How to measure a floor

Record measurements in centimetres and millimetres (cm and mm).
Tip: 1 cm = 10 mm

1 Measure the length (A)

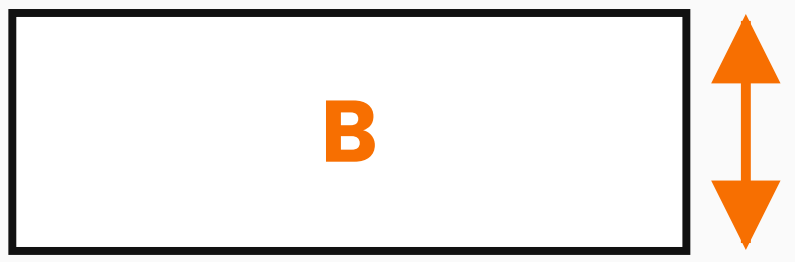

Measure wall to wall along the room.

A = _____ cm _____ mm

2 Measure the width (B)

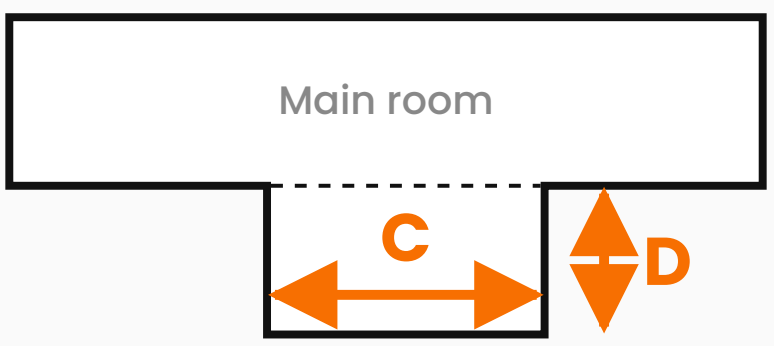

Measure wall to wall across the room.

B = _____ cm _____ mm

3 Alcoves and recesses

Measure any bay, alcove or nook separately (C and D).

C = _____ cm D = _____ cm

4 Calculate the area

Multiply length by width, then add any recesses.

Area = A × B

+ C × D for each alcove

Convert cm² to m² by dividing by 10,000.
Example: 400 cm × 350 cm = 140,000 cm²
= **14 m²**

Measurement notes

- Use a tape measure and keep it flat and straight.
- Measure in centimetres and millimetres, for example 357 cm 4 mm.
- For uneven rooms, take two measurements and use the larger one.
- Add a waste allowance for cuts, usually 5 to 10 percent (follow the product guidance).
- Work out how many packs you need with our Flooring Packs Calculator at asapflooring.shop.
