IMAGINALIS

Multimodality

High Definition Volumetric Imaging (HDVI)
Computed Tomography and Fluoroscopy
in one device.

Diagnostic and intraoperative use

Diagnostics, preoperative, intraoperative and
post-operative environments: our technology
offers full capabilities.

Easy to move with compact design

Our machines easily move around clinical rooms,
passing through a standard door.

Smart technology

Our technology significantly reduces
infrastructure and maintenance costs. Key
advantages include low electrical consumption,
remote technical assistance, and compact design.

Hard tissue and soft tissue

Outstanding image quality in hard and
soft tissues.

Pegaso Evolution

Our High Definition Volumetric Imaging (HDVI) technology represents the most advanced stage of **Flat Panel CT** technology. It offers exceptional diagnostic imaging for both **hard and soft tissues**, in diagnostic settings and intraoperative theaters. It is the gold standard for orthopedic applications.

Pegaso enhances safety and usability by enabling the scanning of a standing horse's head, neck, and limbs.
