

PRESS NOTE

Franchetti S.p.A. announces its participation in the “German Spring Conference”

Arzignano (VI), 4th May 2026 – **Franchetti S.p.A. (Ticker BIT: FCH)**, a multinational company specialising in advanced diagnostics, digital monitoring and predictive maintenance solutions for infrastructure, announces its participation on 11th May 2026 in the “**German Spring Conference**”, which will be held on 11th and 12th May 2026. The event is organised by EF Equity Forum UG in Frankfurt at the Flemings Selection Hotel.

Franchetti’s top management, represented by **Paolo Franchetti**, Chairman and Chief Executive Officer, and **Jacopo Nembro**, Head of Finance, will take the opportunity to present the company’s recent financial results and future strategies to German institutional investors.

The presentation will be made available on the website www.franchetti.tech, in the “Investor Relations/Presentations” section.

This press release is available in the section <https://www.franchetti.tech/news>

Franchetti S.p.A.

Franchetti S.p.A. heads the Franchetti Group, a pioneer in the management, diagnostics and predictive maintenance of infrastructure, particularly bridges and viaducts. Founded in 2013 in Arzignano (Vicenza), with subsidiaries in Brazil and Canada and operations in the United States and India, Franchetti is an innovative SME that has worked on over 40,000 equivalent motorway and railway bridges worldwide. The Group boasts a technical and scientific track record that places it among the leading international experts in the sector. Its activities are structured around two main business lines: diagnostic and remedial services for infrastructure maintenance, including inspections and assessments, intervention design and works supervision; and ICT services for the predictive planning of infrastructure maintenance. Franchetti has developed two proprietary software solutions that leverage the potential of artificial intelligence and predictive data analysis: Argan®, which estimates the infrastructure life cycle and automatically determines the evolution of safety levels over time across different maintenance scenarios and contexts; Pathwork®, which enables optimised management of road and motorway infrastructure worksite planning and supports sustainable mobility; and SIDECHECK®, which intelligently compares data collected on inspections, inspectors, planning activities and work estimates, making the assessment process as objective and comprehensive as possible.
