

FOR IMMEDIATE RELEASE

Cybergen® Announces Partnership with Thales to Strengthen Intelligence-Led Cyber Defence

LONDON, Tuesday 24th March 2026

Cybergen® Security Ltd (Cybergen), a UK-based cyber security services provider specialising in intelligence-led defence, today announced that they have joined the Thales Accelerate Partner Network. This collaboration with [Thales](#), a global leader in advanced technologies for defence, aerospace, and cyber security.

The collaboration brings together Cybergen's next-generation threat intelligence, continuous exposure management, and cyber risk services with Thales' proven global cyber security technologies and expertise. Together, the organisations will support enterprises and critical infrastructure operators in strengthening resilience against increasingly sophisticated and fast-moving cyber threats.

As part of the collaboration, Cybergen will work closely with Thales to help organisations improve visibility of real-world threats, prioritise cyber risk based on business impact, and move from reactive security controls to proactive, intelligence-driven defence.

Tom Britton, CTO of Cybergen Security, said:

"Our partnership with Thales is a major milestone for Cybergen. Cyber security is no longer about managing alerts or ticking compliance boxes. It's about understanding adversaries, anticipating risk, and making informed decisions at speed. By combining our intelligence-first approach with Thales' comprehensive Identity, Application and Data Security capabilities, we're helping organisations turn complex cyber risk into clear, actionable outcomes."

Aydin Ucbasaran, Regional Director, Data and Application Security at Thales, added:

"Working with Cybergen strengthens our ability to support organisations facing increasingly complex cyber threats. Their intelligence-driven approach and focus on measurable outcomes aligns strongly with our commitment to helping customers protect critical assets and operate with confidence in an evolving threat landscape." The collaboration reflects growing demand from organisations for cyber security strategies that prioritise real risk,

resilience, and decision-ready insight, particularly across regulated sectors and critical national infrastructure.
