INDUSTRY	PHARMACEUTICAL MANUFACTURING
LOCATION	EASTERN CREEK, NSW
PROJECT	WASHBAY UPGRADE
SYSTEM	SPECIALIST PU FLOORING SYSTEM
AREA	135M2 - FLOORING 100M2 - FALL CORRECTION 150M2 - STAINLESS STEEL WALL SHEETING 100LM - COVING 11 - WASH BAYS

A leading pharmaceutical manufacturer engaged Allied Finishes to deliver a specialist washbay upgrade within its Eastern Creek facility. The project formed part of a broader improvement to the site's washdown areas, with the objective of creating a more hygienic, durable and efficient environment suited to demanding operational requirements.

The scope involved drainage, 150 square metres of stainless steel wall sheeting, fall correction, coving and the installation of a specialist polyurethane flooring system across 11 wash bays. Each element of the project was carefully coordinated to ensure the completed upgrade functioned as a fully integrated system while also achieving a clean and professionally finished presentation.

Allied Finishes was engaged to deliver the works using its experience in hygiene-critical environments, with particular focus on performance, durability and long-term maintainability. The completed package was designed to support washdown operations, improve drainage performance and provide a hard-wearing finish suited to the standards of a modern pharmaceutical facility.

The final result is a durable, easy-to-maintain and visually refined washbay environment that reflects the quality and attention to detail applied throughout the project. Integrated drainage, stainless steel wall sheeting, formed falls, coving and the specialist PU flooring system combined to create a practical, hygienic and professionally finished outcome built for ongoing use.
