People Stay Longer and Spend More Money at Events with Typhoon Cooling Systems

Outdoor Events • Rehab Stations • Concerts • Races • Sporting Events • Parties • Graduations • Weddings

NASA Study CR-1205-1

This definitive report shows a strong correlation between the effective temperature and human productivity. At 85 degrees, work output drops by 18%, while accuracy suffers by 40%.

Temperature	75	80	85	90	95	100	105
Loss in output	3%	8%	18%	29%	45%	62%	75%
Loss in accuracy	-	5%	40%	300%	700%		

While productivity is the most obvious cost of a hot, uncomfortable work environment, that's not the end of it. Other effects:

- The bottom line suffers
- Tardiness and absenteeism
- Reduced attention to safety
- Low moral caused by heat discomfort
- Potential health risks and liabilities
- Turnover and association training and discharge costs

What does 18% of your payroll cost per month? What about 29% of even as much as 45%? If you consider the payback, you simply cannot ignore the value associated with providing your employees a cool comfortable work environment.

FACTS:

- Where Typhoon Cooling systems are used to cool oil rig workers, it has been reported that productivity increased by 3 hours per day.
- Firemen have effectively used Typhoon Cooling systems for rehabilitating individuals with heat exhaustion.
- When people know a Typhoon Cooling system will be used, more people will attend the event.
- Typhoon Cooling is equivalent to 34 tons of cooled air.

Regardless if you OWN or RENT our Typhoon Cooling systems create the ultimate "SAFE ZONE". Our systems can lower the ambient outdoor temperature by as much as 30 degrees - making your event safe and comfortable.
