Commonwealth Association of Surveying & Land Economy (CASLE) – Autumn/Spring 2026

Welcome to the CASLE newsletter

Greetings from CASLE President, Dr Charisse Griffith-Charles

Hello again, CASLE colleagues! Welcome to the Autumn 2026 CASLE newsletter. The year has moved quickly, but our profession has certainly not stood still. Since our last edition, the FIG Congress in Cape Town has brought the international surveying community together around 'The Future We Want', while member bodies across the Commonwealth have continued to advance professional standards, skills, research and public service.

In this edition we look back at the Congress and the very strong African and Commonwealth presence; highlight practical work from ISK, SAGI, RICS and IPTI; and look ahead to CHOGM in Antigua and Barbuda, the UN World Geospatial Information Congress in Jeddah and a busy programme of professional events through the end of the year.

We also retain our regular updates from the Aubrey Barker Fund, Survey Review and the FIG Foundation. There is a particularly inspiring ABF-FIG Foundation project from Syria, showing how AI-assisted community mapping can support housing recovery while keeping local knowledge and community participation at the centre.

As always, this newsletter can only reflect what members send us. Please continue to share completed activities, forthcoming events, photographs and links. The breadth of CASLE is its strength, and these contributions help colleagues across the Commonwealth learn from one another.

I am also looking forward to the handover ceremony for the FIG Presidency at RICS HQ 26th Nov and extend my congratulations to Dr Diane Dumashie on her very successful 4 year FIG presidential period. News from FIG - 2026 - RICS Lecture and FIG Celebration Event 26 November and I'm delighted to add that CASLE has signed up to Homepage | Conflict Avoidance Coalition the Conflict Avoidance Pledge. More in the next issue.

FIG Congress 2026: a strong Commonwealth gathering in Cape Town

The FIG Congress 2026 was held in Cape Town, South Africa, from 24 to 29 May, hosted with the South African Geomatics Institute and supported by the South African Geomatics Council. Around 1,500 participants gathered from across surveying, geospatial practice, land administration, valuation, construction and academia.

The theme, 'The Future We Want: the SDGs and Beyond', provided a timely framework for discussion on land governance, geospatial intelligence, climate resilience, professional education and the technologies that will shape practice beyond 2030. The Congress also created an important opportunity for African professionals, students and young surveyors to connect directly with the global surveying community.

CASLE warmly congratulates FIG, SAGI, SAGC and the many volunteers and partners who made the event possible. The Congress was not simply a major technical meeting; it was also a clear demonstration that professional cooperation, knowledge transfer and capacity development remain fundamental to a sustainable future.

More information: https://fig2026.org/ | https://www.fig.net/fig2026/

Closing ceremony at FIG Cape Town 2026

In this issue

- FIG and SAGI after Cape Town
- RICS standards and professional updates
- IPTI property tax and valuation programme
- ISK events and Africa Regional Conference
- Commonwealth and CHOGM 2026
- ABF, Survey Review and FIG Foundation
- Dates for the diary

FIG: from Congress outcomes to practical collaboration

The Cape Town May 2026 Congress brought together the full range of the profession. Its programme addressed reference frames, cadastre and land administration, climate action, property valuation, spatial planning, hydrography, construction economics, education and emerging technology. Importantly, the programme also offered a substantial platform for young surveyors and early-career geodesists.

One useful message from the Congress was the need to strengthen collaboration between professional bodies working in closely connected fields. The International Association of Geodesy has reported that its early-career representative joined the FIG Young Surveyors Conference and Congress discussions on education, training and capacity building. This sort of cross-professional link is especially valuable for CASLE member countries where specialist communities can be small and resources stretched.

FIG and ISPRS: imagery to understanding

FIG Vice-President Professor Qin Yan attended the XXV ISPRS Congress in Toronto from 4 to 11 July 2026. More than 2,000 participants took part in a programme built around the theme 'From Imagery to Understanding'. A joint forum considered how photogrammetry and remote sensing can support equitable and liveable cities, continuing the practical cooperation between FIG and ISPRS.

The issues are familiar across the Commonwealth: how to turn rapidly expanding earth observation and spatial data into decisions that improve land governance, infrastructure, climate response and urban services. The technology is advancing quickly, but professional judgement, reliable standards and local capacity remain essential.

FIG report: https://www.fig.net/news/news_2026/07_ISPRS_2026.asp

AI and professional judgement

At the 48th Congress of the French Order of Surveyors in Nantes, nearly 1,400 participants and representatives from 15 countries examined the relationship between human expertise and AI. Practical workshops covered topographic data, checking deliverables, CAD automation and customised AI agents. The Congress also launched a Charter on the Use of AI in professional practice, with emphasis on data sovereignty, transparency and continuing education.

This debate closely aligns with the RICS professional standard on the responsible use of AI featured in our previous newsletter. Across professional bodies, a common direction is now becoming clear: AI can assist professional work, but it does not remove responsibility. Surveyors must understand the tools, protect data, explain their methods and retain control of conclusions and advice.

FIG report: https://www.fig.net/news/news_2026/07_Nantes_france.asp

Looking ahead: FIG Working Week 2027

The next major FIG gathering will be Working Week 2027 in Stavanger, Norway. Member organisations may wish to begin identifying papers, young surveyor participation and examples of practice that deserve a wider international audience. Cape Town demonstrated the value of visible Commonwealth participation. CASLE hopes that this momentum will continue.

UN-Habitat HPF Launches New Global Framework for Transformative Recovery at World Urban Forum

17-22 May 2026, Baku, Azerbaijan

Organised by **United Nations' Habitat Professionals Forum** (HPF), the 13th session of the **World Urban Forum (WUF13)** took place in Azerbadjan in May 2026 under the theme "Housing the world: Safe and resilient cities and communities". Part of the programme was launching a new global framework for transformative recovery from disaster entitled *"Recovering the Future: A Framework for Transformative Recovery from Disasters*", calling for a major shift in how recovery from disasters is planned and delivered. News from FIG 2026 - After Disaster Hits a City: New Transformative Recovery Guide - UN-Habitat and FIG as Key Players

SAGI and African geomatics after the FIG Congress

The South African Geomatics Institute played a central role as the national host of FIG Congress 2026. SAGI represents registered experts across land and engineering surveying, GIS, planning, land management, photogrammetry and remote sensing. Its broad professional base was reflected throughout the Congress programme.

A key legacy opportunity is to convert the energy of Cape Town into sustained professional and institutional cooperation. This includes stronger CPD, support for students and young surveyors, engagement with public agencies, and shared approaches to the practical challenges facing African land and geospatial systems.

For the public, SAGI continues to emphasise the importance of using properly registered practitioners. This is not simply a matter of professional status. Reliable boundary, topographic, engineering and spatial information protects investment, supports infrastructure and gives confidence to land and development decisions.

SAGI: https://www.sagi.co.za/

South African Geomatics Council

The South African Geomatics Council regulates the profession under the Geomatics Profession Act and covers engineering surveying, GISc, hydrographic surveying, land surveying, mining surveying and photogrammetric surveying. Its focus on registration, education, conduct and professional accountability provides an important institutional foundation for the sector.

SAGC: https://www.sagc.org.za/

How Uganda's Digital Land Registry is Formalising Customary Tenure at Scale

By Evelyne Ajambo, Simon Peter Mwesigye, and Sem Olijkan
Uganda has achieved a significant milestone in land governance. For the first time, Certificates of Customary Ownership (CCOs) have been integrated into the National Land Information System (NLIS), a digital platform managing land registration, administration, valuation, and land use planning data. This integration represents a watershed moment for millions of Ugandans who access land through the customary tenure system and whose land rights have historically remained invisible within the country's official land records. **Learn about Uganda's land registry**.

RICS professional updates

Code of measuring practice, 7th edition

RICS released a consultation draft of the seventh edition of its Code of measuring practice guidance during July. The proposed update aims to support a consistent approach to measuring and reporting property. This is useful work for property, valuation and development professionals and also reflects the continuing need for common language across markets.

Expert witnesses: revised framework

RICS published the fifth edition of Surveyors acting as expert witnesses in July 2026, with effect from 30 November 2026. The revised material strengthens expectations around independence, transparency, conflicts of interest and report writing. It also addresses AI-assisted processes, reinforcing that experts remain personally responsible for the opinions they provide and should disclose relevant use of technology.

For professional bodies across CASLE, the wider lesson is that standards must keep pace with working methods. The introduction of AI does not lessen the need for competence, evidence and accountability. If anything, it makes clear professional controls more important.

RICS Journals

RICS Journals are an open online resource for all CASLE members. Recent article that may be of interest include:

What impact is AI having on planning systems?

What effect is the use of AI in the planning process having on planning authorities and developers? Surveyors should be aware of everything from misleading evidence to liability issues

What impact is AI having on planning systems? | Journals | RICS

Surveyors must act now to avoid ecosystem collapse

A government report on global biodiversity loss and ecosystem collapse is crucial reading for surveyors who can limit the damage to critical water and food supplies, and national security.

Surveyors must act now to avoid ecosystem collapse | Journals | RICS

Who gets paid the most in the built environment worldwide?

Which sectors bring the biggest financial rewards, who has the best flexible working arrangements and why job dissatisfaction is on the rise

Who gets paid the most in the built environment worldwide? | Modus | RICS

Future events

RICS has a busy programme for the remainder of 2026, including the Global Building Conservation Conference on 24 September, the Harris Debate on 24 November and the Global Sustainability Conference on 3 December. These events offer useful CPD and cross-disciplinary perspectives for CASLE members.

RICS news and insights: https://www.rics.org/news-insights

The Institution of Surveyors of Kenya

Professional learning across the chapters

ISK continued a strong programme of professional development through the second half of 2026. Recent and forthcoming topics include GIS and remote sensing for sustainable ecosystems, fundamentals of valuation for banking institutions, smart urban growth, affordable housing, land and climate justice, land administration, BIM and land information management systems.

The breadth of this programme is worth noting. It demonstrates how today's surveying profession works across technical measurement, property markets, environmental stewardship, governance, finance and digital delivery. It also creates practical opportunities for collaboration between the profession, universities, counties, financial institutions and communities.

11th Africa Regional Conference and Women in ISK Summit

ISK's 11th Africa Regional Conference and Women in ISK Summit is scheduled for 27 to 30 October 2026 at Lake Naivasha Resort. The event will bring together land and built environment professionals for regional discussion, professional learning and networking.

CASLE warmly encourages members in Africa and beyond to follow and support the conference. Regional events of this kind are essential for sharing experience in contexts that often face similar pressures: rapid urbanisation, complex land rights, infrastructure need, climate risk and the requirement to build professional capacity at scale.

ISK events: https://isk.or.ke/

PAQS Congress 2026, held from 21 to 25 August at Cinnamon Life, City of Dreams, Colombo, Sri Lanka, provided a valuable international forum for examining the future of quantity surveying and the wider built environment. Centred on the theme **"Constructing the Evolution: Unleashing the Human Intelligence,"** the congress combined keynote presentations, technical and parallel sessions, committee meetings, a dedicated Young QS programme and networking events. Discussions spanning digitalisation, sustainability, project management and contemporary construction practice highlighted both the pace of change facing the profession and the continuing importance of professional judgement, collaboration and human capability. For CASLE members, the event reinforced the value of sharing expertise across national boundaries and supporting the next generation of surveyors as the profession responds to technological, environmental and societal change.

PAQS-2026-Proceeding-2.pdf

IPTI: property tax, valuation and public confidence

The International Property Tax Institute continues to provide a useful global forum on property tax policy and practice. Its August review highlighted continuing debate in North America and Europe about affordability, local revenue and new approaches to taxing high-value second homes, vacant land and underused property.

These discussions are not confined to any one country. Property tax remains a vital source of local government finance, but systems must also be fair, understandable and capable of responding to changing markets. Valuation quality, transparency, data and communication are therefore central to public confidence.

Autumn workshops

IPTI's programme includes an online session on AI applications and tools for assessment and property taxation on 16 September, followed by an RICS-IPTI workshop on compulsory purchase and the assessment of compensation on 23 September. Both topics are directly relevant to CASLE's land economy and valuation community.

The earlier 2026 Mass Appraisal Valuation Symposium also brought together international experience from Australia, South Africa, Canada, Hong Kong, China, the UK and the USA. Subjects included revaluation, digital land valuation, equity analysis, machine learning and the communication needed to build public trust.

ISTT 30TH ANNIVERSARY GALA PROMOTION

Institute of Surveyors of Trinidad and Tobago Celebrates 30th Anniversary with Gala Celebration

The Institute of Surveyors of Trinidad and Tobago (ISTT) is proud to announce its 30th Anniversary, marking three decades of excellence in the surveying profession. To commemorate this significant milestone, the ISTT will be hosting a Gala Celebration on Saturday November 14th 2026, at the prestigious Radisson Hotel Trinidad. The event will take place from 6:30pm to 10:30pm.

This special evening will feature an award ceremony recognising outstanding contributions to the field of surveying, followed by an exquisite dinner. Attendees are encouraged to dress in formal wear to enhance the elegance of the occasion.

Join us in celebrating 30 years of dedication, professionalism and commitment to the surveying community. We look forward to an unforgettable evening filled with camaraderie and recognition of our achievements.

Exciting Day of Surveying Event Engages Students in Tobago

On Friday May 8th 2026, the Shaw Park Cultural Complex in Scarborough Tobago, buzzed with enthusiasm as the Institute of Surveyors of Trinidad and Tobago (ISTT) hosted the inaugural 'Tobago Day of Surveying' event. This landmark occasion brought together 275 students and teachers from 7 Secondary schools across the island, fostering a deeper understanding of the Surveying profession.

The event was a collaborative effort between the ISTT, the Department of Geomatics Engineering and Land Management (DGELM) University of the West Indies (UWI), St. Augustine Campus and the Tobago House of Assembly (THA). The day featured insightful addresses from prominent figures, including Professor Bheshem Ramlal, Dean, Faculty of Engineering at UWI and Dr. Dexter Davis, Head, DGELM, UWI. Their presentations inspired students to explore the diverse opportunities within the Surveying field. Additionally, Ms. Ginelle Williams, Administrator in the Division of Education, Skills and Innovation of the Tobago House of Assembly, shared her insights, emphasizing the importance of education and skills development.

Students participated in engaging and interactive sessions that highlighted the significance of Surveying in various sectors. They had the opportunity to visit Exhibitor booths, where cutting-edge Surveying technology was demonstrated and they learned from industry professionals. The Exhibitors included several esteemed Surveying firms from both Trinidad and Tobago, the DGELM and the Land Survey Board of Trinidad and Tobago, all of whom provided students with a comprehensive view of the profession.

Global events through the end of 2026

Third UN World Geospatial Information Congress

The Third United Nations World Geospatial Information Congress will be held in Jeddah, Saudi Arabia, from 16 to 19 November 2026. It will convene governments, national mapping agencies, professional bodies, academia and industry around global geospatial policy, standards, geodesy, land administration and digital public infrastructure.

For CASLE members, the Congress is a valuable reminder that geospatial information is now core public infrastructure. Reliable reference systems, addresses, cadastres, valuation information and land records support everything from disaster response and taxation to housing, transport and environmental management.

UNWGIC: https://ggim.un.org/3UNWGIC/

69th Commonwealth Parliamentary Conference

The 69th Commonwealth Parliamentary Conference will be hosted in Cape Town from 13 to 19 September 2026 under the theme 'Strengthening International Law and Parliamentary Democracy in a Changing World Order: Commonwealth Leadership'. Although the programme is parliamentary, its focus on accountable institutions matters to land and development professionals, whose work depends on sound law, transparent administration and public trust.

CPA conference hub: https://www.cpahq.org/69-cpc/

Mr. Nigel Ramsey, a member of the ISTT, spearheaded the event, which marked a significant milestone for the Surveying community in Tobago. President of the ISTT, Dr. Derek Outridge, also addressed the audience, reinforcing the importance of Surveying as a vital profession in today's world.

The Tobago Day of Surveying was a resounding success and a first for the island, leaving students inspired and informed about the exciting possibilities that lie ahead in the field of Surveying. We look forward to more events like this that bridge the gap between education and industry, empowering the next generation of professionals.

Commonwealth update - CHOGM 2026: partnerships and investment

The 28th Commonwealth Heads of Government Meeting will take place in Antigua and Barbuda from 1 to 4 November 2026 under the theme 'Accelerating Partnerships and Investment for a Prosperous Commonwealth'. The meeting provides an important backdrop for CASLE's work.

Sustainable urbanisation, secure land rights, resilient infrastructure and effective land management are all prerequisites for investment that creates lasting public value. Surveyors and land economy professionals supply the measurement, valuation, cost, governance and spatial evidence that turns broad commitments into deliverable programmes.

CASLE will continue to promote the contribution of the profession to Commonwealth priorities, particularly in small states and rapidly growing cities where climate exposure, limited institutional capacity and infrastructure need frequently intersect.

Commonwealth: https://thecommonwealth.org/

Commonwealth institutions and young people

The Commonwealth's August update placed particular emphasis on meaningful youth participation in resilient and accountable institutions. This message has direct relevance to professional bodies. Young people need more than invitations to attend; they need routes to influence programmes, standards, governance and the future direction of the profession.

Conflict Avoidance Coalition

CASLE has recently signed up the CAP pledge on conflict avoidance. The **Conflict Avoidance Coalition** brings together over 100 leading organisations - including public bodies, contractors, consultants, and professional institutions - who are united in a shared mission: to reduce the financial, reputational, and relational costs of disputes through better conflict management. "The Conflict Avoidance Pledge is a natural fit for CASLE and its network of more than 30 national professional bodies CASLE Aims & Mission | Surveying & Land Economy in Commonwealth. 'Across the Commonwealth, professional surveyors regularly work at the intersection of land, communities, development, and competing interests. By promoting collaboration and early intervention, the Pledge puts into practice the values championed through CHOGM and the Commonwealth: mutual respect, constructive dialogue, professional integrity and peaceful cooperation. " - James Kavanagh MRICS – Secretary General CASLE.

Homepage | Conflict Avoidance Coalition

Aubrey Barker Fund: new opportunities and project impact

Sarah Sayce Award for Sustainability Research

The Aubrey Barker Fund has opened the third call for the Sarah Sayce Award for Sustainability Research. The award supports and recognises research that can contribute to more sustainable land, property and built environment practice. Members, universities and early-career researchers should check the Fund's website for the current criteria and timetable.

Smaller Grants programme

The Fund reopened its Smaller Grants programme in May 2026. Funding streams support capacity development, bursaries, smaller projects and conference attendance in developing countries. The emphasis remains practical: strengthening surveying and land management skills and creating benefits that can endure within institutions and communities.

These smaller awards can be especially valuable where a modest amount of support unlocks training, curriculum development, knowledge exchange or participation that would otherwise not take place.

ABF funding and announcements: https://aubreybarkerfund.org/

AI-assisted community mapping for housing recovery in Syria

Kafaat for Reconstruction is the recipient of the joint Aubrey Barker Fund and FIG Foundation 2025-26 Research Grant, receiving £20,000 for a project in Harasta, Syria. The work pilots AI-assisted community mapping to help municipal staff and returning communities prioritise housing and infrastructure recovery.

The project combines satellite imagery and AI analysis with field validation and participatory mapping. More than 30 community members and municipal staff are being trained in digital surveying and GIS. A natural-language interface in Arabic is intended to help municipal planners interrogate information without requiring specialist GIS expertise.

This is an excellent example of technology being used to support, rather than displace, professional and community knowledge. It also shows the importance of sustainable infrastructure, local training and data that can be maintained after the grant period.

Project profile: https://aubreybarkerfund.org/kafaat-for-reconstruction

SURVEY REVIEW

Survey Review is a peer-reviewed international journal covering geospatial positioning and information, geodesy, remote sensing, survey and mapping, and land administration. It has been published continuously since 1931 and remains an important way for practitioners and academics to keep abreast of research across the surveying disciplines.

Recent CASLE newsletters have highlighted the journal's breadth, from cadastral systems and railway surveying to UAV inspection and mathematical adjustment. That breadth continues to be the journal's particular strength: rigorous technical research is presented alongside work with direct implications for land administration, infrastructure and professional practice.

Suggested reading approach for member bodies

Professional bodies may wish to use Survey Review articles more actively within CPD programmes. A short journal discussion session, webinar or student reading group can help translate research findings into practice and can also build confidence among members who are considering publication.

Members undertaking research are encouraged to review the journal's aims, scope and author guidance. Contributions that connect sound methods with real professional problems across the Commonwealth are particularly valuable to the wider community.

Survey Review: https://www.tandfonline.com/journals/ysre20

Real Estate Economics and Valuations (Distance Learning)

The UWE School of Architecture and Environment are pleased to offer a suite of additional postgraduate level modules in Real Estate Management as continuing professional development (CPD), accredited by the Royal Institution of Chartered Surveyors. These modules offer practical application alongside theoretical underpinning to help develop and broaden your knowledge in the topic. The modules starting in October 2026 are:

- Real Estate Economics and Valuations (DL)
- Real Estate Law (DL)
- Strategic Estate Management (DL)

FIG News and Foundation

The FIG Foundation exists to build a sustainable future by supporting education, capacity development and young surveyor participation. At present, the Foundation's grants page indicates that there are no open calls, but members are encouraged to subscribe to the FIG e-newsletter for future opportunities.

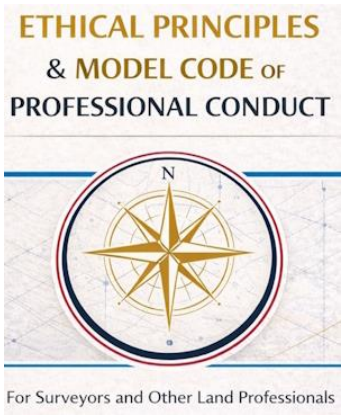

The Foundation's support for young surveyors attending FIG Congress 2026 and the Young Surveyors Conference was an important contribution to Cape Town. The benefits of these grants extend beyond attendance: recipients return with networks, ideas and international experience that can strengthen their national associations and local professional communities.

Building the next pipeline

CASLE member bodies can help by identifying potential applicants early, mentoring them through applications, and creating opportunities for grant recipients to report back. A short presentation, article or online exchange ensures that the benefit is shared, rather than remaining only with the individual participant.

The joint work with the Aubrey Barker Fund also shows the potential of partnership between charitable and professional institutions. CASLE welcomes further ideas for collaborative funding, especially where they support education, practical capacity and community benefit.

FIG Foundation grants: https://www.fig.net/figfoundation/grants.asp

CASLE responded to the FIG consultation on the Model Code of Conduct. The initiative emerged from a recognition that the surveying profession is evolving rapidly. Surveyors and land professionals today face not only traditional ethical challenges, such as conflicts of interest, professional independence, and integrity, but also emerging responsibilities related to gender equality, community engagement, data protection, environmental stewardship, technological innovation, and the prevention of sexual exploitation, abuse, and harassment. The objective of this Statement of Ethical Principles and Model Code of Professional Conduct is not to replace existing national codes, nor to impose new mandatory obligations on Member Associations.

News from FIG - 2026 - Call for Consultation: Ethical Principles and Model Code for Surveyors - fill in questionnaire and attend online consultation meeting

Dates for the diary

13-19 September 2026

69th Commonwealth Parliamentary Conference, Cape Town, South Africa.

16 September 2026

IPTI online session: AI applications and tools for assessment and property taxation.

23 September 2026

RICS-IPTI workshop: compulsory purchase and assessment of compensation.

24 September 2026

RICS Global Building Conservation Conference, online.

27-30 October 2026

11th ISK Africa Regional Conference and Women in ISK Summit, Lake Naivasha, Kenya.

1-4 November 2026

Commonwealth Heads of Government Meeting, Antigua and Barbuda.

16-19 November 2026

Third UN World Geospatial Information Congress, Jeddah, Saudi Arabia.

24 November 2026

RICS Harris Debate, London and online.

26 November 2026

FIG presidential handover and RICS evening lecture

3 December 2026

RICS Global Sustainability Conference, online.

Member news wanted

CASLE's newsletter depends on contributions from across our regions and member organisations. We would be delighted to receive concise reports and photographs covering:

- conferences, seminars and CPD
- professional standards and guidance
- student and young surveyor activity
- research and publications
- awards and appointments
- community or public-interest projects
- forthcoming events for 2027

Please include names, dates, a web link, a short caption for each image and confirmation that CASLE may reproduce the material. Short, clear submissions are easiest to incorporate.

CASLE contacts

Secretary General: James Kavanagh jkavanagh@rics.org

President: Dr Charisse Griffith-Charles

Website: https://casle.org/

Thank you to all CASLE members and partners for keeping the Commonwealth surveying and land economy community connected.

Editorial note

This is an editorial draft prepared from publicly available member-body and partner sources accessed in early September 2026. Dates, titles and open calls should be checked once more immediately before publication. Image spaces and captions can be added when approved photographs are supplied.

And to finish, 2 free to access online webinar events for Geospatial/Land Surveyors

Geo Sessions is an online thought leadership event focused on the trends, benefits, techniques, and applications of geospatial data and analysis. Attend this event to gain insights from spectral, SAR, lidar, and AI experts from public organizations, academia, and commercial industries and see what the present and future of geospatial data looks like from their perspectives. Building on our three signature data modality sessions — spectral, SAR, and lidar — this year's program introduces a new AI-focused session alongside our returning series of targeted follow-on webinars. View the agenda below for details.

This event is beneficial to anyone who is using or considering using spectral, SAR, and lidar data — or who is exploring how AI can enhance their geospatial workflows and analysis.

Geo Sessions 2026

GEO Business Virtual

Free webinars for the geospatial community

Join **11 free, CPD-accredited webinars at GEO Business Virtual, 29 September–1 October**, covering the technology, ideas and challenges shaping the geospatial industry. Hear from people doing the work and take away ideas, knowledge and approaches you can use on your next project.

Three days of sessions, all in one place – click through the tabs and find yours.

GEO Business Virtual: Your free geospatial virtual event
