

**Summary of Comments by Rob Kleegeer on Digital Evidence and Discovery- 8/22/22 at
New York Regional Expert Witness Association Meeting**

Users should be aware of the T&C's and the settings on Data/Privacy when they download and use mobile apps.

Always use an end point detection/malware/anti-virus program on your mobile devices. I use SentinelOne, BitDefender, MalwareBytes for that type of protection (a few others).

For masking my geolocation data I use a VPN. I currently use NORDVPN and a few others as needed (I always keep off-except when needed for driving).

I use LastPass for password management.

Note: The presentation was made more interesting by a review of various cases in which Rob was involved.
