

Fully Biodegradable

T-99 Asphalt Release Agent

Tipper Wagon Application

T-99 is a safe and economical alternative to using diesel which due to recent legislation, does not provide an environmentally friendly option. Diesel also has a detrimental effect to human life as the vapours and fumes are carcinogenic.

It is a long-lasting solution that **prevents build-up of bitumen in tipper beds, chutes and tailgates** it only has a minimal effect on the properties of bitumen material. Amounts used are negligible.

It is 100% environmentally friendly, fully biodegradable, non-toxic and is not classified as dangerous.

The following dos and don'ts apply

DO

- Apply T-99 sparingly through a handheld sprayer (sprayer must be oil resistant and labelled)
- Wear gloves and required PPE while using T-99
- Only apply T-99 to surfaces that meet bitumen.
- Reapply T-99 when bitumen starts to build.
- Apply T-99 from the headboard then working backwards, ensure a good covering on the front 3rd, then splatter over the remainder of the body and top of tailboard.
- Keep cap tightly closed on T-99 containers in case of spillage.
- Store T-99 in chassis lockers or any external locker **outside** of the cab.

DON'T

- Puddle T-99, over-usage is uneconomical (max 1000ml per 8 wheeler)
- Don't over douse boots before walking on freshly laid Asphalt
- Store T-99 in Cab lockers or foot wells in case of spillages.
- Spray T-99 directly at your colleagues
- Spray T-99 directly into eyes or airways
- Spray T-99 onto windscreens or mirrors as it will obscure vision
- Spray T-99 where bitumen does not contact, it is not a vehicle cleaner and can affect some paints and adhesives. (see T-12)
- Spray T-99 onto metal walkways, boot soles or pedals as this may cause a slip hazard
- Pour excess T-99 into waterways.
