April is Earth Month! 🌍

To celebrate, each week we'll share items that can't go in our dumpsters—and why.

This week's item: Paint 🎨

Paint can't go in dumpsters because it's considered hazardous waste. When poured down drains or tossed in the trash, it can contaminate soil and water and harm wildlife. Instead, take leftover paint to a local hazardous waste facility or participate in a community paint recycling program.

Let's keep our planet safe—one proper disposal at a time! ❤️

Continuing our Earth Month series! 🌍 This week's item: Tires 🚗

Tires can't go in dumpsters because they are difficult to break down and take up a lot of space in landfills. They can also trap water, creating a breeding ground for pests like mosquitoes. The best way to dispose of tires is to take them to a tire recycling center or a local tire retailer that offers take-back programs.

Let's help keep our communities cleaner and safer—one proper disposal at a time! ❤️

It's **#NationalScrabbleDay!**

We're playing with words like ELITE, DUMPSTER, and RENTAL.

Bet you can't guess why. 😏🤔

Next up in our Earth Month series: Motor Oil & Fuel 🛢️🚗

Motor oil and fuel can't go in dumpsters because they are highly flammable and hazardous. If thrown away, they can cause fires, contaminate soil and water, and harm wildlife. Instead, take used oil and fuel to a household hazardous waste facility or auto service center that accepts proper disposal.

Keeping our environment safe starts with responsible disposal! ❤️

This week's Earth Month tip: Asbestos 🗑️

Asbestos can't go in dumpsters because it is extremely hazardous when disturbed. Its fibers can cause serious lung diseases, including cancer, if inhaled. Only licensed professionals should handle and dispose of asbestos, following strict local regulations.

Protect yourself and your community by leaving asbestos disposal to the experts! ❤️

Last item in our Earth Month series: Batteries! 📱

Batteries can't go in dumpsters because they contain toxic metals and chemicals that can leak into soil and water, harming the environment and wildlife. The safest way to dispose of them is to take them to a battery recycling center or a retail store with battery drop-off programs.

Let's end Earth Month strong by recycling responsibly! ❤️
