redfrost.com.au

We manage all aspects of project planning, design, construction, and maintenance of civil infrastructure projects.

Our Business

Our experienced network of multi-disciplinary professionals coordinate all aspects of project planning, design, construction, and maintenance of civil infrastructure projects.

We use our unique perspective and approach to create complete solutions for a wide variety of projects. Redfrost have founded our growth on the management of complex programs restoring infrastructure impacted by flooding and severe weather events for local and state governments.

We deliver a comprehensive range of practical and specialist services including:

- Project planning and procurement management
- Engineering and design
- Contract administration
- Feasibility studies and risk management
- Stakeholder consultation and mediation
- Funding grants application writing
- Approvals and permit management
- Planning prior to natural disasters for efficient civil infrastructure recovery
- Program management for recovery of civil infrastructure following natural disasters

“We provide value for money by efficiently integrating into our client's teams and systems.”

Having been involved with projects of all types and scale throughout Queensland, our team are agile, highly skilled and innovative professionals.

We leverage extensive industry knowledge and capability, ensuring projects are delivered with the best possible results in terms of budget, time, safety, quality and environmental considerations.

We place a high level of importance on the relationships we build with our clients. Our demonstrated ability to do exceptional work allows us to manage projects of all sizes and complexity.

Our clients include:

- Private Developers
- Engineering Consultants
- Civil Contractors
