PLACING ORDERS AND PRODUCT ADVICE

If you require advice or wish to place an order, please contact your STERIS representative.

PROCEDURAL SUPPORT

Key Surgical products for Procedural Support are designed to help improve a wide range of procedures in the theatre. Our newest product for electrosurgery procedures is Electro Lube. During electrocauterization, eschar build up is common and constant removal of the buildup and handbacks can result in longer procedure times as well as reduced performance of the instrumentation. Electro Lube is a patented anti-stick solution that is used to coat the working end of the instrument which helps keep build up at bay and the instrument from charring.

Anti-Fog from Key Surgical is a perfect solution to help reduce condensation and fog on your laparoscopic and arthroscopic lens. Other products such as skin markers, cautery tip cleaner, burr brushes, magnetic mat and drapes, and scrub brushes are also available.

Electro Lube

Anti-Fog

Skin Markers

Cautery Tip Cleaner

Burr Brushes

Magnetic Mat and Drapes

Scrub Brushes

1 dispense pouch contents onto sterile field

2 remove paper backing from foam pad and place foam pad onto sterile drape. Note: The foam pad includes a barium filament for radiopacity

3 remove cap and apply Electro Lube onto foam pad or dip electrode tip into bottle

4 wipe electrode tip on foam pad to leave a thin film. Repeat as needed.

ELECTRO LUBE®

An anti-stick solution designed to be used on electrosurgical instrumentation to prevent tissue sticking during the procedure. Also helps protect the instrument from charring. Sterile. Single use.

INSTRUMENT CLEANING & MAINTENANCE

The Key Surgical Instrument Cleaning line is designed to provide you with the tools needed to clean your surgical instruments.

With bristles available in nylon or stainless steel, we also provide an incredible variety of lengths and diameters to fit your needs.

For organization of your cleaning brushes, our brush organizer is perfect for hanging in the department. Our stainless steel organizer is easy to keep clean and helps your team choose the right brush in a more efficient manner.

With our vast assortment of brushes - from channel cleaning to endoscope cleaning to sterilizer cleaning - we can help you match the right brush to the right cleaning task at hand.

TOOTHBRUSH-STYLE CLEANING BRUSHES

Key Surgical® toothbrush-style brushes are ideal for cleaning the outside of the surfaces of instruments before automated disinfection and sterilization. Regardless of the stubbornness of the soiling of your instruments to be cleaned, you are sure to find the right solution thanks to the varying degrees of hardness, sizes, and shapes of the brushes. Even coagulated blood residues can be easily removed due to specially developed nylon bristles. Key Surgical specialized brushes are also suitable for cleaning pan burrs and removing residues in the joints of needle holders and scissors.

Instrument Cleaning & Maintenance – Pipe Cleaners

FLEXISTEM AND MICROCLENE

Flexistem and Microcylene are unique cleaners for all small-bore cannula. Various diameters from 3mm to 15mm are available, constructed from very soft to hard bristles. Single use.

Flexistem FLEX007A and FLEX007B has a wavy bristle configuration to reduce buckling which can occur in long instruments.

Instrument Cleaning & Maintenance – Endoscope Brush

ENDOSCOPE BRUSH

Use our DuoSwift Combination Squeegee Brush to work smarter, not harder, during flexible endoscope reprocessing. Designed to clean endoscope channel diameters from 2.8mm - 7.0mm, the unique design of DuoSwift features a tapered, nylon-bristled brush on one end and a series of flexible disks (squeegees) on the other. This brush does the heavy lifting for you; the combination of bristle brush and squeegee provides cleaning action that removes more soil in a single pass.

WRAPS & LINERS

Key Surgical wraps and liners are available in a wide variety of sizes but can also be customized to your specific needs.

Our Barrier Wraps provide a bacterial barrier and protect the contents of a set or pack from contamination. When classed as alcohol repellent, barrier wraps can be used within the sterile field.

Choice Wrap is designed to reduce the risk of rips, tears, and wet packs. Choice SMS are made of polypropylene. Choice Wraps can be interleaved in blue or green to meet the sterilization service user requirements.

All Transport Wraps must be used in conjunction with one compliant Barrier Wrap to completely prevent the ingress of microorganisms. Use of a single barrier layer with Transport Wrap can be a cost-effective solution that reduces damage in handling and transport. If adopted, changes to both wrapping and unwrapping procedures may be required to ensure aseptic opening.

INSTRUMENT PROTECTION

The protection of instruments has never been more important. As a result of increasing centralization, the merger of CSSDs and external reprocessing, transport routes are becoming ever longer. This means that sensitive and complex instruments have to be protected not only within your own hospital, but often when being transported off-site.

Instrument Sleeves are made of special cardboard or transparent film and are used to protect high-quality instruments from damage during preparation, transport and storage. The shape of the protectors is not directly adapted to the respective instrument. This has the advantage that these protective sleeves are suitable for the most common instruments as well as for special shapes (such as hooks or knives).

Instrument Tip Caps are designed to extend the life of your instruments. Our tip caps protect your valuable instruments from unnecessary wear or damage, helping reduce repair costs while giving you the peace of mind that your instrument investment is being protected. In addition to protecting and extending the life of your valuable instruments, tip caps also help to protect sterilization packs from puncture and protect employees from sharp instruments.

Available in a variety of shapes and sizes to fit all your instrument protection needs, we have the perfect tip cap for each of your various instruments, from flat caps to twin caps to instrument holders, and they are available with or without perforations, depending on your preference. Our tip caps are radiopaque, single use, and compatible with steam sterilization.

Instrument Protection – Round Caps

Guards and caps are used to protect premium instruments from damage during transportation, handling and sterilization. Furthermore, they help to protect personnel from cut wounds and minimize reprocessing costs caused by rips or punctures in sterilization packaging. Standard vinyl protective tip guards are also available in a range of shapes.

TAGS

Our tags allow you to indicate special handling instructions, secure trays and carts from tampering and quickly identify priority instruments for repair and sterilization. Tags are available in a wide range of styles, colors and locking configurations. Printed tags with special handling instructions, as well as uniquely numbered tags, are available as a standard product. Need a customized tag? We can do that for you!

Write-On Tags allow you to write specific handling instructions on each tag when more detailed communication is necessary. These tags attach to instruments and trays with ties, and are larger and more visible than other tags, ensuring that detailed instructions will be seen easily.

Metal Tray Tags clip onto the edge of a tray and provide ample space for identification, tracking and barcoding needs. Made with stainless steel for durability.

TRAYS & ACCESSORIES

Strict requirements have to be met when it comes to the reprocessing of various instruments and medical devices. Key Surgical offers a wide range of these for optimizing individual procedures and keeping instrument turnaround times to a minimum.

In order to meet the needed requirements, we offer sieve baskets and sterilization trays in a variety of designs, sizes and made of premium material for versatile use (e.g., ophthalmology).

In the Key Surgical product portfolio you will also find comprehensive sieve tray accessories for multiple applications and to protect your sensitive instruments.

Wire Containers

Perforated Plate Mesh Trays

Wire Baskets

Special Sieve Trays

Plastic Sterilization Trays

Instrument Clips

Silicone Inserts and Sieve Organization

Key Surgical supplies a wide range of stainless steel sieve trays which satisfy the highest of standards in order to guarantee optimal and efficient processes. Our wire containers made in Germany (Kögel sieve baskets) with a long shelf life are available in DIN and ISO formats in the most widely used sizes, with different mesh grid size and designs.

Container Accessories – Paper Seals

PAPER SEALS

We offer you an environmentally friendly way of closing containers. The seals can be attached to almost all common containers and follow a simple principle. With our paper seals you ensure safe closure for transport and storage due to thermal closure of the components. Available in different versions with and without documentation fields. In some cases, it is also possible to stick on labels. Single use.

INSTRUMENT IDENTIFICATION

The KeyDot® is a small, laser-etched, 2D Data Matrix barcode label that can be applied directly to an instrument's surface. Tested for sterilization efficacy and bio-compatibility for use on stainless steel surgical instruments, it has been conveniently incorporated into most of the instrument tracking software applications available today. With the KeyDot there is no specialized training or intricate equipment needed so application can be done on-site, eliminating the hassle of sending your instrument sets out for this tracking solution.

Our Identification Tape is designed to help you organize and identify instruments as they move between sterile processing and various departments. Using tape can help save you time, effort, and money by offering effective organization and identification of your surgical instrumentation. It is easy to apply and is compatible with steam and H₂O₂ sterilization. We have the broadest selection of tape available and it is colorful, easy to use, and economical. Adhesive Remover is designed to dissolve tape residue on instruments, trays, basins, and other surfaces. Adhesive Remover is the citrus based solution you need to remove residue without causing any damage.

Instrument Identification – KeyDot

HOW DOES KEYDOT WORK?

The KeyDot works like a license plate. It links a specific instrument to a data file within a software application, allowing that instrument to be tracked throughout the complete instrument processing cycle. Instruments marked with the KeyDot are scanned using a two-dimensional barcode reader. Scanners and software applications not available through Key Surgical.

THE KEYDOT IS EFFICIENT

KeyDot provides you with the convenience to decide what to mark and when to mark it – you're in control. Since there are no equipment requirements or complicated procedures and training involved, instruments can be marked with a KeyDot on a continuous basis by anyone in your department, starting with critical instruments and expanding at an individual pace.

KEYDOT®

With the KeyDot there is no specialized training or intricate equipment required. Applying a KeyDot to a surgical instrument is quick and easy: simply clean, lift, place, and press. The instrument then needs to be sterilized to cure the adhesive and assure firm adhesion.

1 clean application area

2 lift KeyDot from sheet

3 place KeyDot on instrument

4 apply firm pressure and sterilize to secure adhesive

FREQUENTLY ASKED QUESTIONS

IS KEYDOT SAFE FOR OUR SURGICAL INSTRUMENTS?

Yes. A licensed, independent medical testing laboratory has scientifically evaluated the KeyDot and found that the instrument surfaces under the KeyDot are completely sterilized during processing.

HOW LONG WILL OUR KEYDOT LAST?

KeyDot labels will remain readable for at least 200 processing cycles or two years, whichever comes first. The radial design of the KeyDot means there are no corners to lift up. The Data Matrix barcode is also highly redundant – even if up to 60% of the barcode is destroyed, the KeyDot is still readable. The KeyDot is designed to withstand harsh environmental and temperature conditions. If a KeyDot needs to be replaced, anyone can do it at a convenient time in a matter of seconds.

DO I HAVE TO PROGRAM KEYDOT WITH MY OWN NUMBERS?

No. All KeyDots are manufactured and shipped with a unique number. We guarantee that there will be no duplicate numbers in the labeling sequence. Custom sequences can also be requested. Simply apply the KeyDot and easily link it to the appropriate data file in your software application.

KEYDOT GUARANTEE

Key Surgical guarantees that our KeyDot labels will remain readable for at least 200 processing cycles or two years, whichever comes first. Simply send us the supporting documentation from your instrument tracking system and we will replace, free of charge, any KeyDot that does not meet our performance benchmark.

Instrument Identification – Cable Binders

Cable binders can be used to bundle different instruments. They can also be used to affix sieve basket labels or for quick visual identification of instruments, sets, and trays due to the unique properties. Our silicone products offer excellent fixation properties and at the same time protect the bundled objects. These facilitate the organization of the sieve during the packing process in the central sterile services department (CSSD) and during removal in the operating theatre. Available in different shapes, colors, lengths, and closure variants or different needs, such as in the operating theatre for marking instruments for repair or replacement. Tear-resistant. Single use.

QUALITY MONITORING & ASSURANCE

Process monitoring and documentation have grown in importance in the field of medical device reprocessing over the past years which, in turn, has led to a significant increase in quality.

Routine controls in between annual maintenance and validation cycles provide consistent procedures and help to guarantee compliance with the applicable guidelines and standards. The Key Surgical product portfolio in this segment is growing continuously to enable you to maintain high quality standards.

- Ink-based seam seal integrity tests or color analysis with indicator strips
- Hollow load process challenge tests for routine monitoring – reusable and single use options
- Batch controls for all widely used sterilization methods such as steam, low temperature (EO, FO, H₂O₂)
- Test materials for quality control of medical instruments (functional capacity, cleaning outcome, information on diameter, length and weight) and for workplace optimization

Bowie-Dick Tests

Sterilization Monitoring

Monitoring Equipment

STEAM STERILIZATION BOWIE-DICK TEST

The Bowie-Dick test is a steam penetration test used as a routine check for the fractional vacuum process in steam sterilizers. It meets EN ISO 11140-4 tests for quality assurance of steam sterilization processes.

	REF	Description	Content	Qty

Quality Monitoring & Assurance - Monitoring Equipment

Our test equipment is designed to help you in a wide variety of areas in the CSSD to maintain a high quality standard. The test aid set is an innovative all-in-one solution designed to support routine checks of surgical instruments.

TEST AID SET IN ACCORDANCE WITH DIN 58298

For testing the functionality of surgical instruments.

REF	Description	Qty
A 08500	test - equipment includes: • for bone splitters, hollow chisel forceps and bone punches: cardboard 160 gsm • for traumatic clamps, paper 30 gsm, polybag 50 µm • for surgical scissors, latex strap, styrene-butadiene rubber • for chisels, raspatories, bone curettes and sharp spoons: plastic round profile • for needle holder, wire 0.4 / 0.6 / 0.8 / 1.0mm, PTFE strap 0.2 mm • for non-cutting conchotome, synthetic film with a strength of 300 µm • for forceps, plates made of synthetic material 1.0 / 1.5 / 2.0 / 2.5 / 3.0 / 4.0mm • for scalpels, knives and cutting conchotome, synthetic film with a strength of 100-µm test drum made of synthetic material • magnifying glass with 5X zoom	1 set

Quality Monitoring & Assurance – Monitoring Equipment for Sealing Devices & Accessories

INKCHECK® SEAL TIGHTNESS TEST

Suitable for routine testing of sealed seams in accordance with DIN EN ISO 11607-1, Annex B. Each set of InkCheck consists of 50 ampules with 2 ml indicator solution and a magnifying glass card (REF 08529). InkCheck offers easy handling twist-off cap aiming to reduce spills and drips, suitable for all standard packaging paper/Tyvek®. The new generation of the seal seam tightness test InkCheck Plus provides simple and clean handling in one step. Single use.

	REF	Description	Qty
A	08101	InkCheck	50 pcs
B	08116	InkCheck Plus	30 pcs
	08124	InkCheck Plus Tyvek	30 pcs

C SEAL PROOF

Seal Proof helps you validate sealers. Single use. Deviations in the sealing process, temperature and the contact pressure are shown on the indicator strip. All this in three simple steps:

1. Place Seal Proof in a cling-free clear pouch
2. Run through the sealing device once
3. Evaluate color change

REF	Description	Format (mm)	Qty
08011	for transparent bags (paper foil)	173 x 91	250 pcs
08017	for Tyvek bags (Tyvek film)	172 x 90	100 pcs

DOCUMENTATION

Ever stricter standards mean that complete documentation is now part of everyday routine when reprocessing instruments. Key Surgical offers a vast array of labels for identification of your sterile goods. Our range includes both paper labels for single use and longlasting foil-based labels. Take advantage of our comprehensive range and label your medical devices to meet your specific requirements.

Our foil and paper labels are available in almost all formats, and for paper labels you can choose between those with and without indicators for reliable identification in ongoing production for all common sterilization processes.

In our product range you will also find labels for low-temperature processes, such as H₂O₂ and thermo transfer foil in a selection of qualities.

[Paper Labels](#)

[Foil Labels](#)

[Thermo Transfer Foil](#)

[Labellers and Labelling Accessories](#)

[Markers](#)

[Miscellaneous Documentation Items](#)

Document the contents of your packaged medical devices using our high-quality paper labels. The labels are compatible with virtually all label printers, so you can print them according to your requirements and are thus always sure of finding the most important information at a glance. In the Key Surgical portfolio you will find labels in common formats. The duplex self-adhesive labels are particularly suitable for documentation in patient files. You will also find in our portfolio labels wound on the inside or outside and on various reel cores. Labels without tear-off perforations are ideal for cut-off printers.

Documentation – Thermo Transfer Foil

A THERMO TRANSFER FOILS

Thermal transfer reels with various coatings and features, suitable for your printer and labels. We recommend the premium resin which is particularly suitable for film carrier material (except 09858, which is only for paper). Wax/resin features are suitable for the most common requirements of the central sterile services department (CSSD) and especially for paper labels, and the wax feature is suitable for simple applications without thermal requirements. Coated on the outside or inside, so you are guaranteed to find the right foil reel for your printer in our range.

REF	Coating	Quality	Format (mm)	Sleeve length (mm)	Sleeve-Ø (mm)	Autoclave resistant	Qty

CSSD EQUIPMENT

On the following pages you will find various products for equipping your CSSD.

The importance of hospital logistics should not be underestimated when it comes to the reprocessing of medical devices and instruments. Short and long distances, safe transport and the avoidance of nosocomial (hospital-acquired) infections are all issues which need to be taken into account. Our UN certified transport boxes offer a safe system to protect personnel from used instruments during transport as well as sterile devices.

Dustproof bags protect the sterile barrier, making them perfectly suited for transporting and storing sterile supplies. Key Surgical provides dustproof bags in various sizes and material strengths and with various sealing systems.
