Other Conditions Treated:

- Plantar Fasciitis
- Arthritis/Joint Pain
- Low Back Pain
- Neck Pain
- Nerve Pain
- Musculoskeletal Pain
- Tendonitis
- Non-healing Wounds
- Sciatica

Frequently Asked Questions

How does it work?

An electron inside a dome of water sends short, frequent bursts of mechanical energy creating soundwaves through the affected tissue, resulting in an increase in blood flow and modulation of inflammation.

What does it feel like?

Over an area without inflammation, it feels like a rubber band snapping on your skin. Over a "hot spot", patients report a deeper discomfort, often replicating the discomfort for which they are being treated.

How long is a session and how many do I need?

A treatment lasts 5-15 minutes depending on the number of shocks. Some people have dramatic relief after 3-4 sessions, while others may need 6-10 treatments, especially if there is more than one area of treatment or longstanding issues.

How much does it cost?

1500 shocks costs \$150, each additional 500 shocks are \$50. Shockwave can be combined with PT or be used on its own. A combined shockwave+PT session typically costs \$300.

Is it covered by insurance?

Shockwave is typically not covered by insurance. We provide a separate invoice for shockwave in addition to a superbill if you have physical therapy. HSA accepted.
