

CARE & MAINTENANCE INSTRUCTIONS

Spot & Spill Removal Instructions

1. Remove any excess spilled material quickly but carefully. Do not rub it in!
2. Blot the spot or spill with a white absorbent or Microfiber towel. DO NOT SCRUB!
3. If spot is dry, Pre-Vacuum fibers in and around the spots thoroughly
4. Apply Fiber ProTector SPOT REMOVER to spots or stains
5. Allow to dwell on the area for 5-10 minutes
6. Blot spot with microfiber or white cotton towel. DO NOT SCRUB!
7. Repeat Steps 4, 5, & 6 if necessary
8. Contact us as soon as possible for spots & stains that cannot be removed with the above treatment.

General Care Recommendations

- Follow all applicable care instructions and guidelines provided by the manufacturer.
- DO NOT use household cleaners or bleaches on treated items/areas. Doing so may interfere with the protective treatment and could irreversibly discolor the area & permanently damage the carpet fibers.
- Vacuum Regularly! This is most important thing you can do to keep the dirt, soil, & other contaminants from damaging your upholstered furniture fabric. A HEPA vacuum w/a soft bristle brush roller is best.
- Deep extraction cleaning of the protected items should be performed every 12 to 18 months by our professional cleaning company, The Fiber Cleaning Specialist. We use professional-grade, eco-friendly cleaning products and professional extraction equipment and systems that will not remove the protector.
