

Carbon Reduction Plan

Supplier name: Neoceuticals Ltd

Publication date: 17.07.2026

Commitment to achieving Net Zero

Neoceuticals Ltd is committed to achieving Net Zero emissions by 2050

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2024. This is the first year that Neoceuticals Ltd has assessed its consumption and output of Greenhouse Gases.

Additional Details relating to the Baseline Emissions calculations.

NEOCEUTICALS Ltd has calculated its carbon footprint according to GHG Protocol Guidelines in 2022.

We have set 2024 as the baseline emissions calculation year as it is the first-year reporting:

The business is a “virtual business” and has 3 employees who work remotely from home, all other operations including our service office address are undertaken by outsourced providers.

Please note the following comments

Scope 1

Neoceuticals Ltd has a company car.

Scope 2

Neoceuticals is a virtual company and therefore does not directly purchase electricity, steam, heating, or cooling.

Scope 3

GHG consumption has been calculated from detailed data or has been estimated using established parameters from industry and government. Specific categories included are:

Upstream Transport & Distribution: (calculated using mode of transport and distances)

Waste Generated: (estimated, detailed information is being requested from contractors)

Business Travel: (trips undertaken and mode of transport)

Employee commuting: (employees all work from home, GHG from home offices is included)

Downstream Transport & Distribution: (based on average CO₂e per pack calculation)

Baseline year emissions: 2024	
EMISSIONS	TOTAL (kgCO ₂ e)
Scope 1	2511
Scope 2	0
Scope 3* (Included Sources)	21225
Total Emissions	23736 kgCO₂e

* Scope 3 emissions are included for: upstream transportation and distribution of goods, operational waste, business travel, employee commuting (work from home), and downstream transportation and distribution of goods.

Current Emissions Reporting For 2025

Reporting Year: 2025	
EMISSIONS	TOTAL (kgCO ₂ e)
Scope 1	1547
Scope 2	0
Scope 3* (Included Sources)	Upstream transportation and distribution – 8882 Waste generated in operations – 48 Business travel – 3347 Employee commuting – 0 Downstream transportation and distribution – 8843 Other - 1542 Total - 22661
Total Emissions	24208 kgCO₂e

* Scope 3 emissions are included for: upstream transportation and distribution of goods, operational waste, business travel, employee commuting (work from home), and downstream transportation and distribution of goods.

Emissions reduction targets

Neoceuticals is committed to meeting the net zero target by 2050 or sooner.

This is our first review and analysis of our GHG footprint. We are a small business, anticipate changes in some of our supply chain, and have plans to add to our product range. Our emissions are likely to vary and could increase in the short/medium term as the business activity develops. When we have completed further analysis, we will then be able to report on the resulting **CO₂e** and identify the emissions in relation to units of activity.

As soon as we have a measure of **CO₂e** per unit of activity, and are able to properly map our carbon footprint, we will then identify meaningful and specific reduction targets in relation to future projected activity.

Carbon Reduction Projects & Future Initiatives

We are discussing emissions and emissions targets with our supply-chain partners, with the objective of reducing carbon footprints in the coming years.

We will be looking to minimise airfreight and identify sea freight shipping partners with a commitment to reducing emissions.

We will also be looking for a new Contract Manufacturing Organisation (CMO) within the United Kingdom instead of abroad.

Our planning department will implement more precise forecasting to carefully manage order quantities to minimise the volume of expired stock.

We will be discussing carbon emissions targets with our road freight partners and encouraging them to move to lower or no emissions vehicles.

Our storage warehouse contractor uses electric heating and cooling and we will be encouraging them to move to zero emissions electricity purchasing.

When the contract on our company car is renewed, we will be evaluating options for a lower emissions vehicle.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of Neoceuticals Ltd:

Operations Director: Nuo Chen
