

**Ponderosa Family Physicians
Vaccination Policy
Effective 6/24/2019**

Please understand that we consider it a privilege to partner with you in your medical care. For the well-being of all of our pediatric patients, we are implementing the following policy:

- We require that all pediatric patients comply with the recommended vaccination schedule that is published by the Centers for Disease Control (CDC). While we prefer the recommended schedule, this can include a modified schedule that spreads out multiple vaccinations. However, all vaccinations recommended by the CDC must be administered in order to be in compliance. These recommended vaccinations include:
diphtheria, tetanus, pertussis, measles, mumps and rubella (MMR), varicella, rotavirus, haemophilus influenza type b (Hib), polio and pneumococcal
- If a parent does not want their child to receive all of the CDC recommended vaccinations listed above, that pediatric patient cannot be seen in our office and/or will be dismissed.
