

10 ABSOLUTE DO'S & DON'TS FOR A HAPPY ATU

1. Only use your toilet to flush what it was intended to flush.
2. Avoid oils, grease and food scraps going into the sink. Use a strainer in the kitchen and dispose of fats in the bin.
3. Return unused medicines to the pharmacy.
4. Do not flush cotton buds, sanitary wear, baby wipes, paper towels and “flushable” wipes.
5. Keep your loo door closed so little people aren't tempted to see what happens when they flush a toy!
6. No perfumes, essential oils (in particular, antibacterial oils like eucalyptus, tea tree oil and lavender in pure form) down the drain.
7. Refrain from using harsh cleaning chemicals in your household. Use low sodium, low phosphorous or phosphorous-free detergents where possible.
8. Avoid disposing of paint, ammonia, fats and oils, alcohol (including the dregs of your wine glass!)
9. Look for products with septic system friendly labels.
10. Use Enviroplus cleaning and remedial products to ensure a positive pro-biotic environment in your ATU is functioning at it's best. You'll find them at www.ecowaterservices.com.au
