CAR LIFTS & AUTOMATED PARKING SYSTEMS

## CAR LIFTS

Are you looking for a way to move your car to different levels in a space-saving and comfortable way? Our car lifts are the right product for you. Whether as access to underground parking or simply for storing the car, our car lifts have been designed to offer maximum parking comfort and user benefits. The car lifts can overcome a height difference of up to 11 meters.

The car can be lifted and lowered both with and without a driver. The car lifts are installed both inside and outside buildings. Outdoors, the car lifts are fitted with a roof that closes off the pit when lowering. This roof can be adapted to suit the surroundings! The areas of application of our car lifts can be found in single-family houses, apartment buildings,

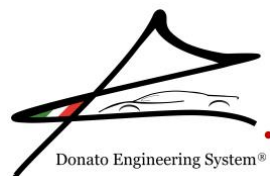

business, and multi-storey car parks as well as in industrial plants.

The car lift makes an entrance ramp obsolete which creates new space for parking. Our products are already in use worldwide.

The models of our *MARE series* move the car and the driver. The models of our *CIELO series* are lifts for cars without a driver on board. You can request our technical data sheets for all models.

Together we will find the right car lift for you in less than two minutes - you can contact us by email [info@donatoengineeringsystem.com](mailto:info@donatoengineeringsystem.com). We will be happy to show you different solutions that are perfectly suited to the needs of your project.
