

## BB Medical - AnGen | Investor one-pager

Med-tech platform for non-invasive therapy based on focused shock waves generated by an electrohydraulic source, with dedicated software tools for chronic patient care management

**Company:** BB Medical S.r.l.

**Country:** Italy

**Sector:** MedTech / Therapeutic Device / Digital Health

**Stage:** product development and regulatory pathway preparation

### What is AnGen

AnGen is a modular therapeutic platform based on focused shock wave impulses generated by an electrohydraulic source, designed for outpatient applications in:

- chronic musculoskeletal pain and osteoarthritis
- sports injuries
- wound care and chronic lesions
- andrological conditions
- selected gynecological and pelvic health applications

### Why it is different

AnGen integrates therapeutic hardware, dedicated applicators, cloud tools for predictive technical support, physician-side digital tools for structured anamnesis, and a patient app to support treatment adherence and care pathways.

### Clinical and social relevance

The project addresses high-impact chronic conditions in which a non-invasive therapy, combined with monitoring and digital support, can help improve quality of life, treatment continuity, and territorial accessibility.

### Project status

- innovative startup already incorporated
- trademark already registered
- initial IP/patent activities already started
- product roadmap and CE pathway in preparation
- development of the cloud layer and apps as an integral part of the platform

### Validation and non-dilutive support

BB Medical has already been awarded a non-dilutive grant of EUR 84,000 from the Tuscany Region innovative startup programme.

### Funding objective

The company is seeking capital to complete engineering, the CE pathway, the first production batch, commercial preparation, and development of the cloud/app component.
