

Unmatched Durability for Automotive Service Facilities

*High-Performance Ceramic Tile
Built to Last Decades*

Durable. Safe. Proven.

Built for the Real Demands of Automotive Facilities

Your service floor is one of the hardest-working surfaces in your building.
Daily exposure to:

- **Heavy vehicle traffic**
- **Dropped tools**
- **Oils, chemicals, and water**

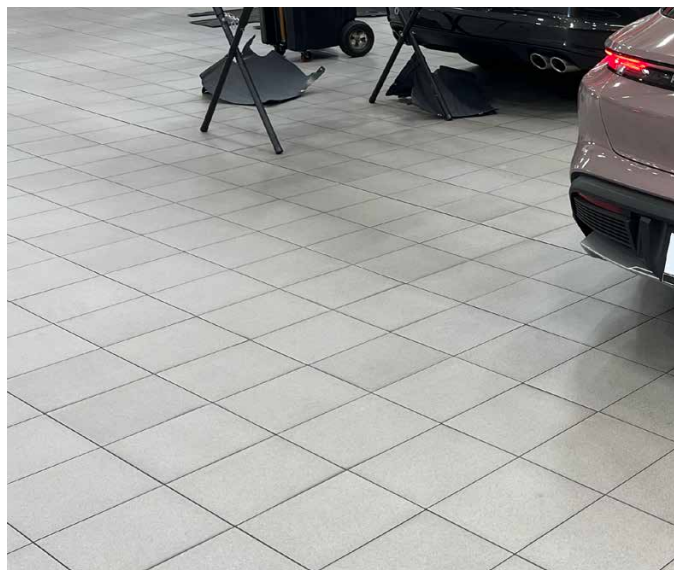

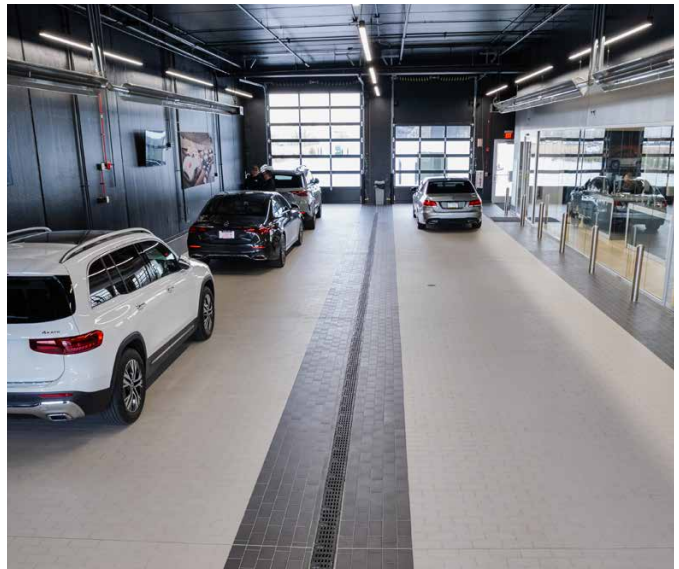

Most flooring systems aren't designed for this level of abuse. Argelith fully vitrified ceramic tiles – often referred to as 'clinker tile' in the automotive industry – are.

For over 20 years, we've supported automotive projects across the U.S. with local inventory, technical expertise, and jobsite support – helping dealerships build floors that perform for decades, not just a few years.

Why Most Shop Floors Don't Last

- **Coatings peel, crack, and wear out in just a few years**
- **Concrete absorbs chemicals and deteriorates**
- **Repairs are visible and disruptive**
- **Maintenance costs add up quickly**

A Long-Term Solution: Argelith tiles are designed to eliminate these problems—not just delay them.

Advantages of Argelith Tile

Built for Heavy-Duty Use

- Handles lifts, rolling loads, and heavy equipment
- Distributes point loads to protect the slab

Resists Oils & Chemicals

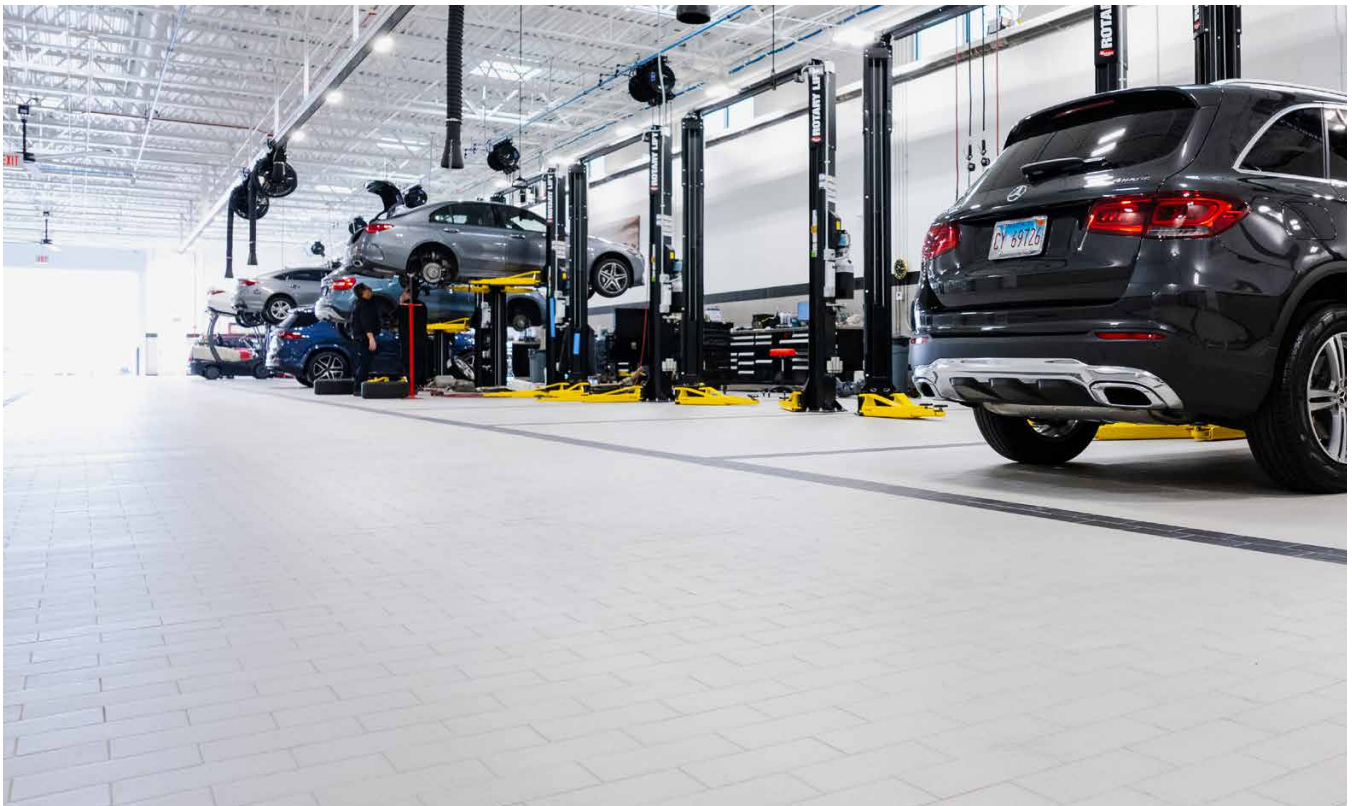

- Performs well against oils, acids, and cleaning agents
- Dense surface helps resist chemical exposure

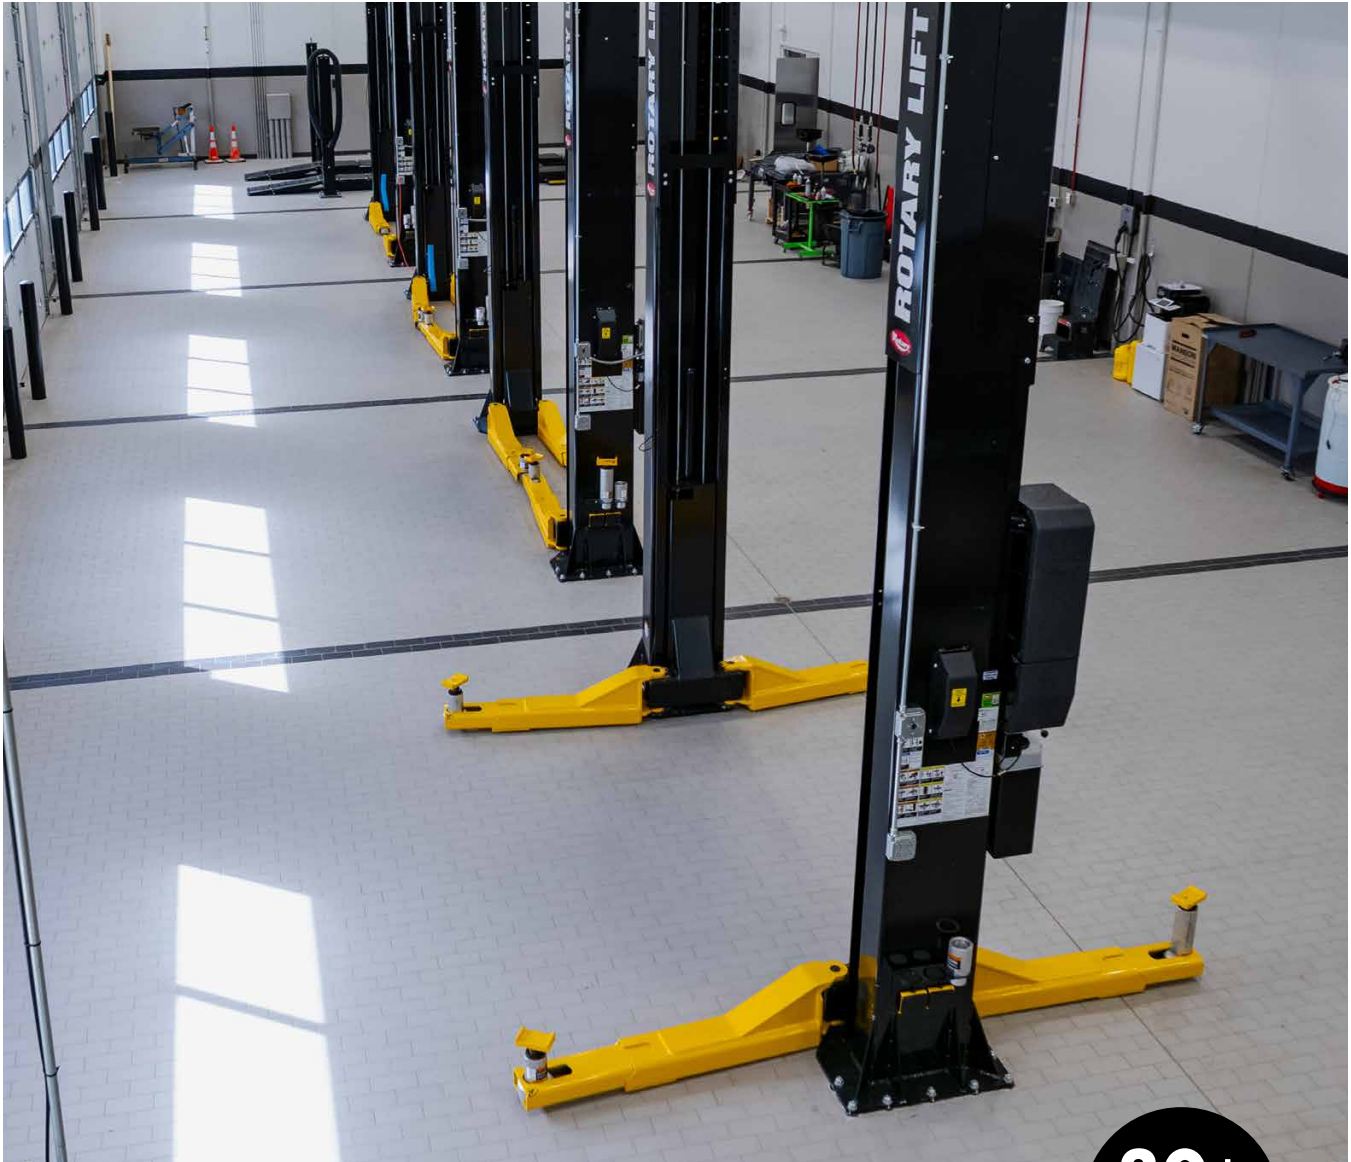

Built for Wet Environments

- Dense, low-absorption surface helps limit moisture penetration
- Protects the substrate from water exposure

Designed for Traction

- Surface profiles designed for traction in demanding environments
- R10-R12V06 options depending on application

Low Cost to Own

Tile is a higher upfront investment – but delivers the best long-term value.

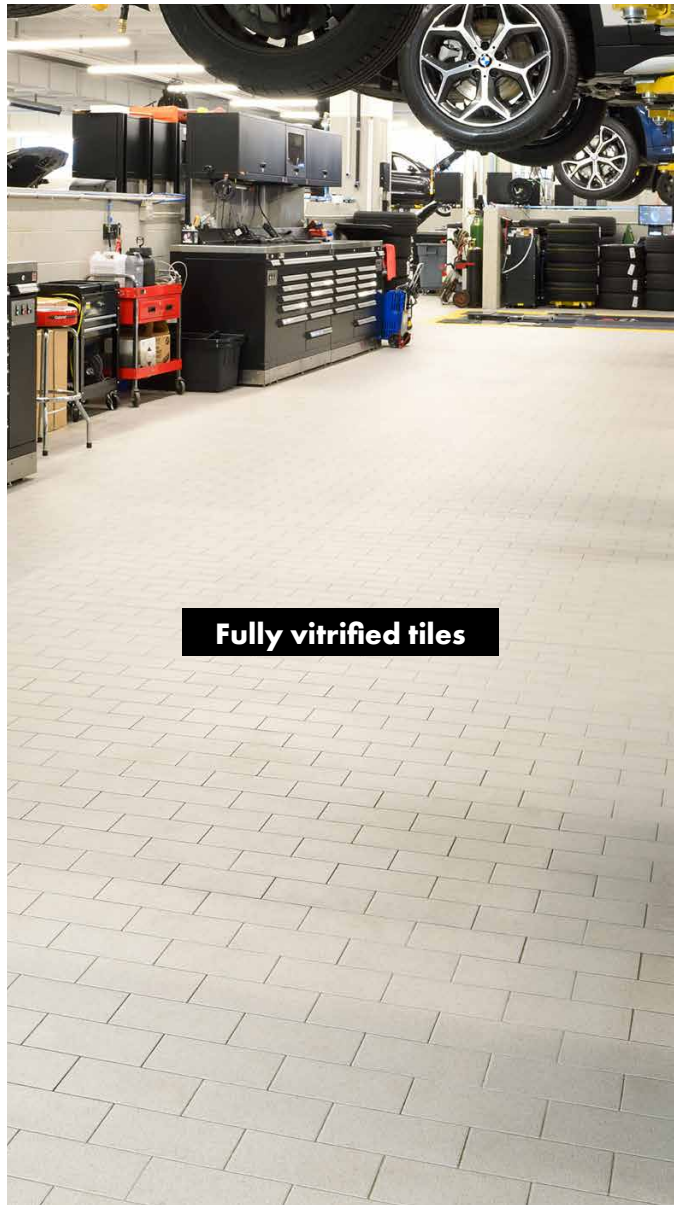

- **30+ year lifespan**
- **No recoating cycles**
- **Minimal maintenance**
- **Reduced downtime**

Most industrial coatings require repair or replacement within just a few years.

Ceramic Tile vs. Coatings

- **No peeling or delamination**
- **No chemical breakdown**
- **Repairs are seamless (replace individual tiles)**
- **Maintains appearance over time**

The result: a floor that performs consistently year after year.

Flexible Installation Options

Argelith tiles can be installed using:

- **Thinset systems**
- **Mortar bed (vibration) systems**

Each method offers advantages depending on the project.

We work closely with your contractor to ensure the right approach for long-term performance.

Product Options

Designed for Performance and Flexibility

- **Multiple formats: 4x8, 8x8, 12x12, 16x16**
- **Thicknesses for different load requirements**
- **R10-R12 surface options**
- **Standard and custom colors**

4" x 8"
Thickness of
5/8" or 3/4"

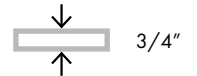

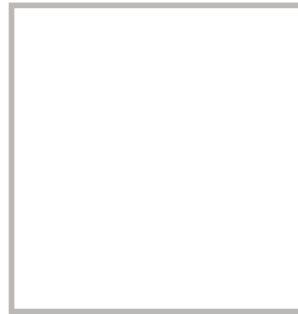

8" x 8"
Thickness of
5/8" or 3/4"

12" x 12"
Thickness of
5/8"

16" x 16"
Thickness of
5/8"

200 Light Gray

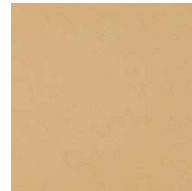

220 Titan Gray

230 Anthracite

300 Beige

400 Sand Yellow

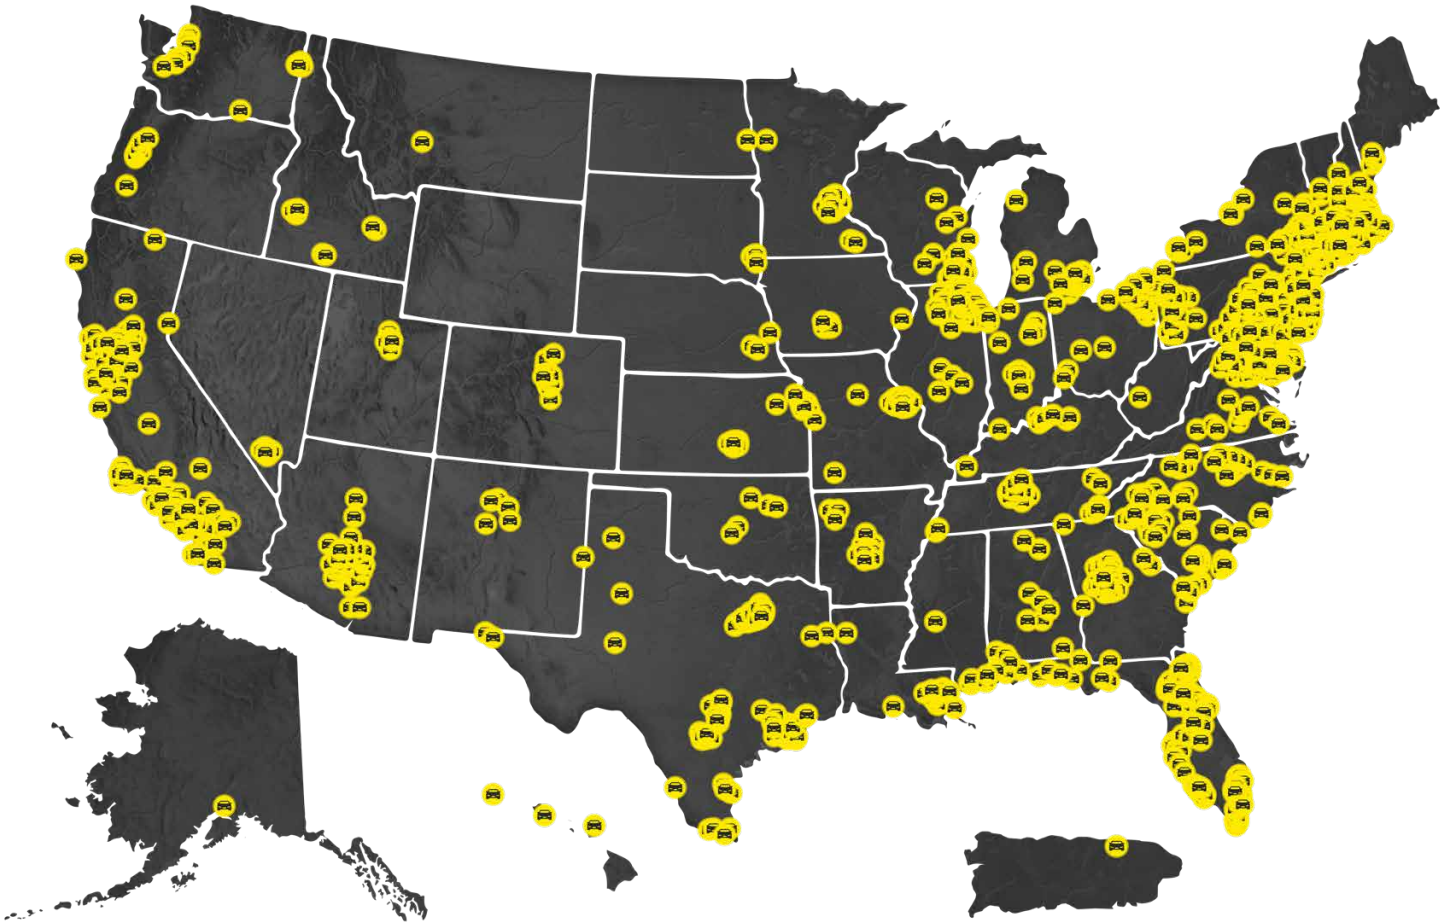

510 Mars Red

Includes integrated safety marking options like Kerasig. Recommended for service bays, drive lanes, and wash areas:

Argelith tiles are installed in service facilities representing leading automotive brands across North America.

Manufacturer Direct

We work directly with:

- **Owners**
- **Contractors**
- **Installers**

No middlemen – just expert support and proven solutions tailored to your project.

Built to Last = Less Waste

- Long service life reduces replacement cycles
- Made from natural raw materials
- Fully recyclable
- Third-party verified Environmental Product Declaration (EPD) available

The most sustainable floor is the one you don't have to replace.
