MILESTONE
SOLAR & RENEWABLES

We are delighted to announce that Greenbridge Renewables, an established distribution partner of Glass Light Power, is now delivering their technology in partnership with RSK Milestone Solar & Renewables. This new joint venture between Glass Light Power and Milestone was unveiled this month at Solar and Storage LIVE. This is a significant milestone for our business and one we are proud to be part of.

RSK Milestone Solar & Renewables

The Joint Venture between Glass light Power & RSK Milestone Solar & Renewables has been formed to serve the growing demand for specialist solar technology in commercial markets, with a particular focus on solar architecture and structures. This includes bespoke photovoltaic modules, roofing, facades, brise soleil, balustrades, curtain walls, solar carports and canopies, serving key sectors including architectural, aviation, high-end construction, highways, marine and rail. The ambition behind this venture is considerable, and already the first contract has been delivered to Renaker in Manchester, with the Tower F2 installation now standing as the highest specification solar installation in the UK.

Greenbridge expansion for 2026

Greenbridge brings over 60 years of combined management industry experience and more than 15MW of delivered projects to this partnership. Our particular strength lies in solar integrated with commercial roofing systems. We are MCS certified since 2020 and preferred installers for Bauder Biosolar and F-Mount, with the capability to design, supply and install across the full range of roof types and membrane systems. We hold one of the largest portfolios of commercial solar integrated with roofing in the UK, spanning single-ply membranes, green roofs and complex high-rise structures, with an uncompromising focus on quality, safety and long-term performance. We are now also offering the Powerframe Series® Skyline, an engineered solar roofing system purpose-built for integration with modern membrane solutions on demanding and high-rise builds.

Benefits for our clients

As a delivery partner operating within this framework, Greenbridge Renewables brings these exceptional solar solutions to market with the full commercial assurance of the RSK Group behind every project: comprehensive PI and product insurance, strong financial covenants, and seamless end-to-end delivery capability.

2026 is shaping up to be a defining year for specialist solar in the UK, and we are proud to be playing our part alongside the RSK Milestone Solar & Renewables team. If you would like to find out more about what we can now offer, get in touch.
