

LiveRoof[®] System Accessories

Roof Edge[®] by LiveRoof, LLC

The patented LiveRoof RoofEdge[®] products represent second generation green roof edging. Each RoofEdge product is the result of lessons learned during hundreds of installations, and collectively represent a new standard for function, aesthetics and integration. RoofEdge was designed to be architecturally "pleasing to the eye," but also with the contractor in mind. Economical and easy to install, the quality of the materials and finishes (whether natural aluminum or color anodized) are better than ever.

Aluminum **RoofEdge** drainboxes will never rust.

Blind rivets to be applied each foot when edging is exposed to wind in perimeter applications without ballast or pavers.

LiveRoof Standard: 4.25" tall mill finish or anodized black or bronze

LiveRoof Lite: 2.75" tall mill finish or anodized black or bronze

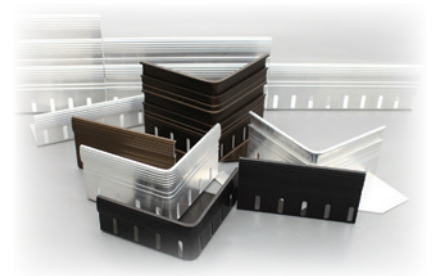

LiveRoof Deep: 6.5" tall mill finish or anodized black or bronze

LiveRoof Maxx: 8.5" tall mill finish or anodized black or bronze

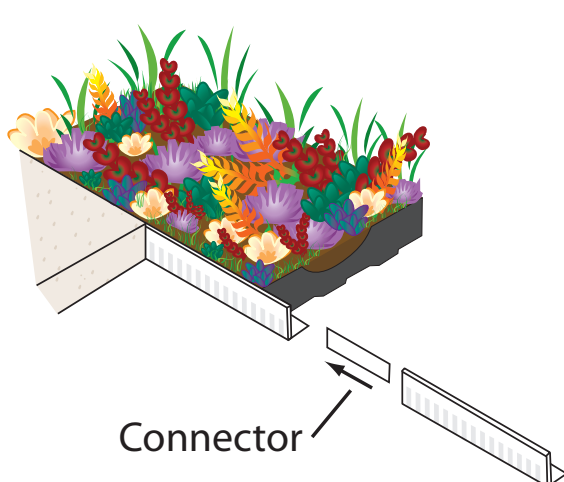

Easy To Use

- 8'-0" sections connected with sliding connector/s
- Preformed corners save time and money.

Enhances Wind Uplift Resistance

RoofEdge corners save time and money, and are far more precise than field-bent corners.

Roof Edge[®]

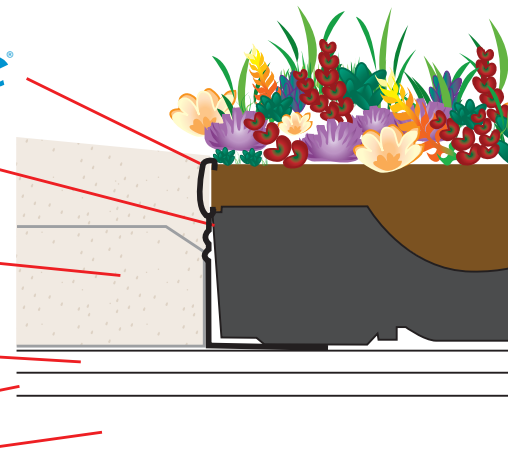

Fully Vegetated Invisible LiveRoof[®] Module

Gravel Ballast or Conventional Paver

Slip Sheet to be extended 3" vertically at parapet.

Waterproof Layer

Roof Deck

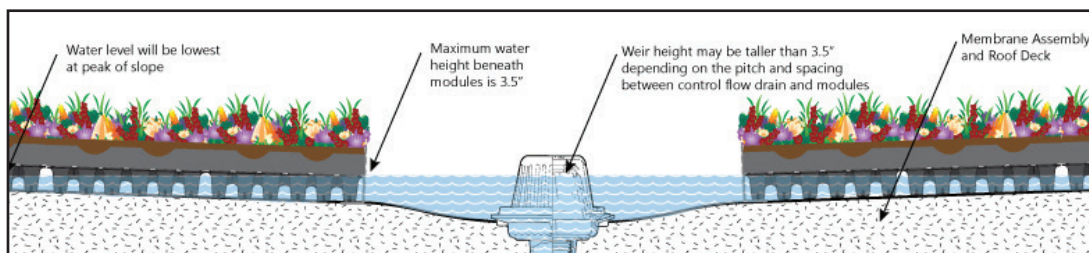

LiveRoof[®] System Accessories

RoofBlue[®] Base

For enhanced storm water management.

The patented LiveRoof Integrated RoofBlue[®] base is engineered to provide temporary water detention beneath the LiveRoof system. When used with a control flow drain system, RoofBlue expands the usefulness of the green roof system to maximize rooftop storm water management capability. This may greatly reduce the need for other onsite storm water management tools, such as cisterns, detention ponds, or underground storage tanks.

For more details, visit liveroof.com/roofblue or call LiveRoof Global, LLC at 800-875-1392.

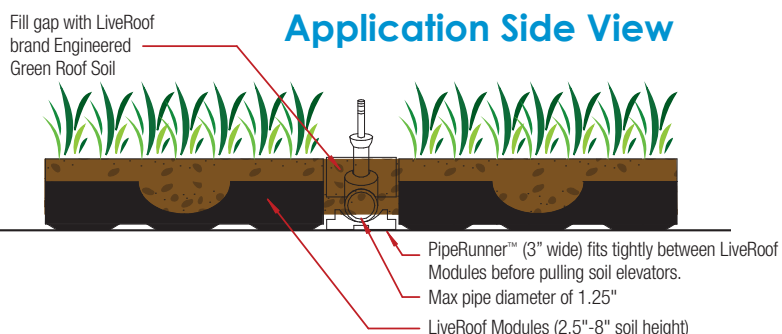

All New

LiveRoof PipeRunner[™]

For easy, fast, effective installation of irrigation pipe in LiveRoof Systems.

PipeRunner insures adequate soil drainage and waterflow under the irrigation piping.

WindDisc[™]

For wind exposed high rise applications, the patent-pending WindDisc[®] feature is a simple and fast way to fasten the LiveRoof modules together for improved wind uplift resistance. WindDisc has tested effective at uplift pressures exceeding 200 psf (under certified laboratory conditions), and can be applied to all LiveRoof systems.

For more details, visit liveroof.com/winddisc or call LiveRoof Global, LLC at 800-875-1392.
