ATLASSIAN | Platinum Solution Partner

Federal Program Delivery, Ready to Repeat

Build once. Adapt by program. Get operational faster across the contract lifecycle.

For **Federal System Integrators (FSIs)**, every new award starts the clock on getting programs operational, even as mission requirements and delivery demands continue to evolve.

Don't start every program from zero

Every federal program has its own mission, requirements, and security environment. But the delivery platform doesn't need to be rebuilt each time. A repeatable Atlassian delivery model helps teams mobilize faster, connect DevSecOps to program management, and scale execution while maintaining the flexibility each program requires.

What should a repeatable foundation address?

A strong federal program delivery platform connects five core areas:

1
Capture & Solutioning

Design proven operating models and pre-configured architectures into proposals before award to accelerate startup.

2
Award-to-Operational

Rapidly deploy standardized Jira, JSM, and Confluence environments with federal templates and governance.

3
Connected DevSecOps

Provide clear line-of-sight from requirements and security controls through development, release, and operations.

4
Boundary Architecture

Confidently align and place workloads across Commercial Cloud, Atlassian Government Cloud (AGC), and Data Center.

5
Platform Governance

Support enterprise administration, continuous optimization, and managed support across active programs and task orders.

Build for future programs, not just the current one.

A repeatable delivery platform preserves operational IP and past performance data to accelerate readiness and win future contracts.

Start with a proven foundation

Valiantys Federal, an Atlassian Platinum Partner, helps FSIs turn Atlassian into a repeatable federal delivery platform across Jira, Jira Service Management, and Confluence that teams can adapt to each program's requirements. Key capabilities include:

Reusable delivery frameworks
Build on proven federal delivery baselines, governance models, and templates.

Award-to-Operational accelerators
Rapidly establish core service management, request intake, and SLA tracking.

Connected federal DevSecOps
Unify requirements, compliance tracking, and automated delivery pipelines.

Compliance & boundary flexibility
Scale environments seamlessly across Commercial Cloud, AGC (FedRAMP), and Data Center.

From capture to ongoing operations

Valiantys Federal combines Atlassian technology with deep federal expertise to help FSIs establish, scale, and sustain their delivery platform.

Solution

Design the program operating model and baseline pre-award.

Mobilize

Deploy and configure standardized environments in days, not months.

Deliver

Connect DevSecOps, workflows, and reporting as program needs evolve.

Sustain

Provide ongoing platform governance, managed services, and IP reuse.

From concept to launch in under six months

Valiantys Federal worked with the U.S. Space Force and Silicon Mountain Technologies to develop a tailored solution using Jira Software, Jira Service Management, and Confluence.

The result: concept to launch in under six months using proven, configurable technology and an iterative approach.

Build a repeatable delivery platform for your next award

Schedule a 30-minute Federal Program Delivery Readiness Review with Valiantys Federal to benchmark your operational baseline, streamline transition timelines, and scale across federal programs.
