CESSNA CJ2

TIME MACHINES DO EXIST...

You won't find a flux capacitor powering the Cessna CJ2, instead these incredible machines use state-of-the-art avionics and two powerful jet engines to shrink weeks into days; and days into hours.

Time machines do exist!

As a business tool, these aircraft are an incredible asset. They allow you to reach anywhere on the east coast of Australia, and be home in time for dinner; but their speed is not the only advantage. Safety is significantly increased, because we fly above the weather at 45,000ft, giving the smoothest, most comfortable ride.

If you're travelling for leisure, choosing a Cessna CJ2 is a truly unforgettable experience for you and your family. It's silky smooth in flight, quiet enough to hear a whisper, and maximises your time away from work. The interiors in these aircraft are simple and elegant, appointed in cream leather with business tables and USB power for charging devices while on the go.

Outside, you'll find conservative white paintwork which accentuates the lines of these gorgeous aircraft. We love hearing our passengers say they look fast even while sitting on the tarmac...

These aircraft offer private jet luxury, at prices comparable with propeller driven aircraft. Why choose anything else?

Yes

INTERIOR

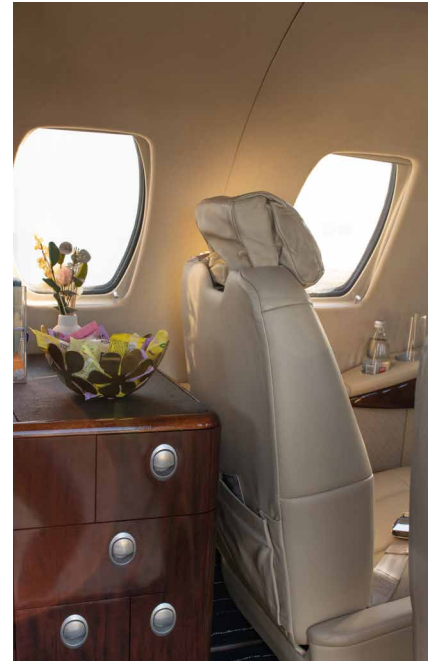

CESSNA CJ2

EVERYTHING A PRIVATE JET SHOULD BE...

Inside the CJ2, the difference between this and our propeller driven aircraft becomes clear.

These aircraft are appointed in cream leather throughout, with seats arranged in a club +2 style. (Four forward facing seats and two rear facing) Each seat has individual arm rests, seat belts, window shades, reading lights and air conditioning vents.

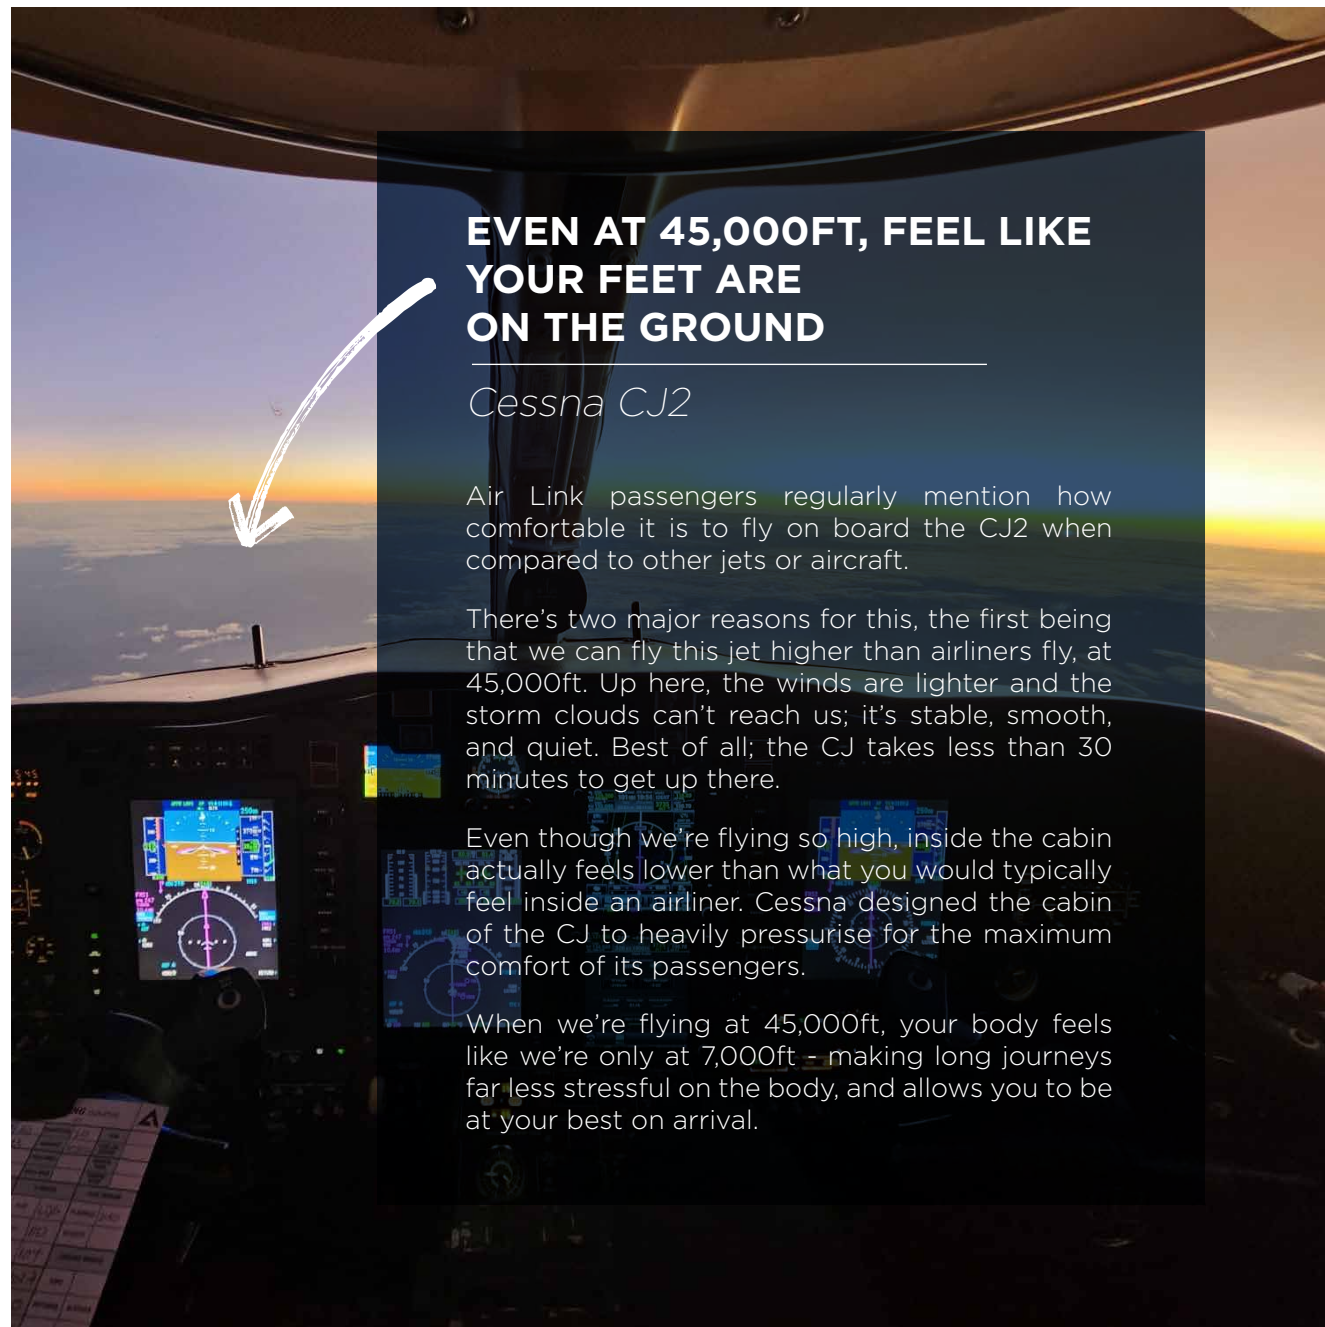

Maximum seating capacity is 8 passengers and one pilot, if the rear seat and copilot's seat are utilised for passengers. Large cargo compartments in the nose and tail will accept up to 8 large suitcases, plus carry on baggage.

RANGE MAP

EVEN AT 45,000FT, FEEL LIKE YOUR FEET ARE ON THE GROUND

Cessna CJ2

Air Link passengers regularly mention how comfortable it is to fly on board the CJ2 when compared to other jets or aircraft.

There's two major reasons for this, the first being that we can fly this jet higher than airliners fly, at 45,000ft. Up here, the winds are lighter and the storm clouds can't reach us; it's stable, smooth, and quiet. Best of all; the CJ takes less than 30 minutes to get up there.

Even though we're flying so high, inside the cabin actually feels lower than what you would typically feel inside an airliner. Cessna designed the cabin of the CJ to heavily pressurise for the maximum comfort of its passengers.

When we're flying at 45,000ft, your body feels like we're only at 7,000ft - making long journeys far less stressful on the body, and allows you to be at your best on arrival.
