SECURE, RESILIENT COLOCATION DATA CENTRE SPACE, AT THE EDGE OF LONDON'S FINANCIAL DISTRICT!

THE MULTI TENANT DATA CENTRE MARKET

Demand for secure, resilient and cost-effective UK data centre space is at an all time high, with growth expected to increase throughout 2019 and beyond.

IP House are located in London, the epicenter of the UK data centre industry, which accounts for more than a third of all UK capacity. The city is well known as one of the World's leading technology hubs and recent fears that Brexit would see a decline in growth for outsourced, or hosted data centre services have been downplayed in a report by 451 Research, which estimates that the Multi-tenant-data-centre (MTDC) market will continue to grow.

Primary drivers contributing to this growth include the increasing adoption of Hybrid-IT systems, the shift towards Cloud computing, and a large reduction in capital expenditure due to the use of outsourced facilities over those owned or deployed on-premise.

Furthermore, the UK has a strong reputation as a trusted place to do business. It is one of the largest economies in Europe and is an important Global financial centre.

LOCATION

IP House's ISO-accredited facility is built to Tier III standards on the Edge of London's financial district. It contains 14,000sq ft. of premium, low-latency White Space, with over 500 racks across two technical data suites.

The facility is Carrier and Cloud-neutral, with superfast connectivity to LINX and multiple Cloud Platforms.

> " In the postcode, but off the island "

Both "in the postcode and off the Island", IP House delivers a cost-effective, highly available and perfectly placed colocation data centre solution. There is no better home for your data.

SALES
