34

**Monkeypox (MPX)** is a viral disease that is transmitted to humans through close contact with:

- an infected animal or person
- contaminated materials.

It's related to smallpox, but is less contagious and causes less severe disease.

You can identify it by a rash and for most people, symptoms will clear up on their own after 2 to 4 weeks.

**You are eligible to receive the MPX vaccine if you're at least 16 years old and are one of the following:**

- A high-risk close contact of a confirmed case (post exposure vaccination)
- Gay and bisexual men, men who have sex with men.
- Trans (binary and non-binary) people who have sex with men
- a sex worker
- a sistergirl

## CLINIC 34

**Monkeypox (MPX)** is a viral disease that is transmitted to humans through close contact with:

- an infected animal or person
- contaminated materials.

It's related to smallpox, but is less contagious and causes less severe disease.

You can identify it by a rash and for most people, symptoms will clear up on their own after 2 to 4 weeks.

### Signs and symptoms

Signs and symptoms of MPX can start 5 to 21 days after exposure.

They can include:

- a distinctive rash with lesions (flat bumps that become raised, fill with fluid, and then crust and scab)
- swollen lymph nodes
- fever or history of fever
- headache
- muscle aches
- joint or back pain
- chills
- fatigue
- sore throat.

**If you develop any of these symptoms and are in one of the at-risk groups, you should seek medical advice immediately.**
