- › “Carrier Grade” network components, such as Sonus networks
- › 160 Gbit global uplink
- › Connection via IP, MPLS, ENX
- › Encryption with VPN, TLS, SSL, PGP, S/MIME
- › Supported protocols include SMTP, HTTPS, SOAP, REST, SFTP

COMPLIANCE

- › ISO27001
- › PCI-DSS, HIPAA
- › ISAE3402/SSAE16/SOC1
- › ITIL compliant
- › Always audit ready, e.g. for finance sector

ABOUT RETARUS

An efficient flow of information is a basic prerequisite for reliable business processes. No matter whether it's communication from person to person, between machines or automated in the "internet of things" - as a global provider of information logistics services, Retarus ensures that your communication functions quickly, efficiently and securely at all times. With state-of-the-art IT infrastructure, data centers in Europe, the USA and the APAC region as well as highly dependable partners, Retarus stands for a global delivery network with the highest levels of security, transparency and compliance. As a Retarus customer you can rely on closely individualized consulting and thoroughly competent technical support - available around the clock by arrangement - by your own personal contact person, and on site if required.

DATA PRIVACY TO MEET YOUR NEEDS

Retarus and its subsidiaries, represented around the globe, are in the position to contractually guarantee customers that data processing takes place in line with locally applicable national regulations. According to your specific requirements, you can decide exactly where you would like to have your data processed. This means that companies can rest assured that sensitive data will not leave the processing domain without explicit authorization. The transmission of data to Retarus’ data centers takes place by way of separate, encrypted connections. Data stored within Retarus’ infrastructure over the short, medium or long term can also additionally be secured on request with customer-specific keys (PGP, S/MIME).
