

Fluid End Packing. Reinvented.

ENDURANCE PACKING™

Proprietary PTFE Material

The new PTFE components provide dry film material transfer to the plunger surface, dramatically reducing friction and heat, improving the life of the system.

All New Chevron Ring

Crafted from our proprietary low-friction PTFE material, the ring design increases structural rigidity for optimal load distribution. The result: smoother operation, reduced wear, and significantly extended packing life.

Redesigned Header Ring

Endurance Packing features an all-new wear-resistant header ring engineered to dramatically lower friction. This enhanced design minimizes service interruptions and supports longer run cycles with fewer back-side maintenance requirements.

DRAMATIC INCREASE IN LIFE

REDUCED FLUID END MAINTENANCE

ELEVATES THE ENTIRE SYSTEM

PATENT PENDING

VULCAN™

The Packing System. Reinvented.

ENDURANCE PACKING SYSTEM™

Vulcan Plunger

The Endurance Packing System includes the Vulcan Plunger, engineered to work optimally with Endurance Packing. The system is designed to reduce friction between plunger and seal, decreasing heat and extending product life.

Tungsten Carbide Coating

The Vulcan Plunger has a tungsten carbide coating to make it more durable and wear-resistant. The coating is applied using an automated process to ensure even distribution and strong adhesion to the base material to minimize flaking.
