SECTION 00 10 00 – ADVERTISEMENT FOR BIDS

Sealed bids will be received by Hospital Service District No. 1 – Parish of Terrebonne, Terrebonne General Health System, 8166 Main Street, Houma, Louisiana 70360, until the hour of **two o'clock (2:00 P.M.) local time on the afternoon of Thursday, December 11, 2025.**

TGHS – HEALTH AND WELLNESS CENTER
TERREBONNE GENERAL HEALTH SYSTEM
885 Westside Blvd. Extension
Houma, Louisiana 70360
Project Number: 21001.RW

Any bid received after the above time and date stated will be returned unopened.

All bids on hand will be publicly opened and read aloud at the hour of **two o' clock (2:00 P.M.) at Terrebonne General Health System, 8120 Main Street, Houma, Louisiana 70360 in the Atrium Auditorium**

Complete Bidding Documents for this project are available in electronic form. They may be obtained from City Blueprint & Supply Company. Printed copies are not available from the Architect but arrangements can be made to obtain them through most reprographic firms. Plan holders are responsible for their own reproduction. Questions about this procedure and requests for a list of plan holders shall be directed to:

City Blueprint & Supply Company
1904 Poydras Street
New Orleans, Louisiana 70112
Phone: 504-522-0387
Fax: 504-522-2542
E-mail: planroom@cityblueprint.com

Other questions about the project shall be directed in written form to the Architect:

AQ Studios Architecture
1100 Poydras Street, Suite 3550
New Orleans, Louisiana 70163
Phone: 504-524-4375
Fax: 504-524-2493

Giulia Irwin – Project Architect
giulia@aqteam.com

Gregory D'Amico – Principal Architect
greg@aqteam.com

Bids must be submitted on the blank Bid Form furnished with the specifications, per Instructions to Bidders.

Each bid shall be accompanied by Bid Security (bid bond, cash, money order, certified or cashier's check) in an amount equal to at least five (5%) percent of the total bid as per Instructions to Bidders.

Bids shall be accepted from Contractors who are licensed under LA. R.S. 37:2150-2163 for the classification of BUILDING CONSTRUCTION.

Bids will only be accepted from contractors attending a **MANDATORY ON-SITE PRE-BID CONFERENCE** scheduled for **ten o' clock (10:00 A.M.) in the morning of Wednesday, November 12, 2025, at Terrebonne General Health System, 8120 Main Street, Houma, Louisiana 70360 in the Atrium Auditorium.**

Bids may also be submitted electronically by going to www.BidSync.com. Contractors opting to submit an electronic bid will be required to register on the website and pay a recurring service fee for this service.

No bid may be withdrawn after the closing time for receipt of bids for at least forty-five (45) calendar days.
The Owner reserves the right to reject any and all bids for just cause.

Publication dates in the Houma Dailly Courier are as follows:

1st Advertisement for Bid:	October 24, 2025
2nd Advertisement for Bid:	October 27, 2025
3rd Advertisement for Bid:	November 6, 2025

PROCUREMENT

SECTION 00 21 13 – INSTRUCTIONS TO BIDDERS

COMPLETION TIME

The Bidder shall agree to fully complete the contract within **_five hundred and forty (540) consecutive calendar days,** subject to such extensions as may be granted under Paragraph 8.3, in the General Conditions, and acknowledges that this construction time will start on or before the date specified in the written "Notice to Proceed" from the Owner.

DEFINITIONS

Bidding Documents include the following:

Advertisement for Bids
Instructions to Bidders
R-1020 Designation of Construction Contractor as Agent of a Governmental Entity And Exemption Certificate
Louisiana Uniform Public Work Bid Form
Attestation Affidavit
Verification Legal Citizen Affidavit
Corporate Resolution
General Conditions of the Contract for Construction (AIA A201-2017) (with integrated Supplemental General Conditions)
Bid Bond (AIA A310-2010)
Performance Bond (AIA A312-2010)
Payment Bond (AIA A312-2010)
Contractor's Affidavit Attesting to Non-Solicitous Activity
Standard Form of Agreement Between Owner and Contractor (A101-2017)
Change Order (AIA G701-2017)
Application and Certificate for Payment and Continuation Sheet (AIA G702 / G703-2017)
Contractor's Affidavit of Payment of Debts and Claims (AIA G706-1994)
Contractor's Affidavit of Release of Liens (AIA G706A-1994)
Certificate of Substantial Completion (AIA G704-2017)
Consent of Surety to Final Payment (AIA G707-1994)
Exhibit 1 - Drawings, dated 10.15.25
Exhibit 2 - Technical Specifications, Divisions 00 through 28, dated 10.15.25
Addenda issued during the bid period and acknowledged on the Louisiana Uniform Public Work Bid Form.

All definitions set forth in the General Conditions of the Contract for Construction (AIA A201 - 2017), as amended or in other Contract Documents, are applicable to Bidding Documents.

Addenda are written and/or graphic instruments issued by the Architect prior to the opening of bids that modify or interpret the Bidding Documents by additions, deletions, clarifications, corrections and prior approvals.

Bid is a complete and properly executed proposal to do the Work or designated portion thereof for the sums stipulated therein, submitted in accordance with the Bidding Documents.

Base Bid is the sum stated in the Bid for which the Bidder offers to perform the Work described in the Bidding Documents as the base, to which Work may be added or from which Work may be deleted for sums stated in Alternate Bids.

Alternate Bid (or Alternate) is an amount stated in the Bid to be added to the amount of the Base Bid if the corresponding change in the Work, as described in the Bidding Documents, is accepted.

Bidder is a person or entity who submits a Bid for a prime Contract with the Owner for the Work described in the Bidding Documents.

Sub-bidder is a person or entity duly licensed in accordance with the laws of the State of Louisiana who submits a bid to a Bidder for materials, equipment or labor for a portion of the Work.

BIDDER'S REPRESENTATIONS

Each Bidder by making a Bid represents that:

The Bidder has read and understands the Bidding Documents and his Bid is made in accordance therewith.

The Bidder has visited the site and has familiarized himself with all conditions under which the Work is to be performed and has correlated the Bidder's personal observations with the requirements of the Bidding Documents.

The Bidder has informed himself fully of the employment of labor necessary to perform the Work as intended. Failure to do so will not relieve a Bidder of his obligation to furnish labor as necessary to carry out the provisions of the Bidding Documents.

The Bid is based upon the materials, equipment and systems described in the Bidding Documents as advertised and/or modified by Addenda, without exception.

The Bid is not based on any verbal instructions contrary to the Contract Documents and Addenda.

The Bidder is a fully qualified and licensed Louisiana Contractor under the provisions of LA R.S. 37.2150, et. seq. Bidder shall be responsible for determining that each Sub-bidder or prospective Subcontractor is duly licensed in accordance with Louisiana law.

BIDDING DOCUMENTS

COPIES

Bidding Documents may be obtained in electronic format without charge and without deposit from City Blueprint & Supply Company as stated in the Advertisement for Bids.

Printed complete sets of Documents are available to Bidders upon request at the Bidder’s expense.

Complete sets of Bidding Documents shall be used in preparing bids; neither the Owner nor the Architect assumes any responsibility for errors or misinterpretations resulting from the use of incomplete sets of Bidding Documents.

The Architect, in making copies of the Bidding Documents available on the above terms, does so only for the purpose of obtaining bids on the Work and does not confer a license or grant for any other use. Contract Documents remain the exclusive property of TGHS and shall be returned to a TGHS agent.

INTERPRETATION OR CORRECTION OF BIDDING DOCUMENTS

Bidders shall carefully study and compare Bidding Documents with each other, examine the site and local conditions to the extent relating to the Work for which the Bid is submitted, and shall at once report to the Architect errors, inconsistencies or ambiguities discovered.

Bidders requiring clarification or interpretation of the Bidding Documents shall make a written request to the Architect, to be received by him not later than seven (7) days prior to the last date for receipt of Bids.

Interpretations, corrections and changes of the Bidding Documents will be made only by written Addendum. Interpretations, corrections and change of the Bidding Documents made in any other manner will not be binding and Bidders shall not rely upon them.

SUBSTITUTIONS

The materials, products and equipment described in the Bidding Documents establish a standard of required function, dimension, appearance and quality to be met by any proposed substitution. No substitutions shall be allowed after bidding.

No substitutions prior to receipt of Bids will be considered unless written request for approval has been received by the Architect at least seven (7) calendar days prior to the last date for receipt of Bids. Each such request, to be considered, shall include:

1. Name or identification of the item on which a substitution is requested (including specification section number).
2. Complete description of proposed substitute, including technical data comprised of drawings, actual dimensions, complete performance specifications, test results and sample (where applicable).
3. Any additional information or data necessary for the Architect to make a complete comparative evaluation.
4. A statement setting forth any changes in other materials, equipment or work that incorporation of the substitute would require.

The burden of proof of the merit of the proposed substitution is upon the proposer. The Architect's decision of approval or disapproval of a proposed substitution shall be final. Preliminary approval is given contingent upon bidder/proposer being responsible for any costs that may be necessary to modify the space or facilities needed to accommodate the substituted materials and/or equipment approval.

If the Architect approves any proposed substitution, such approval will be set forth in an Addendum. Bidder shall not rely upon approvals made in any other manner.

ADDENDA

Addenda will be transmitted in electronic format through City Blueprint & Supply Company to all who are registered to view the Bidding Documents.

Addenda shall not be issued within a period of seventy-two (72) hours prior to the advertised time for the opening of bids, excluding Saturdays, Sundays, and any other legal holidays; however, if the necessity arises to issue an addendum modifying plans and specifications within the seventy-two (72) hour period, then the opening of bids shall be extended for at least7 days, but not more than 21 days. Such Addendum will state the time and date for opening of bids.

The Owner shall have the right to extend the bid date by up to twenty-one (21) days through the issuance of an addendum without the requirement of re-advertising. Any such extension shall be made by addendum issued by the Architect.

Each Bidder shall ascertain from the Architect prior to submitting his bid that he has received all addenda issued, and he shall acknowledge their receipt on the Bid Form.

BIDDING PROCEDURES

PREPARATION OF BIDS

Bids shall be submitted on the form contained in the Bidding Documents.

All blanks on the Bid Form shall be legibly completed in a non-erasable medium.

Sums shall be expressed in both words and figures. In the case of discrepancy, the sum written in words shall govern.

Interlineations, alterations and erasures must be initialed by the signer of the Bid.

All Alternates shall be bid. If no change in the Base Bid is required, enter "NO CHANGE". Failure to submit Alternate prices will render the Bid incomplete and shall cause its rejection.

Bidder shall make no additional stipulations on the Bid Form nor qualify his bid in any other manner.

The bid shall include the legal name of Bidder and statement whether Bidder is a sole proprietor, partnership, a corporation, or any other legal entity, and the bid shall be signed by the person or persons legally authorized to bind the Bidder to a Contract. In accordance with LA. R.S. 38:2212(5) (a) (b) (c) whenever the bidder is other than a sole proprietor, evidence of authority shall be required for submission of a bid in the form of a corporate resolution, certification as to the corporate principal, or other documents that are acceptable to the public entity. Bidder shall include a corporate resolution with bid submission.

The authority of the signature of the person submitting the bid shall be deemed sufficient and acceptable if the signature on bid is that of authorized representative of corporation, partnership, or other legal entity and bid is accompanied by corporate resolution, certification as to the corporate principal, or other documents indicating authority.

Contractor shall certify that he is licensed under R.S. 37:2150-2163 and show his license number on the bid above his signature or his duly authorized representative.

All signatures shall be in longhand.

SUBMISSION OF BIDS

Bid shall be submitted in a securely sealed opaque envelope and will be received until the time specified and at the place specified in the Advertisement For Bids, or as extended by appropriately issued Addendum. Envelope shall be clearly marked with the following:

- Complete name and address of Bidder.
- Complete project name, location and number, with indication of "BID ENCLOSED".
- The Louisiana Contractor's license number of the Bidder.
- Addressed to the party identified in the Advertisement For Bids as the recipient of all Bids.

It shall be the specific responsibility of each Bidder to deliver its sealed bid at the appointed place not later than the announced time for the receipt and opening of Bids. Late delivery of a Bid for any reason shall disqualify the Bid.

Each bid shall be either hand delivered by the bidder or his agent, in which instance the deliverer shall be given a written receipt, or such bid shall be sent by registered or certified mail with a return receipt requested. The Owner will not accept or take any bid, including receiving hand-delivered bids, on days that are recognized as holidays by the U.S. Postal Service.

If the bid is sent by mail, the sealed bid envelope shall be enclosed in a separate mailing envelope with the notation “Sealed Bid Enclosed” on the face thereof. Other methods of delivery will be rejected.

Bids shall be deposited at the designated location not later than the time on the date for receipt of bids indicated in the Advertisement For Bids, or any extension thereof made by Addendum. Bids received after the time and date for receipt of bids will be returned unopened.

Oral, telephonic, or telegraphic bids are invalid and shall not receive consideration. Owner shall not consider notations written outside of bid envelope that have the effect of amending the bid. Written modifications enclosed in the bid envelope, and signed or initialed by the Contractor or his representative, shall be accepted.

Bidders holding Bidding Documents who are unable to bid shall notify the Owner and Architect of their intent not to bid at least seven (7) calendar days prior to the date of bid receipt and shall return Bidding Documents prior to bid opening.

MODIFICATION OR WITHDRAWAL OF BID

A Bid may not be modified, withdrawn or canceled by the Bidder, except in accordance with R.S. 38:2214 which states in part, "Bids containing patently obvious mechanical, clerical or mathematical errors may be withdrawn by the Contractor if clear and convincing sworn, written evidence of such errors is furnished to the public entity within forty-eight hours of the Bid Opening excluding Saturdays, Sundays and legal holidays".

CONSIDERATION OF BIDS

OPENING OF BIDS

The properly identified Bids received on time will be opened publicly and will be read aloud, and a tabulation abstract of the amounts of the base bids and alternates, if any, will be made available to Bidders.

POST BID INFORMATION

The apparent low bidder(s) as determined by the Architect and/or Owner and so notified, no later than end of business on the first full working day following the bid opening shall submit to the Architect and/or Owner the following no later than 4:00 P.M. on the second full working day following the bid opening:

1. Each bidder on this project must submit the completed Attestation Affidavit (in accordance with LA R.S. 38:2227, 38:2212.10, 23: 1726(B) and the completed Verification Legal Citizen Affidavit forms found within this bid package. The Attestation Affidavit form and the Verification Legal Citizen Affidavit shall be RECEIVED by the Owner. The Attestation Affidavit form and the Verification Legal Citizen Affidavit form are NOT to be included with the bid form and are to be submitted separately. The submission should be identified with the name of the bidder, the project on which he is bidding, and the words ATTESTATION AFFIDAVIT / VERIFICATION LEGAL CITIZEN AFFIDAVIT. Forms may be sent via US Mail, express mail, or hand delivered to Terrebonne General Health System, Facility Management Department – 3rd Floor, 8166 Main Street, Houma, Louisiana 70360, Attention: Mr. Mark Hebert.
2. A complete list of all subcontractors, suppliers, equipment vendors, etc. who will provide materials or services on the project (name, address and phone number).
3. A statement of cost of all items to be accomplished by each proposed subcontractor, supplier, equipment vendor, etc.
4. A designation of the work to be performed by the Bidder with his own forces.
5. A cost breakdown of total contract amount based on line item descriptions listed in project specifications (i.e. Divisions and Sections).
6. Additional information as may be requested by the Architect to allow for the proper evaluation of the cost information provided.
7. Resume of Bidder's proposed project manager, superintendent and key project personnel.

Failure of the Bidder to provide the complete above enumerated information in the time frame indicated will be cause to reject said bid; or the assessment of liquidated damages in the amount of **Three Hundred Dollars ($300.00)** per diem, for each day delay until said information is provided, at the Owner's option. Incomplete information submitted will not be considered as compliant with this contract provision.

The bidder will be required to establish to the satisfaction of the Architect and Owner, the reliability and responsibility of the persons or entities proposed to furnish and perform the Work described in the Bidding Documents.

The Contractor is totally responsible for any lost time or extra expense incurred due to a Subcontractor's/or Material Supplier's failure to perform. Failure to perform includes a Subcontractor's financial failure, abandonment of the project, or failure to do work up to standard. Under no circumstances shall the Owner mitigate the Contractor's losses or reimburse the Contractor for losses caused by these events.

REJECTIONS OF BIDS

The Owner shall have the right to reject any or all Bids and in particular to reject a Bid not accompanied by any required bid security or data required by the Bidding Documents (including submission of Post Bid Information outlined herein) or a Bid in any way incomplete or irregular.

ACCEPTANCE OF BID

It is the intent of the Owner to award a Contract to the lowest responsible and responsive Bidder provided the Bid has been submitted in accordance with the requirements of the Bidding Documents as advertised and does not exceed the funds available for construction.

It is the intent of the Owner, if he accepts any alternates, to accept them in the order in which they are listed on the Bid Form. Determination of the Low Bidder shall be on the basis of the sum of the Base Bid and the Alternates accepted. However, the Owner shall reserve the right to accept Alternates in any order which does not affect determination of the Low Bidder.

PERFORMANCE AND PAYMENT BOND

BOND REQUIRED

The Contractor shall furnish and pay for a Performance and Payment Bond written by a company licensed to do business in Louisiana, which shall be signed by the surety's agent or attorney-in-fact and countersigned by a person who is under Contract with the surety as a licensed agent in this State and who is residing in this State, in an amount equal to 100% of the Contract amount. Surety must be listed currently on the U.S. Department of Treasury Financial Management Service List (Treasury List) as approved for an amount equal to or greater than the contract amount, or must be an insurance company domiciled in Louisiana or owned by Louisiana residents. If surety is qualified other than by listing on the Treasury list, the contract amount may not exceed fifteen percent of policyholders' surplus as shown by surety's most recent financial statements filed with the Louisiana Department of Insurance and may not exceed the amount of $500,000.00. However, a Louisiana domiciled insurance company with at least an A- rating in the latest printing of the A.M. Best's Key Rating Guide shall not be subject to the $500,000.00 limitation, provided that the contract amount does not exceed ten percent of policyholders' surplus as shown in the latest A.M. Best's Key Rating Guide nor fifteen percent of policyholders' surplus as shown by surety's most recent financial statements filed with the Louisiana Department of Insurance. The Bond shall be signed by the surety's agent or attorney-in-fact and countersigned by a person who is under contract with surety as a licensed agent in Louisiana, and who is residing in Louisiana. The Bond shall be in favor of **Hospital Service District No. 1 - Parish of Terrebonne**.

TIME OF DELIVERY AND FORM OF BOND

The Bidder shall deliver the required bond to the Owner simultaneous with the execution of the Contract.

Bond shall be in the form furnished in the Bidding Documents, AIA Document A312-2010, dated the same day as the Contract.

The Bidder shall require the Attorney-in-Fact who executes the required bond on behalf of the surety to affix thereto a certified and current copy of his Power of Attorney.

FORM OF AGREEMENT BETWEEN OWNER AND CONTRACTOR

Successful bidder will be notified by registered mail of the acceptance of his proposal.

Contract between the Owner and Contractor will be prepared by the Architect and be in a form similar to AIA Document A101-2017 edition.

Contract signing shall be as established by the Owner with proper notice given to the Contractor. A copy of the executed contract and attached bonds shall be filed with the Clerk of Courts, Terrebonne Parish, and the cost shall be paid by the Contractor.

LIQUIDATED DAMAGES

The parties agree that time is of the essence in the completion of this Contract. In the event the Contractor fails to achieve Substantial Completion within the time stipulated in Section 3.3, then Liquidated Damages are hereby stipulated, and shall be assessed against the Contractor, in the amount of **One Thousand Dollars ($1,000.00)** per calendar day after the agreed upon Substantial Completion date that the Work is not fully certified by the Architect as being Substantially Complete and, in such event: (a) the Owner shall be authorized and empowered to recover such Liquidated Damages without placing Contractor in default, the Contractor hereby specifically waiving the necessity of being placed in default as required by Louisiana Civil Code Article 2010; and (b) the Owner shall be, authorized and empowered to recover such Liquidated Damages by deducting and withholding such sum(s), from payments of the Contract Sum to which Contractor would otherwise be entitled hereunder, without further legal process.

The failure on the part of the Contractor to achieve substantial completion within the time provided herein shall, without any further notice or formal placing in default of the Contractor by the Owner, constitute legal default of the Contract on the part of the Contractor and shall, in and of itself, automatically commence the accumulation of liquidated damages in favor of the Owner for which the Contractor shall be held liable. It is the intention of the parties hereto to specifically provide that formal placing in legal default of the Contractor by the Owner is unnecessary, and occurs by the mere expiration of the term provided by this Contract for achieving substantial completion.

The liquidated damages provided for herein are intended to compensate the owner for all financial losses and the additional administrative burden caused by the failure of the Contractor to complete construction timely. Liquidated damages may be due without regard to whether or not the owner actually suffers any financial loss or incurs additional administrative burdens, but, on the contrary, shall be due solely as a result of the failure of the Contractor to complete construction timely.

Criteria for Substantial Completion is as defined in Article 9, subparagraph 9.8 of the General Conditions of the Contract for Construction, as modified by Supplementary General Conditions.

MANDATORY PRE-BID CONFERENCE

A Mandatory pre-bid conference is scheduled to be held as prescribed in the Advertisement For Bids. Attendance at this mandatory pre-bid conference will be documented by a Roster of Attendance and all attendees are required to sign in prior to the scheduled start time and sign out at the end of the conference. All prospective bidders shall be present at the beginning of the pre-bid conference and shall remain in attendance for the duration of the

conference. Any prospective bidder who fails to attend the conference and remain for the duration shall be prohibited from submitting a bid for the project.

The purpose of the Mandatory Pre-Bid Conference is to familiarize Bidders with the requirements of the Project and the intent of the Contract Documents, and to receive comments and information from interested Bidders.

Any revision of the Bidding Documents made as a result of the Pre-Bid Conference shall not be valid unless included in an Addendum issued in accordance with the Instruction to Bidders.

END OF SECTION 00 21 13

R-1020 (4/12)

LDR Contributing to a better quality of life

Designation of Construction Contractor as Agent of a Governmental Entity Sales Tax Exemption Certificate

Hospital Service District No. 1 - Terrebonne Parish, an agency of the United

Legal Name of Governmental Entity

States government, or an agency, board, commission, or instrumentality of the State of Louisiana or its political subdivisions, including parishes, municipalities and school boards, does hereby designate the following contractor as its agent for the purpose of making sales tax exempt purchases on behalf of the governmental body:

Name of Contractor		
Address		
City	State	ZIP

This designation of agency shall be effective for purchases of component construction materials, taxable services and leases and rentals of tangible personal property for the following named construction project:

Construction Project	Contract Number
TGHS Health and Wellness Center	Project #: 21001

This designation and acceptance of agency is effective for the period

Beginning Date *(mm/dd/yyyy)*	End Date *(mm/dd/yyyy)*

Purchases for the named project during this period by the designated contractor shall be considered as the legal equivalent of purchases directly by the governmental body. Any materials purchased by this agent shall immediately, upon the vendor's delivery to the agent, become the property of this government entity. This government entity, as principal, assumes direct liability to the vendor for the payment of any property, services, leases, or rentals made by this designated agent. This agreement does not void or supersede the obligations of any party created under any construction contract related to this project, including specifically any contractual obligation of the construction contractor to submit payment to the vendors of materials or services for the project.

This contractor-agent is not authorized to delegate this purchasing agency to others; separate designations of agency by this governmental entity are required for each contractor or sub-contractor who is to purchase on behalf of this governmental entity. The undersigned hereby certify that this designation is the entirety of the agency designation agreement between them. In order for a purchase for an eligible governmental entity through a designated agent to be eligible for sales tax exemption, the designation of agency must be made, accepted, and disclosed to the vendor before or at the time of the purchase transaction.

Designation of Agency			**Acceptance of Agency**		
Signature of Authorized Designator	Date *(mm/dd/yyyy)*		Signature of Contractor or Subcontractor Authorized Acceptor	Date *(mm/dd/yyyy)*	
Name of Authorized Designator			Name of Contractor's or Subcontractor's Acceptor		
Name of Governmental Entity			Name of Contractor		
Hospital Service District No. 1 - Terrebonne Parish					
Address			Address		
8166 Main Street					
City	State	ZIP	City	State	ZIP
Houma	LA	70360			

This designation of agency form, when properly executed by both the contractor and the governmental entity, shall serve as evidence of the sales tax exempt status that has been conferred onto the contractor. No other exemption certificate form is necessary to claim exemption from sales taxes. The agency agreement evidenced by this sales tax exemption certificate must be implemented at the time of contract execution with the governmental entity. The contract between the governmental entity and his agent must contain provisions to authenticate the conferment of agency.

LOUISIANA UNIFORM PUBLIC WORK BID FORM

TO: Hospital Service District NO.1 - Terrebonne Parish
8166 Main Street
Houma, Louisiana 70360

(Owner to provide name and address of owner)

BID FOR TGHS - Health and Wellness Center
Terrebonne General health System
8166 Main Street
Houma, Louisiana 70360
Architect's Project Number: 21001

ARTICLE 1 GENERAL PROVISIONS

§ 1.1 Basic Definitions

§ 1.1.1 The Contract Documents

The Contract Documents are enumerated in the Agreement between the Owner and Contractor (hereinafter the Agreement) and consist of the Agreement, Conditions of the Contract (General, Supplementary and other Conditions), Drawings, Specifications, Addenda issued prior to execution of the Contract, other documents listed in the Agreement, and Modifications issued after execution of the Contract. A Modification is (1) a written amendment to the Contract signed by both parties, (2) a Change Order, (3) a Construction Change Directive, or (4) a written order for a minor change in the Work issued by the Architect. ~~Unless specifically enumerated in the Agreement, the Contract Documents do not include the advertisement or invitation to bid, Instructions to Bidders, sample forms, other information furnished by the Owner in anticipation of receiving bids or proposals, the Contractor's bid or proposal, or portions of Addenda relating to bidding or proposal requirements.~~ The Contract Documents shall include Bidding Documents as listed in the Instructions to Bidders and any modifications made thereto by Addenda.

§ 1.1.2 The Contract

The Contract Documents form the Contract for Construction. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. The Contract may be amended or modified only by a Modification. The Contract Documents shall not be construed to create a contractual relationship of any kind (1) between the Contractor and the Architect or the Architect's consultants, (2) between the Owner and a Subcontractor or a Sub-subcontractor, (3) between the Owner and the Architect or the Architect's consultants, or (4) between any persons or entities other than the Owner and the Contractor. The Architect shall, however, be entitled to performance and enforcement of obligations under the Contract intended to facilitate performance of the Architect's duties.

§ 1.1.3 The Work

The term "Work" means the construction and services required by the Contract Documents, whether completed or partially completed, and includes all other labor, materials, equipment, and services provided or to be provided by the Contractor to fulfill the Contractor's obligations. The Work may constitute the whole or a part of the Project.

§ 1.1.4 The Project

The Project is the total construction of which the Work performed under the Contract Documents may be the whole or a part and which may include construction by the Owner and by Separate Contractors.

§ 1.1.5 The Drawings

The Drawings are the graphic and pictorial portions of the Contract Documents showing the design, location and dimensions of the Work, generally including plans, elevations, sections, details, schedules, and diagrams.

§ 1.1.6 The Specifications

The Specifications are that portion of the Contract Documents consisting of the written requirements for materials, equipment, systems, standards and workmanship for the Work, and performance of related services.

§ 1.1.7 Instruments of Service

Instruments of Service are representations, in any medium of expression now known or later developed, of the tangible and intangible creative work performed by the Architect and the Architect's consultants under their respective professional services agreements. Instruments of Service may include, without limitation, studies, surveys, models, sketches, drawings, specifications, and other similar materials.

§ 1.1.8 Initial Decision Maker

The Initial Decision Maker is the person identified in the Agreement to render initial decisions on Claims in accordance with Section 15.2. The Initial Decision Maker shall not show partiality to the Owner or Contractor and shall not be liable for results of interpretations or decisions rendered in good faith.

§ 1.2 Correlation and Intent of the Contract Documents

§ 1.2.1 The intent of the Contract Documents is to include all items necessary for the proper execution and completion of the Work by the Contractor. The Contract Documents are complementary, and what is required by one shall be as binding as if required by all; performance by the Contractor shall be required only to the extent consistent with the Contract Documents and reasonably inferable from them as being necessary to produce the indicated results.

User Notes: (3B9ADA39)

§ 1.2.1.1 The invalidity of any provision of the Contract Documents shall not invalidate the Contract or its remaining provisions. If it is determined that any provision of the Contract Documents violates any law, or is otherwise invalid or unenforceable, then that provision shall be revised to the extent necessary to make that provision legal and enforceable. In such case the Contract Documents shall be construed, to the fullest extent permitted by law, to give effect to the parties' intentions and purposes in executing the Contract.

1.2.1.2 In the event of conflicts or discrepancies among the Contract Documents, Interpretation will be based on the following priorities:

1. The Agreement.
2. Addenda, with those of later date having precedence over those of earlier date.
3. The General Conditions of the Contract for Construction.
4. Drawings and Specifications.

1.2.1.3. In the case of inconsistency between Drawings and Specifications or within either Document not clarified by addendum, the better quality or greater quantity of Work shall be provided in accordance with the Architect's interpretation.

§ 1.2.2 Organization of the Specifications into divisions, sections and articles, and arrangement of Drawings shall not control the Contractor in dividing the Work among Subcontractors or in establishing the extent of Work to be performed by any trade.

§ 1.2.3 Unless otherwise stated in the Contract Documents, words that have well-known technical or construction industry meanings are used in the Contract Documents in accordance with such recognized meanings.

§ 1.3 Capitalization

Terms capitalized in these General Conditions include those that are (1) specifically defined, (2) the titles of numbered articles, or (3) the titles of other documents published by the American Institute of Architects.

§ 1.4 Interpretation

In the interest of brevity the Contract Documents frequently omit modifying words such as "all" and "any" and articles such as "the" and "an," but the fact that a modifier or an article is absent from one statement and appears in another is not intended to affect the interpretation of either statement.

§ 1.5 Ownership and Use of Drawings, Specifications, and Other Instruments of Service

§ 1.5.1 The Architect and the Architect's consultants shall be deemed the authors and owners of their respective Instruments of Service, including the Drawings and Specifications, and retain all common law, statutory, and other reserved rights in their Instruments of Service, including copyrights. The Contractor, Subcontractors, Sub-subcontractors, and suppliers shall not own or claim a copyright in the Instruments of Service. Submittal or distribution to meet official regulatory requirements or for other purposes in connection with the Project is not to be construed as publication in derogation of the Architect's or Architect's consultants' reserved rights.

§ 1.5.2 The Contractor, Subcontractors, Sub-subcontractors, and suppliers are authorized to use and reproduce the Instruments of Service provided to them, subject to any protocols established pursuant to Sections 1.7 and 1.8, solely and exclusively for execution of the Work. All copies made under this authorization shall bear the copyright notice, if any, shown on the Instruments of Service. The Contractor, Subcontractors, Sub-subcontractors, and suppliers may not use the Instruments of Service on other projects or for additions to the Project outside the scope of the Work without the specific written consent of the Owner, Architect, and the Architect's consultants.

§ 1.6 Notice

§ 1.6.1 Except as otherwise provided in Section 1.6.2, where the Contract Documents require one party to notify or give notice to the other party, such notice shall be provided in writing to the designated representative of the party to whom the notice is addressed and shall be deemed to have been duly served if delivered in person, by mail, by courier, or by electronic transmission if a method for electronic transmission is set forth in the Agreement.

§ 1.6.2 Notice of Claims as provided in Section 15.1.3 shall be provided in writing and shall be deemed to have been duly served only if delivered to the designated representative of the party to whom the notice is addressed by certified or registered mail, or by courier providing proof of delivery.

§ 1.7 Digital Data Use and Transmission

The parties shall agree upon protocols governing the transmission and use of Instruments of Service or any other information or documentation in digital form. The parties will use AIA Document E203™–2013, Building Information Modeling and Digital Data Exhibit, to establish the protocols for the development, use, transmission, and exchange of digital data.

§ 1.8 Building Information Models Use and Reliance

Any use of, or reliance on, all or a portion of a building information model without agreement to protocols governing the use of, and reliance on, the information contained in the model and without having those protocols set forth in AIA Document E203™–2013, Building Information Modeling and Digital Data Exhibit, and the requisite AIA Document G202™–2013, Project Building Information Modeling Protocol Form, shall be at the using or relying party's sole risk and without liability to the other party and its contractors or consultants, the authors of, or contributors to, the building information model, and each of their agents and employees.

ARTICLE 2 OWNER

§ 2.1 General

§ 2.1.1 The Owner is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Owner shall designate in writing a representative who shall have express authority to bind the Owner with respect to all matters requiring the Owner's approval or authorization. Except as otherwise provided in Section 4.2.1, the Architect does not have such authority. The term "Owner" means the Owner or the Owner's authorized representative.

§ 2.1.2 The Owner shall furnish to the Contractor, within fifteen days after receipt of a written request, information necessary and relevant for the Contractor to evaluate, give notice of, or enforce mechanic's lien rights. Such information shall include a correct statement of the record legal title to the property on which the Project is located, usually referred to as the site, and the Owner's interest therein.

§ 2.2 Evidence of the Owner's Financial Arrangements

§ 2.2.1 Prior to commencement of the Work and upon written request by the Contractor, the Owner shall furnish to the Contractor reasonable evidence that the Owner has made financial arrangements to fulfill the Owner's obligations under the Contract. The Contractor shall have no obligation to commence the Work until the Owner provides such evidence. If commencement of the Work is delayed under this Section 2.2.1, the Contract Time shall be extended appropriately.

§ 2.2.2 Following commencement of the Work and upon written request by the Contractor, the Owner shall furnish to the Contractor reasonable evidence that the Owner has made financial arrangements to fulfill the Owner's obligations under the Contract only if (1) the Owner fails to make payments to the Contractor as the Contract Documents require; (2) the Contractor identifies in writing a reasonable concern regarding the Owner's ability to make payment when due; or (3) a change in the Work materially changes the Contract Sum. If the Owner fails to provide such evidence, as required, within fourteen days of the Contractor's request, the Contractor may immediately stop the Work and, in that event, shall notify the Owner that the Work has stopped. However, if the request is made because a change in the Work materially changes the Contract Sum under (3) above, the Contractor may immediately stop only that portion of the Work affected by the change until reasonable evidence is provided. If the Work is stopped under this Section 2.2.2, the Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shutdown, delay and start-up, plus interest as provided in the Contract Documents.

§ 2.2.3 After the Owner furnishes evidence of financial arrangements under this Section 2.2, the Owner shall not materially vary such financial arrangements without prior notice to the Contractor.

§ 2.2.4 Where the Owner has designated information furnished under this Section 2.2 as "confidential," the Contractor shall keep the information confidential and shall not disclose it to any other person. However, the Contractor may disclose "confidential" information, after seven (7) days' notice to the Owner, where disclosure is required by law, including a subpoena or other form of compulsory legal process issued by a court or governmental

User Notes: (3B9ADA39)

entity, or by court or arbitrator(s) order. The Contractor may also disclose "confidential" information to its employees, consultants, sureties, Subcontractors and their employees, Sub-subcontractors, and others who need to know the content of such information solely and exclusively for the Project and who agree to maintain the confidentiality of such information.

§ 2.3 Information and Services Required of the Owner

§ 2.3.1 ~~Except for permits and fees that are the responsibility of the Contractor under the Contract Documents, including those required under Section 3.7.1, the Owner~~ The Contractors shall secure and pay for necessary permits, approvals, easements, assessments and charges required for construction, use or occupancy of permanent structures or for permanent changes in existing facilities.

§ 2.3.2 The Owner shall retain an architect lawfully licensed to practice architecture, or an entity lawfully practicing architecture, in the jurisdiction where the Project is located. That person or entity is identified as the Architect in the Agreement and is referred to throughout the Contract Documents as if singular in number.

§ 2.3.3 If the employment of the Architect terminates, the Owner shall employ a successor to whom the Contractor has no reasonable objection and whose status under the Contract Documents shall be that of the Architect.

§ 2.3.4 The Owner shall furnish surveys describing physical characteristics, legal limitations and utility locations for the site of the Project, and a legal description of the site. The Contractor shall be entitled to rely on the accuracy of information furnished by the Owner but shall exercise proper precautions relating to the safe performance of the Work.

§ 2.3.5 The Owner shall furnish information or services required of the Owner by the Contract Documents with reasonable promptness. The Owner shall also furnish any other information or services under the Owner's control and relevant to the Contractor's performance of the Work with reasonable promptness after receiving the Contractor's written request for such information or services.

§ 2.3.6 Unless otherwise provided in the Contract Documents, the Owner shall furnish to the Contractor one copy of the Contract Documents for purposes of making reproductions pursuant to Section 1.5.2.

§ 2.4 Owner's Right to Stop the Work

If the Contractor fails to correct Work that is not in accordance with the requirements of the Contract Documents as required by Section 12.2 or repeatedly fails to carry out Work in accordance with the Contract Documents, the Owner may issue a written order to the Contractor to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, the right of the Owner to stop the Work shall not give rise to a duty on the part of the Owner to exercise this right for the benefit of the Contractor or any other person or entity, except to the extent required by Section 6.1.3.

§ 2.5 Owner's Right to Carry Out the Work

If the Contractor defaults or neglects to carry out the Work in accordance with the Contract Documents and fails within a ten-day period after receipt of notice from the Owner to commence and continue correction of such default or neglect with diligence and promptness, the Owner may, without prejudice to other remedies the Owner may have, correct such default or neglect. Such action by the Owner and amounts charged to the Contractor are both subject to prior approval of the Architect and the Architect may, pursuant to Section 9.5.1, withhold or nullify a Certificate for Payment in whole or in part, to the extent reasonably necessary to reimburse the Owner for the reasonable cost of correcting such deficiencies, including Owner's expenses and compensation for the Architect's additional services made necessary by such default, neglect, or failure. If current and future payments are not sufficient to cover such amounts, the Contractor shall pay the difference to the Owner. If the Contractor disagrees with the actions of the Owner or the Architect, or the amounts claimed as costs to the Owner, the Contractor may file a Claim pursuant to Article 15.

ARTICLE 3 CONTRACTOR

§ 3.1 General

§ 3.1.1 The Contractor is the person or entity identified as such in the Agreement and is referred to throughout the Contract Documents as if singular in number. The Contractor shall be lawfully licensed, if required in the jurisdiction where the Project is located. The Contractor shall designate in writing a representative who shall have

AIA Document A201 – 2017. Copyright © 1911, 1915, 1918, 1925, 1937, 1951, 1958, 1961, 1963, 1966, 1970, 1976, 1987, 1997, 2007 and 2017. All rights reserved. User Notes: (3B9ADA39)

express authority to bind the Contractor with respect to all matters under this Contract. The term "Contractor" means the Contractor or the Contractor's authorized representative.

§ 3.1.2 The Contractor shall perform the Work in accordance with the Contract Documents.

§ 3.1.3 The Contractor shall not be relieved of its obligations to perform the Work in accordance with the Contract Documents either by activities or duties of the Architect in the Architect's administration of the Contract, or by tests, inspections or approvals required or performed by persons or entities other than the Contractor.

§ 3.2 Review of Contract Documents and Field Conditions by Contractor

§ 3.2.1 Execution of the Contract by the Contractor is a representation that the Contractor has visited the site, become generally familiar with local conditions under which the Work is to be performed, and correlated personal observations with requirements of the Contract Documents.

§ 3.2.2 Because the Contract Documents are complementary, the Contractor shall, before starting each portion of the Work, carefully study and compare the various Contract Documents relative to that portion of the Work, as well as the information furnished by the Owner pursuant to Section 2.3.4, shall take field measurements of any existing conditions related to that portion of the Work, and shall observe any conditions at the site affecting it. These obligations are for the purpose of facilitating coordination and construction by the Contractor and are not for the purpose of discovering errors, omissions, or inconsistencies in the Contract Documents; however, the Contractor shall promptly report to the Architect any errors, inconsistencies or omissions discovered by or made known to the Contractor as a request for information in such form as the Architect may require. It is recognized that the Contractor's review is made in the Contractor's capacity as a contractor and not as a licensed design professional, unless otherwise specifically provided in the Contract Documents.

§ 3.2.3 The Contractor is not required to ascertain that the Contract Documents are in accordance with applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities, but the Contractor shall promptly report to the Architect any nonconformity discovered by or made known to the Contractor as a request for information in such form as the Architect may require.

§ 3.2.4 If the Contractor believes that additional cost or time is involved because of clarifications or instructions the Architect issues in response to the Contractor's notices or requests for information pursuant to Sections 3.2.2 or 3.2.3, the Contractor shall submit Claims as provided in Article 15. If the Contractor fails to perform the obligations of Sections 3.2.2 or 3.2.3, the Contractor shall pay such costs and damages to the Owner, subject to Section 15.1.7, as would have been avoided if the Contractor had performed such obligations. If the Contractor performs those obligations, the Contractor shall not be liable to the Owner or Architect for damages resulting from errors, inconsistencies or omissions in the Contract Documents, for differences between field measurements or conditions and the Contract Documents, or for nonconformities of the Contract Documents to applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities.

§ 3.3 Supervision and Construction Procedures

§ 3.3.1 The Contractor shall supervise and direct the Work, using the Contractor's best skill and attention. The Contractor shall be solely responsible for, and have control over, construction means, methods, techniques, sequences, and procedures, and for coordinating all portions of the Work under the Contract. If the Contract Documents give specific instructions concerning construction means, methods, techniques, sequences, or procedures, the Contractor shall evaluate the jobsite safety thereof and shall be solely responsible for the jobsite safety of such means, methods, techniques, sequences, or procedures. If the Contractor determines that such means, methods, techniques, sequences or procedures may not be safe, the Contractor shall give timely notice to the Owner and Architect, and shall propose alternative means, methods, techniques, sequences, or procedures. The Architect shall evaluate the proposed alternative solely for conformance with the design intent for the completed construction. Unless the Architect objects to the Contractor's proposed alternative, the Contractor shall perform the Work using its alternative means, methods, techniques, sequences, or procedures.

§ 3.3.2 The Contractor shall be responsible to the Owner for acts and omissions of the Contractor's employees, Subcontractors and their agents and employees, and other persons or entities performing portions of the Work for, or on behalf of, the Contractor or any of its Subcontractors.

User Notes: (3B9ADA39)

§ 3.3.3 The Contractor shall be responsible for inspection of portions of Work already performed to determine that such portions are in proper condition to receive subsequent Work.

§ 3.4 Labor and Materials

§ 3.4.1 Unless otherwise provided in the Contract Documents, the Contractor shall provide and pay for labor, materials, equipment, tools, construction equipment and machinery, water, heat, utilities, transportation, and other facilities and services necessary for proper execution and completion of the Work, whether temporary or permanent and whether or not incorporated or to be incorporated in the Work.

§ 3.4.2 Except in the case of minor changes in the Work approved by the Architect in accordance with Section 3.12.8 or ordered by the Architect in accordance with Section 7.4, the Contractor may make substitutions only with the consent of the Owner, after evaluation by the Architect and in accordance with a Change Order or Construction Change Directive.

§ 3.4.3 The Contractor shall enforce strict discipline and good order among the Contractor's employees and other persons carrying out the Work. The Contractor shall not permit employment of unfit persons or persons not properly skilled in tasks assigned to them. Proper clothing and conduct by workers is required at all times. Working without shirts is not permitted. There shall be no association of workers with patients or medical staff, tobacco usage is not allowed on Terrebonne General properties, no use of or possession of drugs, fire arms, explosives and alcohol on the construction site. Identification tags will be issued by the Contractor for all individual workers on the project. These must be worn at all times. Workers without I.D. tags are not permitted on the site.

§ 3.5 Warranty

§ 3.5.1 The Contractor warrants to the Owner and Architect that materials and equipment furnished under the Contract will be of good quality and new unless the Contract Documents require or permit otherwise. The Contractor further warrants that the Work will conform to the requirements of the Contract Documents and will be free from defects, except for those inherent in the quality of the Work the Contract Documents require or permit. Work, materials, or equipment not conforming to these requirements may be considered defective. The Contractor's warranty excludes remedy for damage or defect caused by abuse, alterations to the Work not executed by the Contractor, improper or insufficient maintenance, improper operation, or normal wear and tear and normal usage. If required by the Architect, the Contractor shall furnish satisfactory evidence as to the kind and quality of materials and equipment.

§ 3.5.2 All material, equipment, or other special warranties required by the Contract Documents shall be issued in the name of the Owner, or shall be transferable to the Owner, and shall commence in accordance with Section 9.8.4. The Contractor shall submit to the Architect the project warranty for the entire Work and special warranty-guarantees required by the specifications, on his letterhead excluding specified manufacturer's guarantees/warranties. Submittal of all warranties and guarantees is required as prerequisite of the final payment.

§ 3.6 Taxes

The Contractor shall ~~pay sales, consumer, use and similar taxes for the Work provided by the Contractor that are legally enacted when bids are received or negotiations concluded, whether or not yet effective or merely scheduled to go into effect.~~not pay any state or local sales, or state or local use taxes on materials or equipment which are affixed and made a part of the real estate of the project or work in which is permanently incorporated into the project or work (hereinafter referred to as "applicable materials or equipment"). All purchases of applicable materials or equipment shall be made by the contractor on behalf of and as the agent of Hospital Service District No. 1, of the Parish of Terrebonne, a political subdivision of the State of Louisiana. No state or local sales or use taxes are owed on applicable materials or equipment under the provisions of Louisiana Revised Statue 47:301(8)(c). Owner will furnish contractor a certificate on a form R-1020 supplied by the Louisiana Department of Revenue and Taxation which certified that owner is not required to pay such state or local sales or use taxes and contractor shall furnish a copy of such certificates to all vendors or suppliers of the applicable materials or equipment. The owner agrees to indemnify contractor against the payment of any state or local sales or use taxes which are required to be paid regarding the work or the project or any materials or equipment supplied or purchased by the contractor for the work under the contract. Any applicable materials or equipment purchased by the agent through the use of this certificate immediately become the property of Hospital Service District No. 1, of the Parish of Terrebonne, upon delivery to the contractor/agent.

§ 3.7 Permits, Fees, Notices and Compliance with Laws

§ 3.7.1 Unless otherwise provided in the Contract Documents, the Contractor shall secure and pay for the building permit as well as for other permits, fees, licenses, and inspections by government agencies necessary for proper execution and completion of the Work that are customarily secured after execution of the Contract and legally required at the time bids are received or negotiations concluded.

§ 3.7.2 The Contractor shall comply with and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities applicable to performance of the Work.

§ 3.7.3 If the Contractor performs Work knowing it to be contrary to applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of public authorities, the Contractor shall assume appropriate responsibility for such Work and shall bear the costs attributable to correction.

§ 3.7.4 Concealed or Unknown Conditions

If the Contractor encounters conditions at the site that are (1) subsurface or otherwise concealed physical conditions that differ materially from those indicated in the Contract Documents or (2) unknown physical conditions of an unusual nature that differ materially from those ordinarily found to exist and generally recognized as inherent in construction activities of the character provided for in the Contract Documents, the Contractor shall promptly provide notice to the Owner and the Architect before conditions are disturbed and in no event later than 14 days after first observance of the conditions. The Architect will promptly investigate such conditions and, if the Architect determines that they differ materially and cause an increase or decrease in the Contractor's cost of, or time required for, performance of any part of the Work, will recommend that an equitable adjustment be made in the Contract Sum or Contract Time, or both. If the Architect determines that the conditions at the site are not materially different from those indicated in the Contract Documents and that no change in the terms of the Contract is justified, the Architect shall promptly notify the Owner and Contractor, stating the reasons. If either party disputes the Architect's determination or recommendation, that party may submit a Claim as provided in Article 15.

§ 3.7.5 If, in the course of the Work, the Contractor encounters human remains or recognizes the existence of burial markers, archaeological sites or wetlands not indicated in the Contract Documents, the Contractor shall immediately suspend any operations that would affect them and shall notify the Owner and Architect. Upon receipt of such notice, the Owner shall promptly take any action necessary to obtain governmental authorization required to resume the operations. The Contractor shall continue to suspend such operations until otherwise instructed by the Owner but shall continue with all other operations that do not affect those remains or features. Requests for adjustments in the Contract Sum and Contract Time arising from the existence of such remains or features may be made as provided in Article 15.

~~**§ 3.8 Allowances**~~

~~**§ 3.8.1** The Contractor shall include in the Contract Sum all allowances stated in the Contract Documents. Items covered by allowances shall be supplied for such amounts and by such persons or entities as the Owner may direct, but the Contractor shall not be required to employ persons or entities to whom the Contractor has reasonable objection.~~

~~**§ 3.8.2** Unless otherwise provided in the Contract Documents,~~

- ~~.1 allowances shall cover the cost to the Contractor of materials and equipment delivered at the site and all required taxes, less applicable trade discounts;~~
- ~~.2 Contractor's costs for unloading and handling at the site, labor, installation costs, overhead, profit, and other expenses contemplated for stated allowance amounts shall be included in the Contract Sum but not in the allowances; and~~
- ~~.3 whenever costs are more than or less than allowances, the Contract Sum shall be adjusted accordingly by Change Order. The amount of the Change Order shall reflect (1) the difference between actual costs and the allowances under Section 3.8.2.1 and (2) changes in Contractor's costs under Section 3.8.2.2.~~

~~**§ 3.8.3** Materials and equipment under an allowance shall be selected by the Owner with reasonable promptness.~~

3.9 Superintendent

§ 3.9.1 The Contractor shall employ a competent superintendent and necessary assistants who shall be in attendance at the Project site during performance of the Work. The superintendent shall represent the Contractor, and communications given to the superintendent shall be as binding as if given to the Contractor.

§ 3.9.2 The Contractor, as soon as practicable after award of the Contract, shall notify the Owner and Architect of the name and qualifications of a proposed superintendent. Within 14 days of receipt of the information, the Architect may notify the Contractor, stating whether the Owner or the Architect (1) has reasonable objection to the proposed superintendent or (2) requires additional time for review. Failure of the Architect to provide notice within the 14-day period shall constitute notice of no reasonable objection.

§ 3.9.3 The Contractor shall not employ a proposed superintendent to whom the Owner or Architect has made reasonable and timely objection. The Contractor shall not change the superintendent without the Owner's consent, which shall not unreasonably be withheld or delayed.

§ 3.10 Contractor's Construction and Submittal Schedules

§ 3.10.1 The Contractor, promptly after being awarded the Contract, shall submit for the Owner's and Architect's information a Contractor's construction schedule for the Work. The schedule shall contain detail appropriate for the Project, including (1) the date of commencement of the Work, interim schedule milestone dates, and the date of Substantial Completion; (2) an apportionment of the Work by construction activity; and (3) the time required for completion of each portion of the Work. The schedule shall provide for the orderly progression of the Work to completion and shall not exceed time limits current under the Contract Documents. The schedule shall be revised at appropriate intervals as required by the conditions of the Work and Project.

§ 3.10.2 The Contractor, promptly after being awarded the Contract and thereafter as necessary to maintain a current submittal schedule, shall submit a submittal schedule for the Architect's approval. The Architect's approval shall not be unreasonably delayed or withheld. The submittal schedule shall (1) be coordinated with the Contractor's construction schedule, and (2) allow the Architect reasonable time to review submittals. If the Contractor fails to submit a submittal schedule, or fails to provide submittals in accordance with the approved submittal schedule, the Contractor shall not be entitled to any increase in Contract Sum or extension of Contract Time based on the time required for review of submittals.

§ 3.10.3 The Contractor shall perform the Work in general accordance with the most recent schedules submitted to the Owner and Architect.

§ 3.11 Documents and Samples at the Site

The Contractor shall make available, at the Project site, the Contract Documents, including Change Orders, Construction Change Directives, and other Modifications, in good order and marked currently to indicate field changes and selections made during construction, and the approved Shop Drawings, Product Data, Samples, and similar required submittals. These shall be in electronic form or paper copy, available to the Architect and Owner, and delivered to the Architect for submittal to the Owner upon completion of the Work as a record of the Work as constructed.

§ 3.12 Shop Drawings, Product Data and Samples

§ 3.12.1 Shop Drawings are drawings, diagrams, schedules, and other data specially prepared for the Work by the Contractor or a Subcontractor, Sub-subcontractor, manufacturer, supplier, or distributor to illustrate some portion of the Work.

§ 3.12.2 Product Data are illustrations, standard schedules, performance charts, instructions, brochures, diagrams, and other information furnished by the Contractor to illustrate materials or equipment for some portion of the Work.

§ 3.12.3 Samples are physical examples that illustrate materials, equipment, or workmanship, and establish standards by which the Work will be judged.

§ 3.12.4 Shop Drawings, Product Data, Samples, and similar submittals are not Contract Documents. Their purpose is to demonstrate how the Contractor proposes to conform to the information given and the design concept expressed in the Contract Documents for those portions of the Work for which the Contract Documents require submittals.

Review by the Architect is subject to the limitations of Section 4.2.7. Informational submittals upon which the Architect is not expected to take responsive action may be so identified in the Contract Documents. Submittals that are not required by the Contract Documents may be returned by the Architect without action.

§ 3.12.5 The Contractor shall review for compliance with the Contract Documents, approve, and submit to the Architect, Shop Drawings, Product Data, Samples, and similar submittals required by the Contract Documents, in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness and in such sequence as to cause no delay in the Work or in the activities of the Owner or of Separate Contractors.

§ 3.12.6 By submitting Shop Drawings, Product Data, Samples, and similar submittals, the Contractor represents to the Owner and Architect that the Contractor has (1) reviewed and approved them, (2) determined and verified materials, field measurements and field construction criteria related thereto, or will do so, and (3) checked and coordinated the information contained within such submittals with the requirements of the Work and of the Contract Documents.

§ 3.12.7 The Contractor shall perform no portion of the Work for which the Contract Documents require submittal and review of Shop Drawings, Product Data, Samples, or similar submittals, until the respective submittal has been approved by the Architect.

§ 3.12.8 The Work shall be in accordance with approved submittals except that the Contractor shall not be relieved of responsibility for deviations from the requirements of the Contract Documents by the Architect's approval of Shop Drawings, Product Data, Samples, or similar submittals, unless the Contractor has specifically notified the Architect of such deviation at the time of submittal and (1) the Architect has given written approval to the specific deviation as a minor change in the Work, or (2) a Change Order or Construction Change Directive has been issued authorizing the deviation. The Contractor shall not be relieved of responsibility for errors or omissions in Shop Drawings, Product Data, Samples, or similar submittals, by the Architect's approval thereof.

§ 3.12.9 The Contractor shall direct specific attention, in writing or on resubmitted Shop Drawings, Product Data, Samples, or similar submittals, to revisions other than those requested by the Architect on previous submittals. In the absence of such notice, the Architect's approval of a resubmission shall not apply to such revisions.

§ 3.12.10 The Contractor shall not be required to provide professional services that constitute the practice of architecture or engineering unless such services are specifically required by the Contract Documents for a portion of the Work or unless the Contractor needs to provide such services in order to carry out the Contractor's responsibilities for construction means, methods, techniques, sequences, and procedures. The Contractor shall not be required to provide professional services in violation of applicable law.

§ 3.12.10.1 If professional design services or certifications by a design professional related to systems, materials, or equipment are specifically required of the Contractor by the Contract Documents, the Owner and the Architect will specify all performance and design criteria that such services must satisfy. The Contractor shall be entitled to rely upon the adequacy and accuracy of the performance and design criteria provided in the Contract Documents. The Contractor shall cause such services or certifications to be provided by an appropriately licensed design professional, whose signature and seal shall appear on all drawings, calculations, specifications, certifications, Shop Drawings, and other submittals prepared by such professional. Shop Drawings, and other submittals related to the Work, designed or certified by such professional, if prepared by others, shall bear such professional's written approval when submitted to the Architect. The Owner and the Architect shall be entitled to rely upon the adequacy and accuracy of the services, certifications, and approvals performed or provided by such design professionals, provided the Owner and Architect have specified to the Contractor the performance and design criteria that such services must satisfy. Pursuant to this Section 3.12.10, the Architect will review and approve or take other appropriate action on submittals only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents.

§ 3.12.10.2 If the Contract Documents require the Contractor's design professional to certify that the Work has been performed in accordance with the design criteria, the Contractor shall furnish such certifications to the Architect at the time and in the form specified by the Architect.

User Notes: (3B9ADA39)

3.12.11 Shop Drawings, Product Data, or Samples that contain excessive errors, or that are incomplete will be rejected and any delay caused thereby will be the responsibility of the Contractor.

3.12.12 More than two reviews of the same submittal by the Architect necessitated by continuing errors and deficiencies will result in additional costs to the Owner. Contractor agrees to reimburse the Owner through deductive Change Order to the Contract for all costs associated with such reviews.

§ 3.13 Use of Site

The Contractor shall confine operations at the site to areas permitted by applicable laws, statutes, ordinances, codes, rules and regulations, lawful orders of public authorities, and the Contract Documents and shall not unreasonably encumber the site with materials or equipment.

§ 3.14 Cutting and Patching

§ 3.14.1 The Contractor shall be responsible for cutting, fitting, or patching required to complete the Work or to make its parts fit together properly. All areas requiring cutting, fitting, or patching shall be restored to the condition existing prior to the cutting, fitting, or patching, unless otherwise required by the Contract Documents.

§ 3.14.2 The Contractor shall not damage or endanger a portion of the Work or fully or partially completed construction of the Owner or Separate Contractors by cutting, patching, or otherwise altering such construction, or by excavation. The Contractor shall not cut or otherwise alter construction by the Owner or a Separate Contractor except with written consent of the Owner and of the Separate Contractor. Consent shall not be unreasonably withheld. The Contractor shall not unreasonably withhold, from the Owner or a Separate Contractor, its consent to cutting or otherwise altering the Work.

§ 3.15 Cleaning Up

§ 3.15.1 The Contractor shall keep the premises and surrounding area free from accumulation of waste materials and rubbish caused by operations under the Contract. At completion of the Work, the Contractor shall remove waste materials, rubbish, the Contractor's tools, construction equipment, machinery, and surplus materials from and about the Project.

§ 3.15.2 If the Contractor fails to clean up as provided in the Contract Documents, the Owner may do so and the Owner shall be entitled to reimbursement from the Contractor.

§ 3.16 Access to Work

The Contractor shall provide the Owner and Architect with access to the Work in preparation and progress wherever located.

§ 3.17 Royalties, Patents and Copyrights

The Contractor shall pay all royalties and license fees. The Contractor shall defend suits or claims for infringement of copyrights and patent rights and shall hold the Owner and Architect harmless from loss on account thereof, but shall not be responsible for defense or loss when a particular design, process, or product of a particular manufacturer or manufacturers is required by the Contract Documents, or where the copyright violations are contained in Drawings, Specifications, or other documents prepared by the Owner or Architect. However, if an infringement of a copyright or patent is discovered by, or made known to, the Contractor, the Contractor shall be responsible for the loss unless the information is promptly furnished to the Architect.

§ 3.18 Indemnification

§ 3.18.1 To the fullest extent permitted by law, the Contractor shall indemnify and hold harmless the Owner, Architect, Architect's consultants, and agents and employees of any of them from and against claims, damages, losses, and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work, provided that such claim, damage, loss, or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), but only to the extent caused by the negligent acts or omissions of the Contractor, a Subcontractor, anyone directly or indirectly employed by them, or anyone for whose acts they may be liable, regardless of whether or not such claim, damage, loss, or expense is caused in part by a party indemnified hereunder. Such obligation shall not be construed to negate, abridge, or reduce other rights or obligations of indemnity that would otherwise exist as to a party or person described in this Section 3.18.

User Notes: (3B9ADA39)

§ 3.18.2 In claims against any person or entity indemnified under this Section 3.18 by an employee of the Contractor, a Subcontractor, anyone directly or indirectly employed by them, or anyone for whose acts they may be liable, the indemnification obligation under Section 3.18.1 shall not be limited by a limitation on amount or type of damages, compensation, or benefits payable by or for the Contractor or a Subcontractor under workers' compensation acts, disability benefit acts, or other employee benefit acts.

ARTICLE 4 ARCHITECT

§ 4.1 General

§ 4.1.1 The Architect is the person or entity retained by the Owner pursuant to Section 2.3.2 and identified as such in the Agreement.

§ 4.1.2 Duties, responsibilities, and limitations of authority of the Architect as set forth in the Contract Documents shall not be restricted, modified, or extended without written consent of the Owner, Contractor, and Architect. Consent shall not be unreasonably withheld.

§ 4.2 Administration of the Contract

§ 4.2.1 The Architect will provide administration of the Contract as described in the Contract Documents and will be an Owner's representative during construction until the date the Architect issues the final Certificate for Payment. The Architect will have authority to act on behalf of the Owner only to the extent provided in the Contract Documents.

§ 4.2.2 The Architect will visit the site at intervals appropriate to the stage of construction, or as otherwise agreed with the Owner, to become generally familiar with the progress and quality of the portion of the Work completed, and to determine in general if the Work observed is being performed in a manner indicating that the Work, when fully completed, will be in accordance with the Contract Documents. However, the Architect will not be required to make exhaustive or continuous on-site inspections to check the quality or quantity of the Work. The Architect will not have control over, charge of, or responsibility for the construction means, methods, techniques, sequences or procedures, or for the safety precautions and programs in connection with the Work, since these are solely the Contractor's rights and responsibilities under the Contract Documents.

§ 4.2.3 On the basis of the site visits, the Architect will keep the Owner reasonably informed about the progress and quality of the portion of the Work completed, and promptly report to the Owner (1) known deviations from the Contract Documents, (2) known deviations from the most recent construction schedule submitted by the Contractor, and (3) defects and deficiencies observed in the Work. The Architect will not be responsible for the Contractor's failure to perform the Work in accordance with the requirements of the Contract Documents. The Architect will not have control over or charge of, and will not be responsible for acts or omissions of, the Contractor, Subcontractors, or their agents or employees, or any other persons or entities performing portions of the Work.

§ 4.2.4 Communications

The Owner and Contractor shall include the Architect in all communications that relate to or affect the Architect's services or professional responsibilities. The Owner shall promptly notify the Architect of the substance of any direct communications between the Owner and the Contractor otherwise relating to the Project. Communications by and with the Architect's consultants shall be through the Architect. Communications by and with Subcontractors and suppliers shall be through the Contractor. Communications by and with Separate Contractors shall be through the Owner. The Contract Documents may specify other communication protocols.

§ 4.2.5 Based on the Architect's evaluations of the Contractor's Applications for Payment, the Architect will review and certify the amounts due the Contractor and will issue Certificates for Payment in such amounts.

§ 4.2.6 The Architect has authority to reject Work that does not conform to the Contract Documents. Whenever the Architect considers it necessary or advisable, the Architect will have authority to require inspection or testing of the Work in accordance with Sections 13.4.2 and 13.4.3, whether or not the Work is fabricated, installed or completed. However, neither this authority of the Architect nor a decision made in good faith either to exercise or not to exercise such authority shall give rise to a duty or responsibility of the Architect to the Contractor, Subcontractors, suppliers, their agents or employees, or other persons or entities performing portions of the Work.

User Notes: (3B9ADA39)

§ 4.2.7 The Architect will review and approve, or take other appropriate action upon, the Contractor's submittals such as Shop Drawings, Product Data, and Samples, but only for the limited purpose of checking for conformance with information given and the design concept expressed in the Contract Documents. The Architect's action will be taken in accordance with the submittal schedule approved by the Architect or, in the absence of an approved submittal schedule, with reasonable promptness while allowing sufficient time in the Architect's professional judgment to permit adequate review. Review of such submittals is not conducted for the purpose of determining the accuracy and completeness of other details such as dimensions and quantities, or for substantiating instructions for installation or performance of equipment or systems, all of which remain the responsibility of the Contractor as required by the Contract Documents. The Architect's review of the Contractor's submittals shall not relieve the Contractor of the obligations under Sections 3.3, 3.5, and 3.12. The Architect's review shall not constitute approval of safety precautions or of any construction means, methods, techniques, sequences, or procedures. The Architect's approval of a specific item shall not indicate approval of an assembly of which the item is a component.

§ 4.2.8 The Architect will prepare Change Orders and Construction Change Directives, and may order minor changes in the Work as provided in Section 7.4. The Architect will investigate and make determinations and recommendations regarding concealed and unknown conditions as provided in Section 3.7.4.

§ 4.2.9 The Architect will conduct inspections to determine the date or dates of Substantial Completion and the date of final completion; issue Certificates of Substantial Completion pursuant to Section 9.8; receive and forward to the Owner, for the Owner's review and records, written warranties and related documents required by the Contract and assembled by the Contractor pursuant to Section 9.10; and issue a final Certificate for Payment pursuant to Section 9.10.

§ 4.2.10 If the Owner and Architect agree, the Architect will provide one or more Project representatives to assist in carrying out the Architect's responsibilities at the site. The Owner shall notify the Contractor of any change in the duties, responsibilities and limitations of authority of the Project representatives. There shall be no restrictions on the Owner having a project representative.

§ 4.2.11 The Architect will interpret and decide matters concerning performance under, and requirements of, the Contract Documents on written request of either the Owner or Contractor. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness.

§ 4.2.12 Interpretations and decisions of the Architect will be consistent with the intent of, and reasonably inferable from, the Contract Documents and will be in writing or in the form of drawings. When making such interpretations and decisions, the Architect will endeavor to secure faithful performance by both Owner and Contractor, will not show partiality to either, and will not be liable for results of interpretations or decisions rendered in good faith.

§ 4.2.13 The Architect's decisions on matters relating to aesthetic effect will be final if consistent with the intent expressed in the Contract Documents.

§ 4.2.14 The Architect will review and respond to requests for information about the Contract Documents. The Architect's response to such requests will be made in writing within any time limits agreed upon or otherwise with reasonable promptness. If appropriate, the Architect will prepare and issue supplemental Drawings and Specifications in response to the requests for information.

ARTICLE 5 SUBCONTRACTORS

§ 5.1 Definitions

§ 5.1.1 A Subcontractor is a person or entity who has a direct contract with the Contractor to perform a portion of the Work at the site. The term "Subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Subcontractor or an authorized representative of the Subcontractor. The term "Subcontractor" does not include a Separate Contractor or the subcontractors of a Separate Contractor.

§ 5.1.2 A Sub-subcontractor is a person or entity who has a direct or indirect contract with a Subcontractor to perform a portion of the Work at the site. The term "Sub-subcontractor" is referred to throughout the Contract Documents as if singular in number and means a Sub-subcontractor or an authorized representative of the Sub-subcontractor.

§ 5.2 Award of Subcontracts and Other Contracts for Portions of the Work

§ 5.2.1 ~~Unless otherwise stated in the Contract Documents, the Contractor, as soon as practicable after award of the Contract, shall notify the Owner and Architect~~ Within 10 days of bid opening, excluding weekends and holidays, the Contractor shall furnish in writing to the Owner and Architect the names of the persons or entities proposed for each principal portion of the Work, including those who are to furnish materials or equipment fabricated to a special design. Within 14 days of receipt of the information, the Architect may notify the Contractor whether the Owner or the Architect (1) has reasonable objection to any such proposed person or entity or (2) requires additional time for review. Failure of the Architect to provide notice within the 14-day period shall constitute notice of no reasonable objection.

§ 5.2.2 The Contractor shall not contract with a proposed person or entity to whom the Owner or Architect has made reasonable and timely objection. ~~The Contractor shall not be required to contract with anyone to whom the Contractor has made reasonable objection.~~ The Contractor shall be solely responsible for selection and performance of all subcontractors. The Contractor shall not be entitled to claims for additional time and/or an increase in the contract sum due to problems with performance or non-performance of a subcontractor.

§ 5.2.3 If the Owner or Architect has reasonable objection to a person or entity proposed by the Contractor, the Contractor shall propose another to whom the Owner or Architect has no reasonable objection. If the proposed but rejected Subcontractor was reasonably capable of performing the Work, the Contract Sum ~~and Contract Time~~ shall be increased or decreased by the difference, if any, occasioned by such change, and an appropriate Change Order shall be issued before commencement of the substitute Subcontractor's Work. However, no increase in the Contract Sum ~~or Contract Time~~ shall be allowed for such change unless the Contractor has acted promptly and responsively in submitting names as required. The Contractor shall notify the Owner and Architect if a subcontractor is proposed to be changed and substituted- with another subcontractor for cause. Subcontractor substitution shall be with the Owner and Architect's approval only.

§ 5.2.4 The Contractor shall not substitute a Subcontractor, person, or entity for one previously selected if the Owner or Architect makes reasonable objection to such substitution.

§ 5.3 Subcontractual Relations

By appropriate written agreement, the Contractor shall require each Subcontractor, to the extent of the Work to be performed by the Subcontractor, to be bound to the Contractor by terms of the Contract Documents, and to assume toward the Contractor all the obligations and responsibilities, including the responsibility for safety of the Subcontractor's Work that the Contractor, by these Contract Documents, assumes toward the Owner and Architect. Each subcontract agreement shall preserve and protect the rights of the Owner and Architect under the Contract Documents with respect to the Work to be performed by the Subcontractor so that subcontracting thereof will not prejudice such rights, and shall allow to the Subcontractor, unless specifically provided otherwise in the subcontract agreement, the benefit of all rights, remedies, and redress against the Contractor that the Contractor, by the Contract Documents, has against the Owner. Where appropriate, the Contractor shall require each Subcontractor to enter into similar agreements with Sub-subcontractors. The Contractor shall make available to each proposed Subcontractor, prior to the execution of the subcontract agreement, copies of the Contract Documents to which the Subcontractor will be bound, and, upon written request of the Subcontractor, identify to the Subcontractor terms and conditions of the proposed subcontract agreement that may be at variance with the Contract Documents. Subcontractors will similarly make copies of applicable portions of such documents available to their respective proposed Sub-subcontractors.

~~**§ 5.4 Contingent Assignment of Subcontracts**~~

~~**§ 5.4.1** Each subcontract agreement for a portion of the Work is assigned by the Contractor to the Owner, provided that~~

~~.1 assignment is effective only after termination of the Contract by the Owner for cause pursuant to Section 14.2 and only for those subcontract agreements that the Owner accepts by notifying the Subcontractor and Contractor; and~~

~~.2 assignment is subject to the prior rights of the surety, if any, obligated under bond relating to the Contract.~~

~~When the Owner accepts the assignment of a subcontract agreement, the Owner assumes the Contractor's rights and obligations under the subcontract.~~

User Notes: (3B9ADA39)

~~§ 5.4.2 Upon such assignment, if the Work has been suspended for more than 30 days, the Subcontractor's compensation shall be equitably adjusted for increases in cost resulting from the suspension.~~

~~§ 5.4.3 Upon assignment to the Owner under this Section 5.4, the Owner may further assign the subcontract to a successor contractor or other entity. If the Owner assigns the subcontract to a successor contractor or other entity, the Owner shall nevertheless remain legally responsible for all of the successor contractor's obligations under the subcontract.~~

ARTICLE 6 CONSTRUCTION BY OWNER OR BY SEPARATE CONTRACTORS

§ 6.1 Owner's Right to Perform Construction and to Award Separate Contracts

§ 6.1.1 The term "Separate Contractor(s)" shall mean other contractors retained by the Owner under separate agreements. The Owner reserves the right to perform construction or operations related to the Project with the Owner's own forces, and with Separate Contractors retained under Conditions of the Contract substantially similar to those of this Contract, including those provisions of the Conditions of the Contract related to insurance and waiver of subrogation.

§ 6.1.2 When separate contracts are awarded for different portions of the Project or other construction or operations on the site, the term "Contractor" in the Contract Documents in each case shall mean the Contractor who executes each separate Owner-Contractor Agreement.

§ 6.1.3 The Owner shall provide for coordination of the activities of the Owner's own forces and of each Separate Contractor with the Work of the Contractor, who shall cooperate with them. The Contractor shall participate with any Separate Contractors and the Owner in reviewing their construction schedules. The Contractor shall make any revisions to its construction schedule deemed necessary after a joint review and mutual agreement. The construction schedules shall then constitute the schedules to be used by the Contractor, Separate Contractors, and the Owner until subsequently revised.

§ 6.1.4 Unless otherwise provided in the Contract Documents, when the Owner performs construction or operations related to the Project with the Owner's own forces or with Separate Contractors, the Owner or its Separate Contractors shall have the same obligations and rights that the Contractor has under the Conditions of the Contract, including, without excluding others, those stated in Article 3, this Article 6, and Articles 10, 11, and 12.

§ 6.2 Mutual Responsibility

§ 6.2.1 The Contractor shall afford the Owner and Separate Contractors reasonable opportunity for introduction and storage of their materials and equipment and performance of their activities, and shall connect and coordinate the Contractor's construction and operations with theirs as required by the Contract Documents.

§ 6.2.2 If part of the Contractor's Work depends for proper execution or results upon construction or operations by the Owner or a Separate Contractor, the Contractor shall, prior to proceeding with that portion of the Work, promptly notify the Architect of apparent discrepancies or defects in the construction or operations by the Owner or Separate Contractor that would render it unsuitable for proper execution and results of the Contractor's Work. Failure of the Contractor to notify the Architect of apparent discrepancies or defects prior to proceeding with the Work shall constitute an acknowledgment that the Owner's or Separate Contractor's completed or partially completed construction is fit and proper to receive the Contractor's Work. The Contractor shall not be responsible for discrepancies or defects in the construction or operations by the Owner or Separate Contractor that are not apparent.

§ 6.2.3 The Contractor shall reimburse the Owner for costs the Owner incurs that are payable to a Separate Contractor because of the Contractor's delays, improperly timed activities or defective construction. The Owner shall be responsible to the Contractor for costs the Contractor incurs because of a Separate Contractor's delays, improperly timed activities, damage to the Work or defective construction.

§ 6.2.4 The Contractor shall promptly remedy damage that the Contractor wrongfully causes to completed or partially completed construction or to property of the Owner or Separate Contractor as provided in Section 10.2.5.

§ 6.2.5 The Owner and each Separate Contractor shall have the same responsibilities for cutting and patching as are described for the Contractor in Section 3.14.

§ 6.3 Owner's Right to Clean Up

If a dispute arises among the Contractor, Separate Contractors, and the Owner as to the responsibility under their respective contracts for maintaining the premises and surrounding area free from waste materials and rubbish, the Owner may clean up and the Architect will allocate the cost among those responsible.

ARTICLE 7 CHANGES IN THE WORK

§ 7.1 General

§ 7.1.1 Changes in the Work may be accomplished after execution of the Contract, and without invalidating the Contract, by Change Order, Construction Change Directive or order for a minor change in the Work, subject to the limitations stated in this Article 7 and elsewhere in the Contract Documents.

§ 7.1.2 A Change Order shall be based upon agreement among the Owner, Contractor, and Architect. A Construction Change Directive requires agreement by the Owner and Architect and may or may not be agreed to by the Contractor. An order for a minor change in the Work may be issued by the Architect alone.

§ 7.1.3 Changes in the Work shall be performed under applicable provisions of the Contract Documents. The Contractor shall proceed promptly with changes in the Work, unless otherwise provided in the Change Order, Construction Change Directive, or order for a minor change in the Work.

§ 7.2 Change Orders

§ 7.2.1 A Change Order is a written ~~instrument prepared by the Architect and signed by the Owner, Contractor, and Architect stating their agreement upon all of~~ order to the Contractor signed by the Owner and the Architect, issued after execution of the Contract, authorizing a change in the Work or an adjustment in the Contract Sum or Contract Time. The Contract Sum and The Contract Time may be changed only by Change Order. A Change Order signed by the Contractor indicates his agreement therewith including the adjustment in the Contract Sum or the Contract Time.

§ 7.2.2 The Cost to the owner resulting in a change in the Work shall be a sum of:
.1 Contractor's material and labor cost
.2 Subcontractor's and/or Sub-Subcontractor's (as defined in Article 5) material and labor cost.
.3 Overhead and Profit.

7.2.3 The ~~change in the Work;~~credit to the Owner resulting from a change in the Work shall be the sum of:
.1 Contractor's material and labor cost.
.2 Subcontractor's and/or Sub-Subcontractor's material and labor cost
.3 Credit will not be required for overhead and profit.

7.2.4 The Contractor will be due Extended Overhead for time delays only
when complete stoppage of work occurs causing a contract completion extension, the stoppage must be due to acts or omissions solely attributable to the Owner. In all cases, the Contractor is to notify the Architect in writing as required by Article 15.

7.2.5 Before a Change Order is prepared the Contractor shall provide and deliver to the Architect the following information, not subject to waiver, within a reasonable time after being notified to prepare said Change Order:
.1 An itemized list of material and labor cost for the General Contractor's work including quantities and unit costs for each item of labor and each item of material.
.2 An itemized list of material and labor costs for each subcontractor's and/or Sub-Subcontractor's work including quantities and unit costs for each item of labor and each item of material.

7.2.6 Overhead and profit shall be computed by one of the following methods but shall not exceed a total of 25% on any portion of Work.
~~Contract Sum;~~ .1 When all the Work is General Contract Work: 15% of the cost of the Work for overhead and profit.
.2 When the Work is all Subcontract Work: 15% of the cost of the Work for subcontractor's overhead and profit plus 10% of the cost of the Work, not including the Subcontractor's overhead and profit, for General Contractor's overhead and profit.

User Notes: (3B9ADA39)

.3 ~~The extent~~ When the Work is a combination of General Contract Work and Subcontract Work: the portion of the Cost that is General Contract Work shall be figured per 7.2.6.1 and that portion of the cost that is Subcontract Work shall be calculated per 7.2.6.2

7.2.7 After a Change Order has been approved, no follow-on request for extensions of time or additional cost shall be considered for the Work included in the Change Order.

7.2.8 Cost of the Work for the purpose of Change Orders shall be costs necessarily incurred in performance of the Work and paid by the Contractor which shall consist of:
.1 Wages paid.
.2 Cost of all materials and supplies
.3 Cost of necessary machinery and equipment.
.4 Cost of insurance, fringe, benefits, unemployment compensating, social security, bond premiums, and any other documents costs.

7.2.9 Subcontract cost shall consist of the items in 7.2.8 above plus overhead and profit as defined in 7.2.6.

7.2.10 Cost of the Work whether General Contract cost or Subcontract cost shall not apply to the following:
.1 Salaries or other compensation of the Contractor's personnel at the Contractor's principal office and branch offices.
.2 Any part of the Contractor's capital expenses, including interest on the Contractor's capital employed for the Work.
.3 Overhead and general expenses of any kind or the cost of any item not specifically and expressly included above in cost of the Work.
.4 Cost of supervision not specifically required by the Change Order.
.5 Cost due to the negligence of the Contractor, any Subcontractor or Sub-Subcontractor, anyone directly employed by any of them, or for whose acts any of them may be liable, including but not limited to the correction of defective or nonconforming work, disposal of materials and equipment wrongly supplied, making good any damage to property or delays caused by failure to provide adequate Change Order documentation.

7.2.11 When applicable as provided by the Contract, the cost to Owner for Change Orders shall be determined by quantities and unit prices. The quantity of any item shall be as submitted by the Contractor and approved by the Architect. Unit shall cover cost of Material, Labor, Equipment, Overhead and Profit.

§ 7.3 Construction Change Directives

§ 7.3.1 A Construction Change Directive is a written order prepared by the Architect and signed by the Owner and Architect, directing a change in the Work prior to agreement on adjustment, if any, in the Contract Sum or Contract Time, or both. The Owner may by Construction Change Directive, without invalidating the Contract, order changes in the Work within the general scope of the Contract consisting of additions, deletions, or other revisions, the Contract Sum and Contract Time being adjusted accordingly.

§ 7.3.2 A Construction Change Directive shall be used in the absence of total agreement on the terms of a Change Order.

§ 7.3.3 If the Construction Change Directive provides for an adjustment to the Contract Sum, the adjustment shall be based on one of the following methods:

.1 Mutual acceptance of a lump sum properly itemized and supported by sufficient substantiating data to permit evaluation;
.2 Unit prices stated in the Contract Documents or subsequently agreed upon;
.3 Cost to be determined in a manner agreed upon by the parties and a mutually acceptable fixed or percentage fee; or
.4 As provided in Section 7.3.4.

User Notes: (3B9ADA39)

§ 7.3.4 If the Contractor does not respond promptly or disagrees with the method for adjustment in the Contract Sum, the Architect shall determine the adjustment on the basis of reasonable expenditures and savings of those performing the Work attributable to the change, including, in case of an increase in the Contract Sum, an amount for overhead and profit as set forth in the Agreement, or if no such amount is set forth in the Agreement, a reasonable amount. In such case, and also under Section 7.3.3.3, the Contractor shall keep and present, in such form as the Architect may prescribe, an itemized accounting together with appropriate supporting data. Unless otherwise provided in the Contract Documents, costs for the purposes of this Section 7.3.4 shall be limited to the following:

.1 Costs of labor, including applicable payroll taxes, fringe benefits required by agreement or custom, workers' compensation insurance, and other employee costs approved by the Architect;

.2 Costs of materials, supplies, and equipment, including cost of transportation, whether incorporated or consumed;

.3 Rental costs of machinery and equipment, exclusive of hand tools, whether rented from the Contractor or others;

.4 Costs of premiums for all bonds ~~and insurance, permit fees, and sales, use, or similar taxes, directly~~ and insurance and permit fees related to the change; and

.5 Costs of supervision and field office personnel directly attributable to the change.

§ 7.3.5 If the Contractor disagrees with the adjustment in the Contract Time, the Contractor may make a Claim in accordance with applicable provisions of Article 15.

§ 7.3.6 Upon receipt of a Construction Change Directive, the Contractor shall promptly proceed with the change in the Work involved and advise the Architect of the Contractor's agreement or disagreement with the method, if any, provided in the Construction Change Directive for determining the proposed adjustment in the Contract Sum or Contract Time.

§ 7.3.7 A Construction Change Directive signed by the Contractor indicates the Contractor's agreement therewith, including adjustment in Contract Sum and Contract Time or the method for determining them. Such agreement shall be effective immediately and shall be recorded as a Change Order.

§ 7.3.8 The amount of credit to be allowed by the Contractor to the Owner for a deletion or change that results in a net decrease in the Contract Sum shall be actual net cost as confirmed by the Architect. When both additions and credits covering related Work or substitutions are involved in a change, the allowance for overhead and profit shall be figured on the basis of net increase, if any, with respect to that change.

§ 7.3.9 Pending final determination of the total cost of a Construction Change Directive to the Owner, the Contractor may request payment for Work completed under the Construction Change Directive in Applications for Payment. The Architect will make an interim determination for purposes of monthly certification for payment for those costs and certify for payment the amount that the Architect determines, in the Architect's professional judgment, to be reasonably justified. The Architect's interim determination of cost shall adjust the Contract Sum on the same basis as a Change Order, subject to the right of either party to disagree and assert a Claim in accordance with Article 15.

§ 7.3.10 When the Owner and Contractor agree with a determination made by the Architect concerning the adjustments in the Contract Sum and Contract Time, or otherwise reach agreement upon the adjustments, such agreement shall be effective immediately and the Architect will prepare a Change Order. Change Orders may be issued for all or any part of a Construction Change Directive.

§ 7.4 Minor Changes in the Work

The Architect may order minor changes in the Work that are consistent with the intent of the Contract Documents and do not involve an adjustment in the Contract Sum or an extension of the Contract Time. The Architect's order for minor changes shall be in writing. If the Contractor believes that the proposed minor change in the Work will affect the Contract Sum or Contract Time, the Contractor shall notify the Architect and shall not proceed to implement the change in the Work. If the Contractor performs the Work set forth in the Architect's order for a minor change without prior notice to the Architect that such change will affect the Contract Sum or Contract Time, the Contractor waives any adjustment to the Contract Sum or extension of the Contract Time.

ARTICLE 8 TIME

§ 8.1 Definitions

§ 8.1.1 Unless otherwise provided, Contract Time is the period of time, including authorized adjustments, allotted in the Contract Documents for Substantial Completion of the Work.

§ 8.1.2 The date of commencement of the Work is the date established in the Agreement.

§ 8.1.3 The date of Substantial Completion is the date certified by the Architect in accordance with Section 9.8.

§ 8.1.4 The term "day" as used in the Contract Documents shall mean calendar day unless otherwise specifically defined.

§ 8.2 Progress and Completion

§ 8.2.1 Time limits stated in the Contract Documents are of the essence of the Contract. ~~By executing the Agreement, the Contractor confirms that the Contract Time is a reasonable period for performing the Work.~~ Completion of the Work must be within the Time for Completion stated in the Agreement, subject to such extension as may be granted under Section 8.3. The Contractor agrees to commence Work not later than ten (10) days following the date prescribed in the Owner/Contractor Agreement and to substantially complete the project within the time stated in the Contract. The Owner will suffer financial loss if the project is not substantially complete in the time set forth in the Contract Documents. The Contractor and the Contractor's Surety shall be liable for and shall pay to the Owner the sum stated in the Contract Documents as fixed, agreed and liquidated damages for each consecutive calendar (Saturdays, Sundays, and holidays included) of delay until the Work is substantially complete. The Owner shall be entitled to the sum stated in the Contract Documents. Such Liquidated Damages shall be withheld by the Owner from the amounts due the Contractor for progress payments and/or retainage payments.

§ 8.2.2 The Contractor shall not knowingly, except by agreement or instruction of the Owner in writing, prematurely commence the Work on the site or elsewhere prior to the effective date of insurance required by Article 11 to be furnished by the Contractor and Owner. The date of commencement of the Work shall not be changed by the effective date of such insurance.

§ 8.2.3 The Contractor shall proceed expeditiously with adequate forces and shall achieve Substantial Completion within the Contract Time.

§ 8.3 Delays and Extensions of Time

§ 8.3.1 If the Contractor is delayed at any time in the commencement or progress of the Work by (1) an act or neglect of the Owner or Architect, of an employee of either, or of a Separate Contractor; (2) by changes ordered in the Work; (3) by labor disputes, fire, unusual delay in deliveries, unavoidable casualties, adverse weather conditions documented in accordance with Section 15.1.6.2, or other causes beyond the Contractor's control; (4) by delay authorized by the Owner pending ~~mediation and binding dispute resolution; or~~ litigation; or (5) by other causes that the Contractor asserts, and the Architect determines, justify delay, then the Contract Time shall be extended for such reasonable time as the Architect may ~~determine.~~recommend, subject to Owner's approval by Change Order. If the claim is not made within the limits of Article 15, all rights for future claims for that month are waived.

8.3.1.1 Normal adverse weather according to the following table, which is based on National Oceanic and Atmospheric Administration records, shall not be cause for an extension of Contract time unless such extension is agreed to in writing between Contractor and Owner.

MONTHLY NORMAL ADVERSE WATHER (CALENDAR DAYS)

JAN – 11 DAYS	FEB – 9 DAYS	MAR – 7 DAYS	APR – 6 DAYS
MAY – 5 DAYS	JUN – 7 DAYS	JUL – 10 DAYS	AUG – 9 DAYS
SEP – 7 DAYS	OCT – 4 DAYS	NOV – 6 DAYS	DEC – 9 DAYS

8.3.1.2 In planning the construction schedule within the agreed Contract Time, the Contractor shall anticipate days of adverse weather conditions for season or seasons of the year as listed in 8.3.1.1. Only those weather delays which prevent work on critical activities for 50% or more of the Contractor's scheduled work day and which are attributable to other than normal weather conditions will be considered by Architect for extension of time.

User Notes: (3B9ADA39)

§ 8.3.2 Claims relating to time shall be made in accordance with applicable provisions of Article 15.

§ 8.3.3 This Section 8.3 does not preclude recovery of damages for delay by either party under other provisions of the Contract Documents.

ARTICLE 9 PAYMENTS AND COMPLETION

§ 9.1 Contract Sum

§ 9.1.1 The Contract Sum is stated in the Agreement and, including authorized adjustments, is the total amount payable by the Owner to the Contractor for performance of the Work under the Contract Documents.

§ 9.1.2 If unit prices are stated in the Contract Documents or subsequently agreed upon, and if quantities originally contemplated are materially changed so that application of such unit prices to the actual quantities causes substantial inequity to the Owner or Contractor, the applicable unit prices shall be equitably adjusted.

§ 9.2 Schedule of Values

9.2.1 Where the Contract is based on a stipulated sum ~~or Guaranteed Maximum Price~~, the Contractor shall submit ~~a schedule of values to the Architect before the first Application for Payment,~~ in writing and within ten (10) calendar days of bid opening to the Owner, through the Architect, a schedule of values allocating the entire Contract Sum to the various portions of the ~~Work. The schedule of values shall be prepared in the form, and supported by the data to substantiate its accuracy, required by the Architect. This schedule, unless objected to by the Architect,~~ Work and prepared in such form and supported by all such data to substantiate its accuracy as the Architect may require. Schedule shall be structured to isolate cost associated with base Bid and additive alternate costs separately.

9.2.2 Schedule of value format shall be as provided for in the Contract Documents for use in Contractor's Monthly Application for Payment as noted in paragraph 9.3 below.

9.2.3 Each line item contained on schedule of values, divided into the CSI division format, including 6 digit section number breakdowns, as outlined in the Project Manual index, shall include labor, material, overhead and profit. Total of all items shall equal the Total Contract Sum.

9.2.4 Once approved by the Architect, schedule shall be utilized as the basis of the Contractor's application for Payment.

§ 9.3 Applications for Payment

§ 9.3.1 At least ten days before the date established for each progress payment, the Contractor shall submit to the Architect an itemized Application for Payment prepared in accordance with the schedule of values, if required under Section 9.2, for completed portions of the Work. The application shall be notarized, if required, and supported by all data substantiating the Contractor's right to payment that the Owner or Architect require, such as copies of requisitions, and releases and waivers of liens from Subcontractors and suppliers, and shall reflect retainage if provided for in the Contract Documents.

The form of Application for Payment shall be AIA Document G702, Application and Certification for Payment supported by AIA Document G703, Continuation Sheet, and a certified and witnessed statement by the Contractor that all Subcontractors, material suppliers or other persons or entities for which payment has been requested in previous payment applications have been paid in full to the filing of the current statement. In the event that the Contractor cannot provide the above certification, the Contractor shall provide a certified and witnessed statement outlining the nonconforming payments and the corresponding amounts. Documents shall be latest edition. The Contractor shall submit application to Architect each month, not less than forty-eight (48) hours prior to monthly coordination meeting excluding weekends and holidays. The Contractor shall submit three (3) originals unless more copies are required by the Owner. The Contractor shall submit payments for the value of labor and materials incorporated into the work and for materials suitably stored at the site less the normal retainage as follows;

Retainage of 10% of the contract price for projects with contract price up to $500,000.

Retainage of 5% of the contract price for projects with contract price of $500,001 or more.

AIA Document A201 – 2017. Copyright © 1911, 1915, 1918, 1925, 1937, 1951, 1958, 1961, 1963, 1966, 1970, 1976, 1987, 1997, 2007 and 2017. All rights reserved. Upon Substantial Completion, the Owner will pay 90% for contracts up to $500,000 and 95% for contracts $500,001 and over of the amount due the Contractor on account of progress payments less the value of punch list items and unsettled claims. No partial payment of retainage will be made on the basis of partial occupancy, including newly constructed areas.

~~**§ 9.3.1.1** As provided in Section 7.3.9, such applications may include requests for payment on account of changes in the Work that have been properly authorized by Construction Change Directives, or by interim determinations of the Architect, but not yet included in Change Orders.~~

§ 9.3.1.2 Applications for Payment shall not include requests for payment for portions of the Work for which the Contractor does not intend to pay a Subcontractor or supplier, unless such Work has been performed by others whom the Contractor intends to pay.

§ 9.3.2 Unless otherwise provided in the Contract Documents, payments shall be made on account of materials and equipment delivered and suitably stored at the site for subsequent incorporation in the Work. If approved in advance by the Owner, payment may similarly be made for materials and equipment suitably stored off the site at a location agreed upon in writing. Payment for materials and equipment stored on or off the site shall be conditioned upon compliance by the Contractor with procedures satisfactory to the Owner to establish the Owner's title to such materials and equipment or otherwise protect the Owner's interest, and shall include the costs of applicable insurance, storage, and transportation to the site, for such materials and equipment stored off the site.

§ 9.3.3 The Contractor warrants that title to all Work covered by an Application for Payment will pass to the Owner no later than the time of payment. The Contractor further warrants that upon submittal of an Application for Payment all Work for which Certificates for Payment have been previously issued and payments received from the Owner shall, to the best of the Contractor's knowledge, information, and belief, be free and clear of liens, claims, security interests, or encumbrances, in favor of the Contractor, Subcontractors, suppliers, or other persons or entities that provided labor, materials, and equipment relating to the Work.

§ 9.4 Certificates for Payment

§ 9.4.1 The Architect will, within seven days after receipt of the Contractor's Application for Payment, either (1) issue to the Owner a Certificate for Payment in the full amount of the Application for Payment, with a copy to the Contractor; or (2) issue to the Owner a Certificate for Payment for such amount as the Architect determines is properly due, and notify the Contractor and Owner of the Architect's reasons for withholding certification in part as provided in Section 9.5.1; or (3) withhold certification of the entire Application for Payment, and notify the Contractor and Owner of the Architect's reason for withholding certification in whole as provided in Section 9.5.1.

§ 9.4.2 The issuance of a Certificate for Payment will constitute a representation by the Architect to the Owner, based on the Architect's evaluation of the Work and the data in the Application for Payment, that, to the best of the Architect's knowledge, information, and belief, the Work has progressed to the point indicated, the quality of the Work is in accordance with the Contract Documents, and that the Contractor is entitled to payment in the amount certified. The foregoing representations are subject to an evaluation of the Work for conformance with the Contract Documents upon Substantial Completion, to results of subsequent tests and inspections, to correction of minor deviations from the Contract Documents prior to completion, and to specific qualifications expressed by the Architect. However, the issuance of a Certificate for Payment will not be a representation that the Architect has (1) made exhaustive or continuous on-site inspections to check the quality or quantity of the Work; (2) reviewed construction means, methods, techniques, sequences, or procedures; (3) reviewed copies of requisitions received from Subcontractors and suppliers and other data requested by the Owner to substantiate the Contractor's right to payment; or (4) made examination to ascertain how or for what purpose the Contractor has used money previously paid on account of the Contract Sum.

§ 9.5 Decisions to Withhold Certification

§ 9.5.1 The Architect may withhold a Certificate for Payment in whole or in part, to the extent reasonably necessary to protect the Owner, if in the Architect's opinion the representations to the Owner required by Section 9.4.2 cannot be made. If the Architect is unable to certify payment in the amount of the Application, the Architect will notify the Contractor and Owner as provided in Section 9.4.1. If the Contractor and Architect cannot agree on a revised

User Notes: (3B9ADA39)

amount, the Architect will promptly issue a Certificate for Payment for the amount for which the Architect is able to make such representations to the Owner. The Architect may also withhold a Certificate for Payment or, because of subsequently discovered evidence, may nullify the whole or a part of a Certificate for Payment previously issued, to such extent as may be necessary in the Architect's opinion to protect the Owner from loss for which the Contractor is responsible, including loss resulting from acts and omissions described in Section 3.3.2, because of

.1 defective Work not remedied;
.2 third party claims filed or reasonable evidence indicating probable filing of such claims, unless security acceptable to the Owner is provided by the Contractor;
.3 failure of the Contractor to make payments properly to Subcontractors or suppliers for labor, materials or equipment;
.4 reasonable evidence that the Work cannot be completed for the unpaid balance of the Contract Sum;
.5 damage to the Owner or a Separate Contractor;
.6 reasonable evidence that the Work will not be completed within the Contract Time, and that the unpaid balance would not be adequate to cover actual or liquidated damages for the anticipated delay; or
.7 repeated failure to carry out the Work in accordance with the Contract Documents.

§ 9.5.2 When either party disputes the Architect's decision regarding a Certificate for Payment under Section 9.5.1, in whole or in part, that party may submit a Claim in accordance with Article 15.

§ 9.5.3 When the reasons for withholding certification are removed, certification will be made for amounts previously withheld.

§ 9.5.4 If the Architect withholds certification for payment under Section 9.5.1.3, the Owner may, at its sole option, issue joint checks to the Contractor and to any Subcontractor or supplier to whom the Contractor failed to make payment for Work properly performed or material or equipment suitably delivered. If the Owner makes payments by joint check, the Owner shall notify the Architect and the Contractor shall reflect such payment on its next Application for Payment.

§ 9.6 Progress Payments

§ 9.6.1 After the Architect has issued a Certificate for Payment, the Owner shall make payment ~~in the manner and within the time provided in the Contract Documents, and shall so notify the Architect.~~within thirty (30) calendar days.

§ 9.6.2 The Contractor shall pay each Subcontractor, no later than seven days after receipt of payment from the Owner, the amount to which the Subcontractor is entitled, reflecting percentages actually retained from payments to the Contractor on account of the Subcontractor's portion of the Work. The Contractor shall, by appropriate agreement with each Subcontractor, require each Subcontractor to make payments to Sub-subcontractors in a similar ~~manner.~~manner in accordance with Louisiana Revised Statue.

§ 9.6.3 The Architect will, on request, furnish to a Subcontractor, if practicable, information regarding percentages of completion or amounts applied for by the Contractor and action taken thereon by the Architect and Owner on account of portions of the Work done by such Subcontractor.

§ 9.6.4 The Owner has the right to request written evidence from the Contractor that the Contractor has properly paid Subcontractors and suppliers amounts paid by the Owner to the Contractor for subcontracted Work. If the Contractor fails to furnish such evidence within seven days, the Owner shall have the right to contact Subcontractors and suppliers to ascertain whether they have been properly paid. Neither the Owner nor Architect shall have an obligation to pay, or to see to the payment of money to, a Subcontractor or supplier, except as may otherwise be required by law.

§ 9.6.5 The Contractor's payments to suppliers shall be treated in a manner similar to that provided in Sections 9.6.2, 9.6.3 and 9.6.4.

§ 9.6.6 A Certificate for Payment, a progress payment, or partial or entire use or occupancy of the Project by the Owner shall not constitute acceptance of Work not in accordance with the Contract Documents.

§ 9.6.7 Unless the Contractor provides the Owner with a payment bond in the full penal sum of the Contract Sum, payments received by the Contractor for Work properly performed by Subcontractors or provided by suppliers shall

User Notes: (3B9ADA39)

be held by the Contractor for those Subcontractors or suppliers who performed Work or furnished materials, or both, under contract with the Contractor for which payment was made by the Owner. Nothing contained herein shall require money to be placed in a separate account and not commingled with money of the Contractor, create any fiduciary liability or tort liability on the part of the Contractor for breach of trust, or entitle any person or entity to an award of punitive damages against the Contractor for breach of the requirements of this provision.

§ 9.6.8 Provided the Owner has fulfilled its payment obligations under the Contract Documents, the Contractor shall defend and indemnify the Owner from all loss, liability, damage or expense, including reasonable attorney's fees and litigation expenses, arising out of any lien claim or other claim for payment by any Subcontractor or supplier of any tier. Upon receipt of notice of a lien claim or other claim for payment, the Owner shall notify the Contractor. If approved by the applicable court, when required, the Contractor may substitute a surety bond for the property against which the lien or other claim for payment has been asserted.

~~**§ 9.7 Failure of Payment**~~

~~If the Architect does not issue a Certificate for Payment, through no fault of the Contractor, within seven days after receipt of the Contractor's Application for Payment, or if the Owner does not pay the Contractor within seven days after the date established in the Contract Documents, the amount certified by the Architect or awarded by binding dispute resolution, then the Contractor may, upon seven additional days' notice to the Owner and Architect, stop the Work until payment of the amount owing has been received. The Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable costs of shutdown, delay and start-up, plus interest as provided for in the Contract Documents.~~

§ 9.8 Substantial Completion

§ 9.8.1 Substantial Completion is the stage in the progress of the Work when the ~~Work or designated portion thereof~~ total Work is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work for its intended use. The Architect shall determine if the project is substantially complete in accordance with the Subparagraph.

§ 9.8.2 When the Contractor considers that the Work, or a portion thereof which the Owner agrees to accept separately, is substantially complete, the Contractor shall prepare and submit to the Architect a comprehensive list of items to be completed or corrected prior to ~~final payment.~~ occupancy. Failure to include an item on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents.

9.8.2.1 A "punch list" of "exceptions" and the dollar value related there-to will be prepared by the Architect from the list submitted by the Contractor. A monetary value will be assigned to this list estimated to represent the actual value of the work. Cost of these items shall be prepared in the same format as the schedule of values. None of these funds shall be due the Contractor until all punch list items are completed and are accepted by the Owner and Architect. If the dollar value of the punch list exceeds the amount of funds, less the retainage amount in the remaining balance of the Contract, then the project shall not be accepted as substantially complete until a sufficient amount of the punch list work has been completed.

9.8.2.2 If all punch list items have not been completed by the end of the forty-five (45) day lien period through no fault of the Architect or Owner, the Owner may hold the Contractor in default. If the Owner finds the Contractor is in default the surety shall be notified. If within thirty (30) days after notification, the Contractor and surety have not taken reasonable steps to complete the punch list, the Owner may, at his option, contract to have the balance of the work completed, and pay for such work with the unpaid funds remaining in the Contract sum.

§ 9.8.3 Upon receipt of the Contractor's list, the Architect will make an inspection to determine whether the Work ~~or designated portion thereof is substantially complete.~~ is substantially complete. Prior to the inspection by the Architect, the Contractor shall notify the Architect that the project is ready for inspection by the State Fire Marshal's Office. If the Architect's inspection discloses any item, whether or not included on the Contractor's list, which is not sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work ~~or designated portion thereof~~ for its intended use, the Contractor shall, before ~~issuance of the Certificate of Substantial Completion,~~ acceptance of the work as substantially complete, complete or correct such item upon

To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (3B9ADA39)

notification by the Architect. In such case, the Contractor shall then submit a request for another inspection by the Architect to determine Substantial Completion.

§ 9.8.4 When the Work ~~or designated portion thereof~~ is substantially complete, the Architect will prepare a Certificate of Substantial Completion that shall establish the date of Substantial Completion; establish responsibilities of the Owner and Contractor for security, maintenance, heat, utilities, damage to the Work and insurance; and fix the time within which the Contractor shall finish all items on the list accompanying the Certificate. Warranties required by the Contract Documents shall commence on the date of Substantial Completion of the Work ~~or designated portion thereof~~ unless otherwise provided in the Certificate of Substantial Completion.

§ 9.8.5 The Certificate of Substantial Completion shall be submitted to the Owner and Contractor for their written acceptance of responsibilities assigned to them in the Certificate. The Contractor shall record the Certificate of Substantial Completion with the Clerk of Courts Mortgage Records office in the parish in which the work has been done, to commence the forty-five (45) day lien period. Upon such acceptance, and consent of surety if any, the Owner shall make payment of retainage applying to the Work or designated portion thereof. Such payment shall be adjusted for Work that is incomplete or not in accordance with the requirements of the Contract Documents.

9.8.6 Upon Substantial Completion of the Work and upon the recommendations of the Architect, the Owner shall accept the work in accordance with the Certificate of Substantial Completion, AIA Document G704, and the provisions, as amended of Louisiana R.S. 9:4802.1. The Owner shall sign the Certificate of Substantial Completion of the Work and the Contractor shall cause the Certificate to be recorded in the mortgage office of the parish in which the work has been done. The Contractor shall notify the Owner and Architect of the number and folio where said certificate is recorded. Issuance of the Certificate of Substantial Completion does not constitute acceptance.

§ 9.9 Partial Occupancy or Use

§ 9.9.1 Partial Occupancy is the stage in the progress of the Work when a designated portion of the Work is sufficiently complete in accordance with the Contract Documents so the Owner can occupy or utilize the designated portion of the Work for its intended use. The Owner may occupy or use any ~~completed or partially completed portion of the Work at any stage when such portion is~~ portion of the Work deemed acceptable for Beneficial Occupancy so designated by separate agreement with the ~~Contractor, provided such occupancy or use is consented to by the insurer~~ Contractor and authorized by public authorities having jurisdiction over the Project. Such ~~partial~~ occupancy or use may commence ~~whether or not the portion is substantially complete,~~ provided the Owner and Contractor have accepted in writing the responsibilities assigned to each of them for payments, ~~retainage, if any,~~ if any security, maintenance, heat, utilities, damage to the Work and insurance, and have agreed in writing concerning the period for correction of the Work and commencement of warranties required by the ~~Contract~~ Contact Documents. When the Contractor considers ~~a portion substantially~~ the designated portion complete, the Contractor shall prepare and submit a list to the Architect as provided under ~~Section~~ Subparagraph 9.8.2. Consent of the Contractor to partial occupancy or use shall not be unreasonably withheld. ~~The stage of the progress of the Work shall be determined by written agreement between the Owner and Contractor or, if no agreement is reached, by decision of the Architect.~~

§ 9.9.2 Immediately prior to such partial occupancy or use, the Owner, Contractor, and Architect shall jointly inspect the area to be occupied or portion of the Work to be used in order to determine and record the condition of the Work.

§ 9.9.3 Unless otherwise agreed upon, partial occupancy or use of a portion or portions of the Work shall not constitute acceptance of Work not complying with the requirements of the Contract Documents.

§ 9.10 Final Completion and Final Payment

§ 9.10.1 Upon receipt of the Contractor's notice that the Work is ready for final inspection and acceptance and upon receipt of a final Application for Payment, the Architect will promptly make such inspection. When the Architect finds the Work acceptable under the Contract Documents and the Contract fully performed, the Architect will promptly issue a final Certificate for Payment stating that to the best of the Architect's knowledge, information and belief, and on the basis of the Architect's on-site visits and inspections, the Work has been completed in accordance with the Contract Documents and that the entire balance found to be due the Contractor and noted in the final Certificate is due and payable. If the Architect does not find the work acceptable under the Contract Documents, the Architect shall make one additional inspection. If the work is still not acceptable, the Architect, and each of the

User Notes: (3B9ADA39)

Architect's principal consultants, shall be paid $165.00/hour for their time at the project site, for each additional inspection to be withheld from the unpaid funds remaining in the Contract sum. The payments shall be made by the Owner and deducted from the amount to be paid to the Contractor. The Architect's final Certificate for Payment will constitute a further representation that conditions listed in Section 9.10.2 as precedent to the Contractor's being entitled to final payment have been fulfilled.

§ 9.10.2 Neither final payment nor any remaining retained percentage shall become due until the Contractor submits to the Architect (1) an affidavit that payrolls, bills for materials and equipment, and other indebtedness connected with the Work for which the Owner or the Owner's property might be responsible or encumbered (less amounts withheld by Owner) have been paid or otherwise satisfied, (2) a certificate evidencing that insurance required by the Contract Documents to remain in force after final payment is currently in effect, (3) a written statement that the Contractor knows of no reason that the insurance will not be renewable to cover the period required by the Contract Documents, (4) consent of surety, if any, to final payment, (5) documentation of any special warranties, such as manufacturers' warranties or specific Subcontractor warranties, and (6) if required by the Owner, other data establishing payment or satisfaction of obligations, such as receipts and releases and waivers of liens, claims, security interests, or encumbrances arising out of the Contract, to the extent and in such form as may be designated by the Owner. If a Subcontractor refuses to furnish a release or waiver required by the Owner, the Contractor may furnish a bond satisfactory to the Owner to indemnify the Owner against such lien, claim, security interest, or encumbrance. If a lien, claim, security interest, or encumbrance remains unsatisfied after payments are made, the Contractor shall refund to the Owner all money that the Owner may be compelled to pay in discharging the lien, claim, security interest, or encumbrance, including all costs and reasonable attorneys' fees.

§ 9.10.3 If, after Substantial Completion of the Work, final completion thereof is materially delayed through no fault of the Contractor or by issuance of Change Orders affecting final completion, and the Architect so confirms, the Owner shall, upon application by the Contractor and certification by the Architect, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed, corrected, and accepted. If the remaining balance for Work not fully completed or corrected is less than retainage stipulated in the Contract Documents, and if bonds have been furnished, the written consent of the surety to payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by the Contractor to the Architect prior to certification of such payment. Such payment shall be made under terms and conditions governing final payment, except that it shall not constitute a waiver of Claims.

§ 9.10.4 The making of final payment shall constitute a waiver of Claims by the Owner except those arising from

- .1 liens, Claims, security interests, or encumbrances arising out of the Contract and unsettled;
- .2 failure of the Work to comply with the requirements of the Contract Documents;
- .3 terms of special warranties required by the Contract Documents; or
- .4 audits performed by the Owner, if permitted by the Contract Documents, after final payment.

§ 9.10.5 Acceptance of final payment by the Contractor, a Subcontractor, or a supplier, shall constitute a waiver of claims by that payee except those previously made in writing and identified by that payee as unsettled at the time of final Application for Payment.

9.10.6 In response to Federal Arbitrage regulations: If such compliance has not been effected within 90 calendar days of the date of acceptance, the contract shall be terminated and no further opportunity will be granted the Contractor and no further payments will be made on this contract.

ARTICLE 10 PROTECTION OF PERSONS AND PROPERTY

§ 10.1 Safety Precautions and Programs

The Contractor shall be responsible for initiating, maintaining, and supervising all safety precautions and programs in connection with the performance of the Contract.

§ 10.2 Safety of Persons and Property

§ 10.2.1 The Contractor shall take reasonable precautions for safety of, and shall provide reasonable protection to prevent damage, injury, or loss to

- .1 employees on the Work and other persons who may be affected thereby;
- .2 the Work and materials and equipment to be incorporated therein, whether in storage on or off the site, under care, custody, or control of the Contractor, a Subcontractor, or a Sub-subcontractor; and

.3 other property at the site or adjacent thereto, such as trees, shrubs, lawns, walks, pavements, roadways, structures, and utilities not designated for removal, relocation, or replacement in the course of construction.

~~.4 The General Contractor shall be solely responsible for security and safety of all people and property including the Owner's Fixed and Movable Property within the existing facility during renovation operations when the existing facility is placed in the care of the General Contractor for operations outside of the Owner's normal occupancy periods. Extreme care shall be taken to ensure that the facility is secured at all times and the Owner's property is protected. Work during these periods shall be scheduled with the Owner and shall include pre and post inspections of the area by both the Owner and General Contractor. The General Contractor shall reimburse the Owner for any damaged or missing property during these periods. Security involves keeping the existing buildings locked at all times so that unauthorized individuals cannot enter the facilities.~~

§ 10.2.2 The Contractor shall comply with, and give notices required by applicable laws, statutes, ordinances, codes, rules and regulations, and lawful orders of public authorities, bearing on safety of persons or property or their protection from damage, injury, or loss.

§ 10.2.3 The Contractor shall implement, erect, and maintain, as required by existing conditions and performance of the Contract, reasonable safeguards for safety and protection, including posting danger signs and other warnings against hazards; promulgating safety regulations; and notifying the owners and users of adjacent sites and utilities of the safeguards.

§ 10.2.4 When use or storage of explosives or other hazardous materials or equipment, or unusual methods are necessary for execution of the Work, the Contractor shall exercise utmost care and carry on such activities under supervision of properly qualified personnel.

§ 10.2.5 The Contractor shall promptly remedy damage and loss (other than damage or loss insured under property insurance required by the Contract Documents) to property referred to in Sections 10.2.1.2 and 10.2.1.3 caused in whole or in part by the Contractor, a Subcontractor, a Sub-subcontractor, or anyone directly or indirectly employed by any of them, or by anyone for whose acts they may be liable and for which the Contractor is responsible under Sections 10.2.1.2 and 10.2.1.3. The Contractor may make a Claim for the cost to remedy the damage or loss to the extent such damage or loss is attributable to acts or omissions of the Owner or Architect or anyone directly or indirectly employed by either of them, or by anyone for whose acts either of them may be liable, and not attributable to the fault or negligence of the Contractor. The foregoing obligations of the Contractor are in addition to the Contractor's obligations under Section 3.18.

§ 10.2.6 The Contractor shall designate a responsible member of the Contractor's organization at the site whose duty shall be the prevention of accidents. This person shall be the Contractor's superintendent unless otherwise designated by the Contractor in writing to the Owner and Architect.

§ 10.2.7 The Contractor shall not permit any part of the construction or site to be loaded so as to cause damage or create an unsafe condition.

§ 10.2.8 Injury or Damage to Person or Property

If either party suffers injury or damage to person or property because of an act or omission of the other party, or of others for whose acts such party is legally responsible, notice of the injury or damage, whether or not insured, shall be given to the other party within a reasonable time not exceeding 21 days after discovery. The notice shall provide sufficient detail to enable the other party to investigate the matter.

§ 10.3 Hazardous Materials and Substances

§ 10.3.1 The Contractor is responsible for compliance with any requirements included in the Contract Documents regarding hazardous materials or substances. If the Contractor encounters a hazardous material or substance not addressed in the Contract Documents and if reasonable precautions will be inadequate to prevent foreseeable bodily injury or death to persons resulting from a material or substance, including but not limited to asbestos or polychlorinated biphenyl (PCB), or lead, encountered on the site by the Contractor, the Contractor shall, upon recognizing the condition, immediately stop Work in the affected area and notify the Owner and Architect of the condition.

§ 10.3.2 Upon receipt of the Contractor's notice, the Owner shall obtain the services of a licensed laboratory to verify the presence or absence of the material or substance reported by the Contractor and, in the event such material or substance is found to be present, to cause it to be rendered harmless. ~~Unless otherwise required by the Contract Documents, the Owner shall furnish in writing to the Contractor and Architect the names and qualifications of persons or entities who are to perform tests verifying the presence or absence of the material or substance or who are to perform the task of removal or safe containment of the material or substance. The Contractor and the Architect will promptly reply to the Owner in writing stating whether or not either has reasonable objection to the persons or entities proposed by the Owner. If either the Contractor or Architect has an objection to a person or entity proposed by the Owner, the Owner shall propose another to whom the Contractor and the Architect have no reasonable objection. When the material or substance has been rendered harmless, Work in the affected area shall resume upon written agreement of the Owner and Contractor. By Change Order, the Contract Time shall be extended appropriately and the Contract Sum shall be increased by the amount of the Contractor's reasonable additional costs of shutdown, delay, and start-up.~~

~~**§ 10.3.3** To the fullest extent permitted by law, the Owner shall indemnify and hold harmless the Contractor, Subcontractors, Architect, Architect's consultants, and agents and employees of any of them from and against claims, damages, losses, and expenses, including but not limited to attorneys' fees, arising out of or resulting from performance of the Work in the affected area if in fact the material or substance presents the risk of bodily injury or death as described in Section 10.3.1 and has not been rendered harmless, provided that such claim, damage, loss, or expense is attributable to bodily injury, sickness, disease or death, or to injury to or destruction of tangible property (other than the Work itself), except to the extent that such damage, loss, or expense is due to the fault or negligence of the party seeking indemnity.~~

§ 10.3.4 The Owner shall not be responsible under this Section 10.3 for hazardous materials or substances the Contractor brings to the site unless such materials or substances are required by the Contract Documents. The Owner shall be responsible for hazardous materials or substances required by the Contract Documents, except to the extent of the Contractor's fault or negligence in the use and handling of such materials or substances.

§ 10.3.5 The Contractor shall reimburse the Owner for the cost and expense the Owner incurs (1) for remediation of hazardous materials or substances the Contractor brings to the site and negligently handles, or (2) where the Contractor fails to perform its obligations under Section 10.3.1, except to the extent that the cost and expense are due to the Owner's fault or negligence.

~~**§ 10.3.6** If, without negligence on the part of the Contractor, the Contractor is held liable by a government agency for the cost of remediation of a hazardous material or substance solely by reason of performing Work as required by the Contract Documents, the Owner shall reimburse the Contractor for all cost and expense thereby incurred.~~

§ 10.4 Emergencies

In an emergency affecting safety of persons or property, the Contractor shall ~~act,~~ notify the Owner and Architect immediately of the emergency simultaneously acting at the Contractor's discretion, to prevent ~~threatened~~ damage, injury, or loss. Additional compensation or extension of time claimed by the Contractor on account of an emergency work shall be determined as provided in Article 15 and Article 7.

ARTICLE 11 INSURANCE AND BONDS

§ 11.1 CONTRACTOR'S LIABILITY INSURANCE

1. § 11.1.1 The Contractor shall purchase from and maintain in a company or companies lawfully authorized to do business in the jurisdiction in which the Project is located such insurances as will protect the

Contractor from claims set forth below which may arise out of or result from the Contractor's operations and completed operations under the Contract and for which the Contractor may be legally liable, whether such operations be by the Contractor or by a Subcontractor or by anyone directly or indirectly employed by any of them, or by anyone for whose acts any of them may be liable:

.1 **Claims under workers' compensation, disability benefit and other similar employee benefit acts that are applicable to the Work to be performed;**

.2 **Claims for damages because of bodily injury, occupational sickness or disease, or death of the Contractor's employees;**

.3 **Claims for damages because of bodily injury, sickness or disease, or death of any person other than the Contractor's employees;**

.4 **Claims for damages insured by usual personal injury liability coverage;**

.5 **Claims for damages, other than to the Work itself, because of injury to or destruction of tangible property, including loss of use resulting therefrom;**

.6 **Claims for damages because of bodily injury, death of a person or property damage arising out of ownership, maintenance or use of a motor vehicle;**

.7 **Claims for bodily injury or property damage arising out of completed operations; and**

.8 **Claims involving contractual liability insurance applicable to the Contractor's obligations under Section 3.18.**

.9 **Liability Insurance shall include all major divisions of coverage and be on comprehensive basis, including:**

1. Premises & Operations.
2. Independent Contractors Protective covering Contractor's subs, if any.
3. Products and Completed Operations.
4. Personal Injury & Advertising Liability.
5. Blanket Contractual Liability.
6. Auto Liability — Symbol 1 for all owned, non-owned and hired cars.

§ 11.1.2 The insurance required by Section 11.1.1 shall be written for not less than limits of liability specified in the Contract Documents or required by law, whichever coverage is greater. Coverages, whether written on an occurrence or claims-made basis, shall be maintained without interruption from the date of commencement of the Work until the date of final payment and termination of any coverage required to be maintained after final payment, and with respect to the Contractor's completed operations coverage, until the expiration of the period for correction of Work or for such other period for maintenance of completed operation coverage as specified in the Contract Documents.

11.1.2.1 General Liability insurance must be written on an "occurrence" form. Insurance written on a "claims made" form isn not acceptable.

11.1.2.2 The insurance required by subparagraph 11.1.1 shall be written for not less than the following limits, or greater, if required by law;

.1 **Worker's Compensation:** (a) Coverage A – State of Louisiana – Statutory provisions; (b) Coverage B – Employer's Liability: $1,000,000 per Accident, $1,000,000 Disease – Each Employee, $1,000,000 Disease – Annual Aggregate; (c) Applicable federal coverage, e.g. Longshoreman's Railroad Act, Etc.; Statutory Limit

This policy shall be endorsed to include a Waiver of Subrogation in favor of **the Owner**, its officers and employees.

.2 **Commercial General Liability** including Premises & Operations, Independent contractor's Protective Liability and Products and Complete Operations: (a) Bodily Injury & Property Damage Liability combined single limit of: $1,000,000 per Occurrence, $3,000,000 Annual Aggregate: (b) Personal & Advertising Liability combined single limit of: $1,000,000 per Occurrence.

.3 **Owner's Protective Liability** including Bodily Injury and Property Damage Combined Single Limit of Liability of: $1,000,000 per Occurrence.

.4 **Automobile Liability** including Bodily Injury and Property Damage Combined Single Limit of Liability of $1,000,000 per occurrence.

.5 Umbrella or Excess Liability which applies as excess over and lists as underlying the Worker's Compensation, General Liability and Auto Liability policies specified above with Umbrella limit of: $1,000,000 per Occurrence, $1,000,000 Annual Aggregate.

.6 Aircraft Liability when aircrafts are used in the direct performance of the Contract and shall include Bodily Injury (including passengers) and Property Damage Combined Single Limit of Liability of: $1,000,000 per Occurrence.

.7 Watercraft Liability (Owned & Non-Owned) when watercrafts are used in the direct performance of the Contract for Bodily Injury and Property Damage Combined Single Limit of Liability of $1,000,000 per Occurrence.

.8 Products & Completed Operations included in the Commercial General Liability policy must be continued in force for a period of at least ten (10) years after completion of the total contract.

§ 11.1.3 Certificates of insurance acceptable to the Owner shall be filed with the Owner prior to commencement of the Work and thereafter upon renewal or replacement of each required policy of insurance. These certificates and the insurance policies required by this Section 11.1 shall contain a provision that coverages afforded under the policies will not be canceled or allowed to expire until at least 30 days' prior written notice has been given to the Owner. An additional certificate evidencing continuation of liability coverage, including coverage for completed operations, shall be submitted with the final Application for Payment as required by Section 9.10.2 and thereafter upon renewal or replacement of such coverage until the expiration of the time required by Section 11.1.2. Information concerning reduction of coverage on account of revised limits or claims paid under the General Aggregate, or both, shall be furnished by the Contractor with reasonable promptness. If the insurance is written on the Comprehensive General Liability policy form, the Certificates shall be AIA Document G705, "Certificate of Insurance". If this insurance is written on a Commercial General Liability policy form, ACCORD Form 25S will be acceptable.

§ 11.1.4 The following requirements shall apply to all insurance and bonds required under Article 11:

a. Insurance and bonds provided by the Contractor shall be with a reliable company (having at least "A-, X or above" Financial Rating according to the latest A.M. Best Report) of the Contractor's choice, acceptable to and approved by the Owner and authorized to do business in the state where the project is located.

b. The Contractor shall have the policies endorsed to reflect and insure any occupancy by Owner at the time of such occupancy and shall name the Architect, Architect's consultants, and the Owner as additional insureds.

c. All liability policies referred to in this Article shall be maintained in the same company.

§ 11.1.5 The Contractor shall cause the commercial liability coverage required by the Contract Documents to include ~~as additional insureds under the Contractor's commercial general liability policy or as otherwise described in the Contract Documents.~~ (1) the Owner, the Architect and the Architect's Consultants as additional insureds for claims caused in whole or in part by the Contractor's negligent acts or omissions during the Contractor's operations; and (2) the Owner as an additional insured for claims caused in whole or in part by the Contractor's negligent acts or omissions during the Contractor's completed operations.

§ 11.2 Performance Bond and Payment Bond

§ 11.2.1 The Contractor shall furnish bonds covering faithful performance of the Contract and payment of obligations arising thereunder. Bonds shall be obtained through a company licensed to do business in the State of Louisiana, and the cost thereof shall be included in the Contract Sum. The amount of each bond shall be equal to 100% percent of the Contract Sum.

~~§~~ 11.2.2 The Contractor shall deliver the required bonds to the Owner not later than the date Agreement is entered into.

§ 11.2.3 Any bonds issued shall have affixed thereto a certified and current copy of the power of attorney that authorizes the signatory to issue the bond.

§ 11.2.4 Upon the request of any person or entity appearing to be a potential beneficiary of bonds covering payment of obligations arising under ~~the Contract,~~ the Contract,the Contractor shall promptly furnish a copy of the bonds or shall authorize a copy to be furnished.

§ 11.3 ADDITIONAL INSURANCE / BOND REQUIREMENTS

§ 11.3.1 The following requirements shall apply to all insurance and bonds required under Article 11:

.1 Insurance and bonds provided by the Contractor shall be with a reliable company (having at least an "A-, X or above" Financial Rating according to the latest A.M. Best Report) of the Contractor's Choice, acceptable to and approved by the Owner and authorized to do business in the state where the project is located.
.2 The Contractor shall have the policies endorsed to reflect and insure any occupancy by Owner at the time of such occupancy and shall name the Architect, Architect's consultants, and the Owner as additional insureds.
.3 All liability policies referred to in this Article shall be maintained in the same company.

~~**§ 11.3.2 If during the Project construction period the Owner insures properties, real or personal or both, at or adjacent to the site by property insurance under policies separate from those insuring the Project, or if after final payment property insurance is to be provided on the completed Project through a policy or policies other than those insuring the Project during the construction period, to the extent permissible by such policies, the Owner waives all rights in accordance with the terms of Section 11.3.1 for damages caused by fire or other causes of loss covered by this separate property insurance.**~~

§ 11.4 Notice of Cancellation or Expiration of Contractor's Required Insurance. Within three (3) business days of the date the Contractor becomes aware of an ~~impending~~ impending or actual cancellation or expiration of any insurance required by the Contract Documents, the Contractor shall provide notice to the Owner of such impending or actual cancellation or expiration. Upon receipt of notice from the Contractor, the Owner shall, unless the lapse in coverage arises from an act or omission of the Owner, have the right to stop the Work until the lapse in coverage has been cured by the procurement of replacement coverage by the Contractor. The furnishing of notice by the Contractor shall not relieve the Contractor of any contractual obligation to provide any required ~~coverage.~~coverage.

§11.5
~~§ 11.2 Owner's Insurance~~
OWNER'S INSURANCE

~~§ 11.2.1 The Owner shall purchase and maintain insurance~~ The Owner shall be responsible for purchasing and maintaining the Owner's usual liability insurance.

~~of the types and limits of liability, containing the endorsements, and subject to the terms and conditions, as described in the Agreement or elsewhere in the Contract Documents. The Owner shall purchase and maintain the required insurance from an insurance company or insurance companies lawfully authorized to issue insurance in the jurisdiction where the Project is located.~~

11.5.2 Prior to settlement of an insured loss, the Owner shall notify the Contractor of the terms of the proposed settlement as well as the proposed allocation of the insurance proceeds. The Contractor shall have 14 days from receipt of notice to object to the proposed settlement or allocation of the

~~**§ 11.2.2 Failure to Purchase Required Property Insurance.** If the Owner fails to purchase and maintain the required property insurance, with all of the coverages and in the amounts described in the Agreement or elsewhere~~

~~in the Contract Documents, the Owner shall inform the Contractor in writing prior to commencement of the Work. Upon receipt of notice from the Owner, the Contractor may delay commencement of the Work and may obtain insurance that will protect the interests of the Contractor, Subcontractors, and Sub-Subcontractors in the Work. When the failure to provide coverage has been cured or resolved, the Contract Sum and Contract Time shall be equitably adjusted. In the event the Owner fails to procure coverage, the Owner waives all rights against the Contractor, Subcontractors, and Sub-subcontractors to the extent the loss to the Owner would have been covered by the insurance to have been procured by the Owner. The cost of the insurance shall be charged to the Owner by a Change Order. If the Owner does not provide written notice, and the Contractor is damaged by the failure or neglect of the Owner to purchase or maintain the required insurance, the Owner shall reimburse the Contractor for all reasonable costs and damages attributable thereto.~~proceeds. If the Contractor does not object, the Owner shall settle the loss and the Contractor shall be bound by the settlement and allocation. Upon receipt, the Owner shall deposit the insurance proceeds in a separate account and make the appropriate distributions. Thereafter, if no other agreement is made or the Owner does not terminate the Contract for convenience, the Owner and Contractor shall execute a Change Order for reconstruction of the damaged or destroyed Work in the amount allocated for that purpose. If the Contractor timely objects to either the terms of the proposed settlement or the allocation of the proceeds, the Owner may proceed to settle the insured loss, and any dispute between the Owner and Contractor arising out of the settlement or allocation of the proceeds shall be resolved pursuant to Article 15. Pending resolution of any dispute, the Owner may issue a Construction Change Directive for the reconstruction of the damaged or destroyed Work.

~~§ 11.2.3 Notice of Cancellation~~ § 11.6 PROPERTY INSURANCE.

~~or Expiration of Owner's Required Property Insurance.~~ ~~Within three (3) business days of the date the Owner becomes aware of an impending~~ **§ 11.6.1** The Contractor shall purchase and maintain, in a company or companies lawfully authorized to do business in the jurisdiction in which the Project is Louisiana.

~~or actual cancellation or expiration of any property insurance required by the Contract Documents, the Owner shall provide notice to the Contractor of such impending or actual cancellation or expiration. Unless the lapse in coverage arises from an act or omission of the Contractor: (1) the Contractor, upon receipt of notice from the Owner, shall have the right to stop the Work until the lapse in coverage has been cured by the procurement of replacement coverage by either the Owner or the Contractor; (2) the Contract Time and Contract Sum~~ located, property insurance written on a builder's risk "all-risk" or equivalent policy form in the amount of the initial Contract Sum, plus value for the entire Project at the site on a replacement cost basis without optional deductibles. Such property insurance shall be maintained, unless otherwise provided in the Contract Documents or otherwise agreed in writing by all persons and entities who are beneficiaries of such insurance, until final payment has been made as provided in Section 9.10 or until no person or entity other than the Owner has an insurable interest in the property required by this Section 11.3 to be covered, whichever is later. This insurance shall include interests of the Owner, the Contractor, Subcontractors and Sub-subcontractors in the Project. Builder's Risk insurance, in the amount of the total completed value shall be furnished by the Contractor to cover loss or damage to the work or to construction materials at the worksite, plus architectural and consulting engineering fees. The policy shall cover the interest of the contractor, all sub-contractors and Terrebonne Parish Hospital Service District No. 1. Perils shall be "all risk" with a deductible as determined by the Contract. If insurance underwriting considerations dictate a larger Windstorm deductible, the policy may have split deductibles. The Contractor must bear the deductible in each claim.

§ 11.6.1.1 Property insurance shall be on an "all-risk" or equivalent policy form and shall include, without limitation, insurance against the perils of fire (with extended coverage) and physical loss or damage including, without duplication of coverage, theft, vandalism, malicious mischief, collapse, earthquake, flood, windstorm, falsework, testing and startup, temporary buildings and debris removal including demolition occasioned by enforcement of any applicable legal requirements, and shall cover reasonable compensation for Architect's and Contractor's services and expenses required as a result of such insured loss.

~~to the extent any loss to the Owner would have been covered by the insurance had it not expired or been cancelled. If the Contractor purchases replacement coverage, the cost of the insurance~~ **§ 11.6.1.2** Contactor's attention is directed to the fact that because of the nature of the Work, the Contractor will have in his care, custody, and control, at various stages of the Work, property of others which may be subject to damage. This situation is set forth here, so that Contractor will take into consideration this exposure and possibility of loss that would not be covered under a General Liability Policy and provide necessary protection for himself as provided in **Paragraph 11.2**

~~shall be charged to the Owner by an appropriate Change Order. The furnishing of notice by the Owner shall not relieve the Owner of any contractual obligation to provide required insurance.~~ § 11.6.1.3 The Builder's Risk policy shall not be extended to cover transit risks or the tools or equipment of the contractor or sub-contractor. The risk of loss to such property is to fall on the Contractor.

§ ~~11.3~~ 11.7 Waivers of Subrogation

§ ~~11.3.1~~ 11.7.1 The Owner and Contractor waive all rights against (1) each other and any of their subcontractors, sub-subcontractors, agents, and employees, each of the other; (2) the Architect and Architect's ~~consultants;~~ consultants: and (3) Separate Contractors, if any, and any of their subcontractors, sub-subcontractors, agents, and employees, for damages caused by fire, or other causes of loss, to the extent those losses are covered by property insurance required by the Agreement or other property insurance applicable to the Project, except such rights as they have to proceeds of such insurance. The Owner or Contractor, as appropriate, shall require similar written waivers in favor of the individuals and entities identified above from the Architect, Architect's consultants, Separate Contractors, subcontractors, and sub-subcontractors. The policies of insurance purchased and maintained by each person or entity agreeing to waive claims pursuant to this section 11.3.1 shall not prohibit this waiver of subrogation. This waiver of subrogation shall be effective as to a person or entity (1) even though that person or entity would otherwise have a duty of indemnification, contractual or otherwise, (2) even though that person or entity did not pay the insurance premium directly or indirectly, or (3) whether or not the person or entity had ~~an~~ a insurable interest in the damaged property.

§ ~~11.3.2~~ 11.7.2 If during the Project construction period the Owner insures properties, real or personal or both, at or adjacent to the site by property insurance under policies separate from those insuring the Project, or if after final payment property insurance is to be provided on the completed Project through a policy or policies other than those insuring the Project during the construction period, to the extent permissible by such policies, the Owner waives all rights in accordance with the terms of Section 11.3.1 for damages caused by fire or other causes of loss covered by this separate property insurance.

§ ~~11.4~~ 11.8 Loss of Use, Business Interruption, and Delay in Completion Insurance

The Owner, at the Owner's option, may purchase and maintain insurance that will protect the Owner against loss of use of the Owner's property, or the inability to conduct normal operations, due to fire or other causes of loss. The Owner waives all rights of action against the Contractor and Architect for loss of use of the Owner's property, due to fire or other hazards however caused.

~~§11.5~~ § 11.9 Adjustment and Settlement of Insured Loss

§ ~~11.5.1~~ 11.9.1 A loss insured under the property insurance required by the Agreement shall be adjusted by the Owner as fiduciary and made payable to the Owner as fiduciary for the insureds, as their interests may appear, subject to requirements of any applicable mortgagee clause and of Section 11.5.2. The Owner shall pay the Architect and Contractor their just shares of insurance proceeds received by the Owner, and by appropriate agreements the Architect and Contractor shall make payments to their consultants and Subcontractors in similar manner.

§ ~~11.5.2~~ 11.9.2 Prior to settlement of an insured loss, the Owner shall notify the Contractor of the terms of the proposed settlement as well as the proposed allocation of the insurance proceeds. The Contractor shall have 14 days from receipt of notice to object to the proposed settlement or allocation of the proceeds. If the Contractor does not object, the Owner shall settle the loss and the Contractor shall be bound by the settlement and allocation. Upon receipt, the Owner shall deposit the insurance proceeds in a separate account and make the appropriate distributions. Thereafter, if no other agreement is made or the Owner does not terminate the Contract for convenience, the Owner and Contractor shall execute a Change Order for reconstruction of the damaged or destroyed Work in the amount allocated for that purpose. If the Contractor timely objects to either the terms of the proposed settlement or the allocation of the proceeds, the Owner may proceed to settle the insured loss, and any dispute between the Owner and Contractor arising out of the settlement or allocation of the proceeds shall be resolved pursuant to Article 15. Pending resolution ~~of~~ or any dispute, the Owner may issue a ~~Construction~~ Contraction Change Directive for the reconstruction of the damaged or destroyed Work.

ARTICLE 12 UNCOVERING AND CORRECTION OF WORK

§ 12.1 Uncovering of Work

§ 12.1.1 If a portion of the Work is covered contrary to the Architect's request or to requirements specifically expressed in the Contract Documents, it must, if requested in writing by the Architect, be uncovered for the Architect's examination and be replaced at the Contractor's expense without change in the Contract Time.

§ 12.1.2 If a portion of the Work has been covered that the Architect has not specifically requested to examine prior to its being covered, the Architect may request to see such Work and it shall be uncovered by the Contractor. If such Work is in accordance with the Contract Documents, the Contractor shall be entitled to an equitable adjustment to the Contract Sum and Contract Time as may be appropriate. If such Work is not in accordance with the Contract Documents, the costs of uncovering the Work, and the cost of correction, shall be at the Contractor's expense.

§ 12.2 Correction of Work

§ 12.2.1 Before Substantial Completion

The Contractor shall promptly correct Work rejected by the Architect or failing to conform to the requirements of the Contract Documents, discovered before Substantial Completion and whether or not fabricated, installed or completed. Costs of correcting such rejected Work, including additional testing and inspections, the cost of uncovering and replacement, and compensation for the Architect's services and expenses made necessary thereby, shall be at the Contractor's expense.

§ 12.2.2 After Substantial Completion

§ 12.2.2.1 In addition to the Contractor's obligations under Section 3.5, if, within one year after the date of Substantial Completion of the Work or designated portion thereof or after the date for commencement of warranties established under Section 9.9.1, or by terms of any applicable special warranty required by the Contract Documents, any of the Work is found to be not in accordance with the requirements of the Contract Documents, the Contractor shall correct it promptly after receipt of notice from the Owner to do so, unless the Owner has previously given the Contractor a written acceptance of such condition. The Owner shall give such notice promptly after discovery of the condition. During the one-year period for correction of Work, if the Owner fails to notify the Contractor and give the Contractor an opportunity to make the correction, the Owner waives the rights to require correction by the Contractor and to make a claim for breach of warranty. If the Contractor fails to correct nonconforming Work within a reasonable time during that period after receipt of notice from the Owner or Architect, the Owner may correct it in accordance with Section 2.5.

§ 12.2.2.2 The one-year period for correction of Work shall be extended with respect to portions of Work first performed after Substantial Completion by the period of time between Substantial Completion and the actual completion of that portion of the Work.

§ 12.2.2.3 The one-year period for correction of Work shall not be extended by corrective Work performed by the Contractor pursuant to this Section 12.2.

§ 12.2.3 The Contractor shall remove from the site portions of the Work that are not in accordance with the requirements of the Contract Documents and are neither corrected by the Contractor nor accepted by the Owner.

§ 12.2.4 The Contractor shall bear the cost of correcting destroyed or damaged construction of the Owner or Separate Contractors, whether completed or partially completed, caused by the Contractor's correction or removal of Work that is not in accordance with the requirements of the Contract Documents.

§ 12.2.5 Nothing contained in this Section 12.2 shall be construed to establish a period of limitation with respect to other obligations the Contractor has under the Contract Documents. Establishment of the one-year period for correction of Work as described in Section 12.2.2 relates only to the specific obligation of the Contractor to correct the Work, and has no relationship to the time within which the obligation to comply with the Contract Documents may be sought to be enforced, nor to the time within which proceedings may be commenced to establish the Contractor's liability with respect to the Contractor's obligations other than specifically to correct the Work.

§ 12.3 Acceptance of Nonconforming Work

If the Owner prefers to accept Work that is not in accordance with the requirements of the Contract Documents, the Owner may do so instead of requiring its removal and correction, in which case the Contract Sum will be reduced as appropriate and equitable. Such adjustment shall be effected whether or not final payment has been made.

ARTICLE 13 MISCELLANEOUS PROVISIONS

§ 13.1 Governing Law

The Contract shall be governed by the law of the ~~place where the Project is located, excluding that jurisdiction's choice of law rules. If the parties have selected arbitration as the method of binding dispute resolution, the Federal Arbitration Act shall govern Section 15.4.~~State of Louisiana.

§ 13.2 Successors and Assigns

§ 13.2.1 The Owner and Contractor respectively bind themselves, their partners, successors, assigns, and legal representatives to covenants, agreements, and obligations contained in the Contract Documents. Except as provided in Section 13.2.2, neither party to the Contract shall assign the Contract as a whole without written consent of the other. If either party attempts to make an assignment without such consent, that party shall nevertheless remain legally responsible for all obligations under the Contract.

~~§ 13.2.2 The Owner may, without consent of the Contractor, assign the Contract to a lender providing construction financing for the Project, if the lender assumes the Owner's Owner's rights and obligations under the Contract Documents.~~ Documents. The Contractor shall execute all consents reasonably required to facilitate the assignment.

§ 13.3 Rights and Remedies

§ 13.3.1 Duties and obligations imposed by the Contract Documents and rights and remedies available thereunder shall be in addition to and not a limitation of duties, obligations, rights, and remedies otherwise imposed or available by law.

§ 13.3.2 No action or failure to act by the Owner, Architect, or Contractor shall constitute a waiver of a right or duty afforded them under the Contract, nor shall such action or failure to act constitute approval of or acquiescence in a breach thereunder, except as may be specifically agreed upon in writing.

§ 13.3.3 The Thirty-Second Judicial Court in and for the Parish of Terrebonne, State of Louisiana shall have sole jurisdiction in any action brought under this contract.

§ 13.4 Tests and Inspections

§ 13.4.1 Tests, inspections, and approvals of portions of the Work shall be made as required by the Contract Documents and by applicable laws, statutes, ordinances, codes, rules, and regulations or lawful orders of public authorities. ~~Unless otherwise provided, the~~ The Contractor shall make arrangements for such tests, inspections, and approvals with ~~an independent testing laboratory or entity acceptable to the Owner, or with the appropriate public authority, and~~ the testing laboratory provided by the Owner and the Owner shall bear all related costs of tests, inspections, and ~~approvals. The Contractor shall give the Architect timely notice~~ approvals, unless noted otherwise in the Contract Documents. The Contractor shall give timely notice to the Architect of when and where tests and inspections are to be made so that the Architect may be present for such procedures. ~~The Owner shall bear costs of tests, inspections, or approvals that do not become requirements until after bids are received or negotiations concluded. The Owner shall directly arrange and pay for tests, inspections, or approvals where building codes or applicable laws or regulations so require.~~Such costs., except as provided in Section 13.4.3, shall be at the Owner's expense.

§ 13.4.2 If the Architect, Owner, or public authorities having jurisdiction determine that portions of the Work require additional testing, inspection, or approval not included under Section 13.4.1, the Architect will, upon written authorization from the Owner, instruct the Contractor to make arrangements for such additional testing, inspection, or approval, by an entity acceptable to the Owner, and the Contractor shall give timely notice to the Architect of when and where tests and inspections are to be made so that the Architect may be present for such procedures. Such costs, except as provided in Section 13.4.3, shall be at the Owner's expense.

§ 13.4.3 If procedures for testing, inspection, or approval under Sections 13.4.1 and 13.4.2 reveal failure of the portions of the Work to comply with requirements established by the Contract Documents, all costs made necessary

User Notes: (3B9ADA39)

by such failure, including those of repeated procedures and compensation for the Architect's services and expenses, shall be at the Contractor's expense.

§ 13.4.4 Required certificates of testing, inspection, or approval shall, unless otherwise required by the Contract Documents, be secured by the Contractor and promptly delivered to the Architect.

§ 13.4.5 If the Architect is to observe tests, inspections, or approvals required by the Contract Documents, the Architect will do so promptly and, where practicable, at the normal place of testing.

§ 13.4.6 Tests or inspections conducted pursuant to the Contract Documents shall be made promptly to avoid unreasonable delay in the Work.

§ 13.5 Interest

Payments due and unpaid under the Contract Documents shall bear interest from the date payment is due at the rate the parties agree upon in writing or, in the absence thereof, at the legal rate prevailing from time to time at the place where the Project is located.

§ 13.6 EQUAL OPPORTUNITY

13.6.1 The Contractor shall maintain policies of employment as follows:

.1 The Contractor and the Contractor's Subcontractors shall not discriminate against any employee or applicant for employment because of race, religion, color, sex, national origin, or age. The Contractor shall take affirmative action to insurance that applicants are employed and that employees are treated during employment without regard to their race, religion, color, sex, national origin, or age. Such action shall include, but not be limited to the following: Employment, upgrading, demotion or transfer; recruitment or recruitment advertising; layoff or termination, rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Contractor agrees to post in conspicuous places, available to employees and applicants for employment, notices setting forth the policies of nondiscrimination..

.2 The Contractor and the Contractor's Subcontractors shall, in all solicitations or advertisements for employees placed by them or on their behalf, state that all qualified applicants will receive consideration for employment without regard to race, religion, color, sex, national origin or age.

ARTICLE 14 TERMINATION OR SUSPENSION OF THE CONTRACT

§ 14.1 Termination by the Contractor

§ 14.1.1 The Contractor may terminate the Contract if the Work is stopped for a period of 30 consecutive days through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, their agents or employees, or any other persons or entities performing portions of the Work, for any of the following reasons:

.1 Issuance of an order of a court or other public authority having jurisdiction that requires all Work to be stopped;

.2 An act of government, such as a declaration of national emergency, that requires all Work to be stopped;

.3 Because the Architect has not issued a Certificate for Payment and has not notified the Contractor of the reason for withholding certification as provided in Section 9.4.1, or because the Owner has not made payment on a Certificate for Payment within the time stated in the Contract Documents; or

.4 The Owner has failed to furnish to the Contractor reasonable evidence as required by Section 2.2.

§ 14.1.2 The Contractor may terminate the Contract if, through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, their agents or employees, or any other persons or entities performing portions of the Work, repeated suspensions, delays, or interruptions of the entire Work by the Owner as described in Section 14.3, constitute in the aggregate more than 100 percent of the total number of days scheduled for completion, or 120 days in any 365-day period, whichever is less.

§ 14.1.3 If one of the reasons described in Section 14.1.1 or 14.1.2 exists, the Contractor may, upon seven days' notice to the Owner and Architect, terminate the Contract and recover from the Owner payment for Work executed, as well as reasonable overhead and profit on Work not executed, and costs incurred by reason of such termination.

§ 14.1.4 If the Work is stopped for a period of 60 consecutive days through no act or fault of the Contractor, a Subcontractor, a Sub-subcontractor, or their agents or employees or any other persons or entities performing portions of the Work because the Owner has repeatedly failed to fulfill the Owner's obligations under the Contract Documents with respect to matters important to the progress of the Work, the Contractor may, upon seven additional days' notice to the Owner and the Architect, terminate the Contract and recover from the Owner as provided in Section 14.1.3.

§ 14.2 Termination by the Owner for Cause

§ 14.2.1 The Owner may terminate the Contract if the Contractor

.1 repeatedly refuses or fails to supply enough properly skilled workers or proper materials;

.2 fails to make payment to Subcontractors or suppliers in accordance with the respective agreements between the Contractor and the Subcontractors or suppliers;

.3 repeatedly disregards applicable laws, statutes, ordinances, codes, rules and regulations, or lawful orders of a public authority; or

.4 otherwise is guilty of substantial breach of a provision of the Contract Documents.

.5 failure to complete the punch list within the lien period as provided in 9.8.3.

§ 14.2.2 When any of the reasons described in Section 14.2.1 exist, and upon certification by the Architect that sufficient cause exists to justify such action, the Owner may, without prejudice to any other rights or remedies of the Owner and after giving the Contractor and the Contractor's surety, if any, seven days' notice, terminate employment of the Contractor and may, subject to any prior rights of the surety:

.1 Exclude the Contractor from the site and take possession of all materials, equipment, tools, and construction equipment and machinery thereon owned by the Contractor;

.2 ~~Accept assignment of subcontracts pursuant to Section 5.4; and~~

.3 Finish the Work by whatever reasonable method the Owner may deem expedient. Upon written request of the Contractor, the Owner shall furnish to the Contractor a detailed accounting of the costs incurred by the Owner in finishing the Work.

§ 14.2.3 When the Owner terminates the Contract for one of the reasons stated in Section 14.2.1, the Contractor shall not be entitled to receive further payment until the Work is finished.

§ 14.2.4 If the unpaid balance of the Contract Sum exceeds costs of finishing the Work, including compensation for the Architect's services and expenses made necessary thereby, and other damages incurred by the Owner and not expressly waived, such excess shall be paid to the Contractor. If such costs and damages exceed the unpaid balance, the Contractor shall pay the difference to the Owner. The amount to be paid to the Contractor or Owner, as the case may be, shall be certified by the Initial Decision Maker, upon application, and this obligation for payment shall survive termination of the Contract.

§ 14.2.5 If an agreed sum of liquidated damages has been established, termination by the Owner under this Article will not relieve the Contractor and/or surety of his obligations under the liquidated damages provisions and the Contractor and/or surety shall be liable to the Owner for per diem liquidated damages.

§ 14.3 Suspension by the Owner for Convenience

§ 14.3.1 The Owner may, without cause, order the Contractor in writing to suspend, delay or interrupt the Work, in whole or in part for such period of time as the Owner may determine.

§ 14.3.2 The Contract Sum and Contract Time shall be adjusted for increases in the cost and time caused by suspension, delay, or interruption under Section 14.3.1. Adjustment of the Contract Sum shall include profit. No adjustment shall be made to the extent

.1 that performance is, was, or would have been, so suspended, delayed, or interrupted, by another cause for which the Contractor is responsible; or

.2 that an equitable adjustment is made or denied under another provision of the Contract.

§ 14.4 Termination by the Owner for Convenience

§ 14.4.1 The Owner may, at any time, terminate the Contract for the Owner's convenience and without cause.

§ 14.4.2 Upon receipt of notice from the Owner of such termination for the Owner's convenience, the Contractor shall

.1 cease operations as directed by the Owner in the notice;

.2 take actions necessary, or that the Owner may direct, for the protection and preservation of the Work; and

.3 except for Work directed to be performed prior to the effective date of termination stated in the notice, terminate all existing subcontracts and purchase orders and enter into no further subcontracts and purchase orders.

§ 14.4.3 In case of such termination for the Owner's convenience, the Owner shall pay the Contractor for Work properly executed; costs incurred by reason of the termination, including costs attributable to termination of Subcontracts; and the termination fee, if any, set forth in the Agreement.

ARTICLE 15 CLAIMS AND DISPUTES

§ 15.1 Claims

§ 15.1.1 Definition

A Claim is a demand or assertion by one of the parties seeking, as a matter of right, payment of money, a change in the Contract Time, or other relief with respect to the terms of the Contract. The term "Claim" also includes other disputes and matters in question between the Owner and Contractor arising out of or relating to the Contract. The responsibility to substantiate Claims shall rest with the party making the Claim. This Section 15.1.1 does not require the Owner to file a Claim in order to impose liquidated damages in accordance with the Contract Documents.

§ 15.1.2 Time Limits on Claims

The Owner and Contractor shall commence all Claims and causes of action against the other and arising out of or related to the Contract, whether in contract, tort, breach of warranty or otherwise, in accordance with the requirements of the binding dispute resolution method selected in the Agreement and within the period specified by applicable law, but in any case not more than 10 years after the date of Substantial Completion of the Work. The Owner and Contractor waive all Claims and causes of action not commenced in accordance with this Section 15.1.2.

§ 15.1.3 Notice of Claims

§ 15.1.3.1 Claims by either the Owner or Contractor, where the condition giving rise to the Claim is first discovered prior to expiration of the period for correction of the Work set forth in Section 12.2.2, shall be initiated by notice to the other party and to the Initial Decision Maker with a copy sent to the Architect, if the Architect is not serving as the Initial Decision Maker. Claims by either party under this Section 15.1.3.1 shall be initiated within 21 days after occurrence of the event giving rise to such Claim or within 21 days after the claimant first recognizes the condition giving rise to the Claim, whichever is later.

§ 15.1.3.2 Claims by either the Owner or Contractor, where the condition giving rise to the Claim is first discovered after expiration of the period for correction of the Work set forth in Section 12.2.2, shall be initiated by notice to the other party. In such event, no decision by the Initial Decision Maker is required.

§ 15.1.4 Continuing Contract Performance

§ 15.1.4.1 Pending final resolution of a Claim, except as otherwise agreed in writing or as provided in Section 9.7 and Article 14, the Contractor shall proceed diligently with performance of the Contract and the Owner shall continue to make payments in accordance with the Contract Documents.

§ 15.1.4.2 The Contract Sum and Contract Time shall be adjusted in accordance with the Initial Decision Maker's decision, subject to the right of either party to proceed in accordance with this Article 15. The Architect will issue Certificates for Payment in accordance with the decision of the Initial Decision Maker.

§ 15.1.5 Claims for Additional Cost

If the Contractor wishes to make a Claim for an increase in the Contract Sum, notice as provided in Section 15.1.3 shall be given before proceeding to execute the portion of the Work that is the subject of the Claim. Prior notice is not required for Claims relating to an emergency endangering life or property arising under Section 10.4.

§ 15.1.6 Claims for Additional Time

§ 15.1.6.1 If the Contractor wishes to make a Claim for an increase in the Contract Time, notice as provided in Section 15.1.3 shall be given. The Contractor's Claim shall include an estimate of cost and of probable effect of delay on progress of the Work. In the case of a continuing delay, only one Claim is necessary.

§ 15.1.6.2 If adverse weather conditions are the basis for a Claim for additional time, such Claim shall be documented by data substantiating that weather conditions were abnormal for the period of time, could not have been reasonably anticipated, and had an adverse effect on the scheduled construction.

§ 15.1.7 Waiver of Claims for Consequential Damages

The Contractor and Owner waive Claims against each other for consequential damages arising out of or relating to this Contract. This mutual waiver includes

.1 damages incurred by the Owner for rental expenses, for losses of use, income, profit, financing, business and reputation, and for loss of management or employee productivity or of the services of such persons; and

.2 damages incurred by the Contractor for principal office expenses including the compensation of personnel stationed there, for losses of financing, business and reputation, and for loss of profit, except anticipated profit arising directly from the Work.

This mutual waiver is applicable, without limitation, to all consequential damages due to either party's termination in accordance with Article 14. Nothing contained in this Section 15.1.7 shall be deemed to preclude assessment of liquidated damages, when applicable, in accordance with the requirements of the Contract Documents.

§ 15.2 Initial Decision

§ 15.2.1 Claims, excluding those where the condition giving rise to the Claim is first discovered after expiration of the period for correction of the Work set forth in Section 12.2.2 or arising under Sections 10.3, 10.4, and 11.5, shall be referred to the Initial Decision Maker for initial decision. The Architect will serve as the Initial Decision Maker, unless otherwise indicated in the Agreement. Except for those Claims excluded by this Section 15.2.1, an initial decision shall be required as a condition precedent to mediation of any Claim. If an initial decision has not been rendered within 30 days after the Claim has been referred to the Initial Decision Maker, the party asserting the Claim may demand mediation ~~and binding dispute resolution~~ or litigation without a decision having been rendered. Unless the Initial Decision Maker and all affected parties agree, the Initial Decision Maker will not decide disputes between the Contractor and persons or entities other than the Owner.

§ 15.2.2 The Initial Decision Maker will review Claims and within ten days of the receipt of a Claim take one or more of the following actions: (1) request additional supporting data from the claimant or a response with supporting data from the other party, (2) reject the Claim in whole or in part, (3) approve the Claim, (4) suggest a compromise, or (5) advise the parties that the Initial Decision Maker is unable to resolve the Claim if the Initial Decision Maker lacks sufficient information to evaluate the merits of the Claim or if the Initial Decision Maker concludes that, in the Initial Decision Maker's sole discretion, it would be inappropriate for the Initial Decision Maker to resolve the Claim.

§ 15.2.3 In evaluating Claims, the Initial Decision Maker may, but shall not be obligated to, consult with or seek information from either party or from persons with special knowledge or expertise who may assist the Initial Decision Maker in rendering a decision. The Initial Decision Maker may request the Owner to authorize retention of such persons at the Owner's expense.

§ 15.2.4 If the Initial Decision Maker requests a party to provide a response to a Claim or to furnish additional supporting data, such party shall respond, within ten days after receipt of the request, and shall either (1) provide a response on the requested supporting data, (2) advise the Initial Decision Maker when the response or supporting data will be furnished, or (3) advise the Initial Decision Maker that no supporting data will be furnished. Upon receipt of the response or supporting data, if any, the Initial Decision Maker will either reject or approve the Claim in whole or in part.

§ 15.2.5 The Initial Decision Maker will render an initial decision approving or rejecting the Claim, or indicating that the Initial Decision Maker is unable to resolve the Claim. This initial decision shall (1) be in writing; (2) state the reasons therefor; and (3) notify the parties and the Architect, if the Architect is not serving as the Initial Decision Maker, of any change in the Contract Sum or Contract Time or both. The initial decision shall be final and binding

User Notes: (3B9ADA39)

on the parties but subject to mediation and, if the parties fail to resolve their dispute through mediation, to binding dispute resolution.

§ 15.2.6 Either party may file for mediation of an initial decision at any time, subject to the terms of Section 15.2.6.1.

§ 15.2.6.1 Either party may, within 30 days from the date of receipt of an initial decision, demand in writing that the other party file for mediation. If such a demand is made and the party receiving the demand fails to file for mediation within 30 days after receipt thereof, then both parties waive their rights to mediate or pursue ~~binding dispute resolution~~ litigation proceedings with respect to the initial decision.

§ 15.2.7 In the event of a Claim against the Contractor, the Owner may, but is not obligated to, notify the surety, if any, of the nature and amount of the Claim. If the Claim relates to a possibility of a Contractor's default, the Owner may, but is not obligated to, notify the surety and request the surety's assistance in resolving the controversy.

§ 15.2.8 If a Claim relates to or is the subject of a mechanic's lien, the party asserting such Claim may proceed in accordance with applicable law to comply with the lien notice or filing deadlines.

§ 15.3

~~**§ 15.3 Mediation**~~

~~**§ 15.3.1** Claims, disputes, or other matters in controversy arising out of or related to the Contract, except those waived as provided for in Sections 9.10.4, 9.10.5, and 15.1.7, shall be subject to mediation as a condition precedent to binding dispute resolution.~~

~~**§ 15.3.2** The parties shall endeavor to resolve their Claims by mediation which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Mediation Procedures in effect on the date of the Agreement. A request for mediation shall be made in writing, delivered to the other party to the Contract, and filed with the person or entity administering the mediation. The request may be made concurrently with the filing of binding dispute resolution proceedings but, in such event, mediation shall proceed in advance of binding dispute resolution proceedings, which shall be stayed pending mediation for a period of 60 days from the date of filing, unless stayed for a longer period by agreement of the parties or court order. If an arbitration is stayed pursuant to this Section 15.3.2, the parties may nonetheless proceed to the selection of the arbitrator(s) and agree upon a schedule for later proceedings.~~

~~**§ 15.3.3** Either party may, within 30 days from the date that mediation has been concluded without resolution of the dispute or 60 days after mediation has been demanded without resolution of the dispute, demand in writing that the other party file for binding dispute resolution. If such a demand is made and the party receiving the demand fails to file for binding dispute resolution within 60 days after receipt thereof, then both parties waive their rights to binding dispute resolution proceedings with respect to the initial decision.~~

~~**§ 15.3.4** The parties shall share the mediator's fee and any filing fees equally. The mediation shall be held in the place where the Project is located, unless another location is mutually agreed upon. Agreements reached in mediation shall be enforceable as settlement agreements in any court having jurisdiction thereof.~~

Omitted

§ 15.4 Omitted

~~15.4 Arbitration~~

~~**§ 15.4.1** If the parties have selected arbitration as the method for binding dispute resolution in the Agreement, any Claim subject to, but not resolved by, mediation shall be subject to arbitration which, unless the parties mutually agree otherwise, shall be administered by the American Arbitration Association in accordance with its Construction Industry Arbitration Rules in effect on the date of the Agreement. The Arbitration shall be conducted in the place where the Project is located, unless another location is mutually agreed upon. A demand for arbitration shall be made in writing, delivered to the other party to the Contract, and filed with the person or entity administering the arbitration. The party filing a notice of demand for arbitration must assert in the demand all Claims then known to that party on which arbitration is permitted to be demanded.~~

User Notes: (3B9ADA39)

§ 15.4.1.1 A demand for arbitration shall be made no earlier than concurrently with the filing of a request for mediation, but in no event shall it be made after the date when the institution of legal or equitable proceedings based on the Claim would be barred by the applicable statute of limitations. For statute of limitations purposes, receipt of a written demand for arbitration by the person or entity administering the arbitration shall constitute the institution of legal or equitable proceedings based on the Claim.

§ 15.4.2 The award rendered by the arbitrator or arbitrators shall be final, and judgment may be entered upon it in accordance with applicable law in any court having jurisdiction thereof.

§ 15.4.3 The foregoing agreement to arbitrate and other agreements to arbitrate with an additional person or entity duly consented to by parties to the Agreement, shall be specifically enforceable under applicable law in any court having jurisdiction thereof.

§ 15.4.4 Consolidation or Joinder

§ 15.4.4.1 Subject to the rules of the American Arbitration Association or other applicable arbitration rules, either party may consolidate an arbitration conducted under this Agreement with any other arbitration to which it is a party provided that (1) the arbitration agreement governing the other arbitration permits consolidation, (2) the arbitrations to be consolidated substantially involve common questions of law or fact, and (3) the arbitrations employ materially similar procedural rules and methods for selecting arbitrator(s).

§ 15.4.4.2 Subject to the rules of the American Arbitration Association or other applicable arbitration rules, either party may include by joinder persons or entities substantially involved in a common question of law or fact whose presence is required if complete relief is to be accorded in arbitration, provided that the party sought to be joined consents in writing to such joinder. Consent to arbitration involving an additional person or entity shall not constitute consent to arbitration of any claim, dispute or other matter in question not described in the written consent.

§ 15.4.4.3 The Owner and Contractor grant to any person or entity made a party to an arbitration conducted under this Section 15.4, whether by joinder or consolidation, the same rights of joinder and consolidation as those of the Owner and Contractor under this Agreement.

AIA® Document A310™ – 2010

Bid Bond

CONTRACTOR:
(Name, legal status and address)

SURETY:
(Name, legal status and principal place of business)

OWNER:
(Name, legal status and address)
Hospital Service District No. 1 - Parish of Terrebonne
8166 Main Street
Houma, Louisiana 70361

BOND AMOUNT: $

PROJECT:
(Name, location or address, and Project number, if any)
TGHS Health and Wellness Center
8166 Main Street
Houma, Louisiana 70360

The Contractor and Surety are bound to the Owner in the amount set forth above, for the payment of which the Contractor and Surety bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, as provided herein. The conditions of this Bond are such that if the Owner accepts the bid of the Contractor within the time specified in the bid documents, or within such time period as may be agreed to by the Owner and Contractor, and the Contractor either (1) enters into a contract with the Owner in accordance with the terms of such bid, and gives such bond or bonds as may be specified in the bidding or Contract Documents, with a surety admitted in the jurisdiction of the Project and otherwise acceptable to the Owner, for the faithful performance of such Contract and for the prompt payment of labor and material furnished in the prosecution thereof; or (2) pays to the Owner the difference, not to exceed the amount of this Bond, between the amount specified in said bid and such larger amount for which the Owner may in good faith contract with another party to perform the work covered by said bid, then this obligation shall be null and void, otherwise to remain in full force and effect. The Surety hereby waives any notice of an agreement between the Owner and Contractor to extend the time in which the Owner may accept the bid. Waiver of notice by the Surety shall not apply to any extension exceeding sixty (60) days in the aggregate beyond the time for acceptance of bids specified in the bid documents, and the Owner and Contractor shall obtain the Surety's consent for an extension beyond sixty (60) days.

If this Bond is issued in connection with a subcontractor's bid to a Contractor, the term Contractor in this Bond shall be deemed to be Subcontractor and the term Owner shall be deemed to be Contractor.

When this Bond has been furnished to comply with a statutory or other legal requirement in the location of the Project, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so

This document has important legal consequences. Consultation with an attorney is encouraged with respect to its completion or modification.

Any singular reference to Contractor, Surety, Owner or other party shall be considered plural where applicable.

§ 1 The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner for the performance of the Construction Contract, which is incorporated herein by reference.

§ 2 If the Contractor performs the Construction Contract, the Surety and the Contractor shall have no obligation under this Bond, except when applicable to participate in a conference as provided in Section 3.

§ 3 If there is no Owner Default under the Construction Contract, the Surety's obligation under this Bond shall arise after

.1 the Owner first provides notice to the Contractor and the Surety that the Owner is considering declaring a Contractor Default. Such notice shall indicate whether the Owner is requesting a conference among the Owner, Contractor and Surety to discuss the Contractor's performance. If the Owner does not request a conference, the Surety may, within five (5) business days after receipt of the Owner's notice, request such a conference. If the Surety timely requests a conference, the Owner shall attend. Unless the Owner agrees otherwise, any conference requested under this Section 3.1 shall be held within ten (10) business days of the Surety's receipt of the Owner's notice. If the Owner, the Contractor and the Surety agree, the Contractor shall be allowed a reasonable time to perform the Construction Contract, but such an agreement shall not waive the Owner's right, if any, subsequently to declare a Contractor Default;

.2 the Owner declares a Contractor Default, terminates the Construction Contract and notifies the Surety; and

.3 the Owner has agreed to pay the Balance of the Contract Price in accordance with the terms of the Construction Contract to the Surety or to a contractor selected to perform the Construction Contract.

§ 4 Failure on the part of the Owner to comply with the notice requirement in Section 3.1 shall not constitute a failure to comply with a condition precedent to the Surety's obligations, or release the Surety from its obligations, except to the extent the Surety demonstrates actual prejudice.

§ 5 When the Owner has satisfied the conditions of Section 3, the Surety shall promptly and at the Surety's expense take one of the following actions:

§ 5.1 Arrange for the Contractor, with the consent of the Owner, to perform and complete the Construction Contract;

§ 5.2 Undertake to perform and complete the Construction Contract itself, through its agents or independent contractors;

§ 5.3 Obtain bids or negotiated proposals from qualified contractors acceptable to the Owner for a contract for performance and completion of the Construction Contract, arrange for a contract to be prepared for execution by the Owner and a contractor selected with the Owner's concurrence, to be secured with performance and payment bonds executed by a qualified surety equivalent to the bonds issued on the Construction Contract, and pay to the Owner the amount of damages as described in Section 7 in excess of the Balance of the Contract Price incurred by the Owner as a result of the Contractor Default; or

§ 5.4 Waive its right to perform and complete, arrange for completion, or obtain a new contractor and with reasonable promptness under the circumstances:

.1 After investigation, determine the amount for which it may be liable to the Owner and, as soon as practicable after the amount is determined, make payment to the Owner; or

.2 Deny liability in whole or in part and notify the Owner, citing the reasons for denial.

§ 6 If the Surety does not proceed as provided in Section 5 with reasonable promptness, the Surety shall be deemed to be in default on this Bond seven days after receipt of an additional written notice from the Owner to the Surety demanding that the Surety perform its obligations under this Bond, and the Owner shall be entitled to enforce any remedy available to the Owner. If the Surety proceeds as provided in Section 5.4, and the Owner refuses the payment or the Surety has denied liability, in whole or in part, without further notice the Owner shall be entitled to enforce any remedy available to the Owner.

To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes:
(1917085560)

§ 7 If the Surety elects to act under Section 5.1, 5.2 or 5.3, then the responsibilities of the Surety to the Owner shall not be greater than those of the Contractor under the Construction Contract, and the responsibilities of the Owner to the Surety shall not be greater than those of the Owner under the Construction Contract. Subject to the commitment by the Owner to pay the Balance of the Contract Price, the Surety is obligated, without duplication, for

.1 the responsibilities of the Contractor for correction of defective work and completion of the Construction Contract;

.2 additional legal, design professional and delay costs resulting from the Contractor's Default, and resulting from the actions or failure to act of the Surety under Section 5; and

.3 liquidated damages, or if no liquidated damages are specified in the Construction Contract, actual damages caused by delayed performance or non-performance of the Contractor.

§ 8 If the Surety elects to act under Section 5.1, 5.3 or 5.4, the Surety's liability is limited to the amount of this Bond.

§ 9 The Surety shall not be liable to the Owner or others for obligations of the Contractor that are unrelated to the Construction Contract, and the Balance of the Contract Price shall not be reduced or set off on account of any such unrelated obligations. No right of action shall accrue on this Bond to any person or entity other than the Owner or its heirs, executors, administrators, successors and assigns.

§ 10 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 11 Any proceeding, legal or equitable, under this Bond may be instituted in any court of competent jurisdiction in the location in which the work or part of the work is located and shall be instituted within two years after a declaration of Contractor Default or within two years after the Contractor ceased working or within two years after the Surety refuses or fails to perform its obligations under this Bond, whichever occurs first. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 12 Notice to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears.

§ 13 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 14 Definitions

§ 14.1 Balance of the Contract Price. The total amount payable by the Owner to the Contractor under the Construction Contract after all proper adjustments have been made, including allowance to the Contractor of any amounts received or to be received by the Owner in settlement of insurance or other claims for damages to which the Contractor is entitled, reduced by all valid and proper payments made to or on behalf of the Contractor under the Construction Contract.

§ 14.2 Construction Contract. The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and changes made to the agreement and the Contract Documents.

§ 14.3 Contractor Default. Failure of the Contractor, which has not been remedied or waived, to perform or otherwise to comply with a material term of the Construction Contract.

§ 14.4 Owner Default. Failure of the Owner, which has not been remedied or waived, to pay the Contractor as required under the Construction Contract or to perform and complete or comply with the other material terms of the Construction Contract.

§ 14.5 Contract Documents. All the documents that comprise the agreement between the Owner and Contractor.

§ 1 The Contractor and Surety, jointly and severally, bind themselves, their heirs, executors, administrators, successors and assigns to the Owner to pay for labor, materials and equipment furnished for use in the performance of the Construction Contract, which is incorporated herein by reference, subject to the following terms.

§ 2 If the Contractor promptly makes payment of all sums due to Claimants, and defends, indemnifies and holds harmless the Owner from claims, demands, liens or suits by any person or entity seeking payment for labor, materials or equipment furnished for use in the performance of the Construction Contract, then the Surety and the Contractor shall have no obligation under this Bond.

§ 3 If there is no Owner Default under the Construction Contract, the Surety's obligation to the Owner under this Bond shall arise after the Owner has promptly notified the Contractor and the Surety (at the address described in Section 13) of claims, demands, liens or suits against the Owner or the Owner's property by any person or entity seeking payment for labor, materials or equipment furnished for use in the performance of the Construction Contract and tendered defense of such claims, demands, liens or suits to the Contractor and the Surety.

§ 4 When the Owner has satisfied the conditions in Section 3, the Surety shall promptly and at the Surety's expense defend, indemnify and hold harmless the Owner against a duly tendered claim, demand, lien or suit.

§ 5 The Surety's obligations to a Claimant under this Bond shall arise after the following:

§ 5.1 Claimants, who do not have a direct contract with the Contractor,

.1 have furnished a written notice of non-payment to the Contractor, stating with substantial accuracy the amount claimed and the name of the party to whom the materials were, or equipment was, furnished or supplied or for whom the labor was done or performed, within ninety (90) days after having last performed labor or last furnished materials or equipment included in the Claim; and

.2 have sent a Claim to the Surety (at the address described in Section 13).

§ 5.2 Claimants, who are employed by or have a direct contract with the Contractor, have sent a Claim to the Surety (at the address described in Section 13).

§ 6 If a notice of non-payment required by Section 5.1.1 is given by the Owner to the Contractor, that is sufficient to satisfy a Claimant's obligation to furnish a written notice of non-payment under Section 5.1.1.

§ 7 When a Claimant has satisfied the conditions of Sections 5.1 or 5.2, whichever is applicable, the Surety shall promptly and at the Surety's expense take the following actions:

§ 7.1 Send an answer to the Claimant, with a copy to the Owner, within sixty (60) days after receipt of the Claim, stating the amounts that are undisputed and the basis for challenging any amounts that are disputed; and

§ 7.2 Pay or arrange for payment of any undisputed amounts.

§ 7.3 The Surety's failure to discharge its obligations under Section 7.1 or Section 7.2 shall not be deemed to constitute a waiver of defenses the Surety or Contractor may have or acquire as to a Claim, except as to undisputed amounts for which the Surety and Claimant have reached agreement. If, however, the Surety fails to discharge its obligations under Section 7.1 or Section 7.2, the Surety shall indemnify the Claimant for the reasonable attorney's fees the Claimant incurs thereafter to recover any sums found to be due and owing to the Claimant.

§ 8 The Surety's total obligation shall not exceed the amount of this Bond, plus the amount of reasonable attorney's fees provided under Section 7.3, and the amount of this Bond shall be credited for any payments made in good faith by the Surety.

§ 9 Amounts owed by the Owner to the Contractor under the Construction Contract shall be used for the performance of the Construction Contract and to satisfy claims, if any, under any construction performance bond. By the Contractor furnishing and the Owner accepting this Bond, they agree that all funds earned by the Contractor in the performance of the Construction Contract are dedicated to satisfy obligations of the Contractor and Surety under this Bond, subject to the Owner's priority to use the funds for the completion of the work.

User Notes: (893726539)

§ 10 The Surety shall not be liable to the Owner, Claimants or others for obligations of the Contractor that are unrelated to the Construction Contract. The Owner shall not be liable for the payment of any costs or expenses of any Claimant under this Bond, and shall have under this Bond no obligation to make payments to, or give notice on behalf of, Claimants or otherwise have any obligations to Claimants under this Bond.

§ 11 The Surety hereby waives notice of any change, including changes of time, to the Construction Contract or to related subcontracts, purchase orders and other obligations.

§ 12 No suit or action shall be commenced by a Claimant under this Bond other than in a court of competent jurisdiction in the state in which the project that is the subject of the Construction Contract is located or after the expiration of one year from the date (1) on which the Claimant sent a Claim to the Surety pursuant to Section 5.1.2 or 5.2, or (2) on which the last labor or service was performed by anyone or the last materials or equipment were furnished by anyone under the Construction Contract, whichever of (1) or (2) first occurs. If the provisions of this Paragraph are void or prohibited by law, the minimum period of limitation available to sureties as a defense in the jurisdiction of the suit shall be applicable.

§ 13 Notice and Claims to the Surety, the Owner or the Contractor shall be mailed or delivered to the address shown on the page on which their signature appears. Actual receipt of notice or Claims, however accomplished, shall be sufficient compliance as of the date received.

§ 14 When this Bond has been furnished to comply with a statutory or other legal requirement in the location where the construction was to be performed, any provision in this Bond conflicting with said statutory or legal requirement shall be deemed deleted herefrom and provisions conforming to such statutory or other legal requirement shall be deemed incorporated herein. When so furnished, the intent is that this Bond shall be construed as a statutory bond and not as a common law bond.

§ 15 Upon request by any person or entity appearing to be a potential beneficiary of this Bond, the Contractor and Owner shall promptly furnish a copy of this Bond or shall permit a copy to be made.

§ 16 Definitions

§ 16.1 Claim. A written statement by the Claimant including at a minimum:

- .1 the name of the Claimant;
- .2 the name of the person for whom the labor was done, or materials or equipment furnished;
- .3 a copy of the agreement or purchase order pursuant to which labor, materials or equipment was furnished for use in the performance of the Construction Contract;
- .4 a brief description of the labor, materials or equipment furnished;
- .5 the date on which the Claimant last performed labor or last furnished materials or equipment for use in the performance of the Construction Contract;
- .6 the total amount earned by the Claimant for labor, materials or equipment furnished as of the date of the Claim;
- .7 the total amount of previous payments received by the Claimant; and
- .8 the total amount due and unpaid to the Claimant for labor, materials or equipment furnished as of the date of the Claim.

§ 16.2 Claimant. An individual or entity having a direct contract with the Contractor or with a subcontractor of the Contractor to furnish labor, materials or equipment for use in the performance of the Construction Contract. The term Claimant also includes any individual or entity that has rightfully asserted a claim under an applicable mechanic's lien or similar statute against the real property upon which the Project is located. The intent of this Bond shall be to include without limitation in the terms "labor, materials or equipment" that part of water, gas, power, light, heat, oil, gasoline, telephone service or rental equipment used in the Construction Contract, architectural and engineering services required for performance of the work of the Contractor and the Contractor's subcontractors, and all other items for which a mechanic's lien may be asserted in the jurisdiction where the labor, materials or equipment were furnished.

§ 16.3 Construction Contract. The agreement between the Owner and Contractor identified on the cover page, including all Contract Documents and all changes made to the agreement and the Contract Documents.

4 CONTRACT SUM

5 PAYMENTS

6 DISPUTE RESOLUTION

7 TERMINATION OR SUSPENSION

8 MISCELLANEOUS PROVISIONS

9 ENUMERATION OF CONTRACT DOCUMENTS

EXHIBIT A INSURANCE AND BONDS

ARTICLE 1 THE CONTRACT DOCUMENTS

The Contract Documents consist of this Agreement, Conditions of the Contract (General, Supplementary, and other Conditions), Drawings, Specifications, Addenda issued prior to execution of this Agreement, other documents listed in this Agreement, and Modifications issued after execution of this Agreement, all of which form the Contract, and are as fully a part of the Contract as if attached to this Agreement or repeated herein. The Contract represents the entire and integrated agreement between the parties hereto and supersedes prior negotiations, representations, or agreements, either written or oral. An enumeration of the Contract Documents, other than a Modification, appears in Article 9.

ARTICLE 2 THE WORK OF THIS CONTRACT

The Contractor shall fully execute the Work described in the Contract Documents, except as specifically indicated in the Contract Documents to be the responsibility of others.

ARTICLE 3 DATE OF COMMENCEMENT AND SUBSTANTIAL COMPLETION

§ 3.1 The date of commencement of the Work shall be:
(Check one of the following boxes.)

[ ] The date of this Agreement.

[X] A date set forth in a notice to proceed issued by the Owner.

[ ] Established as follows:
(Insert a date or a means to determine the date of commencement of the Work.)

If a date of commencement of the Work is not selected, then the date of commencement shall be the date of this Agreement.

§ 3.2 The Contract Time shall be measured from the date of commencement of the Work.

§ 3.3 Substantial Completion

§ 3.3.1 Subject to adjustments of the Contract Time as provided in the Contract Documents, the Contractor shall achieve Substantial Completion of the entire Work:
(Check one of the following boxes and complete the necessary information.)

AIA Document A101 – 2017. Copyright © 1915, 1918, 1925, 1937, 1951, 1958, 1961, 1963, 1967, 1974, 1977, 1987, 1991, 1997, 2007 and 2017. All rights reserved. To report copyright violations, e-mail docinfo@aiacontracts.com.
User Notes: (3B9ADA35)

[ ] Not later than ( ) calendar days from the date of commencement of the Work.

[ ] By the following date:

§ 3.3.2 Subject to adjustments of the Contract Time as provided in the Contract Documents, if portions of the Work are to be completed prior to Substantial Completion of the entire Work, the Contractor shall achieve Substantial Completion of such portions by the following dates:

Portion of Work	Substantial Completion Date
N/A	

§ 3.3.3 If the Contractor fails to achieve Substantial Completion as provided in this Section 3.3, liquidated damages, if any, shall be assessed as set forth in Section 4.5.

ARTICLE 4 CONTRACT SUM

§ 4.1 The Owner shall pay the Contractor the Contract Sum in current funds for the Contractor's performance of the Contract. The Contract Sum shall be ~~($), ()~~, subject to additions and deductions as provided in the Contract Documents.

§ 4.2 Alternates

§ 4.2.1 Alternates, if any, included in the Contract Sum:

Item	Price
N/A	

§ 4.2.2 Subject to the conditions noted below, the following alternates may be accepted by the Owner following execution of this Agreement. Upon acceptance, the Owner shall issue a Modification to this Agreement.
(Insert below each alternate and the conditions that must be met for the Owner to accept the alternate.)

Item	Price	Conditions for Acceptance
N/A		

§ 4.3 Allowances, if any, included in the Contract Sum:
(Identify each allowance.)

Item	Price
N/A	

§ 4.4 Unit prices, if any:
(Identify the item and state the unit price and quantity limitations, if any, to which the unit price will be applicable.)

Item	Units and Limitations	Price per Unit ($0.00)
N/A		

§ 4.5 Liquidated damages, if any:
(Insert terms and conditions for liquidated damages, if any.)

The parties agree that time is of the essence in the completion of this Contract. In the event the contractor fails to achieve Substantial Completion within the time stipulated in Section 3.3, then Liquidated Damages are herby stipulated, and shall be assessed against the Contractor, in the amount of One Thousand Dollars. ($1,000.00) per calendar day after the agreed upon Substantial Completion date that the Work is not fully certified by the Architect as being Substantially Complete and, in such event" (a) the Owner shall be authorized and empowered to recover such Liquidated Damages without placing Contractor in default, the Contractor hereby specifically waiving the necessity of being placed in default as required by Louisiana Covil Code Article 2010: and (b) the Owner shall be authorized and empowered to recover such Liquidated Damages by deducting and withholding such sum(s.) from payments of the Contract Sum to which Contractor would otherwise be entitles hereunder, without further legal process.

ARTICLE 5 PAYMENTS

§ 5.1 Progress Payments

§ 5.1.1 Based upon Applications for Payment submitted to the Architect by the Contractor and Certificates for Payment issued by the Architect, the Owner shall make progress payments on account of the Contract Sum to the Contractor as provided below and elsewhere in the Contract Documents.

§ 5.1.2 The period covered by each Application for Payment shall be one calendar month ending on the last day of the month, or as follows:

N/A

§ 5.1.3 Provided that an Application for Payment is received by the Architect not later than the Thirtieth day of a month, the Owner shall make payment of the amount certified to the Contractor not later than the Thirtieth day of the following month. If an Application for Payment is received by the Architect after the application date fixed above, payment of the amount certified shall be made by the Owner not later than Thirty (30) days after the Architect receives the Application for Payment.

(Federal, state or local laws may require payment within a certain period of time.)

§ 5.1.4 Each Application for Payment shall be based on the most recent schedule of values submitted by the Contractor in accordance with the Contract Documents. The schedule of values shall allocate the entire Contract Sum among the various portions of the Work. The schedule of values shall be prepared in such form, and supported by such data to substantiate its accuracy, as the Architect may require. This schedule of values shall be used as a basis for reviewing the Contractor's Applications for Payment.

§ 5.1.5 Applications for Payment shall show the percentage of completion of each portion of the Work as of the end of the period covered by the Application for Payment.

§ 5.1.6 In accordance with AIA Document A201™–2017, General Conditions of the Contract for Construction, and subject to other provisions of the Contract Documents, the amount of each progress payment shall be computed as follows:

§ 5.1.6.1 The amount of each progress payment shall first include:

.1 That portion of the Contract Sum properly allocable to completed Work;

.2 That portion of the Contract Sum properly allocable to materials and equipment delivered and suitably stored at the site for subsequent incorporation in the completed construction, or, if approved in advance by the Owner, suitably stored off the site at a location agreed upon in writing; and

.3 That portion of Construction Change Directives that the Architect determines, in the Architect's professional judgment, to be reasonably justified.

§ 5.1.6.2 The amount of each progress payment shall then be reduced by:

.1 The aggregate of any amounts previously paid by the Owner;

.2 The amount, if any, for Work that remains uncorrected and for which the Architect has previously withheld a Certificate for Payment as provided in Article 9 of AIA Document A201–2017;

.3 Any amount for which the Contractor does not intend to pay a Subcontractor or material supplier, unless the Work has been performed by others the Contractor intends to pay;

.4 For Work performed or defects discovered since the last payment application, any amount for which the Architect may withhold payment, or nullify a Certificate of Payment in whole or in part, as provided in Article 9 of AIA Document A201–2017; and

.5 Retainage withheld pursuant to Section 5.1.7.

AIA Document A101 – 2017. Copyright © 1915, 1918, 1925, 1937, 1951, 1958, 1961, 1963, 1967, 1974, 1977, 1987, 1991, 1997, 2007 and 2017. All rights reserved. User Notes:
(3B9ADA35)

§ 5.1.7 Retainage

§ 5.1.7.1 For each progress payment made prior to Substantial Completion of the Work, the Owner may withhold the following amount, as retainage, from the payment otherwise due:
(Insert a percentage or amount to be withheld as retainage from each Application for Payment. The amount of retainage may be limited by governing law.)

5% (Five percent)

§ 5.1.7.1.1 The following items are not subject to retainage:
(Insert any items not subject to the withholding of retainage, such as general conditions, insurance, etc.)

N/A

§ 5.1.7.2 Reduction or limitation of retainage, if any, shall be as follows:
(If the retainage established in Section 5.1.7.1 is to be modified prior to Substantial Completion of the entire Work, including modifications for Substantial Completion of portions of the Work as provided in Section 3.3.2, insert provisions for such modifications.)

N/A

§ 5.1.7.3 Except as set forth in this Section 5.1.7.3, upon Substantial Completion of the Work, the Contractor may submit an Application for Payment that includes the retainage withheld from prior Applications for Payment pursuant to this Section 5.1.7. The Application for Payment submitted at Substantial Completion shall not include retainage as follows:
(Insert any other conditions for release of retainage upon Substantial Completion.)

N/A

§ 5.1.8 If final completion of the Work is materially delayed through no fault of the Contractor, the Owner shall pay the Contractor any additional amounts in accordance with Article 9 of AIA Document A201–2017.

§ 5.1.9 Except with the Owner's prior approval, the Contractor shall not make advance payments to suppliers for materials or equipment which have not been delivered and stored at the site.

§ 5.2 Final Payment

§ 5.2.1 Final payment, constituting the entire unpaid balance of the Contract Sum, shall be made by the Owner to the Contractor when

.1 the Contractor has fully performed the Contract except for the Contractor's responsibility to correct Work as provided in Article 12 of AIA Document A201–2017, and to satisfy other requirements, if any, which extend beyond final payment; and

.2 a final Certificate for Payment has been issued by the Architect. Contractor shall be required to provide 45 day lien clear certificate from the Reorder of Mortgages for the Parish of Terrebonne and Conscent of Surety agreeing to the release of retainage as part of the final payment on project.

§ 5.2.2 The Owner's final payment to the Contractor shall be made no later than 30 days after the issuance of the Architect's final Certificate for Payment, or as follows:

§ 5.3 Interest

Payments due and unpaid under the Contract shall bear interest from the date payment is due at the rate stated below, or in the absence thereof, at the legal rate prevailing from time to time at the place where the Project is located.
(Insert rate of interest agreed upon, if any.)

ARTICLE 6 DISPUTE RESOLUTION

§ 6.1 Initial Decision Maker

The Architect will serve as the Initial Decision Maker pursuant to Article 15 of AIA Document A201–2017, unless the parties appoint below another individual, not a party to this Agreement, to serve as the Initial Decision Maker.
(If the parties mutually agree, insert the name, address and other contact information of the Initial Decision Maker, if other than the Architect.)

§ 6.2 Binding Dispute Resolution

For any Claim subject to, but not resolved by, mediation pursuant to Article 15 of AIA Document A201–2017, the method of binding dispute resolution shall be as follows:
(Check the appropriate box.)

[ ] Arbitration pursuant to Section 15.4 of AIA Document A201–2017

[X] Litigation in ~~a court of competent jurisdiction~~the 32nd JDC, Terrebonne Parish

[ ] Other *(Specify)*

If the Owner and Contractor do not select a method of binding dispute resolution, or do not subsequently agree in writing to a binding dispute resolution method other than litigation, Claims will be resolved by litigation in a court of competent jurisdiction.

ARTICLE 7 TERMINATION OR SUSPENSION

§ 7.1 The Contract may be terminated by the Owner or the Contractor as provided in Article 14 of AIA Document A201–2017.

§ 7.1.1 If the Contract is terminated for the Owner's convenience in accordance with Article 14 of AIA Document A201–2017, then the Owner shall pay the Contractor a termination fee as follows:
(Insert the amount of, or method for determining, the fee, if any, payable to the Contractor following a termination for the Owner's convenience.)

N/A

§ 7.2 The Work may be suspended by the Owner as provided in Article 14 of AIA Document A201–2017.

ARTICLE 8 MISCELLANEOUS PROVISIONS

§ 8.1 Where reference is made in this Agreement to a provision of AIA Document A201–2017 or another Contract Document, the reference refers to that provision as amended or supplemented by other provisions of the Contract Documents.

§ 8.2 The Owner's representative:
(Name, address, email address, and other information)

Phyllis Peoples
President
Hospital Service District No. 1 - Terrebonne Parish
8166 Main Street
Houma, Louisiana 70361

§ 8.3 The Contractor's representative:

AIA Document A101 – 2017. Copyright © 1915, 1918, 1925, 1937, 1951, 1958, 1961, 1963, 1967, 1974, 1977, 1987, 1991, 1997, 2007 and 2017. All rights reserved. User Notes: (3B9ADA35)

(Name, address, email address, and other information)

§ 8.4 Neither the Owner's nor the Contractor's representative shall be changed without ten days' prior notice to the other party.

§ 8.5 Insurance and Bonds

§ 8.5.1 The Owner and the Contractor shall purchase and maintain insurance as set forth in AIA Document A101™–2017, Standard Form of Agreement Between Owner and Contractor where the basis of payment is a Stipulated Sum, Exhibit A, Insurance and Bonds, and elsewhere in the Contract Documents.

§ 8.5.2 The Contractor shall provide bonds as set forth in AIA Document A101™–2017 Exhibit A, and elsewhere in the Contract Documents.

§ 8.6 Notice in electronic format, pursuant to Article 1 of AIA Document A201–2017, may be given in accordance with AIA Document E203™–2013, Building Information Modeling and Digital Data Exhibit, if completed, or as otherwise set forth below:

(If other than in accordance with AIA Document E203–2013, insert requirements for delivering notice in electronic format such as name, title, and email address of the recipient and whether and how the system will be required to generate a read receipt for the transmission.)

N/A

§ 8.7 Other provisions:

8.7.1 No Escrow for Retainage

Owner and Contractor agree that the provisions of Louisiana Revised Statute 9:4857 are not applicable to this contract. In the alternative, Owner and Contractor waive the requirements of Louisiana Revised Statute 9:4857, including but not limited to waiver of those provisions requiring placement of retainage into an escrow account, the use of an escrow agent, and the timing process for retainage payments.

8.7.2 Statutory Employer. In all cases where Contractor's employee (meaning Contractor's direct, borrowed, special or statutory employees) are covered by the Louisiana Worker's Compensation Act, La. R.S. 23:1021 et seq. Owner and Contractor agree that Owner shall be and hereby is designated as the statutory employer of Contractor's direct, borrowed , special and statutory employees, pursuant to la. R.S. 23:1061 (A) (3). Owner and Contractor further agree that the Work is an integral part of and essential to Owner's ability to generate its goods, products and services. This provision is included for the sole purpose of establishing a statutory employer relationship to gain the benefits expressed in la.R.S.23:1061, and is not intended to create an employer/employee relationship for any other purpose. In the event that Owneris required to pay worker's compensation benefits to Contractor's direct, borrowed, special or statutory employees, whether as a statutory employer pursuant to La. R.S. 23:1061 or as a special employer pursuant to La. R.S. 23:1031 (C), Owner shall be entitled to indemnity from Contractor for any such benefit payments. Neither Contractor nor its underwriters shall be entitled to seek contribution from Owner for any worker's compensation benefits payments made on behalf of any Contractor's direct, borrowed, special or statutory employees for purposes of La. R.S. 23:1031 (C). #. It is the intention of the parties that all other terms of the Agreement and/or other Contract Documents not specifically affected by this Amendment will remain unchanged and in full force and effect.

8.7.3 Attorney's Fees.

If as a result of any action or lawsuit filed by the Contractor it is necessary for the Owner to retain an attorney, the Contractor shall pay all legal fees and costs incurred by the Owner, if the Owner is the prevailing party for all or a portion of any claim, in proportion and to the extent the Owner is the prevailing party.

ARTICLE 9 ENUMERATION OF CONTRACT DOCUMENTS

§ 9.1 This Agreement is comprised of the following documents:

8.7.1 Statutory Employer. In all cases where Contractor's employee (meaning Contractor's direct, borrowed, special or statutory employees) are covered by the Louisiana Worker's Compensation Act, La. R.S. 23:1021 et seq. Owner and Contractor agree that Owner shall be and hereby is designated as the statutory employer of Contractor's direct, borrowed , special and statutory employees, pursuant to la. R.S. 23:1061 (A) (3). Owner and Contractor further agree that the Work is an integral part of and essential to Owner's ability to generate its goods, products and services. This provision is included for the sole purpose of establishing a statutory employer relationship to gain the benefits expressed in la.R.S.23:1061, and is not intended to create an employer/employee relationship for any other purpose. In the event that Owneris required to pay worker's compensation benefits to Contractor's direct, borrowed, special or statutory employees, whether as a statutory employer pursuant to La. R.S. 23:1061 or as a special employer pursuant to La. R.S. 23:1031 (C), Owner shall be entitled to indemnity from Contractor for any such benefit payments.
Neither Contractor nor its underwriters shall be entitled to seek contribution from Owner for any worker's compensation benefits payments made on behalf of any Contractor's direct, borrowed, special or statutory employees for purposes of La. R.S. 23:1031 (C). #. It is the intention of the parties that all other terms of the Agreement and/or other Contract Documents not specifically affected by thisAmendment will remain unchanged and in full force and effect.

DRAFT AIA® Document G706® – 1994

Contractor's Affidavit of Payment of Debts and Claims

PROJECT: *(Name and address)*
TGHS Health and Wellness Center
885 Westside Blvd
Houma, Louisiana 70360

ARCHITECT'S PROJECT NUMBER:
#21001

CONTRACT FOR: General Construction

CONTRACT DATED:

OWNER: ☐
ARCHITECT: ☐
CONTRACTOR: ☐
SURETY: ☐
OTHER: ☐

TO OWNER: *(Name and address)*
Hospital Service District No. 1 -
Parish of Terrebonne
8166 Main Street
Houma, Louisiana 70360

STATE OF:
COUNTY OF:

The undersigned hereby certifies that, except as listed below, payment has been made in full and all obligations have otherwise been satisfied for all materials and equipment furnished, for all work, labor, and services performed, and for all known indebtedness and claims against the Contractor for damages arising in any manner in connection with the performance of the Contract referenced above for which the Owner or Owner's property might in any way be held responsible or encumbered.

EXCEPTIONS:

SUPPORTING DOCUMENTS ATTACHED HERETO:

1. Consent of Surety to Final Payment. Whenever Surety is involved, Consent of Surety is required. AIA Document G707, Consent of Surety, may be used for this purpose

Indicate Attachment ☐ Yes ☒ No

The following supporting documents should be attached hereto if required by the Owner:

1. Contractor's Release or Waiver of Liens, conditional upon receipt of final payment.

2. Separate Releases or Waivers of Liens from Subcontractors and material and equipment suppliers, to the extent required by the Owner, accompanied by a list thereof.

3. Contractor's Affidavit of Release of Liens (AIA Document G706A).

CONTRACTOR: *(Name and address)*

DRAFT AIA® Document G704® – 2017

Certificate of Substantial Completion

PROJECT: *(name and address)*	**CONTRACT INFORMATION:**	**CERTIFICATE INFORMATION:**
TGHS Health and Wellness Center 885 Westside Blvd Houma, Louisiana 70360	Contract For: General Construction Date:	Certificate Number: 001 Date:
OWNER: *(name and address)* Hospital Service District No. 1 Parish of Terrebonne 8166 Main Street Houma, Louisiana 70360	**ARCHITECT:** *(name and address)* AQ Studio 1100 Poydras Street, Suite 3550 New Orlean, LA 70163	**CONTRACTOR:** *(name and address)*

The Work identified below has been reviewed and found, to the Architect's best knowledge, information, and belief, to be substantially complete. Substantial Completion is the stage in the progress of the Work when the Work or designated portion is sufficiently complete in accordance with the Contract Documents so that the Owner can occupy or utilize the Work for its intended use. The date of Substantial Completion of the Project or portion designated below is the date established by this Certificate.
(Identify the Work, or portion thereof, that is substantially complete.)

ARCHITECT *(Firm Name)*	**SIGNATURE**	**PRINTED NAME AND TITLE**	**DATE OF SUBSTANTIAL COMPLETION**

WARRANTIES
The date of Substantial Completion of the Project or portion designated above is also the date of commencement of applicable warranties required by the Contract Documents, except as stated below:
(Identify warranties that do not commence on the date of Substantial Completion, if any, and indicate their date of commencement.)

WORK TO BE COMPLETED OR CORRECTED
A list of items to be completed or corrected is attached hereto, or transmitted as agreed upon by the parties, and identified as follows:
(Identify the list of Work to be completed or corrected.)

The failure to include any items on such list does not alter the responsibility of the Contractor to complete all Work in accordance with the Contract Documents. Unless otherwise agreed to in writing, the date of commencement of warranties for items on the attached list will be the date of issuance of the final Certificate of Payment or the date of final payment, whichever occurs first.
The Contractor will complete or correct the Work on the list of items attached hereto within ( ) days from the above date of Substantial Completion.

Cost estimate of Work to be completed or corrected: $

The responsibilities of the Owner and Contractor for security, maintenance, heat, utilities, damage to the Work, insurance, and other items identified below shall be as follows:
(Note: Owner's and Contractor's legal and insurance counsel should review insurance requirements and coverage.)

The Owner and Contractor hereby accept the responsibilities assigned to them in this Certificate of Substantial Completion:

DRAFT AIA® Document G707™ – 1994

Consent Of Surety to Final Payment

PROJECT: *(Name and address)*

TGHS Health and Wellness Center
885 Westside Blvd
Houma, Louisiana 70360

ARCHITECT'S PROJECT NUMBER:

#21001

CONTRACT FOR: General Construction

CONTRACT DATED:

OWNER: ☐
ARCHITECT: ☐
CONTRACTOR: ☐
SURETY: ☐
OTHER: ☐

TO OWNER: *(Name and address)*
Hospital Service District No. 1
Parish of Terrebonne
8166 Main Street
Houma, Louisiana 70360

In accordance with the provisions of the Contract between the Owner and the Contractor as indicated above, the
(Insert name and address of Surety)

, SURETY,

on bond of
(Insert name and address of Contractor)

, CONTRACTOR,

hereby approves of the final payment to the Contractor, and agrees that final payment to the Contractor shall not relieve the Surety of any of its obligations to
(Insert name and address of Owner)

, OWNER,

as set forth in said Surety's bond.

IN WITNESS WHEREOF, the Surety has hereunto set its hand on this date:
(Insert in writing the month followed by the numeric date and year.)

(Surety)

TGMC	*Terrebonne General Medical Center* *Policy and Procedure*		
Title: Infection Control During Construction		**Control No.: 8345-IC**	**Version: 9**
Replaces: v.8 Infection Control During Construction			
Policy Owner: Charlotte Boudreaux (Infection Control Manager)			
Reviewers: Charles Schefferstein (Manager)			
Approved By: Infection Control Committee (Chairman), Teresita McNabb (VP of Nursing)		**Approved Date: 05/28/2018**	**Date Last Reviewed Date: 05/31/2019**

Purpose:

The purpose of this policy is to provide a process to identify and minimize the varying degrees of risk to patients, staff, and visitors during construction and renovation activities undertaken at TGMC.

Policy:

It is the policy of TGMC to maintain the highest level of infection control during any construction or renovation project to eliminate, to the extent possible, airborne contaminants, vibration and noise generating activities from construction and maintenance projects in areas, in which they may have an adverse impact on patient care.

Definitions:

Supportive Data:

Background Information: The Joint Commission on Accreditation for Health Care Organizations has established Environment of Care (EC) standards for evaluation the quality of the patient care environment. Construction projects can create a large amount of air borne contaminations, vibration, and noise generating activities during the demolition, and reconstruction phases of the project. These air borne contaminations can include fungi, dust, vapors and odors, which maybe be detrimental to patients and other persons in the hospital. This policy will also provide methods to include infection control prevention/design containment strategies in the design process. These strategies include:

- Evaluating the project effect on patient care services including the identification of possible disruptions to core services and alternative plans to maintain them.
- Reviewing planned projects and their potential effect on patient population.
- Identifying and implementing appropriate levels of precaution and containment to minimize the risk of nosocomial infections.
- Reviewing planned project drawings and specifications to assure that safety and Infection control methods have been incorporated.
- Identify methods to minimize the effects of other hazards such as noise, vibration, etc.

Equipment:

References:

The Joint Commission Standard, Guidelines for Design and Construction of Health Care Facilities, 2010 edition

Procedure:

A. The Infection Control Department will be involved in the planning and design of all new construction and renovation projects. The design will support current infection control practices.
B. Before initiating any new construction or renovation project, the Facility Management Department will evaluate the project using the Infection Control During Construction - Risk Assessment - Form
    1. Projects shall be classified into four levels of infection control precautions by class. The level of precaution is determined by completing the 14 step risk assessment form.
    2. For all projects, Infection Control precautions are necessary during and upon completion of the project as outlined in Infection Control Risk Assessment Form
C. Based on this assessment an individualized Infection Control Permit is completed as outlined in the Infection Control Risk Assessment Form
        1.Class I and II projects do not require an Infection Control Permit – Facilities Management Department will meet with contractor to discuss needed infection control precautions. A contract will be signed by both parties acknowledging needed precautions.
        2.Class III and IV projects require an Infection Control Permit. Facility Management Department, Contractor, and Infection Control will meet to discuss needed infection control precautions prior to bidding stage. Once a bid is accepted a contract will then be signed by all parties outlining the previously stated infection control precautions necessary during the construction phase and an Infection Control Permit will be initiated.
D. The Facilities Management Department will inspect all job sites daily for compliance to infection control guidelines.
E. At any time Facilities Management or Infection Control may ask to review this permit. Should probable cause exist, these individuals can immediately stop all work on the project until either a valid permit has been issued or any compliance issues resolved.
F. A complete list of open Infection Control Permits will be maintained in the Facilities Management Department until completion of the job.
G. It is the responsibility of the Facilities Management Department to close all permits upon completion of the project.

Terrebonne General Medical Center Policy and Procedure

Title: Interim Life Safety Measures	**Control No.:8370H018**	**Version: 3**
Replaces: Interim Life Safety Measures		
Policy Owner: Charles Schefferstein (Facility Manager) Facilities Management		
Reviewers: Percy Mosely Security		
Approvers: Troy Ledet (Director) Facilities Management	**Date Approved:10/29/14**	**Date last approved: 1/9/20**

Policy:
There will be a program in place which ensures that proper actions are initiated, instituted and documented to temporarily compensate for hazards posed by Life Safety Code deficiencies and construction activities.
This program will be called Interim Life Safety Measures (ILSM) it will be used to temporarily compensate for hazards posed by existing NFPA 101 Life Safety Code deficiencies or construction activities.

Purpose:
To ensure that the safety of the building occupants is not jeopardized during construction, renovations and related activities.

- The Interim Life Safety Measures policy and procedure is reviewed and approved by the Environment of Care Committee.
- The implementation of Interim Life Safety Measures shall be initiated by Facility Management, the Chairman of the Environment of Care Committee or the Safety Officer.
- Monitoring to determine the need for an ILSM shall include:
    - Staff reports
    - Fire alarm and suppression failures
    - Reviewing the hospital's Electronic Statement of Condition (e-SOC)
    - Routine environmental tours
    - Continuously assessing constructions and renovation plans as applicable
- Interim Life Safety Measures must be followed by all staff, patients, visitors, vendors and construction workers.
- The Facility Manager, Safety Officer, and the Environment of Care Committee, shall implement the Interim Life Safety Measures

Actions used to compensate for Life Safety impairments
Interim life safety measures are a series of administrative actions which may be required to provide temporary compensation for hazards posed by construction related activities. These measures include, but are not limited to:

1. The hospital notifies the fire department (or other emergency response group) and initiates a fire watch when a fire alarm or sprinkler system is out of service more than 4

hours in a 24-hour period in an occupied building. Notification and fire watch times are documented.

2. The hospital posts signage identifying the location of alternate exits to everyone affected
3. The hospital has a written Interim Life Safety Measure (ILSM) policy that covers situations when Life Safety Code deficiencies cannot be immediately corrected or during periods of construction. The policy includes criteria for evaluating when and to what extent the hospital follows special measures to compensate for increased life safety risk.
4. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Inspects exits in affected areas on a daily basis. The need for these inspections is based upon criteria in the hospital's Interim Life Safety Measure (ILSM) policy.
5. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Provides temporary but equivalent fire alarm and detection systems for use when a fire system is impaired. The need for equivalent systems is evaluated by Facility Manager or his designee in association with the Construction Manager.
6. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Provides additional fire-fighting equipment. The need for this equipment is evaluated by Facility Manager or his designee in association with the Construction Manager.
7. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Uses temporary construction partitions that are smoke-tight, or made of noncombustible material, or made of limited combustible material that will not contribute to the development or spread of fire. The need for these partitions is evaluated by Facility Manager or his designee in association with the Construction Manager.
8. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Increases surveillance of buildings, grounds, and equipment, giving special attention to construction areas and storage, excavation, and field offices. The need for increased surveillance is evaluated by Facility Manager or his designee in association with the Construction Manager.
9. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Enforces storage, housekeeping, and debris removal practices that reduce the building’s flammable and combustible fire load to the lowest feasible level. The need for these practices is evaluated by Facility Manager or his designee in association with the Construction Manager.
10. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Provides additional training to those who work in the hospital on the use of fire-fighting equipment. The need for additional training is evaluated by Facility Manager or his designee in association with the Construction Manager.
11. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Conducts one additional fire drill per shift per quarter. The need for additional drills is evaluated by Facility Manager or his designee in association with the Construction Manager.
12. When the hospital identifies Life Safety Code (LSC) deficiencies that cannot be immediately corrected or during periods of construction, the hospital does the following: Inspects and tests temporary systems monthly. The completion date of the tests is documented. The need for these inspections and tests is evaluated by Facility Manager or his designee in association with the Construction Manager.

13. The hospital conducts education to promote awareness of building deficiencies, construction hazards, and temporary measures implemented to maintain fire safety. The need for education is evaluated by Facility Manager or his designee in association with the Construction Manager.
14. The hospital trains those who work in the hospital to compensate for impaired structural or compartmental fire safety features. The need for training is evaluated by Facility Manager or his designee in association with the Construction Manager. (See also LS.01.01.01 EP 3)Note: Compartmentalization is the concept of using various building components (fire rated walls and doors, smoke barriers, fire rated floor slabs, and so forth) to prevent the spread of fire and the products of combustion such as to provide a safe means of egress to an approved exit.

Procedure:

- Facility Manager:
    - Shall be notified before the start of any construction
    - Shall attend design/construction meetings to determine if interim life safety measures shall be implemented
    - He/she shall prepare an ILSM assessment of the project
    - He/she shall meet with contractors before the beginning of construction to brief them on hospital policy.
    - He/she shall perform daily on site inspections:
        - Any deficiencies shall be reported to the Construction Project Manager for correction as soon as possible.
        - Any deficiencies observed that are an immediate threat to life and health shall be corrected immediately.
        - Weekends and holiday inspections shall be conducted by security
- He/she Is authorized to shut down any projects that are not meeting ILSM
    - If a project must be halted, the Facility Manager shall notify the following individuals:
        - Environment of Care Committee
        - Construction Project Manager
        - Administration
        - Facility Management Director
    - Modifications must be reviewed before construction may resume.
- The contractor is responsible for posting signage addressing warning notifications at all entrances to the work site.
- Additional fire drills and training will be conducted when conditions warrant in the affected areas.
- Proper barricades (interior and exterior) will be used.
- Hot work permits shall be obtains and contractors will implement and fellow all guidelines contained in the permit. A fire watch will be use when cutting and/or brazing torches are being used, or when interruptions are made in the fire warning system
- Flammable liquids will be properly stored in a flammable storage cabinet
- Contractors shall be responsible for training their crew on ILSMs.

Evaluating & Implementation

ILSM assessment

During the planning stage of any construction or renovation project, a meeting will be held between the Facility Manager, the Construction Manager, and as applicable, the Architect, for responsible for completion of the project. They will review the scope of the project and make efforts to determine if the project will impact the life safety features of the hospital.

The project shall be assessed by the Facility Manager. The Interim Life Safety assessment form shall be completed and scored to determine the degree of life safety impairment during the project and at which stage of the project such impairments would exist.

For each question that is answered yes a detailed assessment of applicability of the measures will be undertaken.

1. The individual assigned will develop implementation schedules(s), actions, and if necessary, means of documentation of the activities.
2. Documentation will be filed by project title.
3. The status of ILSM's for each project will be reviewed by the Environment of Care Committee.
4. Using the 14 above points, The Facility Manager shall initiate appropriate ILSM anytime a lapse in LSC compliance is evident. Each LSC lapse shall be evaluating as to what extent the hospital follows special measures to compensate for increased life safety risk

INTERIM LIFE SAFETY & INFECTION CONTROL DAILY INSPECTION CHECKLIST

PROJECT/AREA inspected: _____ Month/Year: _____

	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
- Are exits clear and unobstructed?																															
- Are exit signs lighted? Temporary exit signs installed?																															
- Has staff been trained on alternate egress routes? (Document on reverse side of this form)																															
- Are doors leading into fire exit stairways being kept closed and latched?																															
- Is access to Emergency services, patient services and for emergency agencies free and unobstructed																															
- Have at least 2 ABC-type extinguishers been provided in the construction area																															
- Have fire alarm or sprinkler systems been impaired? If so, have the proper authorities been notifiec																															
- Has Fire Watch been implemented or are fire alarm/fire sprinklers being re-activated at end of shift?																															
- Document monthly testing of temporary systems																															
- Document staff training of fire fighting equipment on reverse side of this form																															
- Are flammable liquids being used? If so, are they being kept to a minimum and stored in a metal cabinet when not in use?																															
- Document 2 fire drills per shift per quarter																															
- Is the area free of trash accumulation and corridors free of construction debris/material?																															
- Is the amount of combustible material in the area being kept to a minimum?																															
- Has a temporary non-combustible partition been constructed where a smoke partition has been breached or compromised?																															
- Is the "no smoking" policy being followed?																															
- Is power equipment running unattended?																															
- Is cutting or welding being performed? If so, has a permit been issued and prominently displayed

TERREBONNE GENERAL MEDICAL CENTER
INTERIM LIFE SAFETY ASSESSMENT

Project name

		YES	NO
A.	Will any exits become blocked or obstructed and will temporary exit signage identifying alternate exits be necessary? IF YES, DO 1, 2 & 3		
B.	Will access to the ER become blocked or obstructed? IF YES, DO 1, 4 & 11		
C.	Will part of any fire alarm, detection, and/or suppression system be impaired or shut-down more than 4-hrs in a 24-hr period? IF YES, DO 5, 6, 9, 10 &11		
D.	Will temporary, but equivalent fire alarm, detection, or fire-fighting equipment be necessary? IF YES, DO 2, 3, 6, 9 & 10		
E.	Will smoke or fire walls be breached or structural or compartmental fire safety features compromised? IF YES, DO 2 & 10		
F.	Will it be necessary to erect any temporary construction partitions? IF YES, DO 7 & 11		
G.	Will the project result in the accumulation of debris or construction materials? IF YES, DO 2, 8, & 9		
H.	Will construction effect ground's safety (storage, excavations, equipment, etc.)? IF YES, DO 10 &11		
I.	Will construction present other safety hazards? IF YES, DO 10 & 11		

"DO" ACTIONS

1. Post signage and document personnel training for alternative means of egress.
2. Adopt and document daily inspections of construction areas.
3. Conduct and document 2 fire drills per shift per quarter.
4. Meet with ER staff, EMS, Fire Dept. to develop plans; document.
5. Institute Fire Watch and develop alternate systems/policies (i.e. - covering smoke heads during welding operations and uncovering at end of each shift).
6. Test and document temporary systems monthly
7. Document fire resistive rating of partition material/structure.
8. Develop storage, housekeeping and debris removal policies/procedures.
9. Provide fire-fighting equipment and user training; document.
10. Provide training related to other safety hazards.
11. Increase surveillance of buildings, grounds and equipment, especially construction areas.

This is a planning guide only. To DO items may be omitted at the discretion of the Facility Manager. For each item from the "DO" list a separate action plan may need to be developed to assign responsibility and schedule. This hospital is smoke free and policies related to smoking are not required

Evaluated by

Infection Control Risk Assessment
Matrix of Precautions for Construction & Renovation

Step One:
Using the following table, *identify* the Type of Construction Project Activity (Type A-D)

TYPE A	**Inspection and Non-Invasive Activities**. Includes, but is not limited to: ▪ removal of ceiling tiles for visual inspection limited to 1 tile per 50 square feet ▪ painting (but not sanding) ▪ wallcovering, electrical trim work, minor plumbing, and activities which do not generate dust or require cutting of walls or access to ceilings other than for visual inspection.
TYPE B	**Small scale, short duration activities which create minimal dust** Includes, but is not limited to: ▪ installation of telephone and computer cabling ▪ access to chase spaces ▪ cutting of walls or ceiling where dust migration can be controlled.
TYPE C	**Work that generates a moderate to high level of dust or requires demolition or removal of any fixed building components or assemblies** Includes, but is not limited to: ▪ sanding of walls for painting or wall covering ▪ removal of floorcoverings, ceiling tiles and casework ▪ new wall construction ▪ minor duct work or electrical work above ceilings ▪ major cabling activities ▪ any activity which cannot be completed within a single workshift.
TYPE D	**Major demolition and construction projects** Includes, but is not limited to: ▪ activities which require consecutive work shifts ▪ requires heavy demolition or removal of a complete cabling system ▪ new construction.

Step 1__ _____

Steps 1-3 Adapted with permission V Kennedy, B Barnard, St Luke Episcopal Hospital, Houston TX; C Fine, CA
Steps 4-14 Adapted with permission Fairview University Medical Center, Minneapolis MN
Forms modified and provided courtesy of J Bartley, ECSI Inc ,Beverly Hills MI 2002

Step Two:

Using the following table, ***identify*** **the Patient Risk Groups** that will be affected.
If more than one risk group will be affected, select the higher risk group:

Low Risk	Medium Risk	High Risk	Highest Risk
▪ Office areas	▪ Cardiology ▪ Echocardiography ▪ Endoscopy ▪ Nuclear Medicine ▪ Physical Therapy ▪ Radiology/MRI ▪ Respiratory Therapy	▪ CCU ▪ Emergency Room ▪ Labor & Delivery ▪ Laboratories (specimen) ▪ Newborn Nursery ▪ Outpatient Surgery ▪ Pediatrics ▪ Pharmacy ▪ Post Anesthesia Care Unit ▪ Surgical Units	▪ Any area caring for immunocompromised patients ▪ Burn Unit ▪ Cardiac Cath Lab ▪ Central Sterile Supply ▪ Intensive Care Units ▪ Medical Unit ▪ Negative pressure isolation rooms ▪ Oncology ▪ Operating rooms including C-section rooms

Step Two_ _____

Step Three: Match the

Patient Risk Group (***Low, Medium, High, Highest***) with the planned **…**
Construction Project Type (***A, B, C, D***) on the following matrix, to find the **…**
Class of Precautions (***I, II, III or IV***) or level of infection control activities required.

Class I-IV or Color-Coded Precautions are delineated on the following page.

IC Matrix - Class of Precautions: Construction Project by Patient Risk

Patient Risk Group	Construction Project Type: TYPE A	TYPE B	TYPE C	TYPE D
LOW Risk Group	I	II	II	III/IV
MEDIUM Risk Group	I	II	III	IV
HIGH Risk Group	I	II	III/IV	IV
HIGHEST Risk Group	II	III/IV	III/IV	IV

Note: Infection Control approval will be required when the Construction Activity and Risk Level indicate that **Class III** or **Class IV** control procedures are necessary.

Step 3__ _____

Description of Required Infection Control Precautions by Class

During Construction Project **Upon Completion of Project**

Steps 1-3 Adapted with permission V Kennedy, B Barnard, St Luke Episcopal Hospital, Houston TX ; C Fine, CA
Steps 4-14 Adapted with permission Fairview University Medical Center, Minneapolis MN
Forms modified and provided courtesy of J Bartley, ECSI Inc Beverly Hills MI 2002

CLASS I	1. Execute work by methods to minimize raising dust from construction operations. 2. Immediately replace a ceiling tile displaced for visual inspection	1. Clean work area upon completion of task.
CLASS II	1. Provide active means to prevent airborne dust from dispersing into atmosphere. 2. Water mist work surfaces to control dust while cutting. 3. Seal unused doors with duct tape. 4. Block off and seal air vents. 5. Place dust mat at entrance and exit of work area 6. Remove or isolate HVAC system in areas where work is being performed.	1. Wipe work surfaces with disinfectant. 2. Contain construction waste before transport in tightly covered containers. 3. Wet mop and/or vacuum with HEPA filtered vacuum before leaving work area. 4. Remove isolation of HVAC system in areas where work is being performed.
CLASS III	1. Remove or Isolate HVAC system in area where work is being done to prevent contamination of duct system. 2. Complete all critical barriers i.e. sheetrock, plywood, plastic, to seal area from non work area or implement control cube method (cart with plastic covering and sealed connection to work site with HEPA vacuum for vacuuming prior to exit) before construction begins. 3. Maintain negative air pressure within work site utilizing HEPA equipped air filtration units. 4. Contain construction waste before transport in tightly covered containers. 5. Cover transport receptacles or carts. Tape covering unless solid lid.	1. Do not remove barriers from work area until completed project is inspected by the owner's Safety Department and Infection Control Department and thoroughly cleaned by the owner's Environmental Services Department. 2. Remove barrier materials carefully to minimize spreading of dirt and debris associated with construction. 3. Vacuum work area with HEPA filtered vacuums. 4. Wet mop area with disinfectant. 5. Remove isolation of HVAC system in areas where work is being performed.
CLASS IV	1. Isolate HVAC system in area where work is being done to prevent contamination of duct system. 2. Complete all critical barriers i.e. sheetrock, plywood, plastic, to seal area from non work area or implement control cube method (cart with plastic covering and sealed connection to work site with HEPA vacuum for vacuuming prior to exit) before construction begins. 3. Maintain negative air pressure within work site utilizing HEPA equipped air filtration units. 4. Seal holes, pipes, conduits, and punctures appropriately. 5. Construct anteroom and require all personnel to pass through this room so they can be vacuumed using a HEPA vacuum cleaner before leaving work site or they can wear cloth or paper coveralls that are removed each time they leave the work site. 6. All personnel entering work site are required to wear shoe covers. Shoe covers must be changed each time the worker exits the work area. 7. Do not remove barriers from work area until completed project is inspected by the owner's Safety Department and Infection Control Department and thoroughly cleaned by the owner's Environmental Services Department.	1. Remove barrier material carefully to minimize spreading of dirt and debris associated with construction. 2. Contain construction waste before transport in tightly covered containers. 3. Cover transport receptacles or carts. Tape covering unless solid lid 4. Vacuum work area with HEPA filtered vacuums. 5. Wet mop area with disinfectant. 6. Remove isolation of HVAC system in areas where work is being performed.

Step 4. **Identify the areas surrounding the project area, assessing potential impact**

Unit Below	Unit Above	Lateral	Lateral	Behind	Front
Risk Group	Risk Group	Risk Group	Risk Group	Risk Group	Risk Group

Step 5. **Identify specific site of activity eg, patient rooms, medication room, etc.**

__ _____

Step 6. **Identify issues related to: ventilation, plumbing, electrical in terms of the occurrence of probable outages.**

_ _____

Step 7. **Identify containment measures, using prior assessment. What types of barriers? (Eg, solids wall barriers); Will HEPA filtration be required?**

___ _____

(Note: Renovation/construction area shall be isolated from the occupied areas during construction and shall be negative with respect to surrounding areas)

Step 8. **Consider potential risk of water damage. Is there a risk due to compromising structural integrity? (eg, wall, ceiling, roof)**

N/A

Step 9. **Work hours: Can or will the work be done during non-patient care hours?**

N/A

Step 10. **Do plans allow for adequate number of isolation/negative airflow rooms?**

N/A

Step 11. **Do the plans allow for the required number & type of handwashing sinks?**

Yes

Step 12. **Does the infection control staff agree with the minimum number of sinks for this project?**

(Verify against AIA Guidelines for types and area)

Yes

Step 13. **Does the infection control staff agree with the plans relative to clean and soiled utility rooms?**

N/A

Step 14. **Plan to discuss the following containment issues with the project team.**
Eg, traffic flow, housekeeping, debris removal (how and when),

_____

_____

_____

Appendix: Identify and communicate the responsibility for project monitoring that includes infection control concerns and risks. The ICRA may be modified throughout the project. Revisions must be communicated to the Project Manager.

Infection Control Construction Permit

					Permit No:
Location of Construction:				Project Start Date:	
Project Coordinator:				Estimated Duration:	
Contractor Performing Work				Permit Expiration Date:	
Supervisor:				Telephone:	
YES	NO	CONSTRUCTION ACTIVITY	YES	NO	INFECTION CONTROL RISK GROUP
		TYPE A: Inspection, non-invasive activity			GROUP 1: Low Risk
		TYPE B: Small scale, short duration, moderate to high levels			GROUP 2: Medium Risk
		TYPE C: Activity generates moderate to high levels of dust, requires greater 1 work shift for completion			GROUP 3: Medium/High Risk
		TYPE D: Major duration and construction activities Requiring consecutive work shifts			GROUP 4: Highest Risk

CLASS I	1. Execute work by methods to minimize raising dust from construction operations. 2. Immediately replace any ceiling tile displaced for visual inspection.	3. Minor Demolition for Remodeling
CLASS II	1. Provides active means to prevent air-borne dust from dispersing into atmosphere 2. Water mist work surfaces to control dust while cutting. 3. Seal unused doors with duct tape. 4. Block off and seal air vents. 5. Wipe surfaces with disinfectant.	6. Contain construction waste before transport in tightly covered containers. 7. Wet mop and/or vacuum with HEPA filtered vacuum before leaving work area. 8. Place dust mat at entrance and exit of work area. 9. Remove or isolate HVAC system in areas where work is being performed.
CLASS III **Date** **Initial**	1. Obtain infection control permit before construction begins. 2. Isolate HVAC system in area where work is being done to prevent contamination of the duct system. 3. Complete all critical barriers or implement control cube method before construction begins. 4. Maintain negative air pressure within work site utilizing HEPA equipped air filtration units. 5. Do not remove barriers from work area until complete project is thoroughly cleaned by Env. Services Dept.	6. Vacuum work with HEPA filtered vacuums. 7. Wet mop with disinfectant 8. Remove barrier materials carefully to minimize spreading of dirt and debris associated with construction. 9. Contain construction waste before transport in tightly covered containers. 10. Cover transport receptacles or carts. Tape covering. 11. Remove or isolate HVAC system in areas where work is being performed/
Class IV **Date** **Initial**	1. Obtain infection control permit before construction begins. 2. Isolate HVAC system in area where work is being done to prevent contamination of duct system. 3. Complete all critical barriers or implement control cube method before construction begins. 4. Maintain negative air pressure within work site utilizing HEPA equipped air filtration units. 5. Seal holes, pipes, conduits, and punctures appropriately. 6. Construct anteroom and require all personnel to pass through this room so they can be vacuumed using a HEPA vacuum cleaner before leaving work site or they can wear cloth or paper coveralls that are removed each time they leave the work site.	7. All personnel entering work site are required to wear shoe covers 8. Do not remove barriers from work area until completed project is thoroughly cleaned by the Environmental Service Dept. 9. Vacuum work area with HEPA filtered vacuums. 10. Wet mop with disinfectant. 11. Remove barrier materials carefully to minimize spreading of dirt and debris associated with construction. 12. Contain construction waste before transport in tightly covered containers. 13. Cover transport receptacles or carts. Tape covering. 14. Remove or isolate HVAC system in areas where is being done.

DIVISION

01

GENERAL REQUIREMENTS

SECTION 01 10 00 - SUMMARY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:
Project information.
Work covered by Contract Documents.
Purchase contracts.
Access to site.
Coordination with occupants.
Work restrictions.
Specification and drawing conventions.

B. Related Section:
Division 01 Section 01 50 00 "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.

1.3 PROJECT INFORMATION

A. Project Identification: Terrebonne General Health System, Health & Wellness Center
Project Number: 21001
Project Location: Westside Blvd Extension, Houma, LA 70360

B. Owner: Hospital Service District No. 1 of the Parish of Terrebonne
Owner's Representative: TBD

C. Architect: AQ Studios Architecture , 1100 Poydras St Suite 3550, New Orleans LA 70163

D. Project Web Site: A Project Web site administered by the Contractor will be used for purposes of managing communication and documents during the construction stage.

1.4 WORK COVERED BY CONTRACT DOCUMENTS

A. The Work of the Project is defined by the Contract Documents and consists of the following:

B. Project Description

1. This is a single contract project consisting of a new construction of a medical office and wellness building.

C. Type of Contract

1. Project will be constructed under a single prime contract.

1.5 WORK BY OWNER

A. General: Cooperate fully with Owner so work may be carried out smoothly, without interfering with or delaying work under this Contract or work by Owner. Coordinate the Work of this Contract with work performed by Owner.

B. Subsequent Work: Owner will perform the following additional work at site after Substantial Completion. Completion of that work will depend on successful completion of preparatory work under this Contract.
Installation of FFE items provided by Owner contractor.

1.6 ACCESS TO SITE

A. General: Contractor shall have full use of Project site for construction operations during construction period. Contractor's use of Project site is limited only by Owner's right to perform work or to retain other contractors on portions of Project.

1.7 SPECIFICATION AND DRAWING CONVENTIONS

A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.

B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

C. Drawing Coordination: Requirements for materials and products identified on the Drawings are described in detail in the Specifications. One or more of the following are used on the Drawings to identify materials and products:

1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings.

1.8 COORDINATION WITH OCCUPANTS

A. Owner Limited Occupancy of Completed Areas of Construction: Owner reserves the right to occupy and to place and install equipment in completed portions of the Work, prior to Substantial Completion of the Work, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and limited occupancy shall not constitute acceptance of the total Work.
Architect will prepare a Certificate of Substantial Completion for the Work to be occupied prior to Owner acceptance of the completed Work.
Obtain a Certificate of Occupancy from authorities having jurisdiction before limited Owner occupancy.
Before limited Owner occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Owner will operate and maintain mechanical and electrical systems serving occupied portions of Work.
On occupancy, Owner will assume responsibility for maintenance and custodial service for occupied portions of Work.

B. Owner intends to fully occupy the Project upon Substantial Completion.

1.9 WORK RESTRICTIONS

A. Work Restrictions, General: Comply with restrictions on construction operations.
Comply with limitations on use of public streets and other requirements of authorities having jurisdiction.

B. Coordinate construction work sequence schedule and operations with Owner.

C. Nonsmoking Building: Smoking is not permitted within the building or while on Terrebonne General Health System's site.

D. Controlled Substances: Use of tobacco products and other controlled substances on the Project site is not permitted.

E. Employee Identification: Owner will provide identification tags for Contractor personnel working on the Project site. Require personnel to utilize identification tags at all times.

1.10 APPROVAL AGENCIES

A. - The Contractor shall apply to the Parish of Terrebonne, for the Building Permit and pay all required fees.

1.11 SPECIFICATION AND DRAWING CONVENTIONS

A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:
Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
Specification requirements are to be performed by Contractor unless specifically stated otherwise.

B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

C. Drawing Coordination: Requirements for materials and products identified on the Drawings are described in detail in the Specifications. One or more of the following are used on the Drawings to identify materials and products:
Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings.
Keynoting: Materials and products are identified by reference keynotes referencing Specification Section numbers found in this Project Manual.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 10 00

SECTION 01 25 00 - SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for substitutions.

B. Related Sections:
1. Division 01 Section "Product Requirements" for requirements for submitting comparable product submittals for products by listed manufacturers.
2. Divisions 02 through 32 Sections for specific requirements and limitations for substitutions.

1.3 DEFINITIONS

A. Substitutions: Changes in products, materials, equipment, and methods of construction from those required by the Contract Documents and proposed by Contractor.

1. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.

1.4 SUBMITTALS

A. Substitution Requests: Submit three copies of each request for consideration. Identify product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.

1. Substitution Request Form: Use facsimile of form provided in the Project Manual.
2. Documentation: Show compliance with requirements for substitutions and the following, as applicable:

a. Statement indicating why specified product or fabrication or installation cannot be provided, if applicable.
b. Coordination information, including a list of changes or modifications needed to other parts of the Work and to construction performed by Owner and separate contractors, that will be necessary to accommodate proposed substitution.
c. Detailed comparison of significant qualities of proposed substitution with those of the Work specified. Include annotated copy of applicable specification section. Significant qualities may include attributes such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
e. Samples, where applicable or requested.

f. Certificates and qualification data, where applicable or requested.
g. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners.
h. Material test reports from a qualified testing agency indicating and interpreting test results for compliance with requirements indicated.
i. Research reports evidencing compliance with building code in effect for Project, from ICC-ES
j. Detailed comparison of Contractor's construction schedule using proposed substitution with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
k. Cost information, including a proposal of change, if any, in the Contract Sum.
l. Contractor's certification that proposed substitution complies with requirements in the Contract Documents except as indicated in substitution request, is compatible with related materials, and is appropriate for applications indicated.
m. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

3. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation. Architect will announce acceptance of proposed substitution.

a. Forms of Acceptance: Addendum
b. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.

1.5 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage qualified testing agency to perform compatibility tests recommended by manufacturers.

1.6 PROCEDURES

A. Coordination: Modify or adjust affected work as necessary to integrate work of the approved substitutions.

PART 2 - PRODUCTS

2.1 SUBSTITUTIONS

A. Substitutions for Cause: Submit request for substitution in accordance with the Instructions for Bidders.

1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
b. Substitution request is fully documented and properly submitted.
c. Requested substitution will not adversely affect Contractor's construction schedule.
d. Requested substitution has received necessary approvals of authorities having jurisdiction.
e. Requested substitution is compatible with other portions of the Work.

f. Requested substitution has been coordinated with other portions of the Work.
g. Requested substitution provides specified warranty.
h. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

B. Substitutions for Convenience: Not allowed

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 25 00

SUBSTITUTION REQUEST

Project: _____ Substitution Request Number: _____

_____ From: _____

To: _____ Date: _____

_____ A/E Project Number: _____

Re: _____ Contract For: _____

Specification Title: _____ Description: _____

Section: _____ Page: _____ Article/Paragraph: _____

Proposed Substitution: _____ In substitution of _____

Manufacturer: _____ Address: _____ Phone: _____

Trade Name: _____ Model No.: _____

Attached data includes product description, specifications, drawings, photographs, and performance and test data adequate for evaluation of the request; applicable portions of the data are clearly identified.

Attached data also includes a description of changes to the Contract Documents that the proposed substitution will require for its proper installation.

The Undersigned certifies:

- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance service and source of replacement parts, as applicable, is available.
- Proposed substitution will have no adverse effect on other trades and will not affect or delay progress schedule.
- Proposed substitution does not affect dimensions and functional clearances.
- Payment will be made for changes to building design, including A/E design, detailing, and construction costs caused by the substitution. (Pending approval by BASF Wall Systems)

SECTION 01 26 00 - CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

B. Related Sections:

1. Division 01 Section "Product Requirements" for administrative procedures for handling requests for substitutions made after Contract award.

1.3 MINOR CHANGES IN THE WORK

A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time, on AIA Document G710, "Architect's Supplemental Instructions."

1.4 PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

1. Proposal Requests issued by Architect are not instructions either to stop work in progress or to execute the proposed change.
2. Within 5 days, when not otherwise specified, after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.

    a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
    b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
    c. Include costs of labor and supervision directly attributable to the change.
    d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
    e. Quotation Form: Use forms acceptable to Architect

B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to Architect

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Comply with requirements in Division 01 Section "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.
7. Proposal Request Form: Use form acceptable to Architect

1.5 CHANGE ORDER PROCEDURES

A. On Owner's approval of a Proposal Request, Architect will issue a Change Order for signatures of Owner and Contractor on AIA Document G701

1.6 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive: Architect may issue a Construction Change Directive on AIA Document G714. Construction Change Directive instructs Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.

1. Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.

B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.

1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 26 00

SECTION 01 29 00 - PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including Supplementary Conditions and other Division 01 Specification Sections apply to this Section.

1.2 SUMMARY:

A. This Section specifies administrative and procedural requirements governing the Contractor's Applications for Payment. Coordinate the Schedule of Values and Applications for Payment with the Contractor's Construction Schedule, List of Subcontractors, and Submittal Schedule. The Contractor's Construction Schedule and Submittal Schedule are included in Section 01 33 00: Submittal Procedures.

1.3 SCHEDULE OF VALUES:

A. Format and Content:
   1. Use the Schedule of Values form provided in the Project Manual, Division 00 as a guide to establish the format. Include the following project identification on the Schedule of Values:
      a. Project Name and Location
      b. Name of the Architect
      c. State Project Number
      d. Contractor's Name and Address
      e. Date of Submittal

B. Provide a breakdown of the Contract Sum in sufficient detail to facilitate continued evaluation of Applications for Payment and progress reports. Break principal subcontract amounts down into several line items. Round amounts off to the nearest whole dollar; the total shall equal the Contract Sum.

C. Schedule of Updating:
   1. Update and resubmit the Schedule of Values when Change Orders or Construction Change directives result in a change in the Contract Sum, by adding each Change Order as a line item.

1.4 1.4 APPLICATION FOR PAYMENT:

A. Each Application for Payment shall be consistent with previous applications and payments as certified and paid for by Owner. The initial Application for Payment, the Application for Payment at time of Substantial Completion, and the final Application for Payment involve additional requirements.

B. Payment Application Times:
   1. Each progress payment date is as indicated in the Agreement. The period of construction work covered by each Application for Payment is the period indicated in the Agreement.

C. Payment Applications Forms:
   1. Use AIA Document G-702 and Continuation Sheets G703 as the form for Application for Payment. Refer to sample in this Specification.

D. Application Preparation:
   1. Complete every entry on the form, including notarization and execution by person authorized to sign legal documents on behalf of the Contractor. Incomplete or incorrect applications will be returned without action. Entries shall match data on the Schedule of Values. Include amounts of Change Orders and construction change directives issued prior to the last day of the construction period covered by the application.

E. Transmittal:
   1. Submit two (2) executed copies of each Application for Payment to the Architect by means ensuring receipt within 24 hours; one copy shall be complete, including waivers of lien and similar attachments, when required. Transmit each copy with a Transmittal Form listing attachments and recording appropriate information related to the application in a manner acceptable to the Architect.

F. Initial Application for Payment:
   1. Administrative actions and submittals that must precede or coincide with submittal of the first Application for Payment include the following:
      a. List of Subcontractors
      b. List of Principal Suppliers and Fabricators
      c. Schedule of Values
      d. Contractor's Construction Schedule (Preliminary, if not final)

G. Application for Payment at Substantial Completion:
   1. Following issuance of the Certificate of Substantial Completion, submit an Application for Payment.

H. Administrative actions and submittals that shall precede or coincide with this application include:
   1. Warranties (Guarantees) and Maintenance Agreements
   2. Maintenance Instructions
   3. Final Cleaning
   4. Consent of Surety
   5. List of Incomplete Work, recognized as exceptions to Architect's Certificate of Substantial Completion

I. Final Payment Application:
   1. Administrative actions and submittals, which must precede or coincide with submittal of the Final Payment Application for Payment, include the following:
      a. Lien Free Certificate
      b. Completion of Project Closeout Requirements
      c. Completion of Items Specified for Completion after Substantial Completion
      d. Assurance that unsettled Claims will be settled
      e. Transmittal of required Project Construction Records
      f. Proof that taxes, fees and similar obligations have been paid
      g. Removal of temporary facilities and services
      h. Removal of surplus materials, rubbish and similar elements
      i. Consent of Surety to Final Payment(AIA Form G707)

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 01 29 00

SECTION 01 31 00 – CONSTRUCTION SCHEDULES

PART 1 – GENERAL

1.1 DESCRIPTION

A. Work included: To assure adequate planning and execution of the Work so that the Work is completed within the number of calendar days allowed in the Contract, and to assist the Architect in appraising the reasonableness of the proposed schedule and in evaluating progress of the Work, prepare and maintain the schedules and reports described in the Section.

B. Related Work:
   1. Documents affecting work of this Section include, but are not necessarily limited to, General Conditions, Supplementary Conditions, and Sections in Division 1 of these Specifications.
   2. Requirements for progress schedule: General Conditions.
   3. Construction period: Refer to Instructions to Bidders

C. Definitions:
   1. "Day", as used throughout the Contract unless otherwise stated, means "calendar day."

1.2 QUALITY ASSURANCE

A. Employ a scheduler who is thoroughly trained and experienced in compiling construction schedule data, and in preparing and issuing periodic reports as required below.

B. Perform data preparation, analysis, charting, and updating in accordance with standards approved by the Architect.

C. Reliance upon the approved schedule:
   1. The Construction Schedule as approved by the Architect will be an integral part of the Contract and will establish interim completion dates for the various activities under the Contract.

1.3 SUBMITTALS

A. Comply with pertinent provisions of Section 01 33 00.

B. Preliminary Schedule: Within five (5) calendar days after the Contractor has received the Owner's Notice to Proceed, submit one (1) copy of preliminary construction schedule prepared in accordance with Part 3 of this Section.

C. Construction Schedule: Within 10 calendar days after the Contractor has received the Owner's Notice to Proceed, submit one (1) computer disk copy and four (4) prints of construction schedule prepared in accordance with Part 3 of this Section.

D. Periodic Reports: On the first working day of each month following the submittal described in Paragraph 1.3-C above, submit four (4) prints of construction schedule updated as described in Part 3 of this Section.

PART 2 – PRODUCTS

2.1 CONSTRUCTION SCHEDULE

A. Graphically show by bar-chart the order and interdependence of all activities necessary to complete the Work, and the sequence in which each activity is to be accomplished, as planned by the Contractor and his project field superintendent in coordination with all subcontractors whose work is shown on the diagram.

B. Include, but do not necessarily limit indicated activities to:
   1. Project mobilization;
   2. Submittal and approval of Shop Drawings and Samples;
   3. Procurement of equipment and critical materials;
   4. Fabrication of special material and equipment, and its installation and testing;
   5. Milestone dates based on phasing requirements;
   6. Final cleanup;
   7. Final inspecting and testing, and
   8. All activities by the Architect that effect progress, required dates for completion, or both, for all and each part of the Work.

PART 3 – EXECUTION

3.1 PRELIMINARY SCHEDULE

A. Contents:
   1. Show all activities of the Contractor under this Work for the period between receipt of Notice to Proceed and submittal of construction schedule required under Paragraph 1.3-C above;
   2. Show the Contractor's general approach to reminder of the Work;
   3. Show cost of all activities scheduled for performance before submittal and approval of the Construction Schedule.

B. Submit in accordance with Paragraph 1.3-B above.

3.2 CONSTRUCTION SCHEDULE

A. **WITHIN FIVE (5) DAYS** after receipt of Notice to Proceed, complete the Construction Schedule in preliminary form, meet with the Architect and Owner, review contents of the proposed construction schedule and make all revisions agreed upon.

3.3 PERIODIC REPORTS

A. As required under Paragraph 1.3-D above, update the approved construction schedule.
   1. Indicate "actual" progress in percent completion for each activity;
   2. Provide written narrative summary of revisions causing delay in the program, and an explanation of corrective actions taken or proposed.

END OF SECTION 01 31 00

SECTION 01 31 13 – COORDINATION VIA BIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes special procedures for coordinating and preplanning construction operations on Project including, but not limited to, the following:

1. 3D MEPFP coordination procedures.
2. Production of and maintenance of construction model.
3. Coordination drawings.
4. As-built model turn over.

B. Related Sections:

1. Division 01 Section 01 31 00 "Construction Schedules" for preparing and submitting Contractor's construction schedule.
2. Division 01 Section 01 31 19 “Project Management and Coordination” for general coordination provisions.
3. Division 01 Section 01 31 20 "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
4. Division 01 Section 01 77 00 "Closeout Procedures" for coordinating closeout of the Contract.
5. Division 01 Section 01 78 39 “Project Record Documents” for coordination of closeout deliverables.
6. Division 05 and 21-32 Sections for scopes of work which are required to be incorporated into the construction model for coordination purposes.

1.3 DEFINITIONS

A. BIM: Building Information Model, a database of construction project information which is most commonly expressed in 3D geometrical information, but can include schedule, cost loading, and maintenance and operation data, as well as wholly textual or numeric information.

B. Level of Development (LOD): Articulated in AIA G202, general levels of detail and information richness of model elements corresponding to intended use and stage of planning, design, or pre-fabrication. LOD refers to the development of elements which are indicated to be included.

C. Design Model: The 3D model provided by the Architect and/or consultants from which the Contract Documents have been rendered. Disposition of the model is purely to create the Architect’s Instruments of Service and is not a Contract Document. Transmittal of model must be preceded by Hold Harmless Release.

D. Construction Model: The Contractor’s living BIM model, usually founded on the design model but including more detailed systems information, additional modeling of elements not included, modification of elements to align with Contractor’s means and methods, and generally being more complete and detailed to support Contractor’s operation. When submitted for demonstration of contractual obligation to coordinate, this model is referred to as the coordination model.

E. Coordination Deliverables: Digital data which demonstrate that the required coordination has been undertaken, usually including both a BIM model of all required systems and coordination drawings, which consist of 2D drawings of overlaid systems and penetration drawings and other important interfaces between required systems drawn from the coordination model.

F. BIM Coordinator: An employee or consultant of the General Contractor, possessing a minimum of 7 years of experience creating Building Information Models, including management of models, and preparing of Clash Detection reports.

1.4 SUBMITTALS

A. Major Clash Coordination Model: Upgraded model for LOD requirements, means and methods, shop standards, constructability, full populated with model elements so as to illuminate all major coordination issues. Mains, trunks, and all major elements should be resolved as to position, or pending instruction from designer for resolution of positions.

B. Clash Free Coordination Model: Further refined version of the Major Clash Coordination Model to a s fully clash-free state between all runouts, branches, drops, etc.

C. Coordination Drawings: Digital or paper prints with overlaid services and regular section cuts in the densest areas, including slab penetration and structural member penetration drawings. Coordination drawings shall not replace Shop Drawings required by individual Sections.

D. Construction Model updates: Submitted not less than monthly, concurrent with Pay Applications, or maintained continuously online.

E. As-built Model: Digital submission of upgraded and enhanced-detail design model, comprising the BIM representation of all constructed physical elements. Refer to Division 01 ‘Project Record Documents.’

1.5 QUALITY ASSURANCE

A. Level of Development Standard: BIMForum’s most recent version shall govern, see bimforum.org/lod/

B. Software: BIModels should be prepared and tested by the following or equal:

1. Authoring: AutoDesk Revit.
2. Clash Resolution: Navisworks Manage.

C. BIM Execution Plan Meeting: Prior to the starting of coordination and development of models, the Contractor shall host a modeling implementation to review protocols and procedures. Discussion should include the following:

1. Schedule, including deadlines for shop drawing preparation and fabrication
2. Software of various stakeholders.
3. Hierarchy for clash resolution and precedence.
4. Preliminary strategies for routing, including stratification of work for each trade.
5. Layering and color conventions.
6. Procedures for maintenance of a living Construction Model.
7. Collaboration protocol and procedures.
8. Identification of BIM Lead for each trade.
9. Color coding for each trade, and shared coordinate system.
10. Discussion of Level of Development and to what degree models may be relied upon by other trades.

1.6 COORDINATION, GENERAL

A. Coordination: Coordinate construction operations included in different Sections of the specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations, included in different Sections, that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.
4. Preliminary BIM coordination has been undertaken during the design phase in order to eliminate major issues only; no representation is made to the efficacy of that coordination.

1.7 COORDINATION MODEL AND DRAWINGS

A. Coordination Deliverables, General: The construction model is to be created, updated, and detailed for preparation of coordination drawings and for submittal itself when indicated by individual Sections, and under the following circumstances:

1. Where installation is not completely shown on Shop Drawings
2. Where limited space availability necessitates coordination
3. If coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.

B. Construction Model Organization: Contractor shall produce a BIM model in sufficient detail to adequately explore and document conditions in the building to avoid interference between structural framing, ceilings and wall partitions, major equipment, mechanical, electrical, conveying systems, and other engineer service systems. The following elements must be included in the Construction Model at the time of its initial submittal for coordination, and to the following levels of development as a minimum for each segment of construction indicated, as generally interpreted in the industry and below:

1. LOD 500: The Model Element is a field verified representation in terms of size, shape, location, quantity, and orientation. Non-graphic information may also be attached to the Model Elements.
2. LOD 400: The Model Element is graphically represented within the Model as a specific system, object or assembly in terms of size, shape, location, quantity, and orientation with detailing, fabrication, assembly, and installation information. Non-graphic information may also be attached to the Model Element.

    a. Complete steel structural system including:

        1) Major columns and beams and associated connection materials.
        2) Braces and frames, including turnbuckles.
        3) Gusset plates, pour stops,

    b. HVAC system elements as follow:
    c. All Ductwork.

3. LOD 350: The Model Element is graphically represented within the Model as a specific system, object, or assembly in terms of quantity, size, shape, orientation, and interfaces with other building systems. Repetitive elements are modeled in their actual positions. Non-graphic information may also be attached to the Model Element.

    a. Plumbing system including:

        1) Domestic water piping for service, sanitary, storm and vent.

2) Plumbing fixtures.
3) Water storage tanks.
4) Sewerage and storm-water equipment and drains.
5) Compressed air systems.

b. HVAC system including:

1) Registers and Grilles.
2) Air handling units, chillers, fan coil units, VAVS, and all major equipment.
3) Fire and smoker dampers.
4) Hangers associated with required equipment.
5) Fuel piping and storage tanks.
6) Heat generating equipment.

c. Electrical system including:

1) All conduit ¾" in diameter and above.
2) Service panels, meters, substations, transformers, switchgear and protective devices.
3) Light fixtures.
4) Receptacles and switches.
5) Generators and other equipment.
6) Lightning protection.

d. Special systems.
e. Fire protection systems including:

1) Sprinkler mains, branches, drops and heads.
2) Pumps, risers, valves.
3) Fire protection cabinets and specialties..

4. LOD 300: The Model Element is graphically represented within the Model as a specific system, object or assembly in terms of quantity, size, shape, location, and orientation. Non-graphic information may also be attached to the Model Element.

a. Other structural elements, including concrete and non-steel elements.
b. Conveying systems including:

1) Elevator cabs, support rails, hoist beams and doors.
2) Escalators.
3) Service systems including electrical and mechanical.
4) Mechanical room equipment.
5) Special foundation elements, including pits and anchoring.

c. Site systems including:

1) Site utilities.
2) Storm drainage piping and structures.
3) Sanitary drainage piping and structures.
4) Services to building, such as electric mains, water and sprinkler services, gas lines etc.

d. Communication systems including:

1) Panels and equipment.
2) Cable trays, grouped wiring runs, and conduit runs.
3) Receptacles.

e. Specific Elements in a Digital Mock-up of typical rooms configurations.

1) Medical equipment.
2) Large prefabricated equipment.
3) Ceiling cubicle tracks and other accessories intruding into the plenum and wall space.

5. LOD 200: The Model Element is graphically represented within the Model as a generic system, object, or assembly with approximate quantities, size, shape, location, and orientation. Non-graphic information may also be attached to the Model Element.

a. All construction model elements not otherwise provided for.

6. LOD 100: The Model Element may be graphically represented in the Model with a symbol or other generic representation, but does not satisfy the requirements for LOD 200. Information related to the Model Element (i.e. cost per square foot, tonnage of HVAC, etc.) can be derived from other Model Elements.

C. File Format and Software: Submitted models should be in Autodesk Revit file format. Individual trades may model in other software at their choice provided that their geometry can be converted into Revit format. Major equipment should be included as a native Revit family for future virtual facilities management purposes.

1. Clash resolution may be performed via any suitable software program, provided it generally matches Autodesk Navisworks in performance of physical interference between geometries.

D. Coordination Drawings: Construction model-derived 2D drawings, drawn accurately to a scale large enough to indicate and demonstrate the resolution of conflicts. Do not base coordination drawings on standard printed data that has not been incorporated into the model. Include the following information, as applicable:

a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
b. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
c. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
d. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
e. Indicate required installation sequences.
f. Indicate dimensions shown on the Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternate sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

E. Coordination Drawing Organization: Organize coordination drawings as follows, as required to demonstrate coordination process.

1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire protection, fire alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
2. Plenum Space: Indicate subframing for support of ceiling and wall systems, mechanical and electrical equipment, and related Work. Locate components within ceiling plenum to accommodate layout of light fixtures indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
3. Mechanical Rooms: Provide coordination drawings for mechanical rooms showing plans and elevations of mechanical, plumbing, fire protection, fire alarm, and electrical equipment.
4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.

5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
6. Review: Architect will review submitted construction model and coordination drawings to confirm that the Work is being coordinated, but not for the details of the coordination, which are the Contractor's responsibility. If the Architect determines that the coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, the Architect will so inform the Contractor, who shall make changes as directed and resubmit.

    a. Submittal: Coordination Drawings must be submitted concurrently with the first set of shop drawings of any trade or Section which is to be coordinated by the individual drawings.

7. Coordination Drawing Prints: Prepare coordination drawing prints in accordance with requirements of Division 01 Section "Submittal Procedures."

1.8 COORDINATION MEETINGS

A. General: Schedule and conduct meetings and conferences at Project site, unless otherwise indicated, with provisions for non-local participants to observe via suitable web-meeting software or service.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times.
2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3. Minutes: Entity responsible for conducting meeting will record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner, Construction Manager, and Architect, within five days of the meeting.

B. Coordination Conferences: Schedule and conduct conferences to resolve clashes between services for each subdivision of the documents.

1. Attendees: Contractor’s Project Manager and/or superintendent, BIM manager/MEPFP coordinator, major subcontractors; suppliers;; shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to their respective scope of the Work.
2. Major clash conferences: Develop and adopt major coordination strategies at multi-trade or significant systemic clash groups.
3. Round-out Clash conferences: Resolve outstanding clash issues and review all issues preventing creation of a clash-free model.

C. Initial Coordination Review Conference: Schedule and conduct a major-clash coordination conference to review the initial model submission not more than 90 days from the Notice to Proceed.

1. Conduct the conference to review major coordination issues and RFI issues for the construction team to resolve.
2. Attendees: Authorized representatives of Owner, Construction Manager, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference.

1.9 SPECIAL EQUIPMENT AND PERSONNEL

A. Computer Hardware and Display: Maintain onsite one computer of capability sufficient to handle model viewing program and monitor display for use to examine and analyze current state of construction model.

B. BIM Manager/MEPFP Coordinator: Provide one member of staff or subcontracted entity to manage BIM model and facilitate clash resolution.

1. Manager/Coordinator to be primarily dedicated towards resolution of MEPFP coordination issues and examination of model for potential mutually–disadvantageous situations requiring clarification from the Architect until final coordination model is accepted without exception by the Architect. BIM Manager should not have other high-priority or overriding role on site which would prevent the performance of these duties, but is not required to be on site full time.

1.10 CONSTRUCTION MODEL AND AS-BUILT SUBMITTAL

A. Construction Model Modifications: Following acceptance of a clash-free model submission for coordination, the Construction Model shall be maintained and updated not less than bimonthly with any modifications incorporated into the Work and maintained online or at project site for access by the Contractor, Architect, Program Manager, or Owner during meetings for reference.

1. Contractor to produce complete construction model to a minimum of LOD 200, with elements indicated to have higher LODs indicated elsewhere, to comprise the as-built model. Contractor may use the design model and infill model elements which are lacking to produce the complete model. Contractor shall have no claim in case of omission of model/building components in the design model which would be reasonably required to represent competed construction, and the design model is provided as a convenience for the Contractor.
2. Contractor and all subcontractors to receive and utilize design model must execute a hold-harmless agreement acknowledging their understanding of the design model as exterior to the contract, delivered as is with no representation of accuracy or completion, and to be reasonably cross referenced with the Contract.

B. Required updates to the model:

1. Construction Change Directives (CCDs)
2. Architect's Supplemental Information documents (ASIs)
3. Proposal Requests, once change in costs and duration changes are agreed upon.
4. Request for Information (RFIs) replies.
5. Shop Drawings review comments.
6. Bulletins.
7. Field changes and changes made to geometry and layout due to means and methods, constructability, etc.

C. Close-out Submission: Concurrent with other close-out submissions, contractor shall turn over full construction model. Refer to Section "Close-out Procedures" for more details.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 31 13

SECTION 01 31 14 - COORDINATION COMMISSIONING AGENT AND GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 COMMISSIONING

A. This project will have selected building systems commissioned. The equipment and systems to be commissioned are specified in Section 01 91 13, Part 1.4. The commissioning process, which the Contractor is responsible to execute, is defined in Division 01. The commissioning process will be directed by a Commissioning Authority whose services will be provided by the Architect.

B. Abbreviations. The following are common abbreviations used in the *Specifications* and in the *Commissioning Plan.* Definitions are found in Section 01 91 13, Part 1.6.

A/E-	Architect and design engineers	FT-	Functional performance test
CxA-	Commissioning Authority	GC-	General contractor (prime)
CC-	Controls contractor	MC-	Mechanical contractor
CM-	Construction Manager (the Owner's representative)	PC-	Pre-functional checklist
Cx-	Commissioning	PM-	Project manager
Cx Plan-	Commissioning Plan document	Subs-	Subcontractors to General
EC-	Electrical contractor	TAB-	Test and balance contractor

1.2 ADMINISTRATIVE / SUPERVISORY PERSONNEL

A. Commissioning Authority: the Owner will provide the services of a qualified Commissioning Authority. The Commissioning Authority directs and approves the commissioning work.

END OF SECTION

SECTION 01 31 19 - PROJECT MEETINGS

PART 1: GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and other Division 01 Specification Sections apply to this Section.

1.2 SUMMARY:

A. This Section specified administrative and procedural requirements for project meetings including, but not limited to:
   1. Pre-Construction Conference
   2. Progress Meetings

B. Construction Schedules are specified in SECTION 01 33 00: SUBMITTAL PROCEDURES

1.3 PRE-CONSTRUCTION CONFERENCE:

A. Schedule a conference and organization meeting at the Project Site, or other convenient location, no later than 15 days after execution of the Agreement and prior to commencement of construction activities. Conduct the meeting to review responsibilities and personnel assignments. Included in this Conference shall be the Owner, Architect and their consultants, the Contractor and its superintendent, major subcontractors, manufacturers, suppliers, and other concerned parties shall each be represented at the Conference by persons familiar with and authorized to conclude matters relating to the Work.

B. The purpose of this meeting shall be to discuss items of significance that could affect progress.

1.4 PROGRESS MEETINGS:

A. Conduct progress meetings at the Project Site at two week intervals. Notify the Owner and Architect of scheduled meeting dates. Coordinate dates of meetings with preparation of the payment requests.

B. In addition to representatives of the Owner and Architect, each subcontractor, supplier, or other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings by persons familiar with the project and authorized to conclude matters relating to progress.

C. Review and correct or approve minutes of the previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to the current status of the project.

D. Provide current record drawings and project manual at each construction meeting.

E. Provide updated RFI and Submittal Log at each meeting.

F. Schedule Updating:

1. Revise the construction schedule after each progress meeting where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with report of each meeting.

PART 2: PRODUCT (NOT USED)

PART 3: EXECUTION (NOT USED)

END OF SECTION

SECTION 01 31 20 - PROJECT COORDINATION

PART 1 - GENERAL

1.1 SUMMARY

Section Includes: Requirements for project coordination including but not necessary limited to:

1. Construction activities.
2. Submittals.
3. Requests for Information (RFI).
4. Record Drawings.
5. General installation provisions.
6. Cleaning and protection.

Related Sections:

7. Section 01 11 00 – Summary
8. Section 01 31 00 –Construction Schedule
9. Section 01 77 00 –Closeout Procedures

1.2 CONSTRUCTION ACTIVITIES

Coordination: Coordinate and schedule activities (including submittals, testing, and preparations to assure efficient and orderly installation of each part of the Work

1. Sequence activities to obtain the best installation and in-place performances.
2. Coordinate installation of components to assure adequate accessibility for installation, maintenance, service, and repair.
3. Make necessary provisions for items scheduled for later installation under the Contract and by separate contractors.
4. Schedule product deliveries to assure continuity and proper sequence of operations, without delay and interruptions.
5. Verify that equipment items are suitable for available mechanical and electrical systems.

Communications: Where necessary, distribute instructions for coordination.

6. Prepare and issue memoranda for the Owner and separate contractors where coordination of their work is required.

Administrative Procedures: Coordinate administrative activities with construction to avoid delays and assure orderly progress of the Work. Such activities include, but are not limited to, the following:

7. Preparation of schedules.
8. Installation and removal of temporary facilities.
9. Delivery and processing of submittals.
10. Project closeout activities.

1.3 SUBMITTALS

Staff Names: Within fifteen (15) days after Notice to Proceed, submit a list of Project Staff assignments, with individual names, their assignments, and telephone numbers.

1.4 REQUESTS FOR INFORMATION (RFI)

A. **RFI Software Platform:**

1. RFI's (Requests for Information) shall be processed through the Architect's software program - Autodesk "Build". Contractor will have access to this software at no charge to the Contractor and shall be required to utilize this software for all RFI's.

2. The Contractor shall plan for this process accordingly with regard to their project operations.

3. Architect will provide initial introduction to and some basic training on the system to the Contractor's project team.

B. **General:**

1. Immediately on discovery of the need for additional information or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.

2. Architect will return RFIs submitted to Architect by other entities controlled by Contractor with no response.

3. Coordinate and submit RFIs in a prompt manner so as to avoid delays in Contractor's work or work of subcontractors.

C. **Content of the RFI:**
Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.

2. Project number.

3. Date.

4. Name of Contractor.

5. Name of Architect.

6. RFI number, numbered sequentially.

7. RFI subject.

8. Specification Section number and title and related paragraphs, as appropriate.

9. Drawing number and detail references, as appropriate.

10. Field dimensions and conditions, as appropriate.

11. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.

12. Contractor's signature.

13. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.
    a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

D. **Forms:**

1. Contractor's own software-generated form with substantially the same content as indicated above, acceptable to Architect or direct input to Architect's software identified above are acceptable.

2. Attachments shall be electronic files in Adobe Acrobat PDF format.

3. **Mass RFI's:** Receipt of 10 or more RFI's within a seven-day period will result in additional time allowed by the Architect for response. The Architect is allowed an additional fourteen days for every 10 RFI's submitted in a seven-day period.

4. **Architect's Action:** Architect will review each RFI, determine action required, and respond. Allow seven working days for Architect's response for each RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.

5. The following Contractor-generated RFIs will be returned without action:
   a. Requests for approval of submittals.
   b. Requests for approval of substitutions.
   c. Requests for approval of Contractor's means and methods.
   d. Requests for coordination information already indicated in the Contract Documents.
   e. Requests for adjustments in the Contract Time or the Contract Sum.
   f. Requests for interpretation of Architect's actions on submittals.
   g. Incomplete RFIs or inaccurately prepared RFIs.

6. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt of additional information.

7. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Section 012600 "Contract Modification Procedures."
   a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect in writing within 10 days of receipt of the RFI response.

E. **RFI Log:**

1. Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number. Submit log monthly. Software log with not less than the following:
   a. Project name.
   b. Name and address of Contractor.
   c. Name and address of Architect.
   d. RFI number including RFIs that were returned without action or withdrawn.
   e. RFI description.
   f. Date the RFI was submitted.
   g. Date Architect's response was received.

F. **Distribution and Follow-up:**

1. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within seven days if Contractor disagrees with response.

2. Identification of related Minor Change in the Work, Construction Change Directive, and Proposal Request, as appropriate.

3. Identification of related Field Order, Work Change Directive, and Proposal Request, as appropriate.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 GENERAL INSTALLATION PROVISIONS

Inspection of Conditions: Require the Installer of each major component to inspect both the substrate and conditions under which Work is to be performed. Do not proceed until unsatisfactory conditions have been corrected.

Visual Effects: Provide uniform joint width in exposed Work. Arrange joints in exposed Work to obtain the best visual effect. Refer questionable choices to the Architect for final decision.

3.2 CLEANING AND PROTECTION

During Handling and Installation: Clean and protect construction in progress and adjoining materials in place.

1. Apply protective covering where necessary to ensure protection from damage or deterioration at Substantial Completion.
2. Clean and maintain completed construction through the remainder of the construction period.

Limiting Exposures: Supervision construction activities to ensure that no part of the construction, completed or in progress, is subject to excessive loading, damaging temperature and humidity extremes, staining, contact between incompatible materials and similar harmful and deteriorating exposure during the construction period.

Repair and Replacement: If any parts of the construction are deteriorated, become damaged, develop defects, or are otherwise not in compliance with requirements of the Contract, they shall be cleaned, restored to proper condition, repaired acceptably, or replaced with new products prior to requesting Architect's inspection for Substantial Completion or Final Completion.

END OF SECTION 01 31 20

SECTION 01 32 33 - PHOTOGRAPHIC DOCUMENTATION

PART 1 -GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Preconstruction photographs.
2. Periodic construction photographs.
3. Final completion construction photographs.
4. Periodic aerial photographs.

1.3 INFORMATIONAL SUBMITTALS

A. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.
B. Digital Photographs: Submit image files within three days of taking photographs.

1. Digital Camera: Minimum sensor resolution of 8 megapixels.
2. Format: Minimum 3200 by 2400 pixels, in unaltered original files, with same aspect ratio as the sensor, uncropped, date and time stamped, in folder named by date of photograph, accompanied by key plan file.
3. Identification: Provide the following information with each image description in file metadata tag:

a. Name of Project.
b. Name and contact information for photographer.
c. Name of Architect.
d. Name of Contractor.
e. Date photograph was taken.
f. Description of vantage point, indicating location, direction (by compass point), and elevation or story of construction.
g. Unique sequential identifier keyed to accompanying key plan.

1.4 QUALITY ASSURANCE

A. Photographer Qualifications: An individual who has been regularly engaged as a professional photographer of construction projects for not less than three years.
B. Aerial photographer’s qualifications: A firm which has been regularly engaged to document construction professionally for not less than three years.

1.5 USAGE RIGHTS

A. Obtain and transfer copyright usage rights from photographer to Owner for unlimited reproduction of photographic documentation.

PART 2 -PRODUCTS

2.1 PHOTOGRAPHIC MEDIA

A. Digital Images: Provide images in JPG format, produced by a digital camera with minimum sensor size of 8 megapixels, and at an image resolution of not less than 3200 by 2400 pixels.

PART 3 -EXECUTION

3.1 CONSTRUCTION PHOTOGRAPHS

A. Available Photographic Service: Provide photographic services by Multivista Construction Documentation, or a comparable photographic service or photographer with suitable support, to provide a service comparable to the packages offered via their Exterior Progression and Interior Progression services.

    1. Photographic service to integrate seamlessly with project website, providing for uploaded, organized photographs keyed to locations within 24 hours of regular site visits.

B. General: Take photographs using the maximum range of depth of field, and that are in focus, to clearly show the Work. Photographs with blurry or out-of-focus areas will not be accepted.

    1. Maintain key plan with each set of construction photographs that identifies each photographic location.

C. Digital Images: Submit digital images exactly as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.

    1. Date and Time: Include date and time in file name for each image.
    2. Field Office Images: Maintain one set of images accessible in the field office at Project site, available at all times for reference. Identify images in the same manner as those submitted to Architect.

D. Neighborhood Inspection Plan: Incorporate Owner's Neighborhood Inspection requirements in submittal of preconstruction, periodic construction, and final completion construction photographs.

E. Preconstruction Photographs: Before commencement of excavation, take photographs of Project site and surrounding properties, including existing items to remain during construction, from different vantage points, as directed by Architect.

    1. Flag construction limits before taking construction photographs.
    2. Take 20 photographs to show existing conditions adjacent to property before starting the Work.
    3. Take 20 photographs of existing buildings either on or adjoining property to accurately record physical conditions at start of construction.
    4. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements. See specifications Section 31 62 19 “Timber Piles” for additional information concerning Neighborhood Inspection Plan and Damage to Existing Property requirements.

F. Periodic Construction Photographs: Take 50 photographs bi-weekly, coinciding with the cutoff date associated with each Application for Payment. Select vantage points to show status of construction and progress since last photographs were taken.

G. Architect-Directed Construction Photographs: From time to time, Architect will instruct photographer about number and frequency of photographs and general directions on vantage points. Select actual vantage points and take photographs to show the status of construction and progress since last photographs were taken.

H. Final Completion Construction Photographs: Take 50 color photographs after date of Substantial Completion for submission as project record documents. Architect will inform photographer of desired vantage points.

    1. Do not include date stamp.

I. Additional Photographs: Architect may request photographs in addition to periodic photographs specified. Additional photographs will be paid for by Change Order and are not included in the Contract Sum.

    1. Three days' notice will be given, where feasible.
    2. In emergency situations, take additional photographs within 24 hours of request.
    3. Circumstances that could require additional photographs include, but are not limited to, the following:

        a. Immediate follow-up when on-site events result in construction damage or losses.
        b. Photographs to be taken at fabrication locations away from Project site. These photographs are not subject to unit prices or unit-cost allowances.
        c. Substantial Completion of a major phase or component of the Work.

J. Aerial Photographs: Not less than three photographs of site from oblique angles, taken monthly, selected to illustrate greatest amount of building possible from different perspectives. Monthly photographs are to be from as close as to the same position as possible, and continue through Substantial Completion

END OF SECTION 01 32 33

SECTION 013300 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes requirements for the submittal schedule and administrative and procedural requirements for submitting Shop Drawings, Product Data, Samples, and other submittals.

B. Related Requirements:

1. Section 012900 "Payment Procedures" for submitting Applications for Payment and the schedule of values.
2. Section 013200 "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
3. Section 017823 "Operation and Maintenance Data" for submitting operation and maintenance manuals.
4. Section 017839 "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.

1.3 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

C. File Transfer Protocol (FTP): Communications protocol that enables transfer of files to and from another computer over a network and that serves as the basis for standard Internet protocols. An FTP site is a portion of a network located outside of network firewalls within which internal and external users are able to access files.

D. Portable Document Format (PDF): An open standard file format licensed by Adobe Systems used for representing documents in a device-independent and display resolution-independent fixed-layout document format.

E. Mass Submittals: Mass submittals are considered those submittals that are a specified number or greater of submittals provided to the design team within a certain time frame and/or a submittal

or specific set of submittals that are extremely large in the number of items included for review or complex in nature of the submittal that would require additional time and effort for the design team to complete and return the submittal.

1.4 SUBMITTAL SOFTWARE

A. All submittals shall be submitted through the use of the Architect's provided software, Autodesk Build.

1. Service is a web based software system and is of no cost to the Contractor.
2. Basic training and introduction to the system will be provided by AQ Studios personnel and resources from Autodesk when needed.
3. Physical samples shall be logged in to the software system with the actual samples and a copy of the submittal cover sheet sent directly to the Architect.
4. No other software systems for which the Contractor may possess are to be used for submittals without specifically being agreed to in advance between Owner, Architect, and Contractor.

1.5 ACTION SUBMITTALS

A. Submittal Schedule: Submit a schedule of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.

1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
2. Initial Submittal: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
3. Final Submittal: Submit concurrently with the first complete submittal of Contractor's construction schedule.
    a. Submit revised submittal schedule to reflect changes in current status and timing for submittals.
4. Format: Arrange the following information in a tabular format:
    a. Scheduled date for first submittal.
    b. Specification Section number and title.
    c. Submittal category: Action; informational.
    d. Name of subcontractor.
    e. Description of the Work covered.
    f. Scheduled date for Architect's final release or approval.
    g. Scheduled date of fabrication.
    h. Scheduled dates for purchasing.
    i. Scheduled dates for installation.
    j. Activity or event number.

1.6 SUBMITTAL ADMINISTRATIVE REQUIREMENTS

A. Architect's Digital Data Files: Electronic digital data files of the Contract Drawings may be provided by Architect for Contractor's use in preparing submittals.

1. Architect may furnish Contractor one set of digital data drawing files of the Contract Drawings for use in preparing Shop Drawings.
    a. Architect makes no representations as to the accuracy or completeness of digital data drawing files as they relate to the Contract Drawings.
    b. Digital Drawing Software Program: The Contract Drawings are available in AutoCAD and / or Revit depending upon the project..
    c. The following digital data files will by furnished for each appropriate discipline:
        1) Floor plans.
        2) Reflected ceiling plans.
2. Electronic files available to the Contractor will only be those deemed appropriate by the Architect and will be contingent upon the Contractor signing an agreement generated by the Architect. The Architect will be the sole judge of what files are deemed appropriate.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.
    a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.
5. Mass Submittals: Receipt of 10 or more submittals within a 7 day period will result in additional time allowed by the Architect for response. The Architect is allowed an additional 14 days for every 10 submittals submitted in a 7 day period. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
    a. Mass Submittals in Number: Receipt of 10 or more submittals within a 7 day period will result in additional time allowed by the Architect for response. The Architect is allowed an additional 14 days for every 10 submittals submitted in a 7 day period. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.
    b. Mass Submittals in Size and Complexity: Receipt of submittals of a particularly large and/or complex nature either separately or in part with other submittals will automatically result in additional time allowed by the Architect for response. The Architect is allowed an additional 14 days for every 10 submittals submitted in a 7

day period. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1) Submittals of a particularly large and complex nature are typically inclusive of but not limited to Door Hardware, Electrical submittals, lighting submittals, steel submittals, and others requiring multiple disciplines detailed reviews.

6. Initial Review: Allow 15 days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
7. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.
8. Resubmittal Review: Allow 15 days for review of each resubmittal.
9. Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow 21 days for initial review of each submittal.
10. Concurrent Consultant Review: Where the Contract Documents indicate that submittals may be transmitted simultaneously to Architect and to Architect's consultants, allow 15 days for review of each submittal. Submittal will be returned to Architect before being returned to Contractor.

C. Paper Submittals: Note Paper Submittals (hard copies) are not allowed unless otherwise indicated by the Architect and on a limited basis. When allowed paper submittals shall follow the following:

1. Place a permanent label or titleblock on each submittal item for identification.
2. Indicate name of firm or entity that prepared each submittal on label or title block.
3. Provide a space approximately 6 by 8 inches on label or beside title block to record Contractor's review and approval markings and action taken by Architect.
4. Include the following information for processing and recording action taken:
   a. Project name.
   b. Date.
   c. Name of Architect.
   d. Name of Construction Manager.
   e. Name of Contractor.
   f. Name of subcontractor.
   g. Name of supplier.
   h. Name of manufacturer.
   i. Submittal number or other unique identifier, including revision identifier.
      1) Submittal number shall use Specification Section number followed by a decimal point and then a sequential number (e.g., 061000.01). Resubmittals shall include an alphabetic suffix after another decimal point (e.g., 061000.01.A).
   j. Number and title of appropriate Specification Section.
   k. Drawing number and detail references, as appropriate.
   l. Location(s) where product is to be installed, as appropriate.
   m. Other necessary identification.
   n. Clearly highlighted and noted identification of materials, models, colors, etc. being submitted. DO NOT just submit data that is not clearly highlighted identifying the exact submittal or submittals within the documentation.

5. Additional Paper Copies: Unless additional copies are required for final submittal, and unless Architect observes noncompliance with provisions in the Contract Documents, initial submittal may serve as final submittal.
    a. Submit one copy of submittal to concurrent reviewer in addition to specified number of copies to Architect. Additional copy shall have the same requirements for submittal as the original. If additional copy does not follow the same requirements the entire submittal may be rejected for correction and resubmission.
6. Transmittal for Paper Submittals: Assemble each submittal individually and appropriately for transmittal and handling. Transmit each submittal using a transmittal form. Architect will discard submittals received from sources other than Contractor.
    a. Transmittal Form for Paper Submittals: Provide locations on form for the following information:
        1) Project name.
        2) Date.
        3) Destination (To:).
        4) Source (From:).
        5) Name and address of Architect.
        6) Name of Construction Manager.
        7) Name of Contractor.
        8) Name of firm or entity that prepared submittal.
        9) Names of subcontractor, manufacturer, and supplier.
        10) Category and type of submittal.
        11) Submittal purpose and description.
        12) Specification Section number and title.
        13) Specification paragraph number or drawing designation and generic name for each of multiple items.
        14) Drawing number and detail references, as appropriate.
        15) Indication of full or partial submittal.
        16) Transmittal number.
        17) Submittal and transmittal distribution record.
        18) Remarks.
        19) Signature of transmitter.

D. Electronic Submittals: Identify and incorporate information in each electronic submittal file as follows:

1. Assemble complete submittal package into a single indexed file incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.
3. Provide means for insertion to permanently record Contractor's review and approval markings and action taken by Architect.
4. Transmittal Form for Electronic Submittals: Use software-generated form from electronic project management software acceptable to Owner,containing the following information:
    a. Project name.
    b. Date.
    c. Name and address of Architect.
    d. Name of Construction Manager.
    e. Name of Contractor.
    f. Name of firm or entity that prepared submittal.
    g. Names of subcontractor, manufacturer, and supplier.

h. Category and type of submittal.
i. Submittal purpose and description.
j. Specification Section number and title.
k. Specification paragraph number or drawing designation and generic name for each of multiple items.
l. Drawing number and detail references, as appropriate.
m. Location(s) where product is to be installed, as appropriate.
n. Related physical samples submitted directly.
o. Indication of full or partial submittal.
p. Transmittal number.
q. Submittal and transmittal distribution record.
r. Other necessary identification.
s. Remarks.

5. Metadata: Include the following information as keywords in the electronic submittal file metadata:
   a. Project name.
   b. Number and title of appropriate Specification Section.
   c. Manufacturer name.
   d. Product name.

E. Options: Identify options requiring selection by Architect.

F. Deviations and Additional Information: On an attached separate sheet, prepared on Contractor's letterhead, record relevant information, requests for data, revisions other than those requested by Architect on previous submittals, and deviations from requirements in the Contract Documents, including minor variations and limitations. Include same identification information as related submittal.

G. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.

1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block and clearly indicate extent of revision.
3. Resubmit submittals until they are marked with approval notation from Architect's action stamp.

H. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

I. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

PART 2 - PRODUCTS

2.1 SUBMITTAL PROCEDURES

A. General Submittal Procedure Requirements: Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.

1. Submit electronic submittals via Architect's software program and as PDF electronic files.
   a. Architect will return annotated file. Annotate and retain one copy of file as an electronic Project record document file.
2. Action Submittals: Submit three paper copies of each submittal unless otherwise indicated. Architect will return two copies.
3. Informational Submittals: Submit two paper copies of each submittal unless otherwise indicated. Architect will not return copies.
4. Certificates and Certifications Submittals: Provide a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity.
   a. Provide a digital signature with digital certificate on electronically submitted certificates and certifications where indicated.
   b. Provide a notarized statement on original paper copy certificates and certifications where indicated.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1. If information must be specially prepared for submittal because standard published data are not suitable for use, submit as Shop Drawings, not as Product Data.
2. Mark each copy of each submittal to show which products and options are applicable.
3. Include the following information, as applicable:
   a. Manufacturer's catalog cuts.
   b. Manufacturer's product specifications.
   c. Standard color charts.
   d. Statement of compliance with specified referenced standards.
   e. Testing by recognized testing agency.
   f. Application of testing agency labels and seals.
   g. Notation of coordination requirements.
   h. Availability and delivery time information.
   i. Clearly highlighted and noted identification of materials, models, colors, etc. being submitted. DO NOT just submit data that is not clearly highlighted identifying the exact submittal or submittals within the documentation.
4. For equipment, include the following in addition to the above, as applicable:
   a. Wiring diagrams showing factory-installed wiring.
   b. Printed performance curves.
   c. Operational range diagrams.
   d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.
5. Submit Product Data before or concurrent with Samples.
6. Submit Product Data in the following format:
   a. PDF electronic file.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data, unless submittal based on Architect's digital data drawing files is otherwise permitted.

1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:
   a. Identification of products.
   b. Schedules.

c. Compliance with specified standards.
d. Notation of coordination requirements.
e. Notation of dimensions established by field measurement.
f. Relationship and attachment to adjoining construction clearly indicated.
g. Seal and signature of professional engineer if specified.

2. Sheet Size: Except for templates, patterns, and similar full-size drawings, submit Shop Drawings on sheets at least 8-1/2 by 11 inches, but no larger than 30 by 42 inches.
3. Submit Shop Drawings in the following format:
   a. PDF electronic file.
   b. Reduce pdf file size as much as possible.

D. Samples: Submit Samples for review of kind, color, pattern, and texture for a check of these characteristics with other elements and for a comparison of these characteristics between submittal and actual component as delivered and installed.

1. Transmit Samples that contain multiple, related components such as accessories together in one submittal package.
2. Identification: Attach label on unexposed side of Samples that includes the following:
   a. Generic description of Sample.
   b. Product name and name of manufacturer.
   c. Sample source.
   d. Number and title of applicable Specification Section.
   e. Specification paragraph number and generic name of each item.
3. For projects where electronic submittals are required, provide corresponding electronic submittal of Sample transmittal, digital image file illustrating Sample characteristics, and identification information for record.
4. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.
   a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
   b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.
5. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available.
   a. Number of Samples: Submit one full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.
6. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing color, texture, and pattern; color range sets; and components used for independent testing and inspection.
   a. Number of Samples: Submit three sets of Samples. Architect will retain two Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record sample.

1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.

E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:

1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
2. Manufacturer and product name, and model number if applicable.
3. Number and name of room or space.
4. Location within room or space.
5. Submit product schedule in the following format:
   a. PDF electronic file.

F. Coordination Drawing Submittals: Comply with requirements specified in Section 013100 "Project Management and Coordination."

G. Contractor's Construction Schedule: Comply with requirements specified in Section 013200 "Construction Progress Documentation."

H. Application for Payment and Schedule of Values: Comply with requirements specified in Section 012900 "Payment Procedures."

I. Test and Inspection Reports and Schedule of Tests and Inspections Submittals: Comply with requirements specified in Section 014000 "Quality Requirements."

J. Closeout Submittals and Maintenance Material Submittals: Comply with requirements specified in Section 017700 "Closeout Procedures."

K. Maintenance Data: Comply with requirements specified in Section 017823 "Operation and Maintenance Data."

L. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

M. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of Welding Procedure Specification and Procedure Qualification Record on AWS forms. Include names of firms and personnel certified.

N. Installer Certificates: Submit written statements on manufacturer's letterhead certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.

O. Manufacturer Certificates: Submit written statements on manufacturer's letterhead certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.

P. Product Certificates: Submit written statements on manufacturer's letterhead certifying that product complies with requirements in the Contract Documents.

Q. Material Certificates: Submit written statements on manufacturer's letterhead certifying that material complies with requirements in the Contract Documents.

R. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.

S. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.

T. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

1. Name of evaluation organization.
2. Date of evaluation.
3. Time period when report is in effect.
4. Product and manufacturers' names.
5. Description of product.
6. Test procedures and results.
7. Limitations of use.

U. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.

V. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for primers and substrate preparation needed for adhesion.

W. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.

X. Design Data: Prepare and submit written and graphic information, including, but not limited to, performance and design criteria, list of applicable codes and regulations, and calculations. Include list of assumptions and other performance and design criteria and a summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Include page numbers.

2.2 DELEGATED-DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated-Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF electronic file paper copies of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

PART 3 - EXECUTION

3.1 CONTRACTOR'S REVIEW

A. Action and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.

1. All submittals not marked as reviewed by the Contractor will be returned without action.

B. Project Closeout and Maintenance Material Submittals: See requirements in Section 017700 "Closeout Procedures."

C. Approval Stamp: Stamp each submittal with a uniform, approval stamp. Include Project name and location, submittal number, Specification Section title and number, name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

3.2 ARCHITECT'S ACTION

A. Action Submittals: Architect will review each submittal, make marks to indicate corrections or revisions required, and return it. Architect will stamp each submittal with an action stamp and will mark stamp appropriately to indicate action, as follows:

1. Reviewed
2. Furnish as Corrected
3. Revise and Resubmit
4. Rejected
5. Not Required for Review

B. Informational Submittals: Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

C. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

D. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.

E. Submittals not required by the Contract Documents may be returned by the Architect without action.

END OF SECTION 013300

SECTION 01 33 01 - SUBMITTALS – COMMISSIONING

PART 1 – GENERAL

1.1 SUBMITTAL REQUIREMENTS FOR COMMISSIONING:

A. Normal Submittals.

1. The Commissioning Authority will receive a copy of the normal submittals for equipment to be commissioned.

2. The Commissioning Authority will review and approve normal Contractor submittals applicable to systems being commissioned for compliance with commissioning needs, concurrent with the A/E reviews.

B. Data for Commissioning.

1. The Contractor will receive a written request from the Commissioning Authority requesting specific information needed about each piece of commissioned equipment or system.

2. Typically this will include detailed manufacturer installation and start-up, operating, troubleshooting and maintenance procedures, full details of any owner-contracted tests, fan and pump curves, full factory testing reports, if any, and full warranty information, including all responsibilities of the Owner to keep the warranty in force clearly identified. In addition, the installation and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the Commissioning Authority.

3. The Commissioning Authority may request further documentation necessary for the commissioning process.

4. This data request may be made prior to normal submittals.

5. Much of this information is contained in the regular O&M manual submittals normally submitted in the project. Typically, this information is required prior to the regular formal O&M manual submittals.

C. Contractor's responsibility for deviations in submittals from requirements of the Contract Documents is not relieved by the Commissioning Authority's review.

END OF SECTION

SECTION 01 35 73 DELEGATED DESIGN REQUIREMENTS

PART 1 – GENERAL

1.01 SUMMARY

A. This Section specifies the procedures and requirements for Contractor's delegated design responsibilities for specific building systems or components as identified in the Contract Documents.

B. Delegated design includes, but is not limited to, the engineering and preparation of drawings, calculations, and other documents by a qualified, licensed design professional retained by the Contractor.

1.02 RELATED SECTIONS

A. General Conditions and Supplementary Conditions

B. Division 01 Section 01 33 00 "Submittal Procedures"

C. Division 01 Section 01 40 00 "Quality Requirements"

1.03 SUBMITTALS

A. Delegated Design Submittals: Submit the following in accordance with Section 01 33 00 "Submittal Procedures":

1. Shop Drawings: Include all details, materials, dimensions, attachments, interfaces, and configurations. Drawings shall be sealed by a licensed Professional Engineer registered in the jurisdiction of the project.
2. Structural Calculations: Provide sealed calculations demonstrating conformance to performance criteria, code requirements, and applicable design loads.
3. Coordination Drawings: Indicate relationships and interfaces with adjacent work.
4. Certificate of Professional Qualification: Include name, license number, and state of registration for the engineer of record responsible for the delegated design.

1.04 QUALITY ASSURANCE

A. Design Professional Qualifications:

1. A Professional Engineer (PE) currently licensed in the state where the project is located.
2. Experienced in design and detailing of the delegated systems.

B. Review by the Architect/Engineer of Record is for general conformance only and does not relieve the Contractor or their retained engineer of responsibility for full compliance with codes and performance criteria.

C. Delegated design documents shall meet all applicable codes, standards, and specific performance requirements identified in the Project Manual and Drawings.

PART 2 – PRODUCTS

(Not Used)

PART 3 – EXECUTION

3.01 COORDINATION

A. The Contractor shall coordinate delegated design systems with adjacent materials and systems.

B. Notify the Architect of any conflicts between delegated design requirements and other elements of the project.

C. Incorporate field-verified dimensions and actual conditions into the delegated design prior to submission.

3.02 INSTALLATION

A. Install systems in accordance with approved delegated design documents and applicable codes.

B. Installation shall comply with sealed drawings and the manufacturer’s recommendations.

END OF SECTION

SECTION 01 40 00 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspecting services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.
   1. Specific quality-assurance and -control requirements for individual construction activities are specified in the Sections that specify those activities. Requirements in those Sections may also cover production of standard products.
   2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and -control procedures that facilitate compliance with the Contract Document requirements.
   3. Requirements for Contractor to provide quality-assurance and -control services required by Architect, Owner or authorities having jurisdiction are not limited by provisions of this Section.

C. Related Sections:
   1. Division 01 Section "Construction Progress Documentation" for developing a schedule of required tests and inspections.
   2. Divisions 02 through 49 Sections for specific test and inspection requirements.

1.3 DEFINITIONS

A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

B. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Services do not include contract enforcement activities performed by Architect

C. Mockups: Full size physical assemblies that are constructed on-site. Mockups are constructed to verify selections made under sample submittals; to demonstrate aesthetic effects and, where indicated, qualities of materials and execution; to review coordination, testing, or operation; to show interface between dissimilar materials; and to demonstrate compliance with specified installation tolerances. Mockups are not Samples. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.

D. Preconstruction Testing: Tests and inspections performed specifically for the Project before products and materials are incorporated into the Work to verify performance or compliance with specified criteria.

E. Product Testing: Tests and inspections that are performed by an NRTL, an NVLAP, or a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.

F. Source Quality-Control Testing: Tests and inspections that are performed at the source, i.e., plant, mill, factory, or shop.

G. Field Quality-Control Testing: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. Testing laboratory shall mean the same as testing agency.

I. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, Subcontractor, or Sub-subcontractor, to perform a particular construction operation, including installation, erection, application, and similar operations.
   1. Use of trade-specific terminology in referring to a trade or entity does not require that certain construction activities be performed by accredited or unionized individuals, or that requirements specified apply exclusively to specific trade or trades.

J. Experienced: When used with an entity or individual, "experienced" means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

1.4 CONFLICTING REQUIREMENTS

A. Referenced Standards: If compliance with two or more standards is specified and the standards establish different or conflicting requirements for minimum quantities or quality levels, comply with the most stringent requirement. Refer conflicting requirements that are different, but apparently equal, to Architect for a decision before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.5 INFORMATIONAL SUBMITTALS

A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.

B. Contractor's Quality-Control Manager Qualifications: For supervisory personnel.

C. Contractor's Statement of Responsibility: When required by authorities having jurisdiction, submit copy of written statement of responsibility sent to authorities having jurisdiction before starting work on the following systems.
   1. Main wind-force resisting system or a wind-resisting component listed in the wind-force-resisting system quality assurance plan prepared by the Architect.

D. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

E. Schedule of Tests and Inspections: Prepare in tabular form and include the following:
   1. Specification Section number and title.
   2. Entity responsible for performing tests and inspections.
   3. Description of test and inspection.
   4. Identification of applicable standards.
   5. Identification of test and inspection methods.
   6. Number of tests and inspections required.
   7. Time schedule or time span for tests and inspections.
   8. Requirements for obtaining samples.
   9. Unique characteristics of each quality-control service.

1.6 CONTRACTOR'S QUALITY-CONTROL PLAN

A. Quality-Control Plan, General: Submit quality-control plan within 10 days of Notice to Proceed, and not less than five days prior to preconstruction conference. Submit in format acceptable to Architect. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities. Coordinate with Contractor's construction schedule.

B. Quality-Control Personnel Qualifications: Engage qualified full-time personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.
   1. Project quality-control manager shall not have other Project responsibilities.

C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.

D. Testing and Inspection: Include in quality-control plan a comprehensive schedule of Work requiring testing or inspection, including the following:
   1. Contractor-performed tests and inspections including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections.
   2. Special inspections required by authorities having jurisdiction and indicated on the "Statement of Special Inspections."
   3. Owner-performed tests and inspections indicated in the Contract Documents

E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring work into compliance with standards of workmanship established by Contract requirements and approved mockups.

F. Monitoring and Documentation: Maintain testing and inspection reports including log of approved and rejected results. Include work Architect has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.7 REPORTS AND DOCUMENTS

A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:
   1. Date of issue.
   2. Project title and number.
   3. Name, address, and telephone number of testing agency.
   4. Dates and locations of samples and tests or inspections.
   5. Names of individuals making tests and inspections.
   6. Description of the Work and test and inspection method.
   7. Identification of product and Specification Section.
   8. Complete test or inspection data.
   9. Test and inspection results and an interpretation of test results.
   10. Record of temperature and weather conditions at time of sample taking and testing and inspecting.
   11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
   12. Name and signature of laboratory inspector.
   13. Recommendations on retesting and reinspecting.

B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:
   1. Name, address, and telephone number of technical representative making report.
   2. Statement on condition of substrates and their acceptability for installation of product.
   3. Statement that products at Project site comply with requirements.
   4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.

5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
6. Statement whether conditions, products, and installation will affect warranty.
7. Other required items indicated in individual Specification Sections.

C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:
1. Name, address, and telephone number of factory-authorized service representative making report.
2. Statement that equipment complies with requirements.
3. Results of operational and other tests and a statement of whether observed performance complies with requirements.
4. Statement whether conditions, products, and installation will affect warranty.
5. Other required items indicated in individual Specification Sections.

D. Permits, Licenses, and Certificates: For Owner's records, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents, established for compliance with standards and regulations bearing on performance of the Work.

1.8 QUALITY ASSURANCE

A. General: Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

D. Installer Qualifications: A firm or individual experienced in installing, erecting, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that are similar to those indicated for this Project in material, design, and extent.

F. Specialists: Certain Specification Sections require that specific construction activities shall be performed by entities who are recognized experts in those operations. Specialists shall satisfy qualification requirements indicated and shall be engaged for the activities indicated.
1. Requirements of authorities having jurisdiction shall supersede requirements for specialists.

G. Testing Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspecting indicated, as documented according to ASTM E 329 and with additional qualifications specified in individual Sections; and where required by authorities having jurisdiction, that is acceptable to authorities.
1. NRTL: A nationally recognized testing laboratory according to 29 CFR 1910.7.
2. NVLAP: A testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program.

H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following:
   1. Contractor responsibilities include the following:
      a. Provide test specimens representative of proposed products and construction.
      b. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
      c. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
      d. Build site-assembled test assemblies and mockups using installers who will perform same tasks for Project.
      e. Build laboratory mockups at testing facility using personnel, products, and methods of construction indicated for the completed Work.
      f. When testing is complete, remove test specimens, assemblies, mockups; do not reuse products on Project.
   2. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

K. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:
   1. Build mockups in location and of size indicated or, if not indicated, as directed by Architect
   2. Notify Architect seven days in advance of dates and times when mockups will be constructed.
   3. Employ supervisory personnel who will oversee mockup construction. Employ workers that will be employed during the construction at the Project.
   4. Demonstrate the proposed range of aesthetic effects and workmanship.
   5. Obtain Architect's approval of mockups before starting work, fabrication, or construction.
      a. Allow seven days for initial review and each re-review of each mockup.
   6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
   7. Demolish and remove mockups when directed, unless otherwise indicated.

1.9 QUALITY CONTROL

A. Owner Responsibilities: Where quality-control services are indicated as Owner's responsibility, Owner will engage a qualified testing agency to perform these services.
   1. Owner will furnish Contractor with names, addresses, and telephone numbers of testing agencies engaged and a description of types of testing and inspecting they are engaged to perform.
   2. Payment for these services will be made from testing and inspecting allowances, as authorized by Change Orders.
   3. Costs for retesting and reinspecting construction that replaces or is necessitated by work that failed to comply with the Contract Documents will be charged to Contractor, and the Contract Sum will be adjusted by Change Order.
   4. Owner shall engage and pay for testing and inspection services for the following:
      a. Soil and geotechnical testing and inspection.
      b. Concrete testing, including slump, air content, temperature, cylinders and compressive-strength tests.
      c. Structural-steel and weld inspection and testing.
      d. Special inspections required by the Building Code or authorities having jurisdiction.
   5. Independent commissioning agent is contracted by Owner. Contractor is required to perform and coordinate all Commissioning responsibilities as described in the Commissioning Spec Sections.,

B. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities required to verify that the Work complies with requirements, whether specified or not.

1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
2. Where services are indicated as Contractor's responsibility, engage a qualified testing agency to perform these quality-control services.
    a. Contractor shall not employ same entity engaged by Owner, unless agreed to in writing by Owner.
3. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspecting will be performed.
4. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
5. Testing and inspecting requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

C. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Division 01 Section "Submittal Procedures."

D. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

E. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.

F. Testing Agency Responsibilities: Cooperate with Architect and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.
1. Notify Architect and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. Determine the location from which test samples will be taken and in which in-situ tests are conducted.
3. Conduct and interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from requirements.
4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
6. Do not perform any duties of Contractor.

G. Associated Services: Cooperate with agencies performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:
1. Access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Adequate quantities of representative samples of materials that require testing and inspecting. Assist agency in obtaining samples.
4. Facilities for storage and field curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.
7. Security and protection for samples and for testing and inspecting equipment at Project site.

H. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and -control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspecting.
1. Schedule times for tests, inspections, obtaining samples, and similar activities.

I. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents as a component of the Contractor's quality-control plan]. Coordinate and submit concurrently with Contractor's construction schedule. Update as the Work progresses. .
   1. Distribution: Distribute schedule to Owner, Architect testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.10 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: Conducted by a qualified testing agency as required by authorities having jurisdiction as the responsibility of Owner, as indicated in individual specifications sections, and as follows:
   1. Verifying that manufacturer maintains detailed fabrication and quality-control procedures and reviewing the completeness and adequacy of those procedures to perform the Work.
   2. Notifying Architect and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
   3. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect with copy to Contractor and to authorities having jurisdiction.
   4. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
   5. Interpreting tests and inspections and stating in each report whether tested and inspected work complies with or deviates from the Contract Documents.
   6. Retesting and reinspecting corrected work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

A. Prepare a record of tests and inspections. Include the following:
   1. Date test or inspection was conducted.
   2. Description of the Work tested or inspected.
   3. Date test or inspection results were transmitted to Architect.
   4. Identification of testing agency or special inspector conducting test or inspection.

B. Maintain log at Project site. Post changes and modifications as they occur. Provide access to test and inspection log for Architect's reference during normal working hours.

3.2 REPAIR AND PROTECTION

A. General: On completion of testing, inspecting, sample taking, and similar services, repair damaged construction and restore substrates and finishes.
   1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Division 01 Section "Execution."

B. Protect construction exposed by or for quality-control service activities.

C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 01 40 00

SECTION 01 42 00 - REFERENCES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 DEFINITIONS

A. General: Basic Contract definitions are included in the Conditions of the Contract.

B. "Approved": When used to convey Architect's action on Contractor's submittals, applications, and requests, "approved" is limited to Architect's duties and responsibilities as stated in the Conditions of the Contract.

C. "Directed": A command or instruction by Architect. Other terms including "requested," "authorized," "selected," "required," and "permitted" have the same meaning as "directed."

D. "Indicated": Requirements expressed by graphic representations or in written form on Drawings, in Specifications, and in other Contract Documents. Other terms including "shown," "noted," "scheduled," and "specified" have the same meaning as "indicated."

E. "Regulations": Laws, ordinances, statutes, and lawful orders issued by authorities having jurisdiction, and rules, conventions, and agreements within the construction industry that control performance of the Work.

F. "Furnish": Supply and deliver to Project site, ready for unloading, unpacking, assembly, installation, and similar operations.

G. "Install": Operations at Project site including unloading, temporarily storing, unpacking, assembling, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning, and similar operations.

H. "Provide": Furnish and install, complete and ready for the intended use.

I. "Project Site": Space available for performing construction activities. The extent of Project site is shown on Drawings and may or may not be identical with the description of the land on which Project is to be built.

1.3 INDUSTRY STANDARDS

A. Applicability of Standards: Unless the Contract Documents include more stringent requirements, applicable construction industry standards have the same force and effect as if bound or copied directly into the Contract Documents to the extent referenced. Such standards are made a part of the Contract Documents by reference.

B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

C. Copies of Standards: Each entity engaged in construction on Project should be familiar with industry standards applicable to its construction activity. Copies of applicable standards are not bound with the Contract Documents.

1. Where copies of standards are needed to perform a required construction activity, obtain copies directly from publication source.

1.4 ABBREVIATIONS AND ACRONYMS

A. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities indicated in Thomson Gale's "Encyclopedia of Associations" or in Columbia Books' "National Trade & Professional Associations of the U.S."

B. Industry Organizations: Where abbreviations and acronyms are used in Specifications or other Contract Documents, they shall mean the recognized name of the entities in the following list. Names, telephone numbers, and Web sites are subject to change and are believed to be accurate and up-to-date as of the date of the Contract Documents.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 42 00

SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.

B. Related Sections:

1. Division 01 Section 01 10.00 "Summary" for work restrictions and limitations on utility interruptions.
2. Refer to Civil Documents for "Concrete Paving" for construction and maintenance of cement concrete pavement for temporary roads and paved areas.

1.3 USE CHARGES

A. General: Installation and removal of and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities to use temporary services and facilities without cost, including, but not limited to, Owner's construction forces, Architect, occupants of Project, testing agencies, and authorities having jurisdiction.

B. Water and Sewer Service from Existing System: Water from Owner's existing water system is available for use without metering and without payment of use charges. Provide connections and extensions of services as required for construction operations.

C. Electric Power Service from Existing System: Electric power from Owner's existing system is available for use without metering and without payment of use charges. Provide connections and extensions of services as required for construction operations.

1.4 INFORMATIONAL SUBMITTALS

A. Site Plan: Show temporary facilities, utility hookups, staging areas, and parking areas for construction personnel.

B. Moisture-Protection Plan: Describe procedures and controls for protecting materials and construction from water absorption and damage, including delivery, handling, and storage provisions for materials subject to water absorption or water damage, discarding water-damaged materials, protocols for mitigating water intrusion into completed Work, and replacing water damaged Work.

1. Indicate sequencing of work that requires water, such as sprayed fire-resistive materials, plastering, and terrazzo grinding, and describe plans for dealing with water from these operations. Show procedures for verifying that wet construction has dried sufficiently to permit installation of finish materials.

C. Dust-Control and HVAC-Control Plan: Submit coordination drawing and narrative that indicates the dust-control and HVAC-control measures proposed for use, proposed locations, and proposed time frame for their operation. Identify further options if proposed measures are later determined to be inadequate. Include the following:

1. Locations of dust-control partitions at each phase of the work.
2. HVAC system isolation schematic drawing.
3. Location of proposed air filtration system discharge.
4. Other dust-control measures.
5. Waste management plan.

1.5 QUALITY ASSURANCE

A. Electric Service: Comply with NECA, NEMA, and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

B. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

C. Accessible Temporary Egress: Comply with applicable provisions in [the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Portable Chain-Link Fencing: Minimum 2-inch, 0.148-inch-thick, galvanized steel, chain-link fabric fencing; minimum 6 feet high with galvanized steel pipe posts; minimum 2-3/8-inch-OD line posts and 2-7/8-inch-OD corner and pull posts, with 1-5/8-inch-OD top and bottom rails. Provide concrete bases for supporting posts.

B. Polyethylene Sheet: Reinforced, fire-resistive sheet, 10 mils minimum thickness, with flame-spread rating of 15 or less per ASTM E 84.

C. Dust Control Adhesive-Surface Walk-off Mats: Provide mats minimum 36 by 60 inches.

D. Plywood: Water preservative treated in accordance with AWPA UIUse Category UC4a

2.2 TEMPORARY FACILITIES

A. Field Offices, General: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.

B. Common-Use Field Office: Of sufficient size to accommodate needs of Owner, Architect and construction personnel office activities and to accommodate project meetings specified in other Division 01 Sections. Keep office clean and orderly. Furnish and equip offices as follows:

1. Furniture required for Project-site documents including file cabinets, plan tables, plan racks, and bookcases.
2. Conference room of sufficient size to accommodate meetings of 10 individuals. Provide electrical power service and 120-V ac duplex receptacles, with not less than 1 receptacle on each wall. Furnish room with conference table, chairs, and 4-foot-square tack and marker boards.
3. Drinking water and private toilet.
4. Coffee machine and supplies.
5. Heating and cooling equipment necessary to maintain a uniform indoor temperature of 68 to 72 deg F.
6. Lighting fixtures capable of maintaining average illumination of 20 fc at desk height.

2.3 EQUIPMENT

A. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.

B. Air Filtration Units: HEPA primary and secondary filter-equipped portable units with four-stage filtration. Provide single switch for emergency shutoff. Configure to run continuously.

2.4 HURRICANE PREPAREDNESS PLAN

A. Within thirty (30) days of the Notice to Proceed, prepare and submit a comprehensive hurricane preparedness plan, detailing emergency contacts in case of a hurricane emergency, with numbers and emails, with detailed plans for the following:

1. Partial site demobilization, including procedures for disassembly of site crane.
2. Protection of in-place work.
3. Enclosure of existing building.
4. Debris removal efforts verification.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.

1. Locate facilities to limit site disturbance as specified in Division 01 10 00 Section "Summary."
2. All systems, including electrical, mechanical, smoke detection, plumbing and others, are to be kept in operation at all times. Contractor to allow for any overtime work in connection with weekend or overnight work for work requiring utility interruptions."

B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

A. General: Install temporary service or connect to existing service.

1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.

2. All systems, including electrical, mechanical, smoke detection, plumbing and others, are to be kept in operation at all times. Contractor to allow for any overtime work in connection with weekend or overnight work for work requiring utility interruptions

B. Water Service: Connect to Owner's existing water service facilities. Clean and maintain water service facilities in a condition acceptable to Owner. At Substantial Completion, restore these facilities to condition existing before initial use.

C. Sanitary Facilities: Provide temporary toilets, wash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.

1. Toilets: Use of Owner's existing toilet facilities will be permitted, as long as facilities are cleaned and maintained in a condition acceptable to Owner. At Substantial Completion, restore these facilities to condition existing before initial use.

D. Electric Power Service: Connect to Owner's existing electric power service. Maintain equipment in a condition acceptable to Owner.

E. Lighting: Provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.

1. Install and operate temporary lighting that fulfills security and protection requirements without operating entire system.
2. Install lighting for Project identification sign.

F. Telephone Service: Provide temporary telephone service in common-use facilities for use by all construction personnel.

1. Provide additional telephone lines for the following:

a. Provide a dedicated telephone line for each facsimile machine in each field office.

2. At each telephone, post a list of important telephone numbers.

a. Police and fire departments.
b. Ambulance service.
c. Contractor's home office.
d. Architect's office.
e. Engineers' offices.
f. Owner's office.
g. Principal subcontractors' field and home offices.

3. Provide superintendent with cellular telephone or portable two-way radio for use when away from field office.

a. Microsoft Office Professional, XP or higher, including Word, Excel, and Outlook.
b. Adobe Reader 7.0 or higher.
c. WinZip 7.0 or higher.

3.3 SUPPORT FACILITIES INSTALLATION

A. Traffic Controls: Comply with requirements of authorities having jurisdiction.

1. Protect existing site improvements to remain including curbs, pavement, and utilities.
2. Maintain access for fire-fighting equipment and access to fire hydrants.

B. Parking: Use designated areas of Owner's existing parking areas for construction personnel.

C. Project Signs: Provide Project signs as indicated. Unauthorized signs are not permitted.

1. Identification Signs: Provide Project identification signs as indicated on Drawings.
2. Temporary Signs: Provide other signs as indicated and as required to inform public and individuals seeking entrance to Project.

a. Provide temporary, directional signs for construction personnel and visitors.
b. Egress signs shall read as follows: ‘PLEASE PARDON THE INCONVENIENCE. IMPROVEMENTS ARE IN PROGRESS TO MAKE THIS AREA MORE COMFORTABLE AND CONVENIENT FOR OUR PATIENTS’

3. Maintain and touchup signs so they are legible at all times.

D. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with Division 01 Section 01 73 29 "Execution" for progress cleaning requirements.

E. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.

1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

F. Temporary Elevator Use: Refer to Division 14 21 23 Sections for temporary use of new elevators].

G. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.

H. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

3.4 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.

1. Comply with work restrictions specified in Division 01 Section 01 10 00 "Summary."

B. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each work day.

C. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.

D. Covered Walkway: Erect protective, covered walkway for passage of individuals through or adjacent to Project site. Coordinate with entrance gates, other facilities, and obstructions. Comply with regulations of authorities having jurisdiction.

1. Construct covered walkways using scaffold or shoring framing.
2. Provide overhead decking, protective enclosure walls, handrails, barricades, warning signs, exit signs, lights, safe and well-drained walkways, and similar provisions for protection and safe passage.
3. Paint and maintain appearance of walkway for duration of the Work.

E. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heating or cooling is needed and permanent enclosure is not complete, insulate temporary enclosures.

F. Temporary Partitions: Provide floor-to-ceiling dustproof partitions to limit dust and dirt migration and to separate areas occupied by Owner and tenants from fumes and noise.
1. Construct dustproof partitions with two layers of 6-mil polyethylene sheet on each side. Cover floor with two layers of 6-mil polyethylene sheet, extending sheets 18 inches up the sidewalls. Overlap and tape full length of joints. Cover floor with fire-retardant treated plywood.

a. Construct vestibule and airlock at each entrance through temporary partition with not less than 48 inches between doors. Maintain water-dampened foot mats in vestibule.

2. Where fire-resistance-rated temporary partitions are indicated or are required by authorities having jurisdiction, construct partitions according to the rated assemblies.
3. Insulate partitions to control noise transmission to occupied areas.
4. Seal joints and perimeter. Equip partitions with gasketed dustproof doors and security locks where openings are required.
5. Protect air-handling equipment.
6. Provide walk-off mats at each entrance through temporary partition.

G. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241.

1. Prohibit smoking in construction areas.
2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition according to requirements of authorities having jurisdiction.
3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.
4. Provide temporary standpipes and hoses for fire protection. Hang hoses with a warning sign stating that hoses are for fire-protection purposes only and are not to be removed. Match hose size with outlet size and equip with suitable nozzles.

3.5 MOISTURE AND MOLD CONTROL

A. Contractor's Moisture-Protection Plan: Avoid trapping water in finished work. Document visible signs of mold that may appear during construction.

B. Exposed Construction Phase: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:

1. Protect porous materials from water damage.
2. Protect stored and installed material from flowing or standing water.
3. Keep porous and organic materials from coming into prolonged contact with concrete.
4. Remove standing water from decks.
5. Keep deck openings covered or dammed.

C. Partially Enclosed Construction Phase: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:

1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
2. Keep interior spaces reasonably clean and protected from water damage.
3. Periodically collect and remove waste containing cellulose or other organic matter.
4. Discard or replace water-damaged material.
5. Do not install material that is wet.
6. Discard, replace or clean stored or installed material that begins to grow mold.
7. Perform work in a sequence that allows any wet materials adequate time to dry before enclosing the material in drywall or other interior finishes.

D. Controlled Construction Phase of Construction: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:

1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
2. Use permanent HVAC system to control humidity.
3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.

a. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 48 are considered defective.
b. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record daily readings over a forty-eight hour period. Identify materials containing moisture levels higher than allowed. Report findings in writing to Architect.
c. Remove materials that can not be completely restored to their manufactured moisture level within 48 hours

3.6 OPERATION, TERMINATION, AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

B. Maintenance: Maintain facilities in good operating condition until removal.

1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.

C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.

D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.

E. Physician Tower Regulations: Contractor shall adhere to the facility rules, especially rules concerning hallway cleanliness. Contractor shall work closely with the Project Manager to cause a minimum amount of disturbance and inconvenience to the Hospital patients and visitors.

1. Tobacco Products of all kind are not permitted anywhere on the owner's grounds. This means any patient floor, public hallway, public elevator, stairwell, laboratories, job sites, parking lots, etc.; all shall be non-smoking areas.
2. The hospital cafeteria is set up to serve hospital employees having a half hour lunch break. Outside personnel cause delays in the serving line and employees are consequently late returning to their jobs. All contractors' personnel are advised to eat in the Snack shop or off site.

3.7 PROTECTION OF EXISTING FACILITIES

A. Housekeeping: Contractor shall remove all waste materials and trash from areas affected by new construction and shall keep the area clean and free of such debris to the satisfaction of the Owner and Project Manager.

1. Removal: All debris transported inside the hospital, including corridors and elevators, shall be in a covered cart equipped with rubber tires.
2. Disposal: All contractors are advised that hospital-leased dumpsters on the campus are not to be used for disposal of refuse of any kind. Debris resulting from work may not be stored on hospital campus. Such debris must be removed daily and disposed of off the owner's grounds.

B. Demolition, Removal, And Salvage: All light fixtures, electrical panels, A/C diffusers, coils, plumbing fixtures, sinks, valves, piping, carpet, and other existing usable materials shall be inspected by the Project Manager before disposal. All existing usable material shall either be disposed of or delivered to the Hospital's Engineering and Maintenance Shop at the request of the Project manager.

1. Protection: All exhaust and return air grills are to be covered, taped, and sealed during demolition. Covers are to be removed when work is completed in the evening and reinstalled each day when demolition begins. Constructions to maintain a negative air pressure in order to contain 'Debris Dust.'
2. Personnel Protection: Adequate respiratory aids and eye protection are to be used by Contractor's personnel during demolition, and in accordance with OSHA Standards.
3. All existing carpet shall be inspected by the Project Manager before disposal. At the Project Manager's request, carpet is to be either disposed of or delivered to the Engineering and Maintenance Shop in the Hospital.

C. Fire Safety And Protection: Cutting, burning, and welding will require a permit from the Security Department near the Emergency Room. It also requires advance notice to the Engineering Department to take the area smoke detectors out of service. A fire watch must be maintained by contractors and a suitable fire extinguisher (furnished by the Contractor) must be readily available.

1. Partitions: All new walls shall be built floor to underside of slab. All new and existing walls shall be extended to underside of slab. All such work above ceilings shall be a minimum one layer 5/8" fire rated gypsum board each side, taped and sealed as required, fire-caulked at slab and/or masonry, minimum stud size 3-5/8", wallboard joints staggered and attached with long dimension in a horizontal attitude with screw.
2. Repairs: Contractor shall repair all fire partitions that have been penetrated as part of the construction.

D. Work In Below Floor Slabs: Where execution of the work affects the space below the work location (such as cutting openings in floor slabs, piping, or conduit changes, and additions, and similar operations), schedule and coordinate the performance of the work in advance with the Owner.

1. Related Work: Include the removal and reinstallation of ceiling finishes, light fixtures, pipes, ducts, conduit, and other construction below the floor as necessary to perform the work.
2. Protection: Provide and maintain suitable protection for the building and the Owner's property located on the lower floor.

END OF SECTION 01 50 00

SECTION 01 60 00 – MATERIALS AND EQUIPMENT

PART 1 – GENERAL

1.1 DESCRIPTION

A. MATERIALS

1. All materials to be incorporated into the Work shall be new, unless indicated otherwise by the Contract Documents.
2. Materials shall be shipped to the site in manufacturer's unopened containers, where applicable, and checked against requirements of Contract Documents as being applicable for the project.
3. Materials shall be properly stored on site, or elsewhere per subparagraph 9.3.2 of the General Conditions, in such a manner as to protect from adverse weather conditions which may damage or affect its quality.
4. Materials not intended for this project, per requirements of the Contract Documents, or not properly stored prior to installation, shall not be incorporated in the Work.

1.2 EQUIPMENT

A. Contractor, subcontractors, and sub-subcontractors shall provide all necessary tools, equipment apparatus, and machinery necessary to properly carry out the work proficiently.
B. All equipment shall be maintained in a good working order to avoid delays due to any equipment failure.
C. Lack of appropriate equipment shall not relieve the Contractor from specific performance of this Contract.

PART 2 – PRODUCTS (NOT USED)

PART 3 – EXECUTION (NOT USED)

END OF SECTION

SECTION 01 73 00 - EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general administrative and procedural requirements governing execution of the Work including, but not limited to, the following:

1. Construction layout.
2. Field engineering and surveying.
3. Installation of the Work.
4. Cutting and patching.
5. Coordination of Owner-installed products.
6. Progress cleaning.
7. Starting and adjusting.
8. Protection of installed construction.
9. Correction of the Work.

B. Related Sections:

1. Division 01 Section 01 33 00 "Submittal Procedures" for submitting surveys.
2. Division 01 Section 01 77 00 "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and levels, and final cleaning.

1.3 DEFINITIONS

A. Cutting: Removal of in-place construction necessary to permit installation or performance of other work.

B. Patching: Fitting and repair work required to restore construction to original conditions after installation of other work.

1.4 QUALITY ASSURANCE

A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.

B. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.

1. Structural Elements: When cutting and patching structural elements, notify Architect of locations and details of cutting and await directions from the Architect before proceeding. Shore, brace, and support structural element during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection

2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational elements include the following:

    a. Primary operational systems and equipment.
    b. Fire separation assemblies.
    c. Air or smoke barriers.
    d. Fire-suppression systems.
    e. Mechanical systems piping and ducts.
    f. Control systems.
    g. Communication systems.
    h. Conveying systems.
    i. Electrical wiring systems.
    j. Operating systems of special construction.
    k.

3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Other construction elements include but are not limited to the following:

    a. Water, moisture, or vapor barriers.
    b. Membranes and flashings.
    c. Exterior curtain-wall construction.
    d. Equipment supports.
    e. Piping, ductwork, vessels, and equipment.
    f. Noise- and vibration-control elements and systems.

4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

C. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of products and equipment.

1.5 WARRANTY

A. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Comply with requirements specified in other Sections.

B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.

1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to the Architect for the visual and functional performance of in-place materials.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities,mechanical and electrical systems, and other construction affecting the Work.

1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, and water-service piping; underground electrical services, and other utilities.
2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.

1. Written Report: Where a written report listing conditions detrimental to performance of the Work is required by other Sections, include the following:

a. Description of the Work.
b. List of detrimental conditions, including substrates.
c. List of unacceptable installation tolerances.
d. Recommended corrections.

2. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.
3. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
4. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
5. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Existing Utility Information: Furnish information to local utility and Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents caused by differing field conditions outside the control of the Contractor, submit a request for information to Architect according to requirements in Division 01 Section "Project Management and Coordination."

3.3 INSTALLATION

A. General: Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.

1. Make vertical work plumb and make horizontal work level.
2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
3. Conceal pipes, ducts, and wiring in finished areas, unless otherwise indicated.
4. Maintain minimum headroom clearance of 96 inches in occupied spaces and 90 inches in unoccupied spaces.

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.

C. Install products at the time and under conditions that will ensure the best possible results. Maintain conditions required for product performance until Substantial Completion.

D. Conduct construction operations so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy.

E. Tools and Equipment: Do not use tools or equipment that produce harmful noise levels.

F. Templates: Obtain and distribute to the parties involved templates for work specified to be factory prepared and field installed. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

G. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions.

1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
2. Allow for building movement, including thermal expansion and contraction.
3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

H. Joints: Make joints of uniform width. Where joint locations in exposed work are not indicated, arrange joints for the best visual effect. Fit exposed connections together to form hairline joints.

I. Hazardous Materials: Use products, cleaners, and installation materials that are not considered hazardous.

3.4 CUTTING AND PATCHING

A. Cutting and Patching, General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.

1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Temporary Support: Provide temporary support of work to be cut.

C. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

D. Adjacent Occupied Areas: Where interference with use of adjoining areas or interruption of free passage to adjoining areas is unavoidable, coordinate cutting and patching in accordance with requirements of Division 01 Section "Summary."

E. NOT USED.

F. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
4. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
5. Proceed with patching after construction operations requiring cutting are complete.

G. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other work. Patch with durable seams that are as invisible as practicable. Provide materials and comply with installation requirements specified in other Sections, where applicable.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will minimize evidence of patching and refinishing.

    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.

3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.

    a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat

over entire unbroken surface containing the patch. Provide additional coats until patch blends with adjacent surfaces.

4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition.

H. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.5 OWNER-INSTALLED PRODUCTS

A. Site Access: Provide access to Project site for Owner's construction personnel.

B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.

1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
2. Preinstallation Conferences: Include Owner's construction personnel at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.

3.6 PROGRESS CLEANING

A. General: Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F.
3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.

    a. Utilize containers intended for holding waste materials of type to be stored.

4. Coordinate progress cleaning for joint-use areas where more than one installer has worked.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces in Finished Areas: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in Division 01 Section Temporary Facilities and Controls. And Division 01 Section 01 74 19 "Construction Waste Management and Disposal.

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

J. Limiting Exposures: Supervise construction operations to assure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.7 STARTING AND ADJUSTING

A. Coordinate startup and adjusting of equipment and operating components with requirements in Division 01 Section 01 78 24 "General Commissioning Requirements."

B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Manufacturer's Field Service: Comply with qualification requirements in Division 01 Section 01 40 00 "Quality Requirements."

3.8 PROTECTION OF INSTALLED CONSTRUCTION

A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

B. Comply with manufacturer's written instructions for temperature and relative humidity.

3.9 CORRECTION OF THE WORK

A. Repair or remove and replace defective construction. Restore damaged substrates and finishes.

1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

B. NOT USED

C. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.

D. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

E. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION 01 73 00

SECTION 01 74 19 - CONSTRUCTION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

SUMMARY

B. Section includes administrative and procedural requirements for the following:
   1. Disposing of nonhazardous demolition and construction waste.

DEFINITIONS

C. Construction Waste: Building and site improvement materials and other solid waste resulting from construction, remodeling, renovation, or repair operations. Construction waste includes packaging.

D. Disposal: Removal off-site of demolition and construction waste and subsequent sale, recycling, reuse, or deposit in landfill or incinerator acceptable to authorities having jurisdiction.

E. Recycle: Recovery of demolition or construction waste for subsequent processing in preparation for reuse.

F. Salvage: Recovery construction waste and subsequent sale or reuse in another facility.

G. Salvage and Reuse: Recovery of demolition or construction waste and subsequent incorporation into the Work.

PERFORMANCE REQUIREMENTS

H. No recycling or salvage is required unless otherwise noted.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

DISPOSAL OF WASTE

A. General: Except for items or materials to be salvaged, recycled, or otherwise reused, remove waste materials from Project site and legally dispose of them in a landfill or incinerator acceptable to authorities having jurisdiction.
   1. Except as otherwise specified, do not allow waste materials that are to be disposed of accumulate on-site.
   2. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

B. Burning: Do not burn waste materials.

C. Disposal: Transport waste materials off Owner's property and legally dispose of them.

END OF SECTION

SECTION 01 77 00 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:
   1. Substantial Completion procedures.
   2. Final completion procedures.
   3. Warranties.
   4. Final cleaning.

B. Related Sections:
   1. Division 01 Section 01 73 29 "Execution" for progress cleaning of Project site.
   2. Division 01 Section 01 78 23 "Operation and Maintenance Data" for operation and maintenance manual requirements.
   3. Division 01 Section 01 78 39 "Project Record Documents" for submitting Record Drawings, Record Specifications, and Record Product Data.
   4. Division 01 Section 01 79 00 "Demonstration and Training" for requirements for instructing Owner's personnel.
   5. Divisions 02 through 32 Sections for specific closeout and special cleaning requirements for the Work in those Sections.

1.3 SUBSTANTIAL COMPLETION

A. Preliminary Procedures: Before requesting inspection for determining date of Substantial Completion, complete the following. List items below that are incomplete with request.
   1. Prepare a list of items to be completed and corrected (punch list), the value of items on the list, and reasons why the Work is not complete.
   2. Advise Owner of pending insurance changeover requirements.
   3. Submit specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
   4. Prepare and submit Project Record Documents, operation and maintenance manuals, final completion construction photographic documentation, damage or settlement surveys, property surveys, and similar final record information.
   5. Deliver tools, spare parts, extra materials, and similar items to location designated by Owner. Label with manufacturer's name and model number where applicable.
   6. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
   7. Complete startup testing of systems.
   8. Submit test/adjust/balance records.
   9. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
   10. Advise Owner of changeover in heat and other utilities.
   11. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.
   12. Complete final cleaning requirements, including touchup painting.

13. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.

B. Inspection: Submit a written request for inspection for Substantial Completion. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.
   1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
   2. Results of completed inspection will form the basis of requirements for final completion.

1.4 FINAL COMPLETION

A. Preliminary Procedures: Before requesting final inspection for determining final completion, complete the following:
   1. Submit a final Application for Payment according to Division 01 Section "Payment Procedures."
   2. Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Architect. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
   3. Submit evidence of final, continuing insurance coverage complying with insurance requirements.
   4. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems Submit demonstration and training video recordings.

B. Inspection: Submit a written request for final inspection for acceptance. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.
   1. Reinspection: Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.5 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction. Contractor shall provide cloud-based punch-list reporting, organization, and clearance system, such as Plangrid.
   1. Organize list of spaces in sequential order
   2. Organize items applying to each space by major element, including categories for ceiling, individual walls, floors, equipment, and building systems.
   3.
   4. Include the following information at the top of each page:
      a. Project name.
      b. Date.
      c. Name of Architect
      d. Name of Contractor.
      e. Page number.
   5. Submit list of incomplete items in the following format:
      a. PDF electronic file.

1.6 WARRANTIES

A. Submittal Time: Submit written warranties on request of Architect for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.

B. Format for Lists:

1. Warranties and Bonds: Provide two (2) original signed documents where warranties and bonds are required under individual Sections. Unless otherwise required in the individual product or installation Section, provide manufacturer's, supplier's, or subcontractor's standard form.

C. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.
   1. Bind warranties and bonds in heavy-duty, three-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch paper.
   2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
   3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor.
   4. Scan warranties and bonds and assemble complete warranty and bond submittal package into a single indexed electronic PDF file with links enabling navigation to each item. Provide table of contents at beginning of document.

D. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.
   1. Use cleaning products that meet Green Seal GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.1 FINAL CLEANING

A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Construction Waste Disposal: Comply with waste disposal requirements in Division 01 Section 01 50 00 "Temporary Facilities and Controls."

END OF SECTION 01 77 00

SECTION 01 77 13 - PROJECT CLOSE OUT – COMMISSIONING

PART 1 – GENERAL

1.1 PREREQUISITES TO FUNCTIONAL COMPLETION:

A. All TAB work and commissioning must be complete prior to Functional Completion, unless approved in writing by the Owner's Project Manager. Exceptions to this are the planned control system training performed after occupancy and any required seasonal or approved deferred testing. This includes for all systems, but is not limited to:

1. Completed and signed start-up and pre-functional checklist documentation
2. Requested trend log data
3. Submission of final approved TAB report
4. Completion of all functional testing
5. Required training of Owner personnel completed and approved
6. Submission of the approved O&M manuals
7. All identified deficiencies have been corrected or are approved by the Owner to be accepted from this milestone

B. The Owner's Project Manager will determine the date of Functional Completion after reviewing the Commissioning Agent's recommendation for Functional Completion.

END OF SECTION

SECTION 01 78 23 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals

B. Related Sections:
1. Division 01 Section 01 33 00 "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
2. Divisions 02 through 32 Sections for specific operation and maintenance manual requirements for the Work in those Sections.

1.3 DEFINITIONS

A. System: An organized collection of parts, equipment, or subsystems united by regular interaction.

B. Subsystem: A portion of a system with characteristics similar to a system.

1.4 CLOSEOUT SUBMITTALS

A. Manual Content: Operations and maintenance manual content is specified in individual specification sections to be reviewed at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.
1. Where applicable, clarify and update reviewed manual content to correspond to modifications and field conditions.

B. Format: Submit operations and maintenance manuals in the following format:
1. PDF electronic file. Assemble each manual into a composite electronically-indexed file. Submit on digital media acceptable to Architect.

C. Initial Manual Submittal: Submit draft copy of each manual at least 30 days before commencing demonstration and training. Architect will comment on whether general scope and content of manual are acceptable.

D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Architect will return copy with comments.
1. Correct or modify each manual to comply with Architect's comments. Submit copies of each corrected manual within 15 days of receipt of Architect's comments and prior to commencing demonstration and training.
2. Provide 3 copies to Owner.

PART 2 - PRODUCTS

2.1 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY

A. Organization: Include a section in the directory for each of the following:
   1. List of documents.
   2. List of systems.
   3. List of equipment.
   4. Table of contents.

B. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.

C. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.

D. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

2.2 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

A. Organization: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:
   1. Title page.
   2. Table of contents.
   3. Manual contents.

B. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.
   1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

C. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

D. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.
   1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.

PART 3 - EXECUTION

3.1 MANUAL PREPARATION

A. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

B. Operation and Maintenance Manuals: Assemble a complete set of operation and maintenance data indicating operation and maintenance of each system, subsystem, and piece of equipment not part of a system.
   1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
   2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

C. Manufacturers' Data: Where manuals contain manufacturers' standard printed data, include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.
   1. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

D. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.
   1. Do not use original project record documents as part of operation and maintenance manuals.
   2. Comply with requirements of newly prepared record Drawings in Division 01 Section 01 78 39 "Project Record Documents."

E. Comply with Division 01 Section "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

END OF SECTION

SECTION 01 78 24 – COMMISSIONING OPERATIONS AND MAINTENANCE DATA

PART 1 – GENERAL

1.1 DESCRIPTION:

A. The commissioning process requires detailed O&M documentation. Division 1 is alerted to the O&M documentation requirements identified in this section, in Section 01 91 13 Commissioning Requirements and other referenced sections.

B. The commissioning agent's contribution to the O&M manuals is found in Section 01 91 13.

C. The GC shall compile O&M manuals for every piece of equipment and building operating or electrical system with the following format.

1. Format: 8 ½" x 11" loose leaf binders. Each binder shall be clearly labeled on the spine. Use as many as required. Do not overload binders. There shall be dividers with permanently marked tabs of card stock separating each section and sub section. Tab labels shall not be handwritten.

2. There shall be a title page and table of contents in the front of each binder for each binder's contents. In each binder, there shall be a main tab for each specification section. Behind the section number tab there shall be the equipment ID tag sub-tab for each piece of major equipment (or group, if small or numerous). These sub-tabs shall be similar to the specification number tabs but of a different color. Behind each equipment name tab shall be the following sections, in the given order, divided by a double weight colored sheet labeled with the title of the section.

a. Contractor. The first page behind the equipment tab shall contain the name, address and telephone number of the manufacturer and installing contractor and the 24-hour number for emergency service for all equipment in this section, identified by equipment.

b. Submittal and Product Data. This section shall include all approved submittal data, cut sheets and appropriate shop drawings. If a submittal was not required for approval, descriptive product data shall be included.

c. Operation and Maintenance Instructions. These shall be the written manufacturer's data with the model and features of this installation clearly marked and edited to omit reference to products or data not applicable to this installation. This section shall include data on the following:

1. Installation, startup and break-in instructions

2. All starting, normal shutdown, emergency shutdown, manual operation, seasonal changeover and normal operating procedures and data, including any special limitations.

3. O&M and installation instructions that were shipped with the unit.

4. Preventative maintenance and service procedures and schedules.

5. Troubleshooting procedures.

6. A parts list, edited to omit reference to items which do not apply to this installation.

7. A list of any special tools required to service or maintain the equipment.

8. Performance data, ratings and curves.

9. Warranty, which clearly lists conditions to be maintained to keep warranty in effect and conditions that would affect the validity of the warranty.

10. Any service contracts issued.

d. Supplemental Data. Prepare written text and/or special drawings to provide necessary information, where manufacturer's standard printed data is not available and information is necessary for a proper understanding and operation and maintenance of equipment or systems, or where it is necessary to provide additional information to supplement data included in the manual or project documents.

e. Control Drawings. Include the control drawings for the piece of equipment and its components, including the sequence of operation. This section will be provided by the controls contractor. The drawings will be repeated in the control contractor's O&M submittals.

f. Specifications. This section is comprised of the component or system specification section copied and inserted complete with all addenda.

g. System Description. This section shall include the individual equipment portion of the overall system Design Documentation Narrative, if available. It will contain simplified professionally drawn single line system diagrams on 8 ½ x 11 or 11 x 17 sheets if the system's control drawing is not adequate.

h. Preventive Maintenance Instructions. This section shall include condensed typewritten excerpts from the manufacturer's written instructions for weekly, monthly, quarterly, annual, etc. maintenance. This summary shall be prepared by the HVAC mechanical contractor with help from the equipment supplier. It shall be prepared for all items listed under condensed operating instructions (below), plus package, window or through the wall AC units and electric unitary heating equipment.

3. Controls and Test and Balance (TAB) O&M Manuals. The controls contractor and TAB contractor have special O&M manual preparation requirements in Section 23 09 00 and 23 05 94 that shall be merged with those of this section.

4. Architect and Design Engineers' Contributions. The architect and design engineers have special contributions to the O&M manuals as described in Section 01 91 13.

5. Commissioning Record and Testing Data. There will be a separate manual dedicated to documenting the commissioning process which will include all certifications and testing data and some repeating of O&M data. Description of this manual is found in Section 01 91 13 and shall be prepared by the commissioning agent.

END OF SECTION

SECTION 01 78 39 - PROJECT RECORD DOCUMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for project record documents, including the following:
   1. Record Drawings.
   2. Record Specifications.
   3. Miscellaneous record submittals.

B. Related Sections:
   1. Division 01 Section 01 77 00 "Closeout Procedures" for general closeout procedures.
   2. Division 01 Section 01 78 23 "Operation and Maintenance Data" for operation and maintenance manual requirements.
   3. Divisions 03 through 32 Sections for specific requirements for project record documents of the Work in those Sections.

1.3 CLOSEOUT SUBMITTALS

A. Record Drawings: Comply with the following:
   1. Submit copies of record Drawings for Architect's use as follows:
      a. Submit two paper copies and one set of PDF electronic files of marked-up record prints, Provide each Drawing, whether or not changes and additional information were recorded

B. Record Specifications: Submit two paper copies and one annotated PDF electronic files of Project's Specifications, including addenda and contract modifications.

C. Miscellaneous Record Submittals: Refer to other Specification Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Submit two paper copies and annotated PDF electronic files and directories of each submittal.

PART 2 - PRODUCTS

2.1 RECORD DRAWINGS

A. Record Prints: For Architect's use in preparing final record documents, maintain one set of marked up paper copies of the Contract Drawings and Shop Drawings

1. Preparation: Mark record prints to show the actual installation where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.
2. Content: Types of items requiring marking include, but are not limited to, the following:

    a. Dimensional changes to Drawings.
    b. Revisions to details shown on Drawings.
    c. Depths of foundations below first floor.
    d. Locations and depths of underground utilities.
    e. Revisions to routing of piping and conduits.
    f. Revisions to electrical circuitry.
    g. Actual equipment locations.
    h. Duct size and routing.
    i. Locations of concealed internal utilities.
    j. Changes made by Change Order or Change Directive.
    k. Changes made following Architect's written orders.
    l. Details not on the original Contract Drawings.
    m. Field records for variable and concealed conditions.
    n. Record information on the Work that is shown only schematically.
3. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

B. Newly Prepared Record Drawings: Prepare new Drawings instead of preparing record Drawings where Architect determines that neither the original Contract Drawings nor Shop Drawings are suitable to show actual installation.
1. New Drawings may be required when a Change Order is issued as a result of accepting an alternate, substitution, or other modification.
2. Consult Architect for proper scale and scope of detailing and notations required to record the actual physical installation and its relation to other construction. Integrate newly prepared record Drawings into record Drawing sets; comply with procedures for formatting, organizing, copying, binding, and submitting.

C. Format: Identify and date each record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.
1. Record Prints: Organize record prints and newly prepared record Drawings into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.

2.2 RECORD SPECIFICATIONS

A. Preparation: Mark Specifications to indicate the actual product installation where installation varies from that indicated in Specifications, addenda, and contract modifications.
1. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.
2. Mark copy with the proprietary name and model number of products, materials, and equipment furnished, including substitutions and product options selected.
3. Record the name of manufacturer, supplier, Installer, and other information necessary to provide a record of selections made.
4. For each principal product, indicate whether record Product Data has been submitted in operation and maintenance manuals instead of submitted as record Product Data.
5. Note related Change Orders**,** record Product Data, and record Drawings where applicable.

B. Format: Submit record Specifications as annotated PDF electronic file, paper copy, and/or scanned PDF electronic file(s) of marked up paper copy of Specifications per documents, and as required by Architect and Owner.

2.3 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

B. Format: Submit miscellaneous record submittals as PDF electronic file, paper copy, and/or scanned PDF electronic file(s) of marked up miscellaneous record submittals as prescribed by the Owner.
   1. Include miscellaneous record submittals directory organized by specification section number and title, electronically linked to each item of miscellaneous record submittals.

PART 3 - EXECUTION

3.1 RECORDING AND MAINTENANCE

A. Recording: Maintain one copy of each submittal during the construction period for project record document purposes. Post changes and modifications to project record documents as they occur; do not wait until the end of Project.

B. Maintenance of Record Documents and Samples: Store record documents and Samples in the field office apart from the Contract Documents used for construction. Do not use project record documents for construction purposes. Maintain record documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to project record documents for Architect's reference during normal working hours.

END OF SECTION

SECTION 01 79 00 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:

1. Demonstration of operation of systems, subsystems, and equipment.
2. Training in operation and maintenance of systems, subsystems, and equipment.
3. Demonstration and training video recordings.

B. Related Sections:

1. Divisions 02 through 32 Sections for specific requirements for demonstration and training for products in those Sections.

1.3 INFORMATIONAL SUBMITTALS

A. Attendance Record: For each training module, submit list of participants and length of instruction time.

1.4 CLOSEOUT SUBMITTALS

A. Demonstration and Training Video Recordings: Submit two copies within seven days of end of each training module.

1. Identification: On each copy, provide an applied label with the following information:

a. Name of Project.
b. Name and address of videographer.
c. Name of Architect.
d. Name of Construction Manager.
e. Name of Contractor.
f. Date of video recording.

2. At completion of training, submit complete training manual(s) for Owner's use.

1.5 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.

B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Division 01 Section "Quality Requirements," experienced in operation and maintenance procedures and training.

C. Videographer Qualifications: A professional videographer who is experienced photographing demonstration and training events similar to those required.

1.6 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data has been reviewed and approved by Architect.

PART 2 - PRODUCTS

2.1 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.

1. Basis of System Design
2. Documentation
3. Emergencies:
4. Operations
5. Adjustments
6. Troubleshooting
7. Maintenance
8. Repairs

PART 3 - EXECUTION

3.1 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Division 01 Section "Operations and Maintenance Data."

B. Set up instructional equipment at instruction location.

3.2 INSTRUCTION

A. Facilitator: Engage a qualified facilitator to prepare instruction program and training modules, to coordinate instructors, and to coordinate between Contractor and Owner for number of participants, instruction times, and location.

B. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

1. Architect will furnish an instructor to describe basis of system design, operational requirements, criteria, and regulatory requirements.
2. Owner will furnish an instructor to describe Owner's operational philosophy.
3. Owner will furnish Contractor with names and positions of participants.

C. Scheduling: Provide instruction at mutually agreed on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with Owner with at least seven days' advance notice.

3.3 DEMONSTRATION AND TRAINING VIDEO RECORDINGS

A. General: Engage a qualified commercial videographer to record demonstration and training video recordings. Record each training module separately. Include classroom instructions and demonstrations, board diagrams, and other visual aids, but not student practice.

END OF SECTION 01 79 00

SECTION 01 90 00 – ENVELOPE TESTING AND MOCKUP

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general requirements for comprehensive exterior envelope testing scope and general quality requirements for quality control mock-up.

B. Related Sections:

1. Refer to Division 01 Section 01 40 00 'Quality Requirements' for testing requirements and other miscellaneous

1.3 ACTION SUBMITTALS

A. Testing Schedule: Within 30 days of NTP, Contractor will submit a preliminary testing schedule, coordinated with Division 01 Section 01 40 00 Quality Requirements and other Sections, alerting Owner and Testing Agency to required presence on site.

1.4 MOCKUP

A. Contractor will construct a full scale exterior mock-up to evaluate aesthetic choices, verify materials, verify installation of envelope materials, and establish a physical reference for quality control. Mock-up will be evaluated and tested successfully prior to construction of the exterior envelope.

B. Contractor shall construct a minimum of 200 sf of both façade materials and back-up envelope construction in full scale to directly mimic all major façade conditions on grade in a location as directed by the Architect. Refer to Drawings for an example of façade area indicated to be constructed. Mockup shall be roughly comparable in the number of details and types of material interactions indicated.

1.5 OWNER'S RESPONSIBILITIES

A. Owner will solicit, retain and pay an independent testing agency to perform tests explicitly required by this and other Sections. Test required by manufacturers are within the Contractor's scope.

1.6 CONTRACTOR'S RESPONSIBILITIES

A. Contractor shall notify Architect. Owner, and Construction Manager not less than 3 weeks of façade substrate enclosure, and shall notify stakeholders and Testing Agency not less than 4 weeks in advance of substrates and locations to be tested to satisfy the requirements of this Section.

B. Contractor shall be responsible for coordinating with testing agency on schedule and availability, prior to enclosure.

1.7 TESTING AGENCY RESPONSIBILITIES

A. Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect, Owner and construction Manager and, with copy to Contractor. Interpret tests and inspections and state in each report whether tested and inspected work complies with or deviates from the Contract Documents.

B. All testing reports are to be submitted no more than 1 week following completion of testing.

1.8 COORDINATION

A. Contractor shall notify Owner, Architect, CM and Testing Agency of all required pre-installation conferences, coordination meetings, installation start-ups, inspections, and testing related to all systems to be commissioned under this specification.

1. Notify Testing Agency of all meetings, conferences, tests, start-ups, and inspections as specified by A/E under all sections referenced in the summary section of this specification 2 weeks prior to scheduled date of event.

B. Contractor shall copy Testing Agency on all required inspections and testing reports related to all systems to be commissioned under this specification.

1. Provide reports from all tests as specified by A/E under all sections referenced in the summary section of this specification

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 FIELD QUALITY CONTROL

A. Testing of Mockup and Installed Work: Provide testing scopes below on installed work at intervals indicated, as well as at the mock-up. Successful testing of mock-up must proceed installation of exterior enclosure.

B. Division 04 Section ‘Unit Masonry’ exterior enclosure testing requirements, performed continuously alongside exterior masonry erection, performed by Masonry Contractor.

1. Contractor shall verify all water sis draining to the exterior through the weeps before continuing with exterior wythe before capping wall.

a. Do not precede more than 3 veneer courses above flashing without testing, A/E and CxP observation and digital documentation by contractor required.
b. Contractor shall hold water hose and with standard water pressure force water into the cavity at a cell vent so water can be observed coming out adjacent weeps for a period of at least 5 minutes. Contractor shall continue down the wall to the next cell vent where a weep did not indicate water wicking out and continue this process until the entire length of flashing is tested.

Testing Agency at the Mockup and in the progress of the Work at a minimum of three locations at 3 completion intervals (10%, 50%, 75%), prior to the installation of exterior finishes:

c. Where water is observed inside the building or outside the building away from the weeps, masonry units shall be removed and flashing re-inspected and repaired.
d. Water test shall be re-performed where flashing was repaired.
e. Provide a testing report outlining procedures, dates, and issues corrected with photographic evidence of the testing to the A/E and CxP for review

C. Division 07 Section 07 27 26 Fluid Applied Membrane Barriers exterior enclosure testing requirements performed at a minimum of 3 locations at 3 completion intervals (10%, 50%, 75%) by the Testing Agency:

1. Adhesion Testing; ASTM D4541.
2. Air leakage testing, via Bubble Gun; ASM E1186.
3. Water Penetrating Testing; ASTM E1105.

a. Test shall be performed without applied air pressure.
b. Test duration should last 2 hours, minimum per test.
c. Wherever evidence of air leakage has occurred as a result of the test the contractor shall make the sample airtight in a manner acceptable to the Owner/ Architect. Once measures have been put into place and the appropriate curing time has passed a second test of the sample shall be conducted in the same manner as the first. Should unacceptable leakage still be found, further remedial measures shall be implemented and testing shall be repeated until the sample has been deemed acceptable by the Owner/ Architect

D. Division 07 Section 07 42 64 Metal Composite Material Wall Panels exterior enclosure testing requirements to be performed by the Testing Agency at the Mockup and in theprogress of the Work at a minimum of three locations at 3 completion interval (10%, 50%, 75%), prior to the installation of exterior of exterior finishes:

1. Penetration Testing: AAMA 501.2. Insulated metal wall panels including unique edge and transitions conditions for moisture penetration following procedures outlined in AAMA 501.2 and per testing criteria below

a. Testing shall occur after wall panels are weather tight but prior to installation of interior finishes allowing for adequate viewing of potential leakage from both the interior and exterior of the building.
b. Wherever water leakage has occurred as a result of the test the contractor shall make the sample watertight in a manner acceptable to the Owner/ Architect. Once measures have been put into place and the appropriate curing time has passed a second test of the sample shall be conducted in the same manner as the first. Should leakage still be found, further remedial measures shall be implemented and testing shall be repeated until the sample has been deemed acceptable by the Owner/ Architect.

E. Division 07 Section 07 52 16 'SBS Modified Bituminous Membrane Roofing' exterior enclosure testing requirements:

1. Electrical Field Vector Mapping (EFVM). At field of roof for leak detection on waterproofing membrane for testing of capillary defects and/or breaches in the membrane. Testing is to be administered by the Testing Agency.

a. Contractor to submit wiring diagrams prior to scheduling test.
b. Low-Voltage Electric Field Vector Mapping

1) Entire roof to be tested on an area-by-area basis.
2) Entire membrane test area to be wetted with water prior to the start of each test and maintained as wet for the duration of testing. Integrity of the membrane at drains and penetrations to be verified by localized testing.

c. High-Voltage Leak Detection Testing

1) Perimeter of entire roof and any other areas not able to be tested using low-voltage method are to be tested.

2) Waterproofing membrane to be dry prior to and during high voltage testing
3) Entire roof surface to be swept by overlapping individual swept areas by a minimum of 3”

d. If a breach is detected, the testing technician shall report to the roofing contractor immediately.
e. Defects found shall be immediately repaired by roofing contractor and retested by technician using high-voltage method
f. All costs associated with the re-work shall be borne by the contractor responsible for the initial construction.
g. Test shall occur prior to issuance of notice of substantial completion.

2. Flood Testing of Roof Drains to be performed by the Contractor with Architect, Owner and Construction Manager observation.

3. The Owner reserves the right to request the Testing Agency to perform a thermographic scan of the roof per ASTM C1153 to determine if any damp or wet materials have been installed

F. Division 07 Section ‘Joint Sealants’ exterior enclosure testing requirements, performed on a minimum of 2% of total length of sealant joints at 3 completion intervals (10%, 50%, 75%):

1. Adhesion Pull Test; ASTM C 1521. Wherever sealant failure has occurred as a result of the test the contractor shall make review and revise the installation of the sample in a manner acceptable to the Owner/ Architect. Once measures have been put into place and the appropriate curing time has passed a second test of the sample shall be conducted in the same manner as the first. Should failure still occur, further remedial measures shall be implemented and testing shall be repeated until the sample has been deemed acceptable by the Owner/ Architect.

G. Division 08 Section ‘Glazed Aluminum Curtain Walls’ exterior enclosure testing requirements, performed at a minimum of 3 locations at 3 completion intervals (10%, 50%, 75%). At Mockup and 10% test, each unique installation condition shall be tested.

1. Air Infiltration Testing; ASTM E783.
2. Water Penetration Testing; ASTM E1105
3. Water Penetration Testing, without Applied Pressure; ASTM 1105. Test duration should last 2 hours, minimum per test.
   a. Wherever water leakage has occurred as a result of the test the contractor shall make the sample watertight in a manner acceptable to the Owner/Architect. Once measures have been put into place and the appropriate curing time has passed a second test of the sample shall be conducted in the same manner as the first. Should leakage still be found, further remedial measures shall be implemented and testing shall be repeated until the sample has been deemed acceptable by the Owner/Architect.

3.2 FUNCTIONAL PERFORMANCE TESTING

A. Contractor shall be responsible for participation in all Functional Performance Testing

B. Any additional testing required because of failure of the tested sample to meet specifications shall be paid for by the Contractor including time and materials rates for Owner, A/E, and Testing Agency to witness test results

C. Thermal Imaging Functional Performance Test

1. Testing Agency will develop and conduct a Thermal Imaging Functional Performance Test of the entire building envelope system in accordance with ASTM C 1060, ASTM E 1186, and ISO 6781.
2. Test will require access to project site during off hours and manipulation of building controls to maintain prescribed ambient temperature differences.

END OF SECTION 01 90 00

SECTION 01 91 13 - COMMISSIONING REQUIREMENTS

PART 1 – GENERAL

1.1 DESCRIPTION:

A. Commissioning – Commissioning is a systematic process of ensuring that all building systems perform interactively according to the design intent and the owner's operational needs. This is achieved by beginning in the design phase and documenting design intent and continuing through construction, acceptance and the warranty period with actual verification of performance. The commissioning process shall encompass and coordinate the traditionally separate functions of system documentation, equipment startup, control system calibration, testing and balancing, performance testing and training. Commissioning during the construction phase is intended to achieve the following specific objectives according to the Contract Documents:

1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that O&M documentation left on site is complete.
4. Verify that the Owner's operating personnel are adequately trained.

B. The commissioning process does not take away from or reduce the responsibility of the system designers or installing contractors to provide a finished and fully functioning product.

C. Abbreviations. The following are common abbreviations used in the *Specifications* and in the *Commissioning Plan.* Definitions are found in Section #.#.

A/E-	Architect and design engineers	FT-	Functional performance test
CxA-	Commissioning authority	GC-	General contractor (prime)
CC	Controls contractor	MC-	Mechanical contractor
TAB-	Test and balance contractor	PC-	Pre-functional checklist
Cx-	Commissioning	PM-	Project manager (of the Owner)
Cx Plan-	Commissioning Plan document	Subs-	Subcontractors to General
EC-	Electrical contractor		

1.2 COORDINATION:

A. Commissioning Team. The members of the commissioning team consist of the Commissioning authority (CxA), the Project Manager (PM), the General Contractor (GC or Contractor), the architect and design engineers (particularly the mechanical engineer), the Mechanical Contractor (MC), the Electrical Contractor (EC), the TAB representative, the Controls Contractor (CC), any other installing subcontractors or suppliers of equipment. If known, the Owner's building or plant operator/engineer is also a member of the commissioning team.

B. Management. The CxA is hired by the Owner. The CxA directs and coordinates the commissioning activities. All members work together to fulfill their contracted responsibilities and meet the objectives of the Contract Documents. The CxA's responsibilities are the same regardless of who hired the CxA. Refer to Section 01 91 13 Part 1.6 for additional management details.

C. Scheduling. The CxA will work with the PM and GC according to established protocols to schedule the commissioning activities. The CxA will provide sufficient notice to the PM and GC for scheduling commissioning activities. The GC will integrate all commissioning activities into the master schedule. All parties will address scheduling problems and make necessary notifications in a timely manner in order to expedite the commissioning process.

1. The CxA will provide the initial schedule of primary commissioning events at the commissioning scoping meeting. The *Commissioning Plan* provides a format for this schedule. As construction progresses more detailed schedules are developed by the CxA. The Commissioning Plan also provides a format for detailed schedules.

1.3 COMMISSIONING PROCESS:

A. Commissioning Plan. The *Commissioning Plan*, provided as part of the bid documents, is binding on the Contractor. The commissioning plan provides guidance in the execution of the commissioning process. Just after the initial commissioning scoping meeting the CxA will update the plan which is then considered the "final" plan, though it will continue to evolve and expand as the project progresses. The *Specifications* will take precedence over the *Commissioning Plan*.

B. Commissioning Process. The following narrative provides a brief overview of the typical commissioning tasks during construction and the general order in which they occur.

1. Commissioning during construction begins with a scoping meeting conducted by the CxA where the commissioning process is reviewed with the commissioning team members.

2. Additional meetings will be required throughout construction, scheduled by the CxA with necessary parties attending, to plan, scope, coordinate, schedule future activities and resolve problems.

3. Equipment documentation is submitted to the CxA during normal submittals, including detailed start-up procedures.

4. The CxA works with the Subs in developing startup plans and startup documentation formats, including providing the Subs with pre-functional checklists to be completed, during the startup process.

5. In general, the checkout and performance verification proceeds from simple to complex; from component level to equipment to systems and intersystem levels with pre-functional checklists being completed before functional testing.

6. The Subs, under their own direction, execute and document the pre-functional checklists and perform startup and initial checkout. The CxA documents that the checklists and startup were completed according to the approved plans. This may include the CxA witnessing start-up of selected equipment.

7. The CxA develops specific equipment and system functional performance test procedures. The Subs review the procedures.

8. The procedures are executed by the Subs, under the direction of, and documented by the CxA.

9. Items of non-compliance in material, installation or setup are corrected at the Sub's expense and the system retested.

10. The CxA reviews the O&M documentation for completeness.

11. Commissioning not necessarily completed before Substantial Completion.

12. The CxA reviews, pre-approves, coordinates and verifies that the training was provided by the Subs.

13. Deferred testing is conducted, as specified or required.

1.4 RELATED WORK:

A. Specific commissioning requirements are given in other sections of these specifications. The contractor shall check all specification sections specifically sections 013114, 013301, 017713, 017824, 230001, 230810, 230811, 230812, 230813, 230905, 260000, 260810, 260811, 260812, 260813 for information related to commissioning.

1.5 RESPONSIBILITIES:

A. The responsibilities of various parties in the commissioning process are provided in this section. The responsibilities of the mechanical contractor, TAB and controls contractor are in Division 23 and those of the electrical contractor in Division 26. It is noted that the services for the Project Manager, Architect, HVAC mechanical and electrical designers/engineers, and Commissioning authority are not provided for in this contract. That is, the Contractor is not responsible for providing their services. Their responsibilities are listed here to clarify the commissioning process.

B. All Parties

1. Follow the Commissioning Plan.

2. Attend commissioning scoping meeting and additional meetings, as necessary.

C. Architect (of A/E)

Construction and Acceptance Phase

1. Attend the commissioning scoping meeting and selected commissioning team meetings.

2. Perform normal submittal review, construction observation, as-built drawing preparation, O&M manual preparation, etc., as contracted.

3. Provide any design narrative documentation requested by the CxA.

4. Coordinate resolution of system deficiencies identified during commissioning, according to the contract documents.

5. Prepare and submit final as-built design intent documentation for inclusion in the O&M manuals. Review and approve the O&M manuals.

Warranty Period

1. Coordinate resolution of design non-conformance and design deficiencies identified during warranty-period commissioning.

D. Mechanical and Electrical Designers/Engineers (of the A/E)

Construction and Acceptance Phase

1. Perform normal submittal review, construction observation, as-built drawing preparation, etc., as contracted. One site observation should be completed just prior to system startup.

2. Designers shall assist (along with the contractors) in clarifying the operation and control of commissioned equipment in areas where the specifications, control drawings or equipment documentation is not sufficient for writing detailed testing procedures.

3. Attend commissioning scoping meetings and other selected commissioning team meetings.

4. Participate in the resolution of system deficiencies identified during commissioning, according to the contract documents.

5. Prepare and submit the final as-built design intent and operating parameters documentation for inclusion in the O&M manuals. Review and approve the O&M manuals.

6. From the Contractor's red-line drawings, edit and update one-line diagrams developed as part of the design narrative documentation and those provided by the vendor as shop drawings for for what?

7. Provide any design narrative and sequences documentation requested by the CxA. The chilled and hot water, domestic water, steam and condensate systems; supply, return and exhaust air systems.

Warranty Period

1. Participate in the resolution of non-compliance, non-conformance and design deficiencies identified during commissioning during warranty-period commissioning.

E. Commissioning Authority (CxA)

1. The CxA is not responsible for design concept, design criteria, compliance with codes, design or general construction scheduling, cost estimating, or construction management. The CxA may assist with problem-solving non-conformance or deficiencies, but ultimately that responsibility resides with the general contractor and the A/E. The primary role of the CxA is to develop and coordinate the execution of a testing plan, observe and document performance—that systems are functioning in accordance with the documented design intent and in accordance with the Contract Documents. The Contractors will provide all tools or the use of tools to start, check-out and functionally test equipment and systems, except for specified testing with portable data-loggers, which shall be supplied and installed by the CxA.

Construction and Acceptance Phase

1. Coordinates and directs the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties, frequently updated timelines and schedules and technical expertise.

2. Coordinate the commissioning work and, with the GC and PM, ensure that commissioning activities are being scheduled into the master schedule.

3. Revise, as necessary *Commissioning Plan.*

4. Plan and conduct a commissioning scoping meeting and other commissioning meetings.

5. Request and review additional information required to perform commissioning tasks, including O&M materials, contractor start-up and checkout procedures.

6. Before startup, gather and review the current control sequences and interlocks and work with contractors and design engineers until sufficient clarity has been obtained, in writing, to be able to write detailed testing procedures.

7. Review and approve normal Contractor submittals applicable to systems being commissioned for compliance with commissioning needs, concurrent with the A/E reviews.

8. Write and distribute pre-functional tests and checklists.

9. Perform site visits, as necessary, to observe component and system installations. Attends selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to the commissioning process. Assist in resolving any discrepancies.

10. Witness all or part of the HVAC piping test and flushing procedure, sufficient to be confident that proper procedures were followed. Document this testing and include the documentation in O&M manuals. Notify owners' project manager of any deficiencies in results or procedures.

11. Witness all or part of any ductwork testing and cleaning procedures, sufficient to be confident that proper procedures were followed. Document this testing and include the documentation in O&M manuals. Notify owner's project manager of any deficiencies in results or procedures.
12. Approve pre-functional tests and checklist completion by reviewing pre-functional checklist reports and by selected site observation and spot checking.

13. Approve systems startup by reviewing start-up reports and by selected site observation.

14. Review TAB execution plan.

15. Oversee sufficient functional testing of the control system.

16. Approve air and water systems balancing by spot testing, by reviewing completed reports and by selected site observation.

17. With necessary assistance and review from installing contractors, write the functional performance test procedures for equipment and systems. This may include energy management control system trending, stand-alone datalogger monitoring or manual functional testing. Submit to PM for review, and for approval if required.

18. Analyze any functional performance trend logs and monitoring data to verify performance.

19. Coordinate, witness and approve manual functional performance tests performed by installing contractors. Coordinate retesting as necessary until satisfactory performance is achieved.

20. Maintain a master deficiency and resolution log and a separate testing record. Provide the PM with written progress reports and test results with recommended actions.

21. Witness performance testing and all other owner contracted tests or tests by manufacturer's personnel over which the CxA may not have direct control. Document these tests and include this documentation in Commissioning Record in O&M manuals.

22. Review equipment warranties to ensure that the Owner's responsibilities are clearly defined.

23. Oversee and approve the training of the Owner's operating personnel.

24. Compile and maintain a commissioning record.

25. Review and approve the preparation of the O&M manuals.

26. Provide a final commissioning report (as described in this section).

Warranty Period

1. Coordinate and supervise required seasonal or deferred testing and deficiency corrections.

2. Return to the site at 10 months into the 12 month warranty period and review with facility staff the current building operation and the condition of outstanding issues related to the original and seasonal commissioning. Also interview facility staff and identify problems or concerns they have operating the building as originally intended. Make suggestions for improvements and for recording these changes in the O&M manuals. Identify areas that may come under warranty or under the original construction contract. Assist facility staff in developing reports, documents and requests for services to remedy outstanding problems.

F. Owner's Project Manager (PM)

Construction and Acceptance Phase

1. Facilitate the coordination of the commissioning work by the CxA, and, with the GC and CxA, ensure that commissioning activities are being scheduled into the master schedule.

2. Review and approve the final *Commissioning Plan.*

3. Attend a commissioning scoping meeting and other commissioning team meetings.

4. Perform the normal review of Contractor submittals.

5. Review and approve the functional performance test procedures submitted by the CxA, prior to testing.

6. When necessary, observe and witness pre-functional checklists, startup and functional testing of selected equipment.

7. Review commissioning progress and deficiency reports.

8. Coordinate the resolution of non-compliance and design deficiencies identified in all phases of commissioning.

9. Sign-off (final approval) on individual commissioning tests as completed and passing. Recommend completion of the commissioning process to the Project Manager.

10. Assist the GC in coordinating the training of owner personnel.

11. Manage the contract of the A/E and of the GC.

12. Arrange for facility operating and maintenance personnel to attend various field commissioning activities and field training sessions according to the *Commissioning Plan.*

13. Provide final approval for the completion of the commissioning work.

Warranty Period

1. Ensure that any seasonal or deferred testing and any deficiency issues are addressed.

G. General Contractor (GC)

Construction and Acceptance Phase

1. Facilitate the coordination of the commissioning work by the CxA, and with the GC and CxA ensure that commissioning activities are being scheduled into the master schedule.

2. Furnish a copy of all construction documents, addenda, change orders and approved submittals and shop drawings related to commissioned equipment to the CxA.

3. In each purchase order or subcontract written, include requirements for submittal data, O&M data, commissioning tasks and training.

4. Ensure that all Subs execute their commissioning responsibilities according to the Contract Documents and schedule.

5. A representative shall attend a commissioning scoping meeting and other necessary meetings scheduled by the CxA to facilitate the Cx process.

6. Coordinate the training of owner personnel.

7. Prepare O&M manuals, according to the Contract Documents, including clarifying and updating the original sequences of operation to as-built conditions.

8. Responsibilities for submission for systems manual information.

9. Provide all lifts and utilities to facilitate envelope testing.

10. Provide time before and pre-conditioning to facilitate IAQ testing.

Warranty Period

1. Ensure that Subs execute seasonal or deferred functional performance testing, witnessed by the CxA, according to the specifications.

2. Ensure that Subs correct deficiencies and make necessary adjustments to O&M manuals and as-built drawings for applicable issues identified in any seasonal testing.

H. Equipment Suppliers

1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the Owner to keep warranties in force.

2. Assist in equipment testing per agreements with Subs.

3. Include all special tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment according to these Contract Documents in the base bid price to the Contractor, except for stand-alone datalogging equipment that may be used by the CxA.

4. Through the contractors they supply products to, analyze specified products and verify that the designer has specified the newest most updated equipment reasonable for this project's scope and budget.

5. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

6. Review test procedures for equipment installed by factory representatives.

1.6 DEFINITIONS

A. Acceptance Phase - phase of construction after startup and initial checkout when functional performance tests, O&M documentation review and training occurs.

B. Approval - acceptance that a piece of equipment or system has been properly installed and is functioning in the tested modes according to the Contract Documents.

C. Architect / Engineer (A/E) - the prime consultant (architect) and sub-consultants who comprise the design team, generally the HVAC mechanical designer/engineer and the electrical designer/engineer.

D. Basis of Design - The basis of design is the documentation of the primary thought processes and assumptions behind design decisions that were made to meet the design intent. The basis of design describes the systems, components, conditions and methods chosen to meet the intent. Some reiterating of the design intent may be included.

E. Commissioning authority (CxA) - an independent agent, not otherwise associated with the A/E team members or the Contractor, though he/she may be hired as a subcontractor to them. The CxA directs and coordinates the day-to-day commissioning activities. The CxA does not take an oversight role like the PM. The CxA shall report directly to the PM.

F. Commissioning Plan - an overall plan, developed before or after bidding, that provides the structure, schedule and coordination planning for the commissioning process.

G. Contract Documents - the documents binding on parties involved in the construction of this project (drawings, specifications, change orders, amendments, contracts, *Cx Plan*, etc.).

H. Contractor - the general contractor or authorized representative.

I. Control system - the central building energy management control system.

J. Datalogging - monitoring flows, currents, status, pressures, etc. of equipment using stand-alone dataloggers separate from the control system.

K. Deferred Functional Tests - FTs that are performed later, after substantial completion, due to partial occupancy, equipment, seasonal requirements, design or other site conditions that disallow the test from being performed.

L. Deficiency - a condition in the installation or function of a component, piece of equipment or system that is not in compliance with the Contract Documents (that is, does not perform properly or is not complying with the design intent).

M. Design Intent - a dynamic document that provides the explanation of the ideas, concepts and criteria that are considered to be very important to the owner. It is initially the outcome of the programming and conceptual design phases.

N. Design Narrative or Design Documentation - sections of either the Design Intent or Basis of Design.

O. Factory Testing - testing of equipment on-site or at the factory by factory personnel with an Owner's representative present.

P. Functional Performance Test (FT) - test of the dynamic function and operation of equipment and systems using manual (direct observation) or monitoring methods. Functional testing is the dynamic testing of systems (rather than just components) under full operation (e.g., the chiller pump is tested interactively with the chiller functions to see if the pump ramps up and down to maintain the differential pressure setpoint). Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc. The systems are run through all the control system's sequences of operation and components are verified to be responding as the sequences state. Traditional air or water test and balancing (TAB) is not functional testing, in the commissioning sense of the word. TAB's primary work is setting up the system flows and pressures as specified, while functional testing is verifying that which has already been set up. The commissioning authority develops the functional test procedures in a sequential written form, coordinates, oversees and documents the actual testing, which is usually performed by the installing contractor or vendor. FTs are performed after pre-functional checklists and startup are complete.

Q. General Contractor (GC) - the prime contractor for this project. Generally refers to all the GC's subcontractors as well. Also referred to as the Contractor, in some contexts.

R. Indirect Indicators - indicators of a response or condition, such as a reading from a control system screen reporting a damper to be 100% closed.

S. Manual Test - using hand-held instruments, immediate control system readouts or direct observation to verify performance (contrasted to analyzing monitored data taken over time to make the "observation").

T. Monitoring - the recording of parameters (flow, current, status, pressure, etc.) of equipment operation using dataloggers or the trending capabilities of control systems.

U. Non-Compliance - see Deficiency.

V. Non-Conformance - see Deficiency.

W. Over-written Value - writing over a sensor value in the control system to see the response of a system (e.g., changing the outside air temperature value from 50F to 75F to verify economizer operation). See also "Simulated Signal."

X. Owner-Contracted Tests - tests paid for by the Owner outside the GC's contract and for which the CxA does not oversee. These tests will not be repeated during functional tests if properly documented.

Y. Phased Commissioning - commissioning that is completed in phases (by floors, for example) due to the size of the structure or other scheduling issues, in order minimize the total construction time.

Z. Pre-functional Checklist (PC) - a list of items to inspect and elementary component tests to conduct to verify proper installation of equipment, provided by the CxA to the Sub. Pre-functional checklists are primarily static inspections and procedures to prepare the equipment or system for initial operation (e.g., belt tension, oil levels OK, labels affixed, gages in place, sensors calibrated, etc.). However, some pre-functional checklist items entail simple testing of the function of a component, a piece of equipment or system (such as measuring the voltage imbalance on a three phase pump motor of a chiller system). The word pre-functional refers to before functional testing. Pre-functional checklists augment and are combined with the manufacturer's start-up checklist. Even without a commissioning process, contractors typically perform some, if not many, of the pre-functional checklist items a commissioning authority will recommend. However, few contractors document in writing the execution of these checklist items. Therefore, for most equipment, the contractors execute the checklists on their own. The commissioning authority only requires that the procedures be documented in writing, and does not witness much of the pre-functional checklisting, except for larger or more critical pieces of equipment.

AA. Project Manager (PM) - the contracting and managing authority for the owner over the design and/or construction of the project, a staff position.

BB. Sampling. - functionally testing only a fraction of the total number of identical or near identical pieces of equipment. Refer to Section 01 91 13, Part 3.6, J for details.

CC. Seasonal Performance Tests - FT that are deferred until the system(s) will experience conditions closer to their design conditions.

DD. Simulated Condition - condition that is created for the purpose of testing the response of a system (e.g., applying a hair blower to a space sensor to see the response in a VAV box).

EE. Simulated Signal - disconnecting a sensor and using a signal generator to send an amperage, resistance or pressure to the transducer and DDC system to simulate a sensor value.

FF. Specifications - the construction specifications of the Contract Documents.

GG. Startup - the initial starting or activating of dynamic equipment, including executing pre-functional checklists.

HH. Subs - the subcontractors to the GC who provide and install building components and systems.

II. Test Procedures - the step-by-step process which must be executed to fulfill the test requirements. The test procedures are developed by the CxA.

JJ. Test Requirements - requirements specifying what modes and functions, etc. shall be tested. The test requirements are not the detailed test procedures. The test requirements are specified in the Contract Documents (Sections 23 08 11; 26 08 11, etc.).

KK. Trending - monitoring using the building control system.

LL. Vendor - supplier of equipment.

MM. Warranty Period - warranty period for entire project, including equipment components. Warranty begins at Substantial Completion and extends for at least one year, unless specifically noted otherwise in the Contract Documents and accepted submittals.

1.7 SYSTEMS TO BE COMMISSIONED

A. The following checked systems will be commissioned in this project.

Equipment and System	Functional Test Requirements Specified In:	Equipment and System	Functional Test Requirements Specified In:
HVAC System		x Equipment vibration control	23 08 11
x Chillers	23 08 11	__ Egress pressurization	23 08 11
x Pumps	23 08 11	**Electrical System**	
x Cooling tower	23 08 11	x Sweep or scheduled lighting controls	26 08 11
x Heat Transfer Package	23 08 11	__ Daylight dimming controls	26 08 11
x Piping systems	23 08 11	x Lighting occupancy sensors	26 08 11
x Ductwork	23 08 11	x Power quality	26 08 11
__ Variable frequency drives	23 08 11	__ Security system	26 08 11
x Air handler units	23 08 11	x Emergency power system	26 08 11
__ VRF System	23 08 11	x UPS systems	26 08 11
x Pool Dehumidification Air Handling Units	23 08 11		
__ Fan coil units	23 08 11	x Fire and smoke alarm	26 08 11
__ Unit heaters	23 08 11	x Fire protection systems	26 08 11
__ Fan powered boxes	23 08 11	__ Communications system	26 08 11
__ VAV boxes	23 08 11	__ Public address/paging	26 08 11

x Indoor air quality[1]	23 08 11		
__ Condensate return unit	23 08 11		

[1] Indoor air quality (IAQ) commissioning does not ensure that indoor air quality will be adequate or without deficiency at building turnover or during occupancy, unless the owner has specifically specified that actual air quality testing is performed. Commissioning indoor air quality entails performing tasks that minimize the potential for IAQ problems, but it does not eliminate their possibility.

PART 2 – PRODUCTS

2.1 TEST EQUIPMENT

A. All standard testing equipment required to perform startup and initial checkout and required functional performance testing shall be provided by the Division contractor for the equipment being tested. For example, the mechanical contractor of Division # shall ultimately be responsible for all standard testing equipment for the HVAC system and controls system in Division #, except for equipment specific to and used by TAB in their commissioning responsibilities.

B. Special equipment, tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment, according to these Contract Documents shall be included in the base bid price to the Contractor and left on site, except for stand-alone datalogging equipment that may be used by the CxA.

C. Datalogging equipment and software required to test equipment will be provided by the CxA but shall not become the property of the Owner.

D. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the *Specifications.* If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to an accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year. All equipment shall be calibrated according to the manufacturer's recommended intervals and when dropped or damaged. Calibration tags shall be affixed or certificates readily available.

E. Refer to Section 01 91 13, Part 3.6 E for details regarding equipment that may be required to simulate required test conditions.

PART 3 – EXECUTION

3.1 MEETINGS

A. Scoping Meeting. Within 90 days of commencement of construction, the CxA will schedule, plan and conduct a commissioning scoping meeting with the entire commissioning team in attendance. Meeting minutes will be distributed to all parties by the CxA. Information gathered from this meeting will allow the CxA to revise the Draft *Commissioning Plan* to its "final" version, which will also be distributed to all parties.

B. Miscellaneous Meetings. Other meetings will be planned and conducted by the CxA as construction progresses. The CxA will plan these meetings and will minimize unnecessary time being spent by Subs. For large projects, these meetings may be held monthly.

3.2 REPORTING

A. The CxA will provide regular reports to the PM, depending on the management structure, with increasing frequency as construction and commissioning progresses. Standard forms are provided and referenced in the *Commissioning Plan.*

B. The CxA will regularly communicate with all members of the commissioning team, keeping them apprised of commissioning progress and scheduling changes through memos, progress reports, etc.

C. Testing or review approvals and non-conformance and deficiency reports are made regularly with the review and testing as described in later sections.

D. A final summary report (about four to eight pages, not including backup documentation) by the CxA will be provided to the PM, focusing on evaluating commissioning process issues and identifying areas where the process could be improved. All acquired documentation, logs, minutes, reports, deficiency lists, communications, findings, unresolved issues, etc., will be compiled in appendices and provided with the summary report. Pre-functional checklists, functional tests and monitoring reports will not be part of the final report but will be stored in the Commissioning Record in the O&M manuals.

3.3 SUBMITTALS

A. The CxA will provide appropriate contractors with a specific request for the type of submittal documentation the CxA requires to facilitate the commissioning work. These requests will be integrated into the normal submittal process and protocol of the construction team. At minimum, the request will include the manufacturer and model number, the manufacturer's printed installation and detailed start-up procedures, full sequences of operation, O&M data, performance data, any performance test procedures, control drawings and details of owner contracted tests. In addition, the installation and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the Commissioning authority. All documentation requested by the CxA will be included by the Subs in their O&M manual contributions.

B. The Commissioning authority will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment specifications. The Commissioning authority will notify the CM, PM or A/E as requested, of items missing or areas that are not in conformance with Contract Documents and which requires resubmission.

C. The CxA may request additional design narrative from the A/E and Controls Contractor, depending on the completeness of the design intent documentation and sequences provided with the Specifications.

D. These submittals to the CxA do not constitute compliance for O&M manual documentation. The O&M manuals are the responsibility of the Contractor, though the CxA will review and approve them.

3.4 START-UP, PRE-FUNCTIONAL CHECKLISTS AND INITIAL CHECKOUT

A. The following procedures apply to all equipment to be commissioned, according to Section 1.7, Systems to be commissioned. Some systems that are not comprised so much of actual dynamic machinery, e.g., electrical system power quality, may have very simplified PCs and startup.

B. General. Pre-functional checklists are important to ensure that the equipment and systems are hooked up and operational. It ensures that functional performance testing (in-depth system checkout) may proceed without unnecessary delays. Each piece of equipment receives full pre-functional checkout. No sampling strategies are used. The pre-functional testing for a given system must be successfully completed prior to formal functional performance testing of equipment or subsystems of the given system.

C. Start-up and Initial Checkout Plan. The CxA shall assist the commissioning team members responsible for startup of any equipment in developing detailed start-up plans for all equipment. The primary role of the CxA in this process is to ensure that there is written documentation that each of the manufacturer-recommended procedures have been completed. Parties responsible for pre-functional checklists and

startup are identified in the commissioning scoping meeting and in the checklist forms. Parties responsible for executing functional performance tests are identified in the testing requirements in Sections 23 08 11 and 26 08 11.

1. The CxA adapts, if necessary, the representative pre-functional checklists and procedures from Section 23 08 12 and 26 08 12. These checklists indicate required procedures to be executed as part of startup and initial checkout of the systems and the party responsible for their execution.

2. These checklists and tests are provided by the CxA to the Contractor. The Contractor determines which trade is responsible for executing and documenting each of the line item tasks and notes that trade on the form. Each form will have more than one trade responsible for its execution.

3. The subcontractor responsible for the purchase of the equipment develops the full start-up plan by combining (or adding to) the CxA's checklists with the manufacturer's detailed start-up and checkout procedures from the O&M manual and the normally used field checkout sheets. The plan will include checklists and procedures with specific boxes or lines for recording and documenting the checking and inspections of each procedure and a summary statement with a signature block at the end of the plan.

4. The full start-up plan could consist of something as simple as:

   a. The CxA's pre-functional checklists.

   b. The manufacturer's standard written start-up procedures copied from the installation manuals with check boxes by each procedure and a signature block added by hand at the end.

   c. The manufacturer's normally used field checkout sheets.

5. The subcontractor submits the full startup plan to the CxA for review and approval.

6. The CxA reviews and approves the procedures and the format for documenting them, noting any procedures that need to be added.

7. The full start-up procedures and the approval form may be provided to the CM for review and approval, depending on management protocol.

D. Sensor and Actuator Calibration.

1. All field-installed temperature, relative humidity, CO_2 and pressure sensors and gages, and all actuators (dampers and valves) on all equipment shall be calibrated using the methods described below. Alternate methods may be used, if approved by the Owner before-hand. All test instruments shall have had a certified calibration within the last 12 months. Sensors installed *in* the unit at the factory with calibration certification provided need not be field calibrated.

2. All procedures used shall be fully documented on the pre-functional checklists or other suitable forms, clearly referencing the procedures followed and written documentation of initial, intermediate and final results.

E. Sensor Calibration Methods

1. All Sensors. Verify that all sensor locations are appropriate and away from causes of erratic operation. Verify that sensors with shielded cable are grounded only at one end. For sensor pairs that are used to determine a temperature or pressure difference, make sure they are reading within 0.2°F of each other for temperature and within a tolerance equal to 2% of the reading, of each other, for pressure. Tolerances for critical applications may be tighter.

2. Sensors Without Transmitters--Standard Application. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gage or building automation system (BAS)) is within the tolerances in the table below of the instrument-measured value. If not, install offset in BAS, calibrate or replace sensor.

3. Sensors with Transmitters--Standard Application. Disconnect sensor. Connect a signal generator in place of sensor. Connect ammeter in series between transmitter and BAS control panel. Using manufacturer's resistance-temperature data, simulate minimum desired temperature. Adjust transmitter potentiometer zero until 4 mA is read by the ammeter. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the BAS. Record all values and recalibrate controller as necessary to conform with specified control ramps, reset schedules, proportional relationship, reset relationship and P/I reaction. Reconnect sensor. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gage or building automation system (BAS)) is within the tolerances in the table below of the instrument-measured value. If not, replace sensor and repeat. For pressure sensors, perform a similar process with a suitable signal generator.

4. Critical Applications. For critical applications (process, manufacturing, etc.) more rigorous calibration techniques may be required for selected sensors. Describe any such methods used on an attached sheet.

Tolerances, Standard Applications

Sensor	Required Tolerance (+/-)	Sensor	Required Tolerance (+/-)
Cooling coil, chilled and condenser water temps	0.4F	Flow rates, water	4% of design
		Relative humidity	4% of design
AHU wet bulb or dew point	2.0F	Combustion flue temps	5.0F
Hot water coil and boiler water temp	1.5F	Oxygen or CO_2 monitor	0.1 % pts
Outside air, space air, duct air temps	0.4F	CO monitor	0.01 % pts
Watthour, voltage & amperage	1% of design	Natural gas and oil flow rate	1% of design
Pressures, air, water and gas	3% of design	Steam flow rate	3% of design
Flow rates, air	10% of design	Barometric pressure	0.1 in. of Hg

F. Valve and Damper Stroke Setup and Check

1. EMS Readout. For all valve and damper actuator positions checked, verify the actual position against the BAS readout.

2. Set pumps or fans to normal operating mode. Command valve or damper closed, visually verify that valve or damper is closed and adjust output zero signal as required. Command valve or damper open, verify position is full open and adjust output signal as required. Command valve or damper to a few intermediate positions. If actual valve or damper position doesn't reasonably correspond, replace actuator or add pilot positioner (for pneumatics).

3. Closure for heating coil valves (NO): Set heating setpoint 20°F above room temperature. Observe valve open. Remove control air or power from the valve and verify that the valve stem and actuator position do not change. Restore to normal. Set heating setpoint to 20°F below room temperature. Observe the valve close. For pneumatics, by override in the EMS, increase pressure to valve by 3 psi (do not exceed actuator pressure rating) and verify valve stem and actuator position does not change. Restore to normal.

4. Closure for cooling coil valves (NC): Set cooling setpoint 20°F above room temperature. Observe the valve close. Remove control air or power from the valve and verify that the valve stem and actuator position do not change. Restore to normal. Set cooling setpoint to 20°F below room temperature. Observe valve open. For pneumatics, by override in the EMS, increase pressure to valve by 3 psi (do not exceed actuator pressure rating) and verify valve stem and actuator position does not change. Restore to normal.

G. Execution of Pre-functional Checklists and Startup.

1. Four weeks prior to startup, the Subs and vendors schedule startup and checkout with the GC and CxA. The performance of the pre-functional checklists, startup and checkout are directed and executed by the Sub or vendor. When checking off pre-functional checklists, signatures may be required of other Subs for verification of completion of their work.

2. The CxA shall observe, at minimum, the procedures for each piece of primary equipment, unless there are multiple units, (in which case a sampling strategy may be used as approved by the PM). In no case will the number of units witnessed be less than four on anyone building, nor less than 20% of the total number of identical or very similar units.

3. For lower-level components of equipment, (e.g., VAV boxes, sensors, controllers), the CxA shall observe a sampling of the pre-functional and start-up procedures. The sampling procedures are identified in the commissioning plan.

4. The Subs and vendors shall execute startup and provide the CxA with a signed and dated copy of the completed start-up and pre-functional tests and checklists.

5. Only individuals that have direct knowledge and witnessed that a line item task on the pre-functional checklist was actually performed shall initial or check that item off. It is not acceptable for witnessing supervisors to fill out these forms.

H. Deficiencies, Non-Conformance and Approval in Checklists and Startup.

1. The Subs shall clearly list any outstanding items of the initial start-up and pre-functional procedures that were not completed successfully, at the bottom of the procedures form or on an attached sheet. The procedures form and any outstanding deficiencies are provided to the CxA within two days of test completion.

2. The CxA reviews the report and submits either a non-compliance report or an approval form to the Sub or PM. The CxA shall work with the Subs and vendors to correct and retest deficiencies or uncompleted items. The CxA will involve the PM and others as necessary. The installing Subs or vendors shall correct all areas that are deficient or incomplete in the checklists and tests in a timely manner and shall notify the CxA as soon as outstanding items have been corrected and resubmit an updated start-up report and a Statement of Correction on the original non-compliance report. When satisfactorily completed, the CxA recommends approval of the execution of the checklists and startup of each system to the PM using a standard form.

3. Items left incomplete, which later cause deficiencies or delays during functional testing may result in backcharges to the responsible party. Refer to Part 3.7 herein for details.

4. Failure of any owner provided testing to include at a minimum IAQ and envelope testing will require the offending party to pay for retesting in full including all expenses, rental of testing equipment, labor etc.

3.5 PHASED COMMISSIONING

A. The project will *not* require startup and initial checkout to be executed in phases.

3.6 FUNCTIONAL PERFORMANCE TESTING

A. This sub-section applies to all commissioning functional testing for all divisions.

B. The general list of equipment to be commissioned is found in Section 01 91 13, Part 1.7. The specific equipment and modes to be tested are found in Sections 23 08 11 and 26 08 11.

C. The parties responsible to execute each test are listed with each test in Sections 23 08 11 and 26 08 11.

D. Objectives and Scope. The objective of functional performance testing is to demonstrate that each system is operating according to the documented design intent and Contract Documents. Functional testing facilitates bringing the systems from a state of substantial completion to full dynamic operation. Additionally, during the testing process, areas of deficient performance are identified and corrected, improving the operation and functioning of the systems.

E. In general, each system should be operated through all modes of operation (seasonal, occupied, unoccupied, warm-up, cool-down, part- and full-load) where there is a specified system response. Verifying each sequence in the sequences of operation is required. Proper responses to such modes and conditions as power failure, freeze condition, low oil pressure, no flow, equipment failure, etc. shall also be tested. Specific modes required in this project are given in Sections 23 08 11 and 26 08 11.

F. Development of Test Procedures. Before test procedures are written, the CxA shall obtain all requested documentation and a current list of change orders affecting equipment or systems, including an updated points list, program code, control sequences and parameters. Using the testing parameters and requirements in Sections 23 08 11 and 26 08 11 the CxA shall develop specific test procedures and forms to verify and document proper operation of each piece of equipment and system. Each Sub or vendor responsible to execute a test, shall provide limited assistance to the CxA in developing the procedures review (answering questions about equipment, operation, sequences, etc.). Prior to execution, the CxA shall provide a copy of the test procedures to the Sub(s) who shall review the tests for feasibility, safety, equipment and warranty protection. The CxA may submit the tests to the A/E for review, if requested.

G. The CxA shall review owner-contracted, factory testing or required owner acceptance tests which the CxA is not responsible to oversee, including documentation format, and shall determine what further testing or format changes may be required to comply with the *Specifications*. Redundancy of testing shall be minimized.

H. The purpose of any given specific test is to verify and document compliance with the stated criteria of acceptance given on the test form.

I. Representative test formats and examples (not designed for this facility) are found in the appendices to Divisions 23 and 26. The test procedure forms developed by the CxA shall include (but not be limited to) the following information:

1. System and equipment or component name(s)
2. Equipment location and ID number
3. Unique test ID number, and reference to unique pre-functional checklist and start-up documentation ID numbers for the piece of equipment
4. Date
5. Project name
6. Participating parties

7. A copy of the specification section describing the test requirements
8. A copy of the specific sequence of operations or other specified parameters being verified
9. Formulas used in any calculations
10. Required pre-test field measurements
11. Instructions for setting up the test.
12. Special cautions, alarm limits, etc.
13. Specific step-by-step procedures to execute the test, in a clear, sequential and repeatable format
14. Acceptance criteria of proper performance with a Yes / No check box to allow for clearly marking whether or not proper performance of each part of the test was achieved.
15. A section for comments
16. Signatures and date block for the CxA

J. Test Methods.

1. Functional performance testing and verification may be achieved by manual testing (persons manipulate the equipment and observe performance) or by monitoring the performance and analyzing the results using the control system's trend log capabilities or by stand-alone dataloggers. Sections 23 08 11 and 26 08 11 specify which methods shall be used for each test. The CxA may substitute specified methods or require an additional method to be executed, other than what was specified, with the approval of the PM. This may require a change order and adjustment in charge to the Owner. The CxA will determine which method is most appropriate for tests that do not have a method specified.
2. Simulated Conditions. Simulating conditions (not by an overwritten value) shall be allowed, though timing the testing to experience actual conditions is encouraged wherever practical.
3. Overwritten Values. Overwriting sensor values to simulate a condition, such as overwriting the outside air temperature reading in a control system to be something other than it really is, shall be allowed, but shall be used with caution and avoided when possible. Such testing methods often can only test a part of a system, as the interactions and responses of other systems will be erroneous or not applicable. Simulating a condition is preferable. e.g., for the above case, by heating the outside air sensor with a hair blower rather than overwriting the value or by altering the appropriate setpoint to see the desired response. Before simulating conditions or overwriting values, sensors, transducers and devices shall have been calibrated.
4. Simulated Signals. Using a signal generator which creates a simulated signal to test and calibrate transducers and DDC constants is generally recommended overusing the sensor to act as the signal generator via simulated conditions or overwritten values.
5. Altering Setpoints. Rather than overwriting sensor values, and when simulating conditions is difficult, altering setpoints to test a sequence is acceptable. For example, to see the AC compressor lockout work at an outside air temperature below 55F, when the outside air temperature is above 55F, temporarily change the lockout setpoint to be 2F above the current outside air temperature.
6. Indirect Indicators. Relying on indirect indicators for responses or performance shall be allowed only after visually and directly verifying and documenting, over the range of the tested parameters, that the

indirect readings through the control system represent actual conditions and responses. Much of this verification is completed during pre-functional testing.

7. Setup. Each function and test shall be performed under conditions that simulate actual conditions as close as is practically possible. The Sub executing the test shall provide all necessary materials, system modifications, etc. to produce the necessary flows, pressures, temperatures, etc. necessary to execute the test according to the specified conditions. At completion of the test, the Sub shall return all affected building equipment and systems, due to these temporary modifications, to their pre-test condition.

8. Sampling. Multiple identical pieces of non-life-safety or otherwise non-critical equipment may be functionally tested using a sampling strategy. Significant application differences and significant sequence of operation differences in otherwise identical equipment invalidates their common identity. A small size or capacity difference, alone, does not constitute a difference. The specific recommended sampling rates are specified with each type of equipment in Sections 23 08 11 and 26 08 11. It is noted that no sampling by Subs is allowed in pre-functional checklist execution.

    a. A common sampling strategy referenced in the *Specifications* as the "xx% Sampling—yy% Failure Rule" is defined by the following example.

        1) xx = the percent of the group of identical equipment to be included in each sample.

        2) yy = the percent of the sample that if failing, will require another sample to be tested.

    b. The example below describes a 20% Sampling—10% Failure Rule.

        1) Randomly test at least 20% (xx) of each group of identical equipment. In no case test less than three units in each group. This 20%, or three, constitute the "first sample."

        2) If 10% (yy) of the units in the first sample fail the functional performance tests, test another 20% of the group (the second sample).

        3) If 10% of the units in the second sample fail, test all remaining units in the whole group.

        4) If at any point, frequent failures are occurring and testing is becoming more troubleshooting than verification, the CxA may stop the testing and require the responsible Sub to perform and document a checkout of the remaining units, prior to continuing with functionally testing the remaining units.

K. Coordination and Scheduling. The Subs shall provide sufficient notice to the CxA regarding their completion schedule for the pre-functional checklists and startup of all equipment and systems. The CxA will schedule functional tests through the GC and affected Subs. The CxA shall direct, witness and document the functional testing of all equipment and systems. The Subs shall execute the tests.

L. In general, functional testing is conducted after pre-functional testing and startup has been satisfactorily completed. The control system is sufficiently tested and approved by the CxA before it is used for TAB or to verify performance of other components or systems. The air balancing and water balancing is completed and debugged before functional testing of air-related or water-related equipment or systems. Testing proceeds from components to subsystems to systems. When the proper performance of all interacting individual systems has been achieved, the interface or coordinated responses between systems is checked.

M. Test Equipment. Refer to Section 01 91 13, Part 2 for test equipment requirements.

N. Problem Solving. The CxA will recommend solutions to problems found, however the burden of responsibility to solve, correct and retest problems is with the GC, Subs and A/E.

3.7 DOCUMENTATION, NON-CONFORMANCE AND APPROVAL OF TESTS

A. Documentation. The CxA shall witness and document the results of all functional performance tests using the specific procedural forms developed for that purpose. Prior to testing, these forms are provided to the PM for review and approval and to the Subs for review. The CxA will include the filled out forms in the O&M manuals.

B. Non-Conformance.

1. The CxA will record the results of the functional test on the procedure or test form. All deficiencies or non-conformance issues shall be noted and reported to the PM on a standard non-compliance form.

2. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA. In such cases the deficiency and resolution will be documented on the procedure form.

3. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures. However, the CxA will not be pressured into overlooking deficient work or loosening acceptance criteria to satisfy scheduling or cost issues, unless there is an overriding reason to do so at the request of the PM.

4. As tests progress and a deficiency is identified, the CxA discusses the issue with the executing contractor.

   a. When there is no dispute on the deficiency and the Sub accepts responsibility to correct it:

      1) The CxA documents the deficiency and the Sub's response and intentions, and they go on to another test or sequence. After the day's work, the CxA submits the non-compliance reports to the PM for signature, if required. A copy is provided to the Sub and CxA. The Sub corrects the deficiency, signs the statement of correction at the bottom of the non-compliance form certifying that the equipment is ready to be retested and sends it back to the CxA.

      2) The CxA reschedules the test, and the test is repeated.

   b. If there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible:

      1) The deficiency shall be documented on the non-compliance form with the Sub's response and a copy given to the Sub representative assumed to be responsible.

      2) Resolutions are made at the lowest management level possible. Other parties are brought into the discussions as needed. Final interpretive authority is with the A/E. Final acceptance authority is with the Project Manager.

      3) The CxA documents the resolution process.

      4) Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency, signs the statement of correction on the non-compliance form and provides it to the CxA. The CxA reschedules the test, and the test is repeated until satisfactory performance is achieved.

5. Cost of Retesting.

   a. The cost for the *Sub* to retest a pre-functional or functional test, if they are responsible for the deficiency, shall be theirs. If they are not responsible, any cost recovery for retesting costs shall be negotiated with the GC.

b. For a deficiency identified, not related to any pre-functional checklist or start-up fault, the following shall apply: The CxA will direct the retesting of the equipment once at no "charge" to the GC for their time. However, the CxA's time for a second retest will be charged to the GC, who may choose to recover costs from the responsible Sub.

c. The time for the CxA to direct any retesting required because a specific *pre-functional* checklist or start-up test item, reported to have been successfully completed, but determined during functional testing to be faulty, will be backcharged to the GC, who may choose to recover costs from the party responsible for executing the faulty pre-functional test.

d. Refer to the sampling section of Section 01 91 13, Part 3.6 for requirements for testing and retesting identical equipment.

6. The Contractor shall respond in writing to the CxA at least as often as commissioning meetings are being scheduled concerning the status of each apparent outstanding discrepancy identified during commissioning. Discussion shall cover explanations of any disagreements and proposals for their resolution.

7. The CxA retains the original non-conformance forms until the end of the project.

8. Any required retesting by any contractor shall not be considered a justified reason for a claim of delay or for a time extension by the prime contractor.

C. Failure Due to Manufacturer Defect. If 10%, or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the PM. In such case, the Contractor shall provide the Owner with the following:

1. Within one week of notification from the PM, the Contractor or manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the PM within two weeks of the original notice.

2. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.

3. The PM will determine whether a replacement of all identical units or a repair is acceptable.

4. Two examples of the proposed solution will be installed by the Contractor and the GC will be allowed to test the installations for up to one week, upon which the PM will decide whether to accept the solution.

5. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

D. Approval. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA and by the PM, if necessary. The CxA recommends acceptance of each test to the PM using a standard form. The PM gives final approval on each test using the same form, providing a signed copy to the CxA and the Contractor.

3.8 OPERATION AND MAINTENANCE MANUALS

A. Standard O&M Manuals.

1. The specific content and format requirements for the standard O&M manuals are detailed in Section 01 78 23. Special requirements for the controls contractor and TAB contractor are found Section 23 08 10, Part 3.8.

2. A/E Contribution. The A/E will include in the beginning of the O&M manuals a separate section describing the systems including:

   a. The design intent narrative prepared by the A/E and provided as part of the bid documents, updated to as-built status by the A/E.

3. CxA Review and Approval. Prior to substantial completion, the CxA shall review the O&M manuals, documentation and redline as-builds *for systems that were commissioned* to verify compliance with the *Specifications.* The CxA will communicate deficiencies in the manuals to the PM or A/E, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the PM or A/E. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated. This work does not supersede the A/E's review of the O&M manuals according to the A/E's contract.

B. Commissioning Record in O&M Manuals.

1. The CxA is responsible to compile, organize and index the following commissioning data by equipment into labeled, indexed and tabbed, three-ring binders and deliver it to the GC, to be included with the O&M manuals. Three copies of the manuals will be provided. The format of the manuals shall be:

   a. *Tab I-1* Commissioning Plan

   b. *Tab I-2* Final Commissioning Report (see (B.2) below)

   c. *Tab 01* System Type 1 (chiller system, packaged unit, boiler system, etc.)

   d. *Sub-Tab A* Design narrative and criteria, sequences, approvals for Equipment 1

   e. *Sub-Tab B* Startup plan and report, approvals, corrections, blank pre-functional checklists

   f. *Colored Separator Sheets*—for each equipment type (fans, pumps, chiller, etc.)

   g. *Sub-Tab C* Functional tests (completed), trending and analysis, approvals and corrections, training plan, record and approvals, blank functional test forms and a recommended recommissioning schedule.

   h. *Tab 02* System Type 2.....repeat as per System 1

2. Final Report Details. The final commissioning report shall include an executive summary, list of participants and roles, brief building description, overview of commissioning and testing scope and a general description of testing and verification methods. For each piece of commissioned equipment, the report should contain the disposition of the commissioning authority regarding the adequacy of the equipment, documentation and training meeting the contract documents in the following areas: 1) Equipment meeting the equipment specifications, 2) Equipment installation, 3) Functional performance and efficiency, 4) Equipment documentation and design intent, and 5) Operator training. All outstanding non-compliance items shall be specifically listed. Recommendations for improvement to equipment or operations, future actions, commissioning process changes, etc. shall also be listed. Each non-compliance issue shall be referenced to the specific functional test, inspection, trend log, etc. where the deficiency is documented. The functional performance and efficiency section for each piece

of equipment shall include a brief description of the verification method used (manual testing, BAS trend logs, data loggers, etc.) and include observations and conclusions from the testing.

3. Current Facilities Requirements and Operations and Maintenance Plan - Systems Manual
Prepare and maintain a current facilities requirements and operations and maintenance plan that contains the information necessary to operate the building efficiently. The plan must include the following:
    - A sequence of operations for the building
    - The building occupancy schedule
    - Equipment run-time schedules
    - Setpoints for all HVAC equipment
    - Set lighting levels throughout the building
    - Minimum outside air requirements
    - Any changes in schedules or setpoints for different seasons, days of the week, and times of day
    - A systems narrative describing the mechanical and electrical systems and equipment
    - A preventive maintenance plan for building equipment described in the systems narrative
    - A commissioning program that includes periodic commissioning requirements, ongoing commissioning tasks, and continuous tasks for critical facilities.

4. Other documentation will be retained by the CxA.

3.9 TRAINING OF OWNER PERSONNEL

A. The GC shall be responsible for training coordination and scheduling and ultimately for ensuring that training is completed.

B. The CxA shall be responsible for overseeing and approving the content and adequacy of the training of Owner personnel for commissioned equipment.

1. The CxA shall interview the facility manager and lead engineer to determine the special needs and areas where training will be most valuable. The Owner and CxA shall decide how rigorous the training should be for each piece of commissioned equipment. The CxA shall communicate the results to the Subs and vendors who have training responsibilities.

2. In addition to these general requirements, the specific training requirements of Owner personnel by Subs and vendors is specified in Division 23 and 26.

3. Each Sub and vendor responsible for training will submit a written training plan to the CxA for review and approval prior to training. The plan will cover the following elements:

    a. Equipment (included in training)

    b. Intended audience

    c. Location of training

    d. Objectives

    e. Subjects covered (description, duration of discussion, special methods, etc.)

    f. Duration of training on each subject

    g. Instructor for each subject

h. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)

i. Instructor and qualifications

4. For the primary HVAC equipment, the Controls Contractor shall provide a short discussion of the control of the equipment during the mechanical or electrical training conducted by others.

5. The CxA develops an overall training plan and coordinates and schedules, with the PM and GC, the overall training for the commissioned systems. The CxA develops criteria for determining that the training was satisfactorily completed, including attending some of the training, etc. The CxA recommends approval of the training to the PM using a standard form. The PM also signs the approval form.

6. At one of the training sessions, the CxA presents a __1__ hour presentation discussing the use of the blank functional test forms for re-commissioning equipment.

7. Video taping of the training sessions will be provided by the GC with tapes cataloged by the GC and added to the O&M manuals.

8. The mechanical design engineer shall at the first training session present the overall system design concept and the design concept of each equipment section. This presentation shall be __2___ hours in length and include a review of all systems using the simplified system schematics (one-line drawings) including chilled water systems, condenser water or heat rejection systems, heating systems, fuel oil and gas supply systems, supply air systems, exhaust system and outside air strategies.

3.10 DEFERRED TESTING

A. Unforeseen Deferred Tests. If any check or test cannot be completed due to the building structure, required occupancy condition or other deficiency, execution of checklists and functional testing may be delayed upon approval of the PM. These tests will be conducted in the same manner as the seasonal tests as soon as possible. Services of necessary parties will be negotiated.

B. Seasonal Testing. During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) specified in Section 23 08 11 shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the appropriate Subs, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and as-builds due to the testing will be made.

3.11 WRITTEN WORK PRODUCTS

A. The commissioning process generates a number of written work products described in various parts of the *Specifications.* The *Commissioning Plan,* lists all the formal written work products, describes briefly their contents, who is responsible to create them, their due dates, who receives and approves them and the location of the specification to create them. In summary, the written products are:

Product	Developed By
1. Final commissioning plan	CxA
2. Cx meeting minutes	CxA
3. Commissioning schedules	CxA with GC and CM
4. Equipment documentation submittals	Subs

5.	Sequence clarifications		Subs and A/E as needed
6.	Pre-functional checklists		CxA
7.	Startup and initial checkout plan		Subs and CxA (compilation of existing documents)
8.	Startup and initial checkout forms filled out	Subs	
9.	Final TAB report		TAB
10.	Issues log (deficiencies)		CxA
11.	Commissioning Progress Record		CxA
12.	Functional test forms		CxA
13.	Systems Manual		CxA
14.	Filled out functional tests		CxA
15.	O&M manuals	Subs	
16.	Overall training plan		CxA and CM
17.	Specific training agendas		Subs
18.	Final commissioning report	CxA	
19.	Misc. approvals		CxA

3.12 IAQ TESTING

A. The general contractor will assist the commissioning agent in scheduling the IAQ testing. Prior to the testing all finishes shall be complete for at least 72 hours, the building will be purged with as much conditioned outside air as possible and the building will be unoccupied.

B. The building will remain unoccupied during the testing (approximately 8 hours) and the HVAC systems will be run normally as if the building was occupied.

C. The cost of retesting will be born by the offending party if the IAQ test is unsuccessful.

END OF SECTION

SECTION 01 91 13 - COMMISSIONING REQUIREMENTS

PART 1 – GENERAL

1.1 DESCRIPTION:

A. Commissioning – Commissioning is a systematic process of ensuring that all building systems perform interactively according to the design intent and the owner's operational needs. This is achieved by beginning in the design phase and documenting design intent and continuing through construction, acceptance and the warranty period with actual verification of performance. The commissioning process shall encompass and coordinate the traditionally separate functions of system documentation, equipment startup, control system calibration, testing and balancing, performance testing and training. Commissioning during the construction phase is intended to achieve the following specific objectives according to the Contract Documents:

1. Verify that applicable equipment and systems are installed according to the manufacturer's recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by installing contractors.
2. Verify and document proper performance of equipment and systems.
3. Verify that O&M documentation left on site is complete.
4. Verify that the Owner's operating personnel are adequately trained.

B. The commissioning process does not take away from or reduce the responsibility of the system designers or installing contractors to provide a finished and fully functioning product.

C. Abbreviations. The following are common abbreviations used in the *Specifications* and in the *Commissioning Plan.* Definitions are found in Section #.#.

A/E-	Architect and design engineers	FT-	Functional performance test
CxA-	Commissioning authority	GC-	General contractor (prime)
CC	Controls contractor	MC-	Mechanical contractor
TAB-	Test and balance contractor	PC-	Pre-functional checklist
Cx-	Commissioning	PM-	Project manager (of the Owner)
Cx Plan-	Commissioning Plan document	Subs-	Subcontractors to General
EC-	Electrical contractor		

1.2 COORDINATION:

A. Commissioning Team. The members of the commissioning team consist of the Commissioning authority (CxA), the Project Manager (PM), the General Contractor (GC or Contractor), the architect and design engineers (particularly the mechanical engineer), the Mechanical Contractor (MC), the Electrical Contractor (EC), the TAB representative, the Controls Contractor (CC), any other installing subcontractors or suppliers of equipment. If known, the Owner's building or plant operator/engineer is also a member of the commissioning team.

B. Management. The CxA is hired by the Owner. The CxA directs and coordinates the commissioning activities. All members work together to fulfill their contracted responsibilities and meet the objectives of the Contract Documents. The CxA's responsibilities are the same regardless of who hired the CxA. Refer to Section 01 91 13 Part 1.6 for additional management details.

C. Scheduling. The CxA will work with the PM and GC according to established protocols to schedule the commissioning activities. The CxA will provide sufficient notice to the PM and GC for scheduling commissioning activities. The GC will integrate all commissioning activities into the master schedule. All parties will address scheduling problems and make necessary notifications in a timely manner in order to expedite the commissioning process.

1. The CxA will provide the initial schedule of primary commissioning events at the commissioning scoping meeting. The *Commissioning Plan* provides a format for this schedule. As construction progresses more detailed schedules are developed by the CxA. The Commissioning Plan also provides a format for detailed schedules.

1.3 COMMISSIONING PROCESS:

A. Commissioning Plan. The *Commissioning Plan*, provided as part of the bid documents, is binding on the Contractor. The commissioning plan provides guidance in the execution of the commissioning process. Just after the initial commissioning scoping meeting the CxA will update the plan which is then considered the "final" plan, though it will continue to evolve and expand as the project progresses. The *Specifications* will take precedence over the *Commissioning Plan*.

B. Commissioning Process. The following narrative provides a brief overview of the typical commissioning tasks during construction and the general order in which they occur.

1. Commissioning during construction begins with a scoping meeting conducted by the CxA where the commissioning process is reviewed with the commissioning team members.

2. Additional meetings will be required throughout construction, scheduled by the CxA with necessary parties attending, to plan, scope, coordinate, schedule future activities and resolve problems.

3. Equipment documentation is submitted to the CxA during normal submittals, including detailed start-up procedures.

4. The CxA works with the Subs in developing startup plans and startup documentation formats, including providing the Subs with pre-functional checklists to be completed, during the startup process.

5. In general, the checkout and performance verification proceeds from simple to complex; from component level to equipment to systems and intersystem levels with pre-functional checklists being completed before functional testing.

6. The Subs, under their own direction, execute and document the pre-functional checklists and perform startup and initial checkout. The CxA documents that the checklists and startup were completed according to the approved plans. This may include the CxA witnessing start-up of selected equipment.

7. The CxA develops specific equipment and system functional performance test procedures. The Subs review the procedures.

8. The procedures are executed by the Subs, under the direction of, and documented by the CxA.

9. Items of non-compliance in material, installation or setup are corrected at the Sub's expense and the system retested.

10. The CxA reviews the O&M documentation for completeness.

11. Commissioning not necessarily completed before Substantial Completion.

12. The CxA reviews, pre-approves, coordinates and verifies that the training was provided by the Subs.

13. Deferred testing is conducted, as specified or required.

1.4 RELATED WORK:

A. Specific commissioning requirements are given in other sections of these specifications. The contractor shall check all specification sections for information related to commissioning.

1.5 RESPONSIBILITIES:

A. The responsibilities of various parties in the commissioning process are provided in this section. The responsibilities of the mechanical contractor, TAB and controls contractor are in Division # and those of the electrical contractor in Division #. It is noted that the services for the Project Manager, Architect, HVAC mechanical and electrical designers/engineers, and Commissioning authority are not provided for in this contract. That is, the Contractor is not responsible for providing their services. Their responsibilities are listed here to clarify the commissioning process.

B. All Parties

1. Follow the Commissioning Plan.

2. Attend commissioning scoping meeting and additional meetings, as necessary.

C. Architect (of A/E)

Construction and Acceptance Phase

1. Attend the commissioning scoping meeting and selected commissioning team meetings.

2. Perform normal submittal review, construction observation, as-built drawing preparation, O&M manual preparation, etc., as contracted.

3. Provide any design narrative documentation requested by the CxA.

4. Coordinate resolution of system deficiencies identified during commissioning, according to the contract documents.

5. Prepare and submit final as-built design intent documentation for inclusion in the O&M manuals. Review and approve the O&M manuals.

Warranty Period

1. Coordinate resolution of design non-conformance and design deficiencies identified during warranty-period commissioning.

D. Mechanical and Electrical Designers/Engineers (of the A/E)

Construction and Acceptance Phase

1. Perform normal submittal review, construction observation, as-built drawing preparation, etc., as contracted. One site observation should be completed just prior to system startup.

2. Designers shall assist (along with the contractors) in clarifying the operation and control of commissioned equipment in areas where the specifications, control drawings or equipment documentation is not sufficient for writing detailed testing procedures.

3. Attend commissioning scoping meetings and other selected commissioning team meetings.

4. Participate in the resolution of system deficiencies identified during commissioning, according to the contract documents.

5. Prepare and submit the final as-built design intent and operating parameters documentation for inclusion in the O&M manuals. Review and approve the O&M manuals.

6. From the Contractor's red-line drawings, edit and update one-line diagrams developed as part of the design narrative documentation and those provided by the vendor as shop drawings for for what?

7. Provide any design narrative and sequences documentation requested by the CxA. The chilled and hot water, domestic water, steam and condensate systems; supply, return and exhaust air systems.

Warranty Period

1. Participate in the resolution of non-compliance, non-conformance and design deficiencies identified during commissioning during warranty-period commissioning.

E. Commissioning Authority (CxA)

1. The CxA is not responsible for design concept, design criteria, compliance with codes, design or general construction scheduling, cost estimating, or construction management. The CxA may assist with problem-solving non-conformance or deficiencies, but ultimately that responsibility resides with the general contractor and the A/E. The primary role of the CxA is to develop and coordinate the execution of a testing plan, observe and document performance—that systems are functioning in accordance with the documented design intent and in accordance with the Contract Documents. The Contractors will provide all tools or the use of tools to start, check-out and functionally test equipment and systems, except for specified testing with portable data-loggers, which shall be supplied and installed by the CxA.

Construction and Acceptance Phase

1. Coordinates and directs the commissioning activities in a logical, sequential and efficient manner using consistent protocols and forms, centralized documentation, clear and regular communications and consultations with all necessary parties, frequently updated timelines and schedules and technical expertise.

2. Coordinate the commissioning work and, with the GC and PM, ensure that commissioning activities are being scheduled into the master schedule.

3. Revise, as necessary *Commissioning Plan.*

4. Plan and conduct a commissioning scoping meeting and other commissioning meetings.

5. Request and review additional information required to perform commissioning tasks, including O&M materials, contractor start-up and checkout procedures.

6. Before startup, gather and review the current control sequences and interlocks and work with contractors and design engineers until sufficient clarity has been obtained, in writing, to be able to write detailed testing procedures.

7. Review and approve normal Contractor submittals applicable to systems being commissioned for compliance with commissioning needs, concurrent with the A/E reviews.

8. Write and distribute pre-functional tests and checklists.

9. Perform site visits, as necessary, to observe component and system installations. Attends selected planning and job-site meetings to obtain information on construction progress. Review construction meeting minutes for revisions/substitutions relating to the commissioning process. Assist in resolving any discrepancies.

10. Witness all or part of the HVAC piping test and flushing procedure, sufficient to be confident that proper procedures were followed. Document this testing and include the documentation in O&M manuals. Notify owners' project manager of any deficiencies in results or procedures.

11. Witness all or part of any ductwork testing and cleaning procedures, sufficient to be confident that proper procedures were followed. Document this testing and include the documentation in O&M manuals. Notify owner's project manager of any deficiencies in results or procedures.
12. Approve pre-functional tests and checklist completion by reviewing pre-functional checklist reports and by selected site observation and spot checking.

13. Approve systems startup by reviewing start-up reports and by selected site observation.

14. Review TAB execution plan.

15. Oversee sufficient functional testing of the control system.

16. Approve air and water systems balancing by spot testing, by reviewing completed reports and by selected site observation.

17. With necessary assistance and review from installing contractors, write the functional performance test procedures for equipment and systems. This may include energy management control system trending, stand-alone datalogger monitoring or manual functional testing. Submit to PM for review, and for approval if required.

18. Analyze any functional performance trend logs and monitoring data to verify performance.

19. Coordinate, witness and approve manual functional performance tests performed by installing contractors. Coordinate retesting as necessary until satisfactory performance is achieved.

20. Maintain a master deficiency and resolution log and a separate testing record. Provide the PM with written progress reports and test results with recommended actions.

21. Witness performance testing and all other owner contracted tests or tests by manufacturer's personnel over which the CxA may not have direct control. Document these tests and include this documentation in Commissioning Record in O&M manuals.

22. Review equipment warranties to ensure that the Owner's responsibilities are clearly defined.

23. Oversee and approve the training of the Owner's operating personnel.

24. Compile and maintain a commissioning record.

25. Review and approve the preparation of the O&M manuals.

26. Provide a final commissioning report (as described in this section).

Warranty Period

1. Coordinate and supervise required seasonal or deferred testing and deficiency corrections.

2. Return to the site at 10 months into the 12 month warranty period and review with facility staff the current building operation and the condition of outstanding issues related to the original and seasonal commissioning. Also interview facility staff and identify problems or concerns they have operating the building as originally intended. Make suggestions for improvements and for recording these changes in the O&M manuals. Identify areas that may come under warranty or under the original construction contract. Assist facility staff in developing reports, documents and requests for services to remedy outstanding problems.

F. Owner's Project Manager (PM)

Construction and Acceptance Phase

1. Facilitate the coordination of the commissioning work by the CxA, and, with the GC and CxA, ensure that commissioning activities are being scheduled into the master schedule.

2. Review and approve the final *Commissioning Plan.*

3. Attend a commissioning scoping meeting and other commissioning team meetings.

4. Perform the normal review of Contractor submittals.

5. Review and approve the functional performance test procedures submitted by the CxA, prior to testing.

6. When necessary, observe and witness pre-functional checklists, startup and functional testing of selected equipment.

7. Review commissioning progress and deficiency reports.

8. Coordinate the resolution of non-compliance and design deficiencies identified in all phases of commissioning.

9. Sign-off (final approval) on individual commissioning tests as completed and passing. Recommend completion of the commissioning process to the Project Manager.

10. Assist the GC in coordinating the training of owner personnel.

11. Manage the contract of the A/E and of the GC.

12. Arrange for facility operating and maintenance personnel to attend various field commissioning activities and field training sessions according to the *Commissioning Plan.*

13. Provide final approval for the completion of the commissioning work.

Warranty Period

1. Ensure that any seasonal or deferred testing and any deficiency issues are addressed.

G. General Contractor (GC)

Construction and Acceptance Phase

1. Facilitate the coordination of the commissioning work by the CxA, and with the GC and CxA ensure that commissioning activities are being scheduled into the master schedule.

2. Furnish a copy of all construction documents, addenda, change orders and approved submittals and shop drawings related to commissioned equipment to the CxA.

3. In each purchase order or subcontract written, include requirements for submittal data, O&M data, commissioning tasks and training.

4. Ensure that all Subs execute their commissioning responsibilities according to the Contract Documents and schedule.

5. A representative shall attend a commissioning scoping meeting and other necessary meetings scheduled by the CxA to facilitate the Cx process.

6. Coordinate the training of owner personnel.

7. Prepare O&M manuals, according to the Contract Documents, including clarifying and updating the original sequences of operation to as-built conditions.

8. Responsibilities for submission for systems manual information.

9. Provide all lifts and utilities to facilitate envelope testing.

10. Provide time before and pre-conditioning to facilitate IAQ testing.

Warranty Period

1. Ensure that Subs execute seasonal or deferred functional performance testing, witnessed by the CxA, according to the specifications.

2. Ensure that Subs correct deficiencies and make necessary adjustments to O&M manuals and as-built drawings for applicable issues identified in any seasonal testing.

H. Equipment Suppliers

1. Provide all requested submittal data, including detailed start-up procedures and specific responsibilities of the Owner to keep warranties in force.

2. Assist in equipment testing per agreements with Subs.

3. Include all special tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment according to these Contract Documents in the base bid price to the Contractor, except for stand-alone datalogging equipment that may be used by the CxA.

4. Through the contractors they supply products to, analyze specified products and verify that the designer has specified the newest most updated equipment reasonable for this project's scope and budget.

5. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.

6. Review test procedures for equipment installed by factory representatives.

1.6 DEFINITIONS

A. Acceptance Phase - phase of construction after startup and initial checkout when functional performance tests, O&M documentation review and training occurs.

B. Approval - acceptance that a piece of equipment or system has been properly installed and is functioning in the tested modes according to the Contract Documents.

C. Architect / Engineer (A/E) - the prime consultant (architect) and sub-consultants who comprise the design team, generally the HVAC mechanical designer/engineer and the electrical designer/engineer.

D. Basis of Design - The basis of design is the documentation of the primary thought processes and assumptions behind design decisions that were made to meet the design intent. The basis of design describes the systems, components, conditions and methods chosen to meet the intent. Some reiterating of the design intent may be included.

E. Commissioning authority (CxA) - an independent agent, not otherwise associated with the A/E team members or the Contractor, though he/she may be hired as a subcontractor to them. The CxA directs and coordinates the day-to-day commissioning activities. The CxA does not take an oversight role like the PM. The CxA shall report directly to the PM.

F. Commissioning Plan - an overall plan, developed before or after bidding, that provides the structure, schedule and coordination planning for the commissioning process.

G. Contract Documents - the documents binding on parties involved in the construction of this project (drawings, specifications, change orders, amendments, contracts, *Cx Plan*, etc.).

H. Contractor - the general contractor or authorized representative.

I. Control system - the central building energy management control system.

J. Datalogging - monitoring flows, currents, status, pressures, etc. of equipment using stand-alone dataloggers separate from the control system.

K. Deferred Functional Tests - FTs that are performed later, after substantial completion, due to partial occupancy, equipment, seasonal requirements, design or other site conditions that disallow the test from being performed.

L. Deficiency - a condition in the installation or function of a component, piece of equipment or system that is not in compliance with the Contract Documents (that is, does not perform properly or is not complying with the design intent).

M. Design Intent - a dynamic document that provides the explanation of the ideas, concepts and criteria that are considered to be very important to the owner. It is initially the outcome of the programming and conceptual design phases.

N. Design Narrative or Design Documentation - sections of either the Design Intent or Basis of Design.

O. Factory Testing - testing of equipment on-site or at the factory by factory personnel with an Owner's representative present.

P. Functional Performance Test (FT) - test of the dynamic function and operation of equipment and systems using manual (direct observation) or monitoring methods. Functional testing is the dynamic testing of systems (rather than just components) under full operation (e.g., the chiller pump is tested interactively with the chiller functions to see if the pump ramps up and down to maintain the differential pressure setpoint). Systems are tested under various modes, such as during low cooling or heating loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc. The systems are run through all the control system's sequences of operation and components are verified to be responding as the sequences state. Traditional air or water test and balancing (TAB) is not functional testing, in the commissioning sense of the word. TAB's primary work is setting up the system flows and pressures as specified, while functional testing is verifying that which has already been set up. The commissioning authority develops the functional test procedures in a sequential written form, coordinates, oversees and documents the actual testing, which is usually performed by the installing contractor or vendor. FTs are performed after pre-functional checklists and startup are complete.

Q. General Contractor (GC) - the prime contractor for this project. Generally refers to all the GC's subcontractors as well. Also referred to as the Contractor, in some contexts.

R. Indirect Indicators - indicators of a response or condition, such as a reading from a control system screen reporting a damper to be 100% closed.

S. Manual Test - using hand-held instruments, immediate control system readouts or direct observation to verify performance (contrasted to analyzing monitored data taken over time to make the "observation").

T. Monitoring - the recording of parameters (flow, current, status, pressure, etc.) of equipment operation using dataloggers or the trending capabilities of control systems.

U. Non-Compliance - see Deficiency.

V. Non-Conformance - see Deficiency.

W. Over-written Value - writing over a sensor value in the control system to see the response of a system (e.g., changing the outside air temperature value from 50F to 75F to verify economizer operation). See also "Simulated Signal."

X. Owner-Contracted Tests - tests paid for by the Owner outside the GC's contract and for which the CxA does not oversee. These tests will not be repeated during functional tests if properly documented.

Y. Phased Commissioning - commissioning that is completed in phases (by floors, for example) due to the size of the structure or other scheduling issues, in order minimize the total construction time.

Z. Pre-functional Checklist (PC) - a list of items to inspect and elementary component tests to conduct to verify proper installation of equipment, provided by the CxA to the Sub. Pre-functional checklists are primarily static inspections and procedures to prepare the equipment or system for initial operation (e.g., belt tension, oil levels OK, labels affixed, gages in place, sensors calibrated, etc.). However, some pre-functional checklist items entail simple testing of the function of a component, a piece of equipment or system (such as measuring the voltage imbalance on a three phase pump motor of a chiller system). The word pre-functional refers to before functional testing. Pre-functional checklists augment and are combined with the manufacturer's start-up checklist. Even without a commissioning process, contractors typically perform some, if not many, of the pre-functional checklist items a commissioning authority will recommend. However, few contractors document in writing the execution of these checklist items. Therefore, for most equipment, the contractors execute the checklists on their own. The commissioning authority only requires that the procedures be documented in writing, and does not witness much of the pre-functional checklisting, except for larger or more critical pieces of equipment.

AA. Project Manager (PM) - the contracting and managing authority for the owner over the design and/or construction of the project, a staff position.

BB. Sampling. - functionally testing only a fraction of the total number of identical or near identical pieces of equipment. Refer to Section 01 91 13, Part 3.6, J for details.

CC. Seasonal Performance Tests - FT that are deferred until the system(s) will experience conditions closer to their design conditions.

DD. Simulated Condition - condition that is created for the purpose of testing the response of a system (e.g., applying a hair blower to a space sensor to see the response in a VAV box).

EE. Simulated Signal - disconnecting a sensor and using a signal generator to send an amperage, resistance or pressure to the transducer and DDC system to simulate a sensor value.

FF. Specifications - the construction specifications of the Contract Documents.

GG. Startup - the initial starting or activating of dynamic equipment, including executing pre-functional checklists.

HH. Subs - the subcontractors to the GC who provide and install building components and systems.

II. Test Procedures - the step-by-step process which must be executed to fulfill the test requirements. The test procedures are developed by the CxA.

JJ. Test Requirements - requirements specifying what modes and functions, etc. shall be tested. The test requirements are not the detailed test procedures. The test requirements are specified in the Contract Documents (Sections 23 08 11; 26 08 11, etc.).

KK. Trending - monitoring using the building control system.

LL. Vendor - supplier of equipment.

MM. Warranty Period - warranty period for entire project, including equipment components. Warranty begins at Substantial Completion and extends for at least one year, unless specifically noted otherwise in the Contract Documents and accepted submittals.

1.7 SYSTEMS TO BE COMMISSIONED

A. The following checked systems will be commissioned in this project.

Equipment and System	Functional Test Requirements Specified In:	Equipment and System	Functional Test Requirements Specified In:
HVAC System		x Equipment vibration control	23 08 11
x Chillers	23 08 11	__ Egress pressurization	23 08 11
x Pumps	23 08 11	**Electrical System**	
x Cooling tower	23 08 11	x Sweep or scheduled lighting controls	26 08 11
x Heat Transfer Package	23 08 11	__ Daylight dimming controls	26 08 11
x Piping systems	23 08 11	x Lighting occupancy sensors	26 08 11
x Ductwork	23 08 11	x Power quality	26 08 11
__ Variable frequency drives	23 08 11	__ Security system	26 08 11
x Air handler units	23 08 11	x Emergency power system	26 08 11
__ VRF System	23 08 11	x UPS systems	26 08 11
x Pool Dehumidification Air Handling Units	23 08 11		
__ Fan coil units	23 08 11	x Fire and smoke alarm	26 08 11
__ Unit heaters	23 08 11	x Fire protection systems	26 08 11
__ Fan powered boxes	23 08 11	__ Communications system	26 08 11
__ VAV boxes	23 08 11	__ Public address/paging	26 08 11
__ Kitchen make-up air unit	23 08 11		
__ Kitchen exhaust fans	23 08 11	**Other**

x Indoor air quality[1]	23 08 11		
__ Condensate return unit	23 08 11		

[1] Indoor air quality (IAQ) commissioning does not ensure that indoor air quality will be adequate or without deficiency at building turnover or during occupancy, unless the owner has specifically specified that actual air quality testing is performed. Commissioning indoor air quality entails performing tasks that minimize the potential for IAQ problems, but it does not eliminate their possibility.

PART 2 – PRODUCTS

2.1 TEST EQUIPMENT

A. All standard testing equipment required to perform startup and initial checkout and required functional performance testing shall be provided by the Division contractor for the equipment being tested. For example, the mechanical contractor of Division # shall ultimately be responsible for all standard testing equipment for the HVAC system and controls system in Division #, except for equipment specific to and used by TAB in their commissioning responsibilities.

B. Special equipment, tools and instruments (only available from vendor, specific to a piece of equipment) required for testing equipment, according to these Contract Documents shall be included in the base bid price to the Contractor and left on site, except for stand-alone datalogging equipment that may be used by the CxA.

C. Datalogging equipment and software required to test equipment will be provided by the CxA but shall not become the property of the Owner.

D. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the *Specifications.* If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to an accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year. All equipment shall be calibrated according to the manufacturer's recommended intervals and when dropped or damaged. Calibration tags shall be affixed or certificates readily available.

E. Refer to Section 01 91 13, Part 3.6 E for details regarding equipment that may be required to simulate required test conditions.

PART 3 – EXECUTION

3.1 MEETINGS

A. Scoping Meeting. Within 90 days of commencement of construction, the CxA will schedule, plan and conduct a commissioning scoping meeting with the entire commissioning team in attendance. Meeting minutes will be distributed to all parties by the CxA. Information gathered from this meeting will allow the CxA to revise the Draft *Commissioning Plan* to its "final" version, which will also be distributed to all parties.

B. Miscellaneous Meetings. Other meetings will be planned and conducted by the CxA as construction progresses. The CxA will plan these meetings and will minimize unnecessary time being spent by Subs. For large projects, these meetings may be held monthly.

3.2 REPORTING

A. The CxA will provide regular reports to the PM, depending on the management structure, with increasing frequency as construction and commissioning progresses. Standard forms are provided and referenced in the *Commissioning Plan*.

B. The CxA will regularly communicate with all members of the commissioning team, keeping them apprised of commissioning progress and scheduling changes through memos, progress reports, etc.

C. Testing or review approvals and non-conformance and deficiency reports are made regularly with the review and testing as described in later sections.

D. A final summary report (about four to eight pages, not including backup documentation) by the CxA will be provided to the PM, focusing on evaluating commissioning process issues and identifying areas where the process could be improved. All acquired documentation, logs, minutes, reports, deficiency lists, communications, findings, unresolved issues, etc., will be compiled in appendices and provided with the summary report. Pre-functional checklists, functional tests and monitoring reports will not be part of the final report but will be stored in the Commissioning Record in the O&M manuals.

3.3 SUBMITTALS

A. The CxA will provide appropriate contractors with a specific request for the type of submittal documentation the CxA requires to facilitate the commissioning work. These requests will be integrated into the normal submittal process and protocol of the construction team. At minimum, the request will include the manufacturer and model number, the manufacturer's printed installation and detailed start-up procedures, full sequences of operation, O&M data, performance data, any performance test procedures, control drawings and details of owner contracted tests. In addition, the installation and checkout materials that are actually shipped inside the equipment and the actual field checkout sheet forms to be used by the factory or field technicians shall be submitted to the Commissioning authority. All documentation requested by the CxA will be included by the Subs in their O&M manual contributions.

B. The Commissioning authority will review and approve submittals related to the commissioned equipment for conformance to the Contract Documents as it relates to the commissioning process, to the functional performance of the equipment and adequacy for developing test procedures. This review is intended primarily to aid in the development of functional testing procedures and only secondarily to verify compliance with equipment specifications. The Commissioning authority will notify the CM, PM or A/E as requested, of items missing or areas that are not in conformance with Contract Documents and which requires resubmission.

C. The CxA may request additional design narrative from the A/E and Controls Contractor, depending on the completeness of the design intent documentation and sequences provided with the Specifications.

D. These submittals to the CxA do not constitute compliance for O&M manual documentation. The O&M manuals are the responsibility of the Contractor, though the CxA will review and approve them.

3.4 START-UP, PRE-FUNCTIONAL CHECKLISTS AND INITIAL CHECKOUT

A. The following procedures apply to all equipment to be commissioned, according to Section 1.7, Systems to be commissioned. Some systems that are not comprised so much of actual dynamic machinery, e.g., electrical system power quality, may have very simplified PCs and startup.

B. General. Pre-functional checklists are important to ensure that the equipment and systems are hooked up and operational. It ensures that functional performance testing (in-depth system checkout) may proceed without unnecessary delays. Each piece of equipment receives full pre-functional checkout. No sampling strategies are used. The pre-functional testing for a given system must be successfully completed prior to formal functional performance testing of equipment or subsystems of the given system.

C. Start-up and Initial Checkout Plan. The CxA shall assist the commissioning team members responsible for startup of any equipment in developing detailed start-up plans for all equipment. The primary role of the CxA in this process is to ensure that there is written documentation that each of the manufacturer-recommended procedures have been completed. Parties responsible for pre-functional checklists and

startup are identified in the commissioning scoping meeting and in the checklist forms. Parties responsible for executing functional performance tests are identified in the testing requirements in Sections 23 08 11 and 26 08 11.

1. The CxA adapts, if necessary, the representative pre-functional checklists and procedures from Section 23 08 12 and 26 08 12. These checklists indicate required procedures to be executed as part of startup and initial checkout of the systems and the party responsible for their execution.

2. These checklists and tests are provided by the CxA to the Contractor. The Contractor determines which trade is responsible for executing and documenting each of the line item tasks and notes that trade on the form. Each form will have more than one trade responsible for its execution.

3. The subcontractor responsible for the purchase of the equipment develops the full start-up plan by combining (or adding to) the CxA's checklists with the manufacturer's detailed start-up and checkout procedures from the O&M manual and the normally used field checkout sheets. The plan will include checklists and procedures with specific boxes or lines for recording and documenting the checking and inspections of each procedure and a summary statement with a signature block at the end of the plan.

4. The full start-up plan could consist of something as simple as:

    a. The CxA's pre-functional checklists.

    b. The manufacturer's standard written start-up procedures copied from the installation manuals with check boxes by each procedure and a signature block added by hand at the end.

    c. The manufacturer's normally used field checkout sheets.

5. The subcontractor submits the full startup plan to the CxA for review and approval.

6. The CxA reviews and approves the procedures and the format for documenting them, noting any procedures that need to be added.

7. The full start-up procedures and the approval form may be provided to the CM for review and approval, depending on management protocol.

D. Sensor and Actuator Calibration.

1. All field-installed temperature, relative humidity, CO_2 and pressure sensors and gages, and all actuators (dampers and valves) on all equipment shall be calibrated using the methods described below. Alternate methods may be used, if approved by the Owner before-hand. All test instruments shall have had a certified calibration within the last 12 months. Sensors installed *in* the unit at the factory with calibration certification provided need not be field calibrated.

2. All procedures used shall be fully documented on the pre-functional checklists or other suitable forms, clearly referencing the procedures followed and written documentation of initial, intermediate and final results.

E. Sensor Calibration Methods

1. All Sensors. Verify that all sensor locations are appropriate and away from causes of erratic operation. Verify that sensors with shielded cable are grounded only at one end. For sensor pairs that are used to determine a temperature or pressure difference, make sure they are reading within 0.2°F of each other for temperature and within a tolerance equal to 2% of the reading, of each other, for pressure. Tolerances for critical applications may be tighter.

2. Sensors Without Transmitters--Standard Application. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gage or building automation system (BAS)) is within the tolerances in the table below of the instrument-measured value. If not, install offset in BAS, calibrate or replace sensor.

3. Sensors with Transmitters--Standard Application. Disconnect sensor. Connect a signal generator in place of sensor. Connect ammeter in series between transmitter and BAS control panel. Using manufacturer's resistance-temperature data, simulate minimum desired temperature. Adjust transmitter potentiometer zero until 4 mA is read by the ammeter. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the BAS. Record all values and recalibrate controller as necessary to conform with specified control ramps, reset schedules, proportional relationship, reset relationship and P/I reaction. Reconnect sensor. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gage or building automation system (BAS)) is within the tolerances in the table below of the instrument-measured value. If not, replace sensor and repeat. For pressure sensors, perform a similar process with a suitable signal generator.

4. Critical Applications. For critical applications (process, manufacturing, etc.) more rigorous calibration techniques may be required for selected sensors. Describe any such methods used on an attached sheet.

Tolerances, Standard Applications

Sensor	Required Tolerance (+/-)	Sensor	Required Tolerance (+/-)
Cooling coil, chilled and condenser water temps	0.4F	Flow rates, water	4% of design
		Relative humidity	4% of design
AHU wet bulb or dew point	2.0F	Combustion flue temps	5.0F
Hot water coil and boiler water temp	1.5F	Oxygen or CO_2 monitor	0.1 % pts
Outside air, space air, duct air temps	0.4F	CO monitor	0.01 % pts
Watthour, voltage & amperage	1% of design	Natural gas and oil flow rate	1% of design
Pressures, air, water and gas	3% of design	Steam flow rate	3% of design
Flow rates, air	10% of design	Barometric pressure	0.1 in. of Hg

F. Valve and Damper Stroke Setup and Check

1. EMS Readout. For all valve and damper actuator positions checked, verify the actual position against the BAS readout.

2. Set pumps or fans to normal operating mode. Command valve or damper closed, visually verify that valve or damper is closed and adjust output zero signal as required. Command valve or damper open, verify position is full open and adjust output signal as required. Command valve or damper to a few intermediate positions. If actual valve or damper position doesn't reasonably correspond, replace actuator or add pilot positioner (for pneumatics).

3. Closure for heating coil valves (NO): Set heating setpoint 20°F above room temperature. Observe valve open. Remove control air or power from the valve and verify that the valve stem and actuator position do not change. Restore to normal. Set heating setpoint to 20°F below room temperature. Observe the valve close. For pneumatics, by override in the EMS, increase pressure to valve by 3 psi (do not exceed actuator pressure rating) and verify valve stem and actuator position does not change. Restore to normal.

4. Closure for cooling coil valves (NC): Set cooling setpoint 20°F above room temperature. Observe the valve close. Remove control air or power from the valve and verify that the valve stem and actuator position do not change. Restore to normal. Set cooling setpoint to 20°F below room temperature. Observe valve open. For pneumatics, by override in the EMS, increase pressure to valve by 3 psi (do not exceed actuator pressure rating) and verify valve stem and actuator position does not change. Restore to normal.

G. Execution of Pre-functional Checklists and Startup.

1. Four weeks prior to startup, the Subs and vendors schedule startup and checkout with the GC and CxA. The performance of the pre-functional checklists, startup and checkout are directed and executed by the Sub or vendor. When checking off pre-functional checklists, signatures may be required of other Subs for verification of completion of their work.

2. The CxA shall observe, at minimum, the procedures for each piece of primary equipment, unless there are multiple units, (in which case a sampling strategy may be used as approved by the PM). In no case will the number of units witnessed be less than four on anyone building, nor less than 20% of the total number of identical or very similar units.

3. For lower-level components of equipment, (e.g., VAV boxes, sensors, controllers), the CxA shall observe a sampling of the pre-functional and start-up procedures. The sampling procedures are identified in the commissioning plan.

4. The Subs and vendors shall execute startup and provide the CxA with a signed and dated copy of the completed start-up and pre-functional tests and checklists.

5. Only individuals that have direct knowledge and witnessed that a line item task on the pre-functional checklist was actually performed shall initial or check that item off. It is not acceptable for witnessing supervisors to fill out these forms.

H. Deficiencies, Non-Conformance and Approval in Checklists and Startup.

1. The Subs shall clearly list any outstanding items of the initial start-up and pre-functional procedures that were not completed successfully, at the bottom of the procedures form or on an attached sheet. The procedures form and any outstanding deficiencies are provided to the CxA within two days of test completion.

2. The CxA reviews the report and submits either a non-compliance report or an approval form to the Sub or PM. The CxA shall work with the Subs and vendors to correct and retest deficiencies or uncompleted items. The CxA will involve the PM and others as necessary. The installing Subs or vendors shall correct all areas that are deficient or incomplete in the checklists and tests in a timely manner and shall notify the CxA as soon as outstanding items have been corrected and resubmit an updated start-up report and a Statement of Correction on the original non-compliance report. When satisfactorily completed, the CxA recommends approval of the execution of the checklists and startup of each system to the PM using a standard form.

3. Items left incomplete, which later cause deficiencies or delays during functional testing may result in backcharges to the responsible party. Refer to Part 3.7 herein for details.

4. Failure of any owner provided testing to include at a minimum IAQ and envelope testing will require the offending party to pay for retesting in full including all expenses, rental of testing equipment, labor etc.

3.5 PHASED COMMISSIONING

A. The project will *not* require startup and initial checkout to be executed in phases.

3.6 FUNCTIONAL PERFORMANCE TESTING

A. This sub-section applies to all commissioning functional testing for all divisions.

B. The general list of equipment to be commissioned is found in Section 01 91 13, Part 1.7. The specific equipment and modes to be tested are found in Sections 23 08 11 and 26 08 11.

C. The parties responsible to execute each test are listed with each test in Sections 23 08 11 and 26 08 11.

D. Objectives and Scope. The objective of functional performance testing is to demonstrate that each system is operating according to the documented design intent and Contract Documents. Functional testing facilitates bringing the systems from a state of substantial completion to full dynamic operation. Additionally, during the testing process, areas of deficient performance are identified and corrected, improving the operation and functioning of the systems.

E. In general, each system should be operated through all modes of operation (seasonal, occupied, unoccupied, warm-up, cool-down, part- and full-load) where there is a specified system response. Verifying each sequence in the sequences of operation is required. Proper responses to such modes and conditions as power failure, freeze condition, low oil pressure, no flow, equipment failure, etc. shall also be tested. Specific modes required in this project are given in Sections 23 08 11 and 26 08 11.

F. Development of Test Procedures. Before test procedures are written, the CxA shall obtain all requested documentation and a current list of change orders affecting equipment or systems, including an updated points list, program code, control sequences and parameters. Using the testing parameters and requirements in Sections 23 08 11 and 26 08 11 the CxA shall develop specific test procedures and forms to verify and document proper operation of each piece of equipment and system. Each Sub or vendor responsible to execute a test, shall provide limited assistance to the CxA in developing the procedures review (answering questions about equipment, operation, sequences, etc.). Prior to execution, the CxA shall provide a copy of the test procedures to the Sub(s) who shall review the tests for feasibility, safety, equipment and warranty protection. The CxA may submit the tests to the A/E for review, if requested.

G. The CxA shall review owner-contracted, factory testing or required owner acceptance tests which the CxA is not responsible to oversee, including documentation format, and shall determine what further testing or format changes may be required to comply with the *Specifications*. Redundancy of testing shall be minimized.

H. The purpose of any given specific test is to verify and document compliance with the stated criteria of acceptance given on the test form.

I. Representative test formats and examples (not designed for this facility) are found in the appendices to Divisions 23 and 26. The test procedure forms developed by the CxA shall include (but not be limited to) the following information:

1. System and equipment or component name(s)
2. Equipment location and ID number
3. Unique test ID number, and reference to unique pre-functional checklist and start-up documentation ID numbers for the piece of equipment
4. Date
5. Project name
6. Participating parties

7. A copy of the specification section describing the test requirements
8. A copy of the specific sequence of operations or other specified parameters being verified
9. Formulas used in any calculations
10. Required pre-test field measurements
11. Instructions for setting up the test.
12. Special cautions, alarm limits, etc.
13. Specific step-by-step procedures to execute the test, in a clear, sequential and repeatable format
14. Acceptance criteria of proper performance with a Yes / No check box to allow for clearly marking whether or not proper performance of each part of the test was achieved.
15. A section for comments
16. Signatures and date block for the CxA

J. Test Methods.

1. Functional performance testing and verification may be achieved by manual testing (persons manipulate the equipment and observe performance) or by monitoring the performance and analyzing the results using the control system's trend log capabilities or by stand-alone dataloggers. Sections 23 08 11 and 26 08 11 specify which methods shall be used for each test. The CxA may substitute specified methods or require an additional method to be executed, other than what was specified, with the approval of the PM. This may require a change order and adjustment in charge to the Owner. The CxA will determine which method is most appropriate for tests that do not have a method specified.
2. Simulated Conditions. Simulating conditions (not by an overwritten value) shall be allowed, though timing the testing to experience actual conditions is encouraged wherever practical.
3. Overwritten Values. Overwriting sensor values to simulate a condition, such as overwriting the outside air temperature reading in a control system to be something other than it really is, shall be allowed, but shall be used with caution and avoided when possible. Such testing methods often can only test a part of a system, as the interactions and responses of other systems will be erroneous or not applicable. Simulating a condition is preferable. e.g., for the above case, by heating the outside air sensor with a hair blower rather than overwriting the value or by altering the appropriate setpoint to see the desired response. Before simulating conditions or overwriting values, sensors, transducers and devices shall have been calibrated.
4. Simulated Signals. Using a signal generator which creates a simulated signal to test and calibrate transducers and DDC constants is generally recommended overusing the sensor to act as the signal generator via simulated conditions or overwritten values.
5. Altering Setpoints. Rather than overwriting sensor values, and when simulating conditions is difficult, altering setpoints to test a sequence is acceptable. For example, to see the AC compressor lockout work at an outside air temperature below 55F, when the outside air temperature is above 55F, temporarily change the lockout setpoint to be 2F above the current outside air temperature.
6. Indirect Indicators. Relying on indirect indicators for responses or performance shall be allowed only after visually and directly verifying and documenting, over the range of the tested parameters, that the

indirect readings through the control system represent actual conditions and responses. Much of this verification is completed during pre-functional testing.

7. Setup. Each function and test shall be performed under conditions that simulate actual conditions as close as is practically possible. The Sub executing the test shall provide all necessary materials, system modifications, etc. to produce the necessary flows, pressures, temperatures, etc. necessary to execute the test according to the specified conditions. At completion of the test, the Sub shall return all affected building equipment and systems, due to these temporary modifications, to their pre-test condition.

8. Sampling. Multiple identical pieces of non-life-safety or otherwise non-critical equipment may be functionally tested using a sampling strategy. Significant application differences and significant sequence of operation differences in otherwise identical equipment invalidates their common identity. A small size or capacity difference, alone, does not constitute a difference. The specific recommended sampling rates are specified with each type of equipment in Sections 23 08 11 and 26 08 11. It is noted that no sampling by Subs is allowed in pre-functional checklist execution.

    a. A common sampling strategy referenced in the *Specifications* as the "xx% Sampling—yy% Failure Rule" is defined by the following example.

        1) xx = the percent of the group of identical equipment to be included in each sample.

        2) yy = the percent of the sample that if failing, will require another sample to be tested.

    b. The example below describes a 20% Sampling—10% Failure Rule.

        1) Randomly test at least 20% (xx) of each group of identical equipment. In no case test less than three units in each group. This 20%, or three, constitute the "first sample."

        2) If 10% (yy) of the units in the first sample fail the functional performance tests, test another 20% of the group (the second sample).

        3) If 10% of the units in the second sample fail, test all remaining units in the whole group.

        4) If at any point, frequent failures are occurring and testing is becoming more troubleshooting than verification, the CxA may stop the testing and require the responsible Sub to perform and document a checkout of the remaining units, prior to continuing with functionally testing the remaining units.

K. Coordination and Scheduling. The Subs shall provide sufficient notice to the CxA regarding their completion schedule for the pre-functional checklists and startup of all equipment and systems. The CxA will schedule functional tests through the GC and affected Subs. The CxA shall direct, witness and document the functional testing of all equipment and systems. The Subs shall execute the tests.

L. In general, functional testing is conducted after pre-functional testing and startup has been satisfactorily completed. The control system is sufficiently tested and approved by the CxA before it is used for TAB or to verify performance of other components or systems. The air balancing and water balancing is completed and debugged before functional testing of air-related or water-related equipment or systems. Testing proceeds from components to subsystems to systems. When the proper performance of all interacting individual systems has been achieved, the interface or coordinated responses between systems is checked.

M. Test Equipment. Refer to Section 01 91 13, Part 2 for test equipment requirements.

N. Problem Solving. The CxA will recommend solutions to problems found, however the burden of responsibility to solve, correct and retest problems is with the GC, Subs and A/E.

3.7 DOCUMENTATION, NON-CONFORMANCE AND APPROVAL OF TESTS

A. Documentation. The CxA shall witness and document the results of all functional performance tests using the specific procedural forms developed for that purpose. Prior to testing, these forms are provided to the PM for review and approval and to the Subs for review. The CxA will include the filled out forms in the O&M manuals.

B. Non-Conformance.

1. The CxA will record the results of the functional test on the procedure or test form. All deficiencies or non-conformance issues shall be noted and reported to the PM on a standard non-compliance form.

2. Corrections of minor deficiencies identified may be made during the tests at the discretion of the CxA. In such cases the deficiency and resolution will be documented on the procedure form.

3. Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures. However, the CxA will not be pressured into overlooking deficient work or loosening acceptance criteria to satisfy scheduling or cost issues, unless there is an overriding reason to do so at the request of the PM.

4. As tests progress and a deficiency is identified, the CxA discusses the issue with the executing contractor.

   a. When there is no dispute on the deficiency and the Sub accepts responsibility to correct it:

      1) The CxA documents the deficiency and the Sub's response and intentions, and they go on to another test or sequence. After the day's work, the CxA submits the non-compliance reports to the PM for signature, if required. A copy is provided to the Sub and CxA. The Sub corrects the deficiency, signs the statement of correction at the bottom of the non-compliance form certifying that the equipment is ready to be retested and sends it back to the CxA.

      2) The CxA reschedules the test, and the test is repeated.

   b. If there is a dispute about a deficiency, regarding whether it is a deficiency or who is responsible:

      1) The deficiency shall be documented on the non-compliance form with the Sub's response and a copy given to the Sub representative assumed to be responsible.

      2) Resolutions are made at the lowest management level possible. Other parties are brought into the discussions as needed. Final interpretive authority is with the A/E. Final acceptance authority is with the Project Manager.

      3) The CxA documents the resolution process.

      4) Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency, signs the statement of correction on the non-compliance form and provides it to the CxA. The CxA reschedules the test, and the test is repeated until satisfactory performance is achieved.

5. Cost of Retesting.

   a. The cost for the *Sub* to retest a pre-functional or functional test, if they are responsible for the deficiency, shall be theirs. If they are not responsible, any cost recovery for retesting costs shall be negotiated with the GC.

b. For a deficiency identified, not related to any pre-functional checklist or start-up fault, the following shall apply: The CxA will direct the retesting of the equipment once at no "charge" to the GC for their time. However, the CxA's time for a second retest will be charged to the GC, who may choose to recover costs from the responsible Sub.

c. The time for the CxA to direct any retesting required because a specific *pre-functional* checklist or start-up test item, reported to have been successfully completed, but determined during functional testing to be faulty, will be backcharged to the GC, who may choose to recover costs from the party responsible for executing the faulty pre-functional test.

d. Refer to the sampling section of Section 01 91 13, Part 3.6 for requirements for testing and retesting identical equipment.

6. The Contractor shall respond in writing to the CxA at least as often as commissioning meetings are being scheduled concerning the status of each apparent outstanding discrepancy identified during commissioning. Discussion shall cover explanations of any disagreements and proposals for their resolution.

7. The CxA retains the original non-conformance forms until the end of the project.

8. Any required retesting by any contractor shall not be considered a justified reason for a claim of delay or for a time extension by the prime contractor.

C. Failure Due to Manufacturer Defect. If 10%, or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the PM. In such case, the Contractor shall provide the Owner with the following:

1. Within one week of notification from the PM, the Contractor or manufacturer's representative shall examine all other identical units making a record of the findings. The findings shall be provided to the PM within two weeks of the original notice.

2. Within two weeks of the original notification, the Contractor or manufacturer shall provide a signed and dated, written explanation of the problem, cause of failures, etc. and all proposed solutions which shall include full equipment submittals. The proposed solutions shall not significantly exceed the specification requirements of the original installation.

3. The PM will determine whether a replacement of all identical units or a repair is acceptable.

4. Two examples of the proposed solution will be installed by the Contractor and the GC will be allowed to test the installations for up to one week, upon which the PM will decide whether to accept the solution.

5. Upon acceptance, the Contractor and/or manufacturer shall replace or repair all identical items, at their expense and extend the warranty accordingly, if the original equipment warranty had begun. The replacement/repair work shall proceed with reasonable speed beginning within one week from when parts can be obtained.

D. Approval. The CxA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the CxA and by the PM, if necessary. The CxA recommends acceptance of each test to the PM using a standard form. The PM gives final approval on each test using the same form, providing a signed copy to the CxA and the Contractor.

3.8 OPERATION AND MAINTENANCE MANUALS

A. Standard O&M Manuals.

1. The specific content and format requirements for the standard O&M manuals are detailed in Section 01 78 23. Special requirements for the controls contractor and TAB contractor are found Section 23 08 10, Part 3.8.

2. A/E Contribution. The A/E will include in the beginning of the O&M manuals a separate section describing the systems including:

   a. The design intent narrative prepared by the A/E and provided as part of the bid documents, updated to as-built status by the A/E.

3. CxA Review and Approval. Prior to substantial completion, the CxA shall review the O&M manuals, documentation and redline as-builds *for systems that were commissioned* to verify compliance with the *Specifications.* The CxA will communicate deficiencies in the manuals to the PM or A/E, as requested. Upon a successful review of the corrections, the CxA recommends approval and acceptance of these sections of the O&M manuals to the PM or A/E. The CxA also reviews each equipment warranty and verifies that all requirements to keep the warranty valid are clearly stated. This work does not supersede the A/E's review of the O&M manuals according to the A/E's contract.

B. Commissioning Record in O&M Manuals.

1. The CxA is responsible to compile, organize and index the following commissioning data by equipment into labeled, indexed and tabbed, three-ring binders and deliver it to the GC, to be included with the O&M manuals. Three copies of the manuals will be provided. The format of the manuals shall be:

   a. *Tab I-1* Commissioning Plan

   b. *Tab I-2* Final Commissioning Report (see (B.2) below)

   c. *Tab 01* System Type 1 (chiller system, packaged unit, boiler system, etc.)

   d. *Sub-Tab A* Design narrative and criteria, sequences, approvals for Equipment 1

   e. *Sub-Tab B* Startup plan and report, approvals, corrections, blank pre-functional checklists

   f. *Colored Separator Sheets*—for each equipment type (fans, pumps, chiller, etc.)

   g. *Sub-Tab C* Functional tests (completed), trending and analysis, approvals and corrections, training plan, record and approvals, blank functional test forms and a recommended recommissioning schedule.

   h. *Tab 02* System Type 2.....repeat as per System 1

2. Final Report Details. The final commissioning report shall include an executive summary, list of participants and roles, brief building description, overview of commissioning and testing scope and a general description of testing and verification methods. For each piece of commissioned equipment, the report should contain the disposition of the commissioning authority regarding the adequacy of the equipment, documentation and training meeting the contract documents in the following areas: 1) Equipment meeting the equipment specifications, 2) Equipment installation, 3) Functional performance and efficiency, 4) Equipment documentation and design intent, and 5) Operator training. All outstanding non-compliance items shall be specifically listed. Recommendations for improvement to equipment or operations, future actions, commissioning process changes, etc. shall also be listed. Each non-compliance issue shall be referenced to the specific functional test, inspection, trend log, etc. where the deficiency is documented. The functional performance and efficiency section for each piece

of equipment shall include a brief description of the verification method used (manual testing, BAS trend logs, data loggers, etc.) and include observations and conclusions from the testing.

3. Current Facilities Requirements and Operations and Maintenance Plan - Systems Manual
Prepare and maintain a current facilities requirements and operations and maintenance plan that contains the information necessary to operate the building efficiently. The plan must include the following:
    - A sequence of operations for the building
    - The building occupancy schedule
    - Equipment run-time schedules
    - Setpoints for all HVAC equipment
    - Set lighting levels throughout the building
    - Minimum outside air requirements
    - Any changes in schedules or setpoints for different seasons, days of the week, and times of day
    - A systems narrative describing the mechanical and electrical systems and equipment
    - A preventive maintenance plan for building equipment described in the systems narrative
    - A commissioning program that includes periodic commissioning requirements, ongoing commissioning tasks, and continuous tasks for critical facilities.

4. Other documentation will be retained by the CxA.

3.9 TRAINING OF OWNER PERSONNEL

A. The GC shall be responsible for training coordination and scheduling and ultimately for ensuring that training is completed.

B. The CxA shall be responsible for overseeing and approving the content and adequacy of the training of Owner personnel for commissioned equipment.

1. The CxA shall interview the facility manager and lead engineer to determine the special needs and areas where training will be most valuable. The Owner and CxA shall decide how rigorous the training should be for each piece of commissioned equipment. The CxA shall communicate the results to the Subs and vendors who have training responsibilities.

2. In addition to these general requirements, the specific training requirements of Owner personnel by Subs and vendors is specified in Division 15 and 16.

3. Each Sub and vendor responsible for training will submit a written training plan to the CxA for review and approval prior to training. The plan will cover the following elements:

    a. Equipment (included in training)

    b. Intended audience

    c. Location of training

    d. Objectives

    e. Subjects covered (description, duration of discussion, special methods, etc.)

    f. Duration of training on each subject

    g. Instructor for each subject

h. Methods (classroom lecture, video, site walk-through, actual operational demonstrations, written handouts, etc.)

i. Instructor and qualifications

4. For the primary HVAC equipment, the Controls Contractor shall provide a short discussion of the control of the equipment during the mechanical or electrical training conducted by others.

5. The CxA develops an overall training plan and coordinates and schedules, with the PM and GC, the overall training for the commissioned systems. The CxA develops criteria for determining that the training was satisfactorily completed, including attending some of the training, etc. The CxA recommends approval of the training to the PM using a standard form. The PM also signs the approval form.

6. At one of the training sessions, the CxA presents a __1__ hour presentation discussing the use of the blank functional test forms for re-commissioning equipment.

7. Video taping of the training sessions will be provided by the GC with tapes cataloged by the GC and added to the O&M manuals.

8. The mechanical design engineer shall at the first training session present the overall system design concept and the design concept of each equipment section. This presentation shall be __2___ hours in length and include a review of all systems using the simplified system schematics (one-line drawings) including chilled water systems, condenser water or heat rejection systems, heating systems, fuel oil and gas supply systems, supply air systems, exhaust system and outside air strategies.

3.10 DEFERRED TESTING

A. Unforeseen Deferred Tests. If any check or test cannot be completed due to the building structure, required occupancy condition or other deficiency, execution of checklists and functional testing may be delayed upon approval of the PM. These tests will be conducted in the same manner as the seasonal tests as soon as possible. Services of necessary parties will be negotiated.

B. Seasonal Testing. During the warranty period, seasonal testing (tests delayed until weather conditions are closer to the system's design) specified in Section 23 08 11 shall be completed as part of this contract. The CxA shall coordinate this activity. Tests will be executed, documented and deficiencies corrected by the appropriate Subs, with facilities staff and the CxA witnessing. Any final adjustments to the O&M manuals and as-builds due to the testing will be made.

3.11 WRITTEN WORK PRODUCTS

A. The commissioning process generates a number of written work products described in various parts of the *Specifications.* The *Commissioning Plan,* lists all the formal written work products, describes briefly their contents, who is responsible to create them, their due dates, who receives and approves them and the location of the specification to create them. In summary, the written products are:

Product	Developed By
1. Final commissioning plan	CxA
2. Cx meeting minutes	CxA
3. Commissioning schedules	CxA with GC and CM
4. Equipment documentation submittals	Subs

5.	Sequence clarifications		Subs and A/E as needed
6.	Pre-functional checklists		CxA
7.	Startup and initial checkout plan		Subs and CxA (compilation of existing documents)
8.	Startup and initial checkout forms filled out	Subs	
9.	Final TAB report		TAB
10.	Issues log (deficiencies)		CxA
11.	Commissioning Progress Record		CxA
12.	Functional test forms		CxA
13.	Systems Manual		CxA
14.	Filled out functional tests		CxA
15.	O&M manuals	Subs	
16.	Overall training plan		CxA and CM
17.	Specific training agendas		Subs
18.	Final commissioning report	CxA	
19.	Misc. approvals		CxA

3.12 IAQ TESTING

A. The general contractor will assist the commissioning agent in scheduling the IAQ testing. Prior to the testing all finishes shall be complete for at least 72 hours, the building will be purged with as much conditioned outside air as possible and the building will be unoccupied.

B. The building will remain unoccupied during the testing (approximately 8 hours) and the HVAC systems will be run normally as if the building was occupied.

C. The cost of retesting will be born by the offending party if the IAQ test is unsuccessful.

END OF SECTION

DIVISION

03

CONCRETE

SECTION 03 30 00 - CAST-IN-PLACE CONCRETE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and Divisions 00 & 01 Specifications apply to this Section.

1.2 SUMMARY

A. Section Includes: Cast-in-place concrete, including formwork, reinforcing, mix design, placement procedures, and finishes, for the following:
   1. Pile caps.
   2. Foundations, grade beams, and walls.
   3. Floor slabs.
   4. Equipment pads and bases.

B. Related Sections:
   1. Division 01Section – “Submittal Procedures”.
   2. Division 22: Equipment bases.
   3. Division 5 Section: “Steel Decking”.
   4. Division 31 Section: “Steel Pipe Piles”

1.3 SUBMITTALS

A. Product Data: Submit manufacturer's descriptive literature and application recommendations for reinforcement and forming accessories, admixtures, patching compounds, waterstops, joint systems, curing compounds, and other proprietary materials and items if requested by Architect.

B. Shop Drawings: Submit details for fabricating, bending, and placing concrete reinforcement. Comply with ACI 315 "Manual of Standard Practice for Detailing Reinforced Concrete Structures". Show bar schedules, spacing, bent bar diagrams, and arrangement of concrete reinforcement, ties, and stirrups. Include special reinforcing for openings through concrete.

C. Mix Design Data: Submit laboratory test reports or evaluation reports for concrete materials and each proposed concrete mix.
   1. The Contractor shall engage a testing agency acceptable to Architect to perform material evaluation tests and to design concrete mixes.
   2. Submit written mix design data at least 15 days prior to scheduled start of concrete placement.
   3. Do not begin concrete production until mix designs have been reviewed by the Architect.
   4. Submit aggregate test data or LADOTD acceptance information indicating no potential for alkali-silica reactions.

D. Proposed construction joint locations at slabs.

1.4 QUALITY ASSURANCE

A. Codes and Standards: Comply with provisions of the following, except where more stringent requirements are shown or specified:
   1. ACI 301, "Specifications for Structural Concrete for Buildings".

2. ACI 318, "Building Code Requirements for Reinforced Concrete" IBC 2021 referenced Edition.
3. ACI 315, “Manual of Standard Practice for Detailing Reinforced Concrete Structures”.
4. 2021 International Building Code (IBC).
5. Concrete Reinforcing Steel Institute (CRSI) "Manual of Standard Practice".

B. Concrete Testing Service: As specified in PART 3 of this Section.

PART 2 – PRODUCTS

2.1 FORM MATERIALS

A. General: Furnish form materials capable of supporting construction loads in addition to weight of fresh concrete, without displacement or excessive deflection.

B. Forms for Exposed Concrete: Metal, or other acceptable panel-type materials to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable sizes to minimize number of joints. Provide Class A formwork.

C. Forms for Unexposed Concrete: Plywood, lumber, metal, or another acceptable material. Provide lumber dressed on at least two edges and one side for tight fit. Provide Class C formwork.

C. Form Release Agent: Commercial formulation that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

D. Form Ties: Factory-fabricated, adjustable-length, removable or snap-off metal form ties that will leave no metal closer than 1-1/2 inches to the exposed concrete surface.

2.2 REINFORCING MATERIALS

A. Reinforcing Bars: ASTM A 615, Grade 60, deformed.

B. Welded Wire Fabric: ASTM A 185, welded steel wire fabric sheets.

C. Supports for Reinforcement: Bolsters, chairs, spacers, and other devices for spacing, supporting, and positioning reinforcing bars and welded wire fabric in place. Use wire bar-type supports complying with CRSI specifications.
   1. For slabs-on-grade, use supports with sand plates or horizontal runners.
   2. For exposed-to-view concrete surfaces where legs of supports are in contact with forms, provide supports with legs that are protected by plastic (CRSI, Class 1) or stainless steel (CRSI, Class 2).

2.3 CONCRETE MATERIALS

A. Portland Cement: ASTM C 150, Type I/II.

B. Fly Ash: ASTM C 618, Type F.

C. Normal-Weight Aggregates: Normal-Weight, ASTM C 33, except local aggregates proven by special tests or actual service to produce concrete of adequate strength and durability may be used, subject to acceptance by Architect.

D. Water: Potable.

E. Slag: Not acceptable.

F. Micro-Fiber Reinforcement:
   1. Synthetic Fiber: Fibrillated polypropylene fibers engineered and designed for use in concrete, complying with ASTM C 1116, Type III, ½ to 1-inch (13 to 25mm) long.
   2. Products: Subject to compliance with requirements, provide one of the following:
      a. Fibrillated Fibers:
         1) Fibrasol F; Axim Concrete Technologies
         2) Fibermesh; Fibermesh, Div. of Synthetic Industries

3) Forta CR; Forta Corporation
4) Grace Fibers; W.R. Grace & Co., Construction Products Division

2.4 ADMIXTURES

A. General: Use only admixtures that have been accepted in mix designs. Use admixtures in accordance with manufacturer's directions and recommendations. Use water-reducing admixture in concrete, as necessary for placement and workability. Provide concrete admixtures that are compatible with other concrete ingredients and that contain not more than 0.1 percent chloride ions.
1. Use accelerating admixture in concrete placed at ambient temperatures below 50 deg F (10 deg C).
2. Use high-range water-reducing admixture (super plasticizer) in pumped concrete, concrete with water-cement ratios below 0.50, and elsewhere only as instructed.
3. Use air-entraining admixture in exterior exposed concrete unless otherwise indicated, to result in concrete at point of placement having total air content from 2 to 4 percent.
4. Provide a shrinkage inhibiting admixture at all slabs.
5. Provide a shrinkage inhibiting admixture and micro-fiber reinforcing at all exterior pile-supported slabs.

B. Air-Entraining Admixture: ASTM C 260.

1. Products: Subject to compliance with requirements, provide one of the following:
a) Air-Mix or Perma-Air, Euclid Chemical Co.
b) Darex AEA or Daravair, W.R. Grace & Co.
c) Master Air AE-90, BASF Corporation.
d) Sika AER, Sika Corp.

C. Water-Reducing Admixture: ASTM C 494, Type A.

1. Products: Subject to compliance with requirements, provide one of the following:
a) Eucon WR-75, Euclid Chemical Co.
b) WRDA, W.R. Grace & Co.
c) Master Pozzolith, BASF Corporation.
d) Plastocrete 161, Sika Corp.

D. High-Range Water-Reducing Admixture: (Superplasticizer) ASTM C 494, Type F or Type G. All pumped concrete shall contain a high range water-reducer (Superplasticizer) chloride free.

1. Products: Subject to compliance with requirements, provide one of the following:
a) Eucon 37, Euclid Chemical Co.
b) WRDA 19 or Daracem, W.R. Grace & Co.
c) Master Rheobuild 1000 or Master Glenium, BASF Corporation.
d) Sikament 300, Sika Corp.

E. Water-Reducing, Accelerating Admixture: ASTM C 494, Type E.

1. Products: Subject to compliance with requirements, provide one of the following:
a) Accelguard 80, Euclid Chemical Co.
b) Daraset, W.R. Grace & Co.
c) Master Set AC-534 or Master Set FP-20, BASF Corporation.

F. Water-Reducing, Retarding Admixture: ASTM C 494, Type D

1. Products: Subject to compliance with requirements, provide one of the following:

a) Eucon Retarder 75, Euclid Chemical Co.
b) Daratard-17, W.R. Grace & Co.
c) Master Set R or Master Set DELVO, BASF Corporation.
d) Plastiment, Sika Corporation.

G. Shrinkage Inhibiting Admixture: Shrinkage reducing admixture shall be Master LIFE SRA 20 manufactured by BASF Corporation or pre-bid approved equal. Dosage rate shall be in accordance with the manufacturer's recommendations for the designated usage with a maximum shrinkage allowance of .025% but not less than 1.5 gal./yd.

H. Crystalline waterproofing admixture shall be Xypex, Caltite, or prior approved equal. Admixture is required for concrete mixes at elevator pit walls, elevator pit slabs, curbs, pool slabs & walls, and where otherwise indicated. Dosage shall be as recommended by the manufacturer for a water head pressure of 6ft. minimum.

2.5 RELATED MATERIALS

A. Expansion Joint Filler: Non-bituminous, non-extruding cork or rubber joint filler, ASTMD1752. Joint sealants are specified in Division 07.

B. Self-Expanding Strip Waterstops: Manufactured rectangular or trapezoidal strip, sodium bentonite or other hydrophilic material for adhesive bonding to concrete.
1. Products: Subject to compliance with requirements, provide one of the following:
a) Volclay Waterstop-RX; Colloid Environmental Technologies Co.
b) Conseal CS-231; Concrete Sealants Inc.
c) Swellseal Joint; De Neef Construction Chemicals (U.S.) Inc.
d) Hydrotite; Greenstreak.
e) Mirastop; Mirafi Moisture Protection, Div. of Royal Ten Cate (USA), Inc.
f) Adeka Ultra Seal; Mitsubishi International Corporation.
g) Superstop; Progress Unlimited Inc.

C. Underslab Polyethylene Sheet: Provide 15 mil STEGO-WRAP with manufacturer's pressure sensitive adhesive tape beneath interior slabs. 8 mil polyethylene sheet beneath exterior pile-supported slabs.

D. Concrete Dressing: ARDEX CD Concrete Dressing.

2.6 CURING MATERIALS

A. Absorptive Cover: Burlap cloth weighing approximately 9 oz. per sq. yd., complying with AASHTO M 182, Class 2.

B. Moisture-Retaining cover: Waterproof paper, polyethylene film or polyethylene-coated burlap, complying with ASTM C 171.

C. Curing Compound: ASTM C309 dissipating, water-based and compatible with floor coverings and coatings.

2.7 SEALER

A. Seal Hard – L&M Chemical Co. or Ashford Formula – Curecrete Chemical Co., Inc.

2.8 ADHESIVE

A. Epoxy Adhesive: ASTM C 881, two-component material suitable for use on dry or damp surfaces. Provide material type, grade, and class to suit Project requirements.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a) HIT-HY 200, HILTI.
      b) SET-XP, Simpson Strong-Tie
      c) Sikadur 32 Hi-Mod, Sika Corp.

2.9 PROPORTIONING AND DESIGNING MIXES

A. General: Prepare design mixes for each type and strength of concrete by either laboratory trial batch or field experience methods as specified in ACI 301. Comply with "SUBMITTALS" provisions in PART 1 of this Section.
   1. Limit use of fly ash to not exceed 25 percent of cement content by weight.
   2. Limit water/cement ratio of concrete exposed to freezing to 0.45.
   3. Limit water/cement ratio of first floor slab concrete to 0.45.

B. Slump Limits: Design mixes for concrete slump at point of placement as follows:
   1. Ramps, slabs, and sloping surfaces: Not more than 3 inches.
   2. Reinforced foundation systems: Not less than 1 inch and not more than 3 inches.
   3. Concrete containing high-range water-reducing admixture (super plasticizer): Not more than 8 inches after adding admixture to site-verified 2-to-3-inch slump concrete.
   4. Other concrete: Not more than 4 inches.

C. Adjustment to Concrete Mixes: Adjust mix design when characteristics of materials, job conditions, weather, test results, or other circumstances warrant. Do not use revised mix designs until test data and strength results have been submitted to and accepted by the Architect.

2.10 CONCRETE MIXING

A. Ready-Mixed Concrete: Use ready-mixed concrete throughout, unless otherwise approved by the Architect. Comply with requirements of ASTM C 94, and as specified.

B. Hot Weather Mixing: When air temperature is between 85 deg F (30 deg C) and 90 deg F (32 deg C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes, and when air temperature is above 90 deg F (32 deg C), reduce mixing and delivery time to 60 minutes.

PART 3 – EXECUTION

3.1 GENERAL

A. Coordination: Coordinate the installation of joint materials, vapor retarder/barrier, and other related materials with placement of forms and reinforcing steel.

B. Tolerances: Control form construction, reinforcement placement, and placing and finishing concrete to meet the following requirements in the completed construction. Provide more stringent tolerances where required at interfaces with adjoining materials as required to achieve the indicated details of construction.

   1. Slab Surfaces – Unless otherwise indicated the maximum variation from true plane and levelness of the first-floor slab shall be as follows: Ff25; Fl20. Coordinate more stringent flatness and levelness requirements at medical equipment with the appropriate vendors.

   2. Other Exposed Surfaces and Edges -
      a) Cross section dimension: Minus ¼", plus ½".

b) Variation from indicated level: ±¼" in 10 feet; ± ½" max.
c) Variation from plumb: ±¼" in 10 feet; ±½" max.
d) Variation from true line: ±¼" in 10 feet; ±3/8" in 20 feet; ±½" max.
e) Alignment of columns and walls (bottom versus top): ±½".
f) Location in plan: ±½" in 20 feet; ±3/4" max.

3. Reinforcement Placement –
   a) Concrete cover: Plus ¼", minus 0.
   b) Spacing of parallel bars: ±¼".
   c) Length of bars: ±1".
   d) Vertical or horizontal displacement: One bar diameter.

3.2 FORMS

A. General: Design, erect, support, brace, and maintain formwork to resist wind loads and to support vertical, lateral, static, and dynamic loads of concrete and subsequent operations until concrete structure can support such loads. Construct formwork so concrete members and structures are of correct size, shape, alignment, elevation, and position.

B. Formwork Tolerances: Maintain formwork construction tolerances and surface irregularities within ACI 347 limits:
   1. Provide Class A tolerances for concrete surfaces exposed to view.
   2. Provide Class C tolerances for other concrete surfaces.

C. Embedded Items: Set and build into formwork reglets, dovetail slots, anchorage devices, sleeves, and other embedded items for work that is attached to or supported by cast-in-place concrete. Use setting drawings, diagrams, instructions, and directions provided by suppliers of items to be attached.

D. Formwork Construction: Fabricate forms for easy removal without hammering or prying against concrete surfaces. Kerf wood inserts for keyways, reglets, recesses, and similar features for easy removal.
   1. Provide necessary temporary openings for clean-outs and inspections before and during concrete placement. Locate temporary openings at inconspicuous locations.
   2. Chamfer exposed corners and edges as indicated.
   3. Apply form release agent or wet forms as necessary.

E. Provisions for Other Trades: Provide openings in formwork to accommodate work of other trades. Accurately place and securely support sleeves and other items built into forms.
   1. The forming Contractor shall coordinate slab and beam blockouts and embedded weld plates with the exterior wall manufacturer.

F. Forms for Slabs: Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and contours in finished surfaces. Provide and securely support screed strips for use with strike-off templates or compacting-type screeds.

G Cleaning and Tightening: Thoroughly clean forms and adjacent surfaces prior to concrete placement. Retighten forms and bracing during placement if necessary to prevent mortar leaks and maintain proper alignment.

H. Under Slab Vapor Barrier: Continuous installation under slabs with continuous taped seams and taped penetrations.

I. Earth Cuts as Forms: All concrete construction must be non-earth formed. Earth cuts will only be acceptable in lieu of forms where Drawings indicate slanted sides of a concrete member.

The Contractor shall provide necessary dewatering or dry bottoms, without additional cost to the Owner.

3.3 REINFORCEMENT

A. General: Comply with Concrete Reinforcing Steel Institute's recommended practice for details and methods of reinforcement placement and supports.
   1. Clean reinforcement of loose rust and mill scale, earth, ice, and other materials that reduce or destroy bond with concrete.
   2. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcing by metal chairs, runners, bolsters, spacers, and hangers, and wire ties. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.
   3. Maintain minimum coverage as indicated.

B. Welded Wire Fabric: Install welded wire fabric sheets in lengths as long as practicable. Lap two full squares and tie splices with wire. Offset laps of adjoining widths to prevent continuous laps in both directions.

C. Micro-Fiber Reinforcement: Add to mix at a rate of 1.5 lb. per cubic yard. Fiber reinforcement is required in all exterior exposed-to-view, pile supported concrete slabs.

D. Deformed Bar Anchors: Weld per manufacturer’s printed instructions.

3.4 JOINTS

A. Construction Joints: Locate and install construction joints so they do not impair strength or appearance of the structure.
   1. Provide formed keyways at least 1-1/2 inches deep in construction joints.
   2. Place construction joints perpendicular to main reinforcement and continue reinforcement across construction joints unless indicated otherwise.
   3. Use bonding agent on concrete surfaces that will be joined with fresh concrete.

3.5 CONCRETE PLACEMENT

A. General: Comply with ACI 304, "Guide for Measuring, Mixing, Transporting, and Placing Concrete". Deposit concrete continuously so that no new concrete will be placed on concrete that has hardened sufficiently to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as specified.
   1. Deposit concrete to avoid segregation at its final location.
   2. Maintain reinforcing in proper position during concrete placement.

B. Consolidation: Consolidate concrete by mechanical vibrating equipment supplemented by hand-spading, rodding, or tamping in compliance with ACI 309. Do not use vibrators to transport concrete inside forms. Limit vibration to time necessary to consolidate concrete and embed reinforcement and other items without causing mix to segregate.

C. Placing Concrete Slabs: Deposit and consolidate concrete slabs in a continuous operation, within limits of construction joints. Bring slab surfaces to correct level with a straightedge and strike off. Use bull floats or darbies to smooth surface free of humps or hollows. Do not disturb slab surfaces prior to beginning finishing operations.

D. Cold-Weather Placement: Comply with ACI 306 and the following. Protect concrete work from physical damage or reduced strength from frost, freezing actions, or low temperatures.
   1. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.

2. Do not use calcium chloride, salt, or other antifreeze agents or chemical accelerators unless otherwise accepted in mix designs.

E. Hot-Weather Placement: Comply with ACI 305 and the following. Protect concrete work from reduced strength and impaired quality from too-rapid drying and elevated temperature.
1. Water-fog spray forms, reinforcing steel, and subgrade just before placing concrete. Keep subgrade moisture uniform without puddles or dry areas.
2. Use water-reducing retarding admixture when required by high temperatures, low humidity, or other adverse placing conditions, if acceptable to Architect.

3.6 FORMED SURFACES FINISHES

A. Verify formed surface finish requirements with Project Architect prior to construction.

B. Rough-Formed Finish: Provide concrete surfaces not exposed to view in the finished construction with texture imparted by form material used, with tie holes and defective areas repaired and patched, and fins and other projections exceeding ¼ inch in height rubbed down or chipped off.

C. Smooth-Formed Finish: Provide concrete surfaces exposed to view or to be covered with a coating or covering material applied directly to concrete (such as waterproofing, dampproofing, veneer plaster, or similar system), with an as-cast surface obtained with selected form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch defective concrete areas. Fins and other projections shall be completely removed and smoothed.

D. Smooth-Rubbed Finish: Provide smooth-rubbed finish within 24 hours after form removal on concrete surfaces to be painted or left exposed at occupied rooms and spaces in the completed construction. In addition to smooth-formed finish as specified, moisten concrete surfaces and rub with carborundum brick or another abrasive to produce a uniform color and texture. Do not apply cement grout other than that created by the rubbing process.

E. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike-off smooth and finish with a texture matching adjacent formed surfaces.

F. Exterior, exposed-to-view, vertical concrete surfaces at grade beams, walls, and slab edges shall be surfaced with the specified concrete dressing product. The concrete dressing shall extend 6” below finish grade elevations to provide a uniform visual appearance as a final product. Preparation and installation shall be in strict conformance with the product manufacturer’s printed instructions.

3.7 MONOLITHIC SLAB FINISHES

A. General: Verify required slab finishes with Architect and flooring specifications before concrete is placed. At epoxy floor areas provide slab finish compatible with manufacturer and installer requirements (refer to epoxy flooring specification). Slope surfaces uniformly to drains where required.

B. Scratch Finish: Apply scratch finish to monolithic slab surfaces to receive concrete floor topping or mortar setting beds for tile, Portland cement terrazzo, and other bonded applied cementitious finish flooring material, and where indicated. After leveling, roughen surface before final set with stiff brushes, brooms, or rakes.

C. Float Finish: Apply float finish to monolithic slab surfaces to receive trowel finish and other finishes as specified; slab surfaces to be covered with membrane or elastic waterproofing, membrane or elastic roofing and roof insulation, or sand-bed terrazzo; and where indicated.
   1. After screeding, consolidating, and leveling concrete slabs, do not work surface until ready for floating. Begin floating, using float blades or float shoes only, when surface water has disappeared and concrete has stiffened sufficiently to permit operation of power-driven floats. Consolidate surface with power-driven floats or by hand-floating if area is small or inaccessible to power units. Produce a uniform, smooth, granular texture.
   2. Finish surfaces to tolerances specified. Cut down high spots and fill low spots; refloat such corrections.

D. Trowel Finish: Apply a trowel finish to monolithic slab surfaces exposed to view and slab surfaces to be covered with resilient flooring, carpet, adhesive-set ceramic or quarry tile, paint, or other thin-film coating system or adhesive-set finish.
   1. After floating, begin first trowel-finish operation using a power-driven trowel when surface produces a ringing sound as trowel is moved over surface. Consolidate concrete surface by final hand-troweling operation, free of trowel marks, uniform in texture and appearance.
   2. Finish surfaces to tolerances specified. After concrete has hardened, grind smooth surface defects that would telegraph through applied floor covering system.

E. Trowel and Fine Broom Finish: Where ceramic or quarry tile is to be installed with thin-set mortar, apply a trowel finish as specified, then immediately follow by slightly scarifying the surface with a fine broom.

F. Nonslip Broom Finish: Apply a nonslip broom finish to exterior concrete platforms, steps, and ramps, and elsewhere as indicated. Uniformly slope exterior surfaces to eliminate "bird baths". Immediately after float finishing, slightly roughen concrete surface by brooming with fiber-bristle broom perpendicular to main traffic route.

G. Provide specified Sealer and Densifier at concrete slabs indicated as “sealed concrete” on the Architectural floor finish schedules or drawings.

3.8 MISCELLANEOUS CONCRETE ITEMS

A. Filling In: Fill in holes and openings left in concrete structures for passage of work by other trades, unless otherwise shown or directed, after work of other trades is in place. Mix, place, and cure concrete as specified to blend with in-place construction. Provide other miscellaneous concrete filling shown or required to complete work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment to template at correct elevations. Comply with diagrams or templates of manufacturer furnishing machines and equipment.

D. Moisture Testing: Moisture testing shall be performed in accordance with floor covering and coating specifications and manufacturer’s requirements.

3.9 CONCRETE CURING AND PROTECTION

A. General: Protect freshly placed concrete from physical damage, premature drying and excessive cold or hot temperatures.

B. Initial Curing: Begin curing as soon as free water has disappeared from concrete surface after placing and finishing. Continue curing for not less than 7 days.

C. Curing Methods: Cure concrete by one or a combination of the following methods.
1. Continuous water-fog spray, or completely cover with specified absorptive cover, thoroughly saturated with water and kept continuously wet, with sides and ends lapped 4 inches.
2. Cover with moisture-retaining cover with sides and ends lapped at least 3 inches and sealed by waterproof tape or adhesive. Immediately repair any holes or tears during curing period using cover material and waterproof tape.
3. Curing Compound in compliance with manufacturer's requirements.

D. Curing Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and similar surfaces, by moist curing with forms in place for the full curing period or until forms are removed. After forms are removed, continue curing by methods specified above, as applicable.

3.10 REMOVING FORMS

A. General: Formwork not supporting weight of concrete, such as sides of beams, walls, columns, and similar elements, may be removed 24 hours after placing concrete, provided concrete is sufficiently hard to not be damaged by form-removal operations, and provided curing and protection operations are maintained. Formwork supporting weight of concrete, such as beam soffits, joists, slabs, and other structural elements, may be removed when concrete has attained at least 75 percent of specified 28-day compressive strength.

B. Form Re-Use: Clean and repair surfaces of forms to be reused. Split, frayed, delaminated, or otherwise damaged form material will not be acceptable. Apply new form-coating compound.

C. Extending Formed Surfaces: When forms are extended for successive concrete placement, thoroughly clean forms and in-place concrete surfaces, remove fins and latence, and tighten forms to close joints. Align and secure forms to avoid offsets.

3.11 CONCRETE REPAIRS

A. Patching Defective Areas: Immediately after removing forms, repair and patch defective areas with cement mortar consisting of one-part Portland cement to 2-1/2 parts fine aggregate passing a No. 16 mesh sieve, using only the amount of water necessary for handling and placing.
1. Patch voids over ¼ inch in any dimension and holes left by tie rods and bolts. Cut down to solid concrete, but in no case to a depth less than 1 inch. Make edges of cuts perpendicular to the concrete surface.
2. Thoroughly clean, dampen with water, and brush-coat the area to be patched with bonding agent. Place patching mortar before bonding agent has dried.
3. Correct high areas in formed and unformed surfaces by grinding after concrete has cured at least 14 days.
4. Correct low areas in unformed surfaces during or immediately after completing surface finishing operations by cutting out low areas and replacing with fresh concrete. Finish repaired areas to blend into adjacent concrete. Proprietary underlayment compounds may be used when acceptable to Architect.

B. Replacing Defective Areas: Remove and replace defective concrete if defects cannot be satisfactorily patched. Defects include color and texture irregularities, cracks, spalls, air bubbles, honeycomb, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.
   1. Remove defective areas with clean, square cuts and expose reinforcing steel with at least 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials to provide concrete of same type or class as original concrete. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
   2. Perform structural repairs with prior approval of Architect for method and procedure, using specified epoxy adhesive and mortar.

3.12 FIELD QUALITY CONTROL TESTING

A. General: The Independent Testing Lab shall perform tests and submit test reports. Minimum testing will be as specified below. Additional testing may be ordered by the Owner or Architect.

B. Minimum Testing: Sampling and testing for quality control during concrete placement will include the following.
   1. Sampling Fresh Concrete: ASTM C 172, except modified for slump to comply with ASTM C 94.
   2. Slump: ASTM C 143; one test at point of discharge for each day's pour of each type of concrete; additional tests when concrete consistency seems to have changed.
   3. Compression Test Specimen: ASTM C 31; one set of four standard cylinders for each compressive-strength test, unless otherwise directed.
   4. Compressive-Strength Tests: ASTM C 39; one set for each day's pour exceeding 5 cu. yd. plus additional sets for each 50-cu. yd. more than the first 50 cu. yd. of each concrete class placed in any one day; one specimen tested at 7 days, two specimens tested at 28 days, and one specimen retained in reserve for later testing if required.

C. Random Sampling: When specified frequency of testing will provide fewer than five sets of cylinders for a given class of concrete, obtain samples and conduct testing from at least five randomly selected batches or from each batch if fewer than five are used.

D. Reporting: Test results will be reported in writing to Architect, Structural Engineer, ready-mix producer, and Contractor within 24 hours after tests.

E. Additional Tests: The testing agency may make additional tests of in-place concrete when test results indicate specified concrete strengths and other characteristics have not been attained in the structure, as directed by Architect, by cored cylinders complying with ASTM C 42, or by other methods as directed.

F. Flatness-Levelness: Flatness and Levelness testing at the first floor slab is required. Levelness testing is required at slabs on steel deck.

END OF SECTION 03 30 00

SECTION 03 33 01 – SHEET VAPOR BARRIERS

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:

1. Vapor barrier and installation accessories for installation under concrete slabs.

B. Related Sections:

1. Section 03 30 00 – Cast-in-Place Concrete.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM E1745 – 11, *Standard Specification for Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs.*
2. ASTM E1643 – 11, *Standard Practice for Installation of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs.*

1.3 SUBMITTALS

A. Quality Assurance/Control Submittals:

1. Product Data for vapor barrier and accessories.
2. Manufacturer's installation instructions for placement, seaming, and penetration repair.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Vapor barrier shall meet the following requirements:

1. Permeance: Less than 0.01 perms [grains/(ft²·hr·in. Hg)] when tested in accordance with ASTM E1745, including mandatory conditioning procedures per Section 7.1 (7.1.1–7.1.5).
2. Strength: ASTM E1745, Class A.
3. Minimum Thickness: 15 mils.

B. Acceptable Products: Subject to compliance with requirements, provide one of the following:

1. Stego Industries – Stego Wrap Vapor Barrier.
2. Reef Industries – Vaporguard.
3. Sundance Inc. – Sundance Vapor Barrier.
4. Or approved equal.

2.2 ACCESSORIES

A. Seam/Penetration Tape: Manufacturer's standard tape for seaming overlapping sheets and sealing penetrations.

B. Mastic: Manufacturer's standard mastic for sealing around penetrations too tight or small to receive tape.

C. Penetration/Edge Seal: Manufacturer's standard termination system for sealing vapor barrier edges in accordance with manufacturer's installation instructions (e.g., Stego Crete Claw).

PART 3 – EXECUTION

3.1 PREPARATION

A. Ensure subsoil is approved by Architect or Geotechnical Engineer.

B. Level and compact base material prior to vapor barrier installation.

3.2 INSTALLATION

A. Install vapor barrier in accordance with ASTM E1643 and manufacturer's instructions.

B. Unroll vapor barrier with the longest dimension parallel to the direction of concrete placement; face laps away from the direction of placement when possible.

C. Extend vapor barrier over footings and grade beams to the extent acceptable to the Structural Engineer, or terminate at impediments such as dowels or waterstops.

D. Seal perimeter of vapor barrier using one of the following:

1. Seal to slab perimeter/edge with manufacturer's termination system such as Stego Crete Claw; remove dirt, debris, and mud from termination prior to concrete placement.

2. Seal to footing/grade beam with double-sided tape, termination bar, or both.

E. Overlap joints a minimum of 6 inches and seal with manufacturer's tape.

F. Apply tape/termination system only to clean and dry vapor barrier surfaces.

G. Seal all penetrations (including pipes) per manufacturer's instructions. No penetrations are permitted except for reinforcing steel and permanent utilities.

H. Repair damaged areas by cutting patches of vapor barrier to overlap the damaged area by a minimum of 6 inches on all sides; tape all seams.

I. Protect installed vapor barrier from damage until concrete placement.

END OF SECTION 03 30 01

SECTION 03 54 00 – CEMENT-BASED FINISHING UNDERLAYMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. This is the recommended specification for ARDEX SD-F Feather Finish, Self-Drying, Cement-Based Finishing Underlayment

2. ARDEX SD-F Feather Finish, Self-Drying, Cement-Based Finishing Underlayment.

B. Related Sections include the following:

1. Division 09 Flooring Sections

1.3 QUALITY ASSURANCE

A. Provide ARDEX SD-F Feather Finish from as manufactured by ARDEX INC., 400 Ardex Park Drive, Aliquippa, PA 15001.

B. Underlayment shall be able to be installed from a true featheredge to ½" thick over large areas and to any thickness in well-defined areas such as filling holes or gouges and for making ramps.

C. Underlayment shall not require that the substrate be primed.

D. Underlayment shall be formulated with a Portland cement matrix, which develops a compressive strength of 4200 psi when tested in accordance with ASTM C109/mod. (air-cure only).

E. Underlayment shall be able to be covered by most finish flooring materials as soon as the surface hardens (usually within 1 hour). Parquet, athletic flooring and floor covering requiring specialized adhesives can be installed after 16 hours.

F. Underlayment shall not require the addition of latex or any additive other than potable water.

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in their original, unopened packages and protect from extreme temperatures and moisture. 03540-2 10/8/12

1. SITE CONDITIONS

B. ARDEX SD-F is a cementitious material. Observe the basic rules of concrete work. Do not install below 50°F surface temperature. Install quickly if floor is warm and follow hot weather precautions available from the ARDEX Technical Service Department. Never mix with cement or additives other than ARDEX-approved products.

PART 2 - PRODUCTS

2.1 MATERIALS

A. The Portland cement-based, self-drying, trowelable finishing underlayment shall be ARDEX SD-F Feather Finish.

B. No primer required over all recommended substrates.

C. Water shall be clean, potable, and sufficiently cool (not warmer than 70°F).

2.2 MIX DESIGNS

A. Mix ARDEX SD-F powder with water to the desired trowelable consistency. The recommended mixing ratio is 2 parts powder to 1 part water by volume.

B. Apply ARDEX SD-F to the prepared substrate using a steel trowel using sufficient pressure to achieve the desired thickness and to provide a perfect featheredge, where necessary.

C. Install ARDEX SD-F from a true featheredge up to a maximum thickness of ½ inch or as required to fill gouges, scratches or small holes.

D. When the underlayment can be worked on without adversely affecting the surface, proceed with the installation of floor covering. Note: The surface of the ARDEX SD-F does not have to be dry to receive ceramic tile, carpet, or vinyl floor coverings. It only needs to be hard enough to permit application of the adhesive with a notches trowel without marking the surface. Typical times range from 15 minutes to 1 hour depending upon ambient conditions.

PART 3 – EXECUTION

3.1 PREPARATION

A. All subfloors, regardless of material, must be solid, sound and thoroughly cleaned.

B. All concrete subfloors must be clean, and free of all oil, grease, dirt, curing compounds, and any substance, which might act as a bondbreaker. Mechanically clean, if necessary, using shot blasting or other. Acid etching and the use of sweeping compounds or solvents are not acceptable.

C. Non-porous subfloors, such as ceramic tile and terrazzo must be clean and free of all sealers, waxes, or other surface treatments, which may act as a bondbreaker. Professionally strip where necessary.

D. Cutback and other non-water soluble adhesive residues must be thin and well bonded to the subfloor. Note: The use of ARDEX SD-F over adhesive residues is recommended for projects only where the adhesive residue may interfere with the performance of the new flooring. For a permanent barrier to migration of adhesive residues on commercial projects, use ARDEX K-15 + E-25 or ARDEX SD-L following the Recommended Work Practices of the Resilient Floor5 Covering Institute.

E. Subfloors shall be tested and corrected for moisture or any other conditions which could affect the performance of the underlayment or finished floor covering.

3.3 PROTECTION

A. Prior to the installation of the finish topping, the surface of the underlayment should be protected from abuse by other trades by the use of plywood, Masonite or other suitable protection course.

END OF SECTION 03540

DIVISION

04

MASONRY

SECTION 04 20 00 - UNIT MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Concrete masonry units.
2. Mortar and grout.
3. Steel reinforcing bars.
4. Masonry joint reinforcement.
5. Miscellaneous masonry accessories.

B. Related Sections:
1. Division 03 Section 03 30 00 "Cast-in-Place Concrete" for installing dovetail slots for masonry anchors.
2. Division 05 Section 05 12 00 "Structural Steel Framing" for furnishing steel lintels and shelf angels, and for installing anchor sections of adjustable masonry anchors for connecting to structural steel frame.

1.3 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).

B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.
1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

C. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined according to Tables 1 and 2 in ACI 530.1/ASCE 6/TMS 602.

D. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM C 1093 for testing indicated.

B. Source Limitations for Masonry Units: Obtain exposed masonry units of a uniform texture and color, or a uniform blend within the ranges accepted for these characteristics, from single source from single manufacturer for each product required.

C. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color for exposed masonry, from single manufacturer for each cementitious component and from single source or producer for each aggregate.

D. Masonry Standard: Comply with ACI 530.1/ASCE 6/TMS 602 unless modified by requirements in the Contract Documents.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained, and contamination avoided.

D. Deliver preblended, dry mortar mix in moisture-resistant containers designed for use with dispensing silos. Store preblended, dry mortar mix in delivery containers on elevated platforms, under cover, and in a dry location or in covered weatherproof dispensing silos.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.7 PROJECT CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
   1. Extend cover a minimum of 24 inches down both sides of walls and hold cover securely in place.
   2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe and hold cover in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
   1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
   2. Protect sills, ledges, and projections from mortar droppings.
   3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
   4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

PART 2 - PRODUCTS

2.1 MASONRY UNITS, GENERAL

A. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.

B. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.2 CONCRETE MASONRY UNITS

A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
1. Provide special shapes for corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Provide bullnose units for outside corners unless otherwise indicated.

B. CMUs: ASTM C 90.
1. Density Classification: Normal weight unless otherwise indicated.
2. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.
3. Exposed Faces: Ground Face
4. Compressive Strength: 19000psi minimum average.

2.3 STONE MASONRY

A. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:
1. For ends of sills and caps and for similar applications that would otherwise expose unfinished surfaces, provide units without cores or frogs and with exposed surfaces finished.
2. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.
3. Provide special shapes for applications requiring brick of size, form, color, and texture on exposed surfaces that cannot be produced by sawing.
4. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.

B. Stone Masonry: Facing brick complying with ASTM C 216.
1. Basis-of-Design Products: Cordova Stone Masonry Units.
2. Color: TBD
3. Texture: Burnished and split face

2.4 MORTAR AND GROUT MATERIALS

A. Use type 'N' mortar for setting mortar and pointing mortar complying with ASTM C 270.
   1. Do not use admixtures, including pigments, air entraining agents, accelerators, retarders, water repellent agents, anti-freeze compounds, or other admixtures unless otherwise indicated.
   2. Do not use calcium chloride in mortar or grout.
   3. Provide mortar achieving 4000psi at 28 days, with a 7 to 8 inch slump; premixed type in accordance with ASTM C 94, mixed in accordance with ASTM C 476 fine and coarse grout.

B. Masonry Cement: ASTM C 91.
   1. Products: Subject to compliance with requirements, provide one of the following:

      a. Holcim (US) Inc.; Mortamix Masonry Cement.
      b. Lafarge North America Inc.; Magnolia Masonry Cement.
      c. Lehigh Cement Company; Lehigh Masonry Cement.

C. Aggregate for Mortar: ASTM C 144.
   1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
   2. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
   3. White-Mortar Aggregates: Natural white sand or crushed white stone.
   4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.

D. Aggregate for Grout: ASTM C 404.

E. Water: Potable.

F. Color: Match existing building.

2.5 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A 615/A 615M or ASTM A 996/A 996M, Grade 60.

B. Masonry Joint Reinforcement, General: ASTM A 951/A 951M.
   1. Interior Walls: Hot-dip galvanized, carbon steel.
   2. Exterior Walls: Hot-dip galvanized, carbon steel.
   3. Wire Size for Side Rods: 0.187-inch diameter.
   4. Wire Size for Cross Rods: 0.187-inch diameter.
   5. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches o.c.
   6. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.

C. Masonry Joint Reinforcement for Single-Wythe Masonry: Either ladder or truss type with single pair of side rods.

D. Recycled Content of Steel Products: Provide steel products with an average recycled content so that post-consumer recycled content plus one-half pre-consumer recycled content is not less than 75 percent.

2.6 TIES AND ANCHORS

A. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated.
   1. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A 82/A 82M; with ASTM A 153/A 153M, Class B-2 coating.
   2. Galvanized Steel Sheet: ASTM A 653/A 653M, Commercial Steel, G60 zinc coating.
   3. Steel Sheet, Galvanized after Fabrication: ASTM A 1008/A 1008M, Commercial Steel, with ASTM A 153/A 153M, Class B coating.
   4. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Wire Ties, General: Unless otherwise indicated, size wire ties to extend at least halfway through veneer but with at least 5/8-inch cover on outside face. Outer ends of wires are bent 90 degrees and extend 2 inches parallel to face of veneer.

C. Individual Wire Ties: Rectangular units with closed ends and not less than 4 inches wide.
1. Z-shaped ties with ends bent 90 degrees to provide hooks not less than 2 inches long may be used for masonry constructed from solid units.
2. Where wythes are of different materials, use adjustable ties with pintle-and-eye connections having a maximum adjustment of 1-1/4 inches.
3. Wire: Fabricate from 3/16-inch-diameter, hot-dip galvanized steel wire.

D. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Tie Section: Triangular-shaped wire tie, sized to extend within 1 inch of masonry face, made from 0.187-inch-diameter, hot-dip galvanized steel wire.
2. Manufacturers: Subject to requirements:

a. Basis of Design - HB Veneer Anchors Thermal 2-Seal Tie or approved equal.
.

E. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.
1. Connector Section: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from 01.05-inch-thick, steel sheet, galvanized after fabrication.

a. 0.064-inch-thick, galvanized sheet may be used at interior walls unless otherwise indicated.
2. Tie Section: Triangular-shaped wire tie, sized to extend within 1 inch of masonry face, made from 0.187-inch-diameter, hot-dip galvanized steel wire. Mill-galvanized wire may be used at interior walls unless otherwise indicated.

2.7 MASONRY DRAINAGE MAT

A. Masonry Drainage Mat: Fluid-conducting, non-absorbent, mold and mildew resistant, non-woven polymer mesh designed for substantially continuous installation in masonry cavities.
1. Basis-of-Design: Subject to other requirements, provide Archovations, inc.; CavClear or comparable product.
2. Thickness: ¾ inches to allow no more than 3/8” gap between the mat and masonry wythe.

B. Weep Vents: Non-woven polymer mesh with M-notched bottom placed above every horizontal break in masonry drainage cavities.
1. Basis-of-Design: Subject to other requirements, provide Archovations, inc.; CavClear Weep Vents or comparable product.

2.8 MISCELLANEOUS ANCHORS

A. Unit Type Inserts in Concrete: Cast-iron or malleable-iron wedge-type inserts.

B. Dovetail Slots in Concrete: Furnish dovetail slots with filler strips, of slot size indicated, fabricated from 0.034-inch, galvanized steel sheet.

C. Anchor Bolts: Headed or L-shaped steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A 153/A 153M, Class C; of dimensions indicated.

D. Postinstalled Anchors: Torque-controlled expansion anchors or chemical anchors.

1. Load Capacity: Capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.
2. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941, Class Fe/Zn 5 unless otherwise indicated.
3. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

2.9 MISCELLANEOUS MASONRY ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D 1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene, urethane or PVC.

B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D 2000, Designation M2AA-805 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

C. Bond-Breaker Strips: Asphalt-saturated, organic roofing felt complying with ASTM D 226, Type I (No. 15 asphalt felt).

D. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and hold reinforcing bars in center of cells. Units are formed from 0.148-inch steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

2.10 MASONRY CLEANERS

A. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

2.11 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures, unless otherwise indicated.
1. Do not use calcium chloride in mortar or grout.
2. Use masonry cement mortar unless otherwise indicated.
3. For interior masonry, use colored masonry cement mortar.

    a. Color: As selected by Architect from masonry cement manufacturer’s full range.
4. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C 270, Property Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.
1. For masonry below grade or in contact with earth, use Type N.
2. For reinforced masonry, use Type N.
3. For mortar parge coats, use Type N.
4. For exterior, above-grade, load-bearing and non-load-bearing walls and parapet walls; for interior load-bearing walls; for interior non-load-bearing partitions; and for other applications where another type is not indicated, use Type N.
5. For interior non-load-bearing partitions, Type O may be used instead of Type N.

D. Pigmented Mortar: Use colored mortar cement product.
   1. Pigments shall not exceed 10 percent of mortar cement by weight.
   2. Mix to match Architect's sample.
   3. Application: Use pigmented mortar for exposed mortar joints with the following units:

      a. Pre-faced CMUs.

E. Grout for Unit Masonry: Comply with ASTM C 476.
   1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with Table 1.15.1 in ACI 530.1/ASCE 6/TMS 602 for dimensions of grout spaces and pour height.
   2. Proportion grout in accordance with ASTM C 476, Table 1 or paragraph 4.2.2 for specified 28-day compressive strength indicated, but not less than 4000 psi.
   3. Provide grout with a slump of 7 to 8 inches as measured according to ASTM C 143/C 143M.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of work.
   2. Verify that foundations are within tolerances specified.
   3. Verify that reinforcing dowels are properly placed.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.

B. Build chases and recesses to accommodate items specified in this and other Sections.

C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to opening.

D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures.
   1. Mix units from several pallets or cubes as they are placed.

F. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 30 g/30 sq. in. per minute when tested per ASTM C 67. Allow units to absorb water so they are damp but not wet at time of laying.

3.3 TOLERANCES

A. Dimensions and Locations of Elements:
   1. For dimensions in cross section or elevation do not vary by more than plus 1/2 inch or minus 1/4 inch.
   2. For location of elements in plan do not vary from that indicated by more than plus or minus 1/2 inch.
   3. For location of elements in elevation do not vary from that indicated by more than plus or minus 1/4 inch in a story height or 1/2 inch total.

B. Lines and Levels:
   1. For bed joints and top surfaces of bearing walls do not vary from level by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
   2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
   3. For vertical lines and surfaces do not vary from plumb by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
   4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.
   5. For lines and surfaces do not vary from straight by more than 1/4 inch in 10 feet, 3/8 inch in 20 feet, or 1/2 inch maximum.
   6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet, or 1/2 inch maximum.
   7. For faces of adjacent exposed masonry units, do not vary from flush alignment by more than 1/16 inch except due to warpage of masonry units within tolerances specified for warpage of units.

C. Joints:
   1. Set face brick in bed joints of thickness so as to align with concrete masonry unit backers.
   2. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch.
   3. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.
   4. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch or minus 1/4 inch.
   5. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.
   6. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch from one masonry unit to the next.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay face brick in running bond, and exposed CMU and prefaced CMU in stack bond; refer to bond pattern indicated on Drawings; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

C. Lay concealed masonry with all units in a wythe in running bond or bonded by lapping not less than 2 inches. Bond and interlock each course of each wythe at corners. Do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

D. Stopping and Resuming Work: Stop work by racking back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

F. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below and rod mortar or grout into core.

G. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

H. Build non-load-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.
   1. Install compressible filler in joint between top of partition and underside of structure above.

3.5 MORTAR BEDDING AND JOINTING

A. Lay hollow CMUs as follows:
   1. With face shells fully bedded in mortar and with head joints of depth equal to bed joints.
   2. With webs fully bedded in mortar in all courses of piers, columns, and pilasters.
   3. With webs fully bedded in mortar in grouted masonry, including starting course on footings.
   4. With entire units, including areas under cells, fully bedded in mortar at starting course on footings where cells are not grouted.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Set cast-stone trim units in full bed of mortar with full vertical joints. Fill dowel, anchor, and similar holes.
   1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
   2. Wet joint surfaces thoroughly before applying mortar.

D. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.
   1. For glazed masonry units, use a nonmetallic jointer 3/4 inch or more in width.

3.6 MASONRY JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.
   1. Space reinforcement not more than 16 inches o.c.
   2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
   3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at wall intersections by using prefabricated T-shaped units.

D. Provide continuity at corners by using prefabricated L-shaped units.

E. Cut and bend reinforcing units as directed by manufacturer for continuity at corners, returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.7 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete where masonry abuts or faces structural steel or concrete to comply with the following:
   1. Provide an open space not less than 1 inch wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.

2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
3. Space anchors as indicated, but not more than 24 inches o.c. vertically and 36 inches o.c. horizontally.

3.8 CONTROL AND EXPANSION JOINTS

A. General: Install control and expansion joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry using one of the following methods:
1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout and rake out joints in exposed faces for application of sealant.
2. Install preformed control-joint gaskets designed to fit standard sash block.
3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar or rake out joint for application of sealant.
4. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete for application of sealant.

C. Form expansion joints in brick as follows:
1. Build flanges of metal expansion strips into masonry. Lap each joint 4 inches in direction of water flow. Seal joints below grade and at junctures with horizontal expansion joints if any.
2. Build flanges of factory-fabricated, expansion-joint units into masonry.
3. Build in compressible joint fillers where indicated.
4. Form open joint full depth of brick wythe and of width indicated, but not less than 1/2 inch for installation of sealant and backer rod specified in Division 07 Section "Joint Sealants."

D. Provide horizontal, pressure-relieving joints by either leaving an air space or inserting a compressible filler of width required for installing sealant and backer rod specified in Division 07 Section "Joint Sealants," but not less than 3/8 inch.
1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.

3.9 LINTELS

A. Install steel lintels where indicated.

B. Provide concrete or masonry lintels where shown and where openings of more than 12 inches, for brick-size units, and 24 inches, for block-size units, and less than 144 inches are shown without structural steel or other supporting lintels. Provide steel lintels for spans greater than 144 inches with no steel indicated; coordinate with Architect.

C. Provide minimum bearing of 8 inches at each jamb unless otherwise indicated.

3.10 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in ACI 530.1/ASCE 6/TMS 602.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in ACI 530.1/ASCE 6/TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
2. Limit height of vertical grout pours to not more than 60 inches.

3.11 FIELD QUALITY CONTROL

A. Testing and Inspecting: Engage special inspectors to perform tests and inspections and prepare reports. Allow inspectors access to scaffolding and work areas, as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements shall be done at Contractor's expense.

B. Inspections: Level 1 special inspections according to the "International Building Code."
1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
3. Place grout only after inspectors have verified proportions of site-prepared grout.

C. Testing Prior to Construction: One set of tests.

D. Testing Frequency: One set of tests for each 5000 sq. ft. of wall area or portion thereof.

E. Concrete Masonry Unit Test: For each type of unit provided, according to ASTM C 140 for compressive strength.

F. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, according to ASTM C 780.

G. Mortar Test (Property Specification): For each mix provided, according to ASTM C 780. Test mortar for mortar air content and compressive strength.

H. Grout Test (Compressive Strength): For each mix provided, according to ASTM C 1019.

I. Prism Test: For each type of construction provided, according to ASTM C 1314 at 7 days and at 28 days.

3.12 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
3. Protect adjacent stone and nonmasonry surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
5. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.
6. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.

7. Clean stone trim to comply with stone supplier's written instructions.

3.13 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.
   1. Crush masonry waste to less than 4 inches in each dimension.
   2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Division 31 Section "Earth Moving."
   3. Do not dispose of masonry waste as fill within 18 inches of finished grade.

C. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 04 20 00

SECTION 04 72 00 - CAST STONE MASONRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Cast stone trim including the following:

a. Window sills.
b. Watertables.
c. Parapet/Roof edge caps.

B. Related Sections:

1. Division 04 Section 04 20 00 "Unit Masonry" for installing cast stone units in unit masonry.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

1. For cast stone units, include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Show fabrication and installation details for cast stone units. Include dimensions, details of reinforcement and anchorages if any, and indication of finished faces.

1. Include building elevations showing layout of units and locations of joints and anchors.

C. Samples for Initial Selection: For colored mortar; sample can double for Section 04 20 00 — “Unit Masonry.”

D. Samples for Verification:

1. For each color and texture of cast stone required, 10-inches min. square in size.

2. For colored mortar. Make Samples using same sand and mortar ingredients to be used on Project. Label Samples to indicated types and amounts of pigments used.

E. Full-Size Samples: For each shape of cast stone unit required.

1. Make available for Architect's review at Project site.
2. Make Samples from materials to be used for units used on Project immediately before beginning production of units for Project.
3. Approved Samples may be installed in the Work.

F. Qualification Data: For manufacturer.

1. Include copies of material test reports for completed projects, indicating compliance of cast stone with ASTM C 1364.

G. Material Test Reports: For each mix required to produce cast stone, based on testing according to ASTM C 1364.

1. Provide test reports based on testing within previous two years.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer of cast stone units similar to those indicated for this Project, that has sufficient production capacity to manufacture required units, and is a plant certified by the Cast Stone Institute, the Architectural Precast Association, or the Precast/Prestressed Concrete Institute for Group A, Category AT.

B. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

C. Source Limitations for Cast Stone: Obtain cast stone units through single source from single manufacturer.

D. Source Limitations for Mortar Materials: Obtain mortar ingredients of a uniform quality, including color, from one manufacturer for each cementitious component and from one source or producer for each aggregate.

E. Mockups: Furnish cast stone for installation in mockups specified in Division 04 Section "Unit Masonry."

1.5 DELIVERY, STORAGE, AND HANDLING

A. Coordinate delivery of cast stone with unit masonry work to avoid delaying the Work and to minimize the need for on-site storage.

B. Pack, handle, and ship cast stone units in suitable packs or pallets.

1. Lift with wide-belt slings; do not use wire rope or ropes that might cause staining. Move cast stone units, if required, using dollies with wood supports.
2. Store cast stone units on wood skids or pallets with non-staining, waterproof covers, securely tied. Arrange to distribute weight evenly and to prevent damage to units. Ventilate under covers to prevent condensation.

C. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

D. Store mortar aggregates where grading and other required characteristics can be maintained and contamination can be avoided.

1.6 PROJECT CONDITIONS

A. Hot-Weather Requirements: Comply with hot-weather construction requirements in ACI 530.1/ASCE 6/TMS 602.

PART 2 - PRODUCTS

2.1 CAST STONE MATERIALS

A. General: Comply with ASTM C 1364 and the following:

B. Portland Cement: ASTM C 150, Type I or Type III, containing not more than 0.60 percent total alkali when tested according to ASTM C 114. Provide natural color or white cement as required to produce cast stone color indicated.

C. Coarse Aggregates: Granite, quartz, or limestone complying with ASTM C 33; gradation and colors as needed to produce required cast stone textures and colors.

D. Fine Aggregates: Natural sand or crushed stone complying with ASTM C 33, gradation and colors as needed to produce required cast stone textures and colors.

E. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.

F. Admixtures: Use only admixtures specified or approved in writing by Architect.

1. Do not use admixtures that contain more than 0.1 percent water-soluble chloride ions by mass of cementitious materials. Do not use admixtures containing calcium chloride.
2. Use only admixtures that are certified by manufacturer to be compatible with cement and other admixtures used.
3. Air-Entraining Admixture: ASTM C 260. Add to mixes for units exposed to the exterior at manufacturer's prescribed rate to result in an air content of 4 to 6 percent, except do not add to zero-slump concrete mixes.
4. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
5. Water-Reducing, Retarding Admixture: ASTM C 494/C 494M, Type D.
6. Water-Reducing, Accelerating Admixture: ASTM C 494/C 494M, Type E.

G. Reinforcement: Deformed steel bars complying with ASTM A 615/A 615M, Grade 60. Use galvanized or epoxy-coated reinforcement when covered with less than of cast stone material.

1. Epoxy Coating: ASTM A 775/A 775M.
2. Galvanized Coating: ASTM A 767/A 767M.

H. Embedded Anchors and Other Inserts: Fabricated from steel complying with ASTM A 36/A 36M, and hot-dip galvanized to comply with ASTM A 123/A 123M.

2.2 CAST STONE UNITS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Stone Legends, Inc.
2. Melton Classics, Inc.
3. Continental Cast Stone.
4. New Orleans Cast Stone, LLC.
5. Alforthish Cast Stone Products.

6. Intrinsic Cast Stone, co.

B. Regional Materials: Provide cast stone units that have been manufactured within 500 miles of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles of Project site.

C. Recycled Content: Provide cast stone products with an average recycled content with postconsumer recycled content plus one-half of preconsumer recycled content being not less than 30 percent.

D. Provide cast stone units complying with ASTM C 1364 using either the vibrant dry tamp or wet-cast method.

1. Provide units that are resistant to freezing and thawing as determined by laboratory testing according to ASTM C 666/C 666M, Procedure A, as modified by ASTM C 1364.

E. Fabricate units with sharp arris and accurately reproduced details, with indicated texture on all exposed surfaces unless otherwise indicated.

1. Slope exposed horizontal surfaces 1:12 to drain unless otherwise indicated.
2. Provide raised fillets at backs of sills and at ends indicated to be built into jambs.
3. Provide drips on projecting elements unless otherwise indicated.

F. Fabrication Tolerances:

1. Variation in Cross Section: Do not vary from indicated dimensions by more than 1/8-inch.
2. Variation in Length: Do not vary from indicated dimensions by more than 1/360 of the length of unit or 1/8 inch, whichever is greater, but in no case by more than ¼ inch.
3. Warp, Bow, and Twist: Not to exceed 1/360 of the length of unit or 1/8 inch, whichever is greater.
4. Location of Grooves, False Joints, Holes, Anchorages, and Similar Features: Do not vary from indicated position by more than 1/8 inch on formed surfaces of units and 3/8 inch on unformed surfaces.

G. Cure units as follows:

1. Cure units in enclosed moist curing room at 95 to 100 percent relative humidity and temperature of 100 deg F for 12 hours or 70 deg F for 16 hours.
2. Keep units damp and continue curing to comply with one of the following:

a. No fewer than five days at mean daily temperature of 70 deg F or above.
b. No fewer than six days at mean daily temperature of 60 deg F or above.
c. No fewer than seven days at mean daily temperature of 50 deg F or above.
d. No fewer than eight days at mean daily temperature of 45 deg F or above.

H. Acid etch units after curing to remove cement film from surfaces to be exposed to view.

I. Colors and Textures: As selected by Architect from manufacturer's full range.

2.3 MORTAR MATERIALS

A. General: Refer to Mortar Materials section in Section 04 20 00 – “Unit Masonry” for mortar materials. Use same mixture for cast stone as unit masonry.

2.4 ACCESSORIES

A. Anchors: Type and size indicated, fabricated from steel complying with ASTM A 36/A 36M, and hot-dip galvanized to comply with ASTM A 123/A 123M.

B. Dowels: ½-inch-diameter, round bars, fabricated from steel complying with ASTM A 36/A 36M, and hot-dip galvanized to comply with ASTM A 123/A 123M.

C. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cast stone manufacturer and expressly approved by cleaner manufacturer for use on cast stone and adjacent masonry materials.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Diedrich Technologies, Inc.
b. EaCo Chem, Inc.
c. ProSoCo, Inc.

2.5 MORTAR MIXES

A. Comply with requirements in Division 04 Section 04 20 00 "Unit Masonry" for mortar mixes.

2.6 SOURCE QUALITY CONTROL

A. Engage a qualified independent testing agency to sample and test cast stone units according to ASTM C 1364.

1. Include one test for resistance to freezing and thawing.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SETTING CAST STONE IN MORTAR

A. Install cast stone units to comply with requirements in Division 04 Section 04 20 00 "Unit Masonry."

B. Set cast stone as indicated on Drawings. Set units accurately in locations indicated with edges and faces aligned according to established relationships and indicated tolerances.

1. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure units in place.
2. Coordinate installation of cast stone with installation of flashing specified in other Sections.

C. Wet joint surfaces thoroughly before applying mortar or setting in mortar.

D. Set units in full bed of mortar with full head joints unless otherwise indicated.

1. Set units with joints 3/8” wide unless otherwise indicated – coordinate with surrounding joint widths.
2. Build anchors and ties into mortar joints as units are set.
3. Fill dowel holes and anchor slots with mortar.

4. Fill collar joints solid as units are set.
5. Build concealed flashing into mortar joints as units are set.
6. Keep head joints in coping and other units with exposed horizontal surfaces open to receive sealant.
7. Keep joints at shelf angles open to receive sealant.

E. Rake out joints for pointing with mortar to depths of not less than ¾-inch. Rake joints to uniform depths with square bottoms and clean sides. Scrub faces of units to remove excess mortar as joints are raked.

F. Point mortar joints by placing and compacting mortar in layers not greater than 3/8-inch. Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer.

G. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

H. Provide sealant joints at copings and other horizontal surfaces, at expansion, control, and pressure-relieving joints, and at locations indicated. Refer to Section 04 20 00 “Unit Masonry”

1. Keep joints free of mortar and other rigid materials.
2. Build in compressible foam-plastic joint fillers where indicated.
3. Form joint of width indicated, but not less than ½”.
4. Prime cast stone surfaces to receive sealant and install compressible backer rod in joints before applying sealant unless otherwise indicated.
5. Prepare and apply sealant of type and at locations indicated to comply with applicable requirements in Division 07 Section "Joint Sealants."

3.3 INSTALLATION TOLERANCES

A. Variation from Plumb: Do not exceed 1/8-inch in 10-feet, ¼-inch in 20-feet, or ½-inch maximum.

B. Variation from Level: Do not exceed 1/8-inch in 10-feet, ¼-inch in 20-feet, or ½-inch maximum.

C. Variation in Joint Width: Do not vary joint thickness more than 1/8 inch in 36 inches or one-fourth of nominal joint width, whichever is less.

D. Variation in Plane between Adjacent Surfaces (Lipping): Do not vary from flush alignment with adjacent units or adjacent surfaces indicated to be flush with units by more than 1/16-inch, except where variation is due to warpage of units within tolerances specified.

3.4 ADJUSTING AND CLEANING

A. Remove and replace stained and otherwise damaged units and units not matching approved Samples. Cast stone may be repaired if methods and results are approved by Architect.

B. Replace units in a manner that results in cast stone matching approved Samples, complying with other requirements, and showing no evidence of replacement.

C. In-Progress Cleaning: Clean cast stone as work progresses.

1. Remove mortar fins and smears before tooling joints.
2. Remove excess sealant immediately, including spills, smears, and spatter.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed cast stone as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.

2. Test cleaning methods on sample; leave one sample uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of cast stone.
3. Protect adjacent surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
4. Wet surfaces with water before applying cleaners; remove cleaners promptly by rinsing thoroughly with clear water.
5. Clean cast stone by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
6. Clean cast stone with proprietary acidic cleaner applied according to manufacturer's written instructions.

END OF SECTION 04 72 00

DIVISION

05

METALS

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and Divisions 00 & 01 Specifications apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Scope: The Contract Drawings, including schedules, notes and details, show size and location of members, typical connections, and type of steel required. This Section includes all structural steel work as defined in American Institute of Steel Construction (AISC) "Code of Standard Practice" and as shown on Drawings.

B. Related Sections:

1. Division 01 Section – “Submittal Procedures”.
2. Testing Laboratory Services.
3. Cast-In-Place Concrete.
4. Steel Decking.

C. Design of Members and Connections: Details shown are typical; similar details apply to similar conditions, unless otherwise indicated. Promptly notify Architect whenever design of members and connections for any portion of structure are not clearly indicated. Unless otherwise noted on the Drawings, all beam end shear connections shall develop one-half of the total allowable uniform load capacity of the beam for the given span in the AISC Manual of Steel Construction Beam Tables. Beam end shear connections for beams with shear studs shall develop three-quarters of the total allowable load capacity of the beam for the given span in the AISC Manual of Steel Construction Beam Tables. Greater loadings will be shown on the Drawings.

1. The design adequacy of any detail configuration of connections developed by the fabricator as part of the preparation of Shop Drawings and fabrication of material is not the responsibility of the Owner, Architect, or Architect's consultants.
2. Paragraph 4.2.1 of the AISC "Code of Standard Practice" referenced herein is hereby amended accordingly to eliminate the acceptance of this responsibility by the Owner, the Architect, and the Architect's consultants as a result of the review and approval of Shop Drawings.

1.3 SUBMITTALS

A. General: Submit the following: (Hard copies are required.)

B. Product Data: Producer's or manufacturer's specifications, installation instructions, laboratory test reports and other data to show compliance with specifications (including specified standards) for following products:

1. Structural steel (each type), including certified copies of mill reports covering chemical and physical properties.
2. High-strength bolts (each type), including nuts and washers.
3. Structural steel primer paint.
4. Shrinkage-resistant grout.

C. Shop Drawings (three full-size hard copies are required to be submitted): Complete details and schedules for fabrication and assembly of structural steel members.

1. Include details of cuts, connections, camber, holes, and other pertinent data.
2. Indicate welds by standard AWS symbols. Show size, length, and type of each shop and field weld.
3. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed as work of other Sections.
4. Provide connection design calculations, for all member connections not fully detailed on the Drawings, prepared and sealed by a Louisiana licensed civil or structural engineer shall be submitted concurrent with the shop drawings. Calculations shall be project specific and shall reference member piece detail numbers on the shop drawings.
5. Shop drawings shall be submitted only after the results of the connection design have been incorporated.

D. AISC fabricator and erector certifications.

1.4 QUALITY ASSURANCE

A. Codes and Standards: Comply with provisions of following, except as otherwise indicated:
1. AISC "Code of Standard Practice for Steel Buildings and Bridges."
2. AISC "Specifications for the Design, Fabrication, and Erection of Structural Steel for Buildings", including "Commentary" and Supplements thereto as issued.
3. AISC "Specifications for Architecturally Exposed Structural Steel."
4. AISC "Specifications for Structural Joints using ASTM A 325 or A 490 Bolts" approved by the Research Council on Structural Connections.
5. American Welding Society (AWS) D1.1 "Structural Welding Code – Steel."
6. ASTM A 6 "General Requirements for Delivery of Rolled Steel Plates, Shapes, Sheet Piling and Bars for Structural Use."

B. Qualifications for Welding Work: Qualify welding processes and welding operators in accordance with AWS "Standard Qualification Procedure."
1. Provide certification that welders to be employed in work have satisfactorily passed AWS qualification tests.
2. If recertification of welders is required, retesting will be Contractor's responsibility.

C. Source Quality Control: Materials and fabrication procedures are subject to inspection and tests in mill, shop and field, conducted by inspection agency. Such inspections and tests will not relieve Contractor of responsibility for providing materials and fabrication procedures in compliance with specified requirements. Promptly remove and replace materials or fabricated components which do not comply.

D. AISC Certification: Fabricator and erector shall be AISC certified for buildings.

1.5 DELIVERY, STORAGE AND HANDLING

A. Delivery Schedule and Sequence:
1. Deliver materials to site at such intervals to ensure uninterrupted progress of work.
2. Deliver anchor bolts and anchorage devices, which are to be embedded in cast-in-place concrete or masonry, in ample time to not delay work.

B. Storage and Handling: Comply with applicable requirements of Section 01600 and the following.
1. Store materials to permit easy access for inspection and identification.

2. Keep steel members off ground, using pallets, platforms, or other supports. Protect steel members and packaged materials from corrosion and deterioration.
3. Do not store materials in a manner that might cause distortion or damage to members or supporting structures. Repair or replace damaged materials or structures as directed.
4. Handle materials to avoid damage to materials and other construction.

PART 2 – PRODUCTS

2.1 MATERIALS

A. General: For work which will be exposed to view, use only materials which are smooth and free of surface blemishes including pitting, rust and scale seam marks, roller marks, rolled trade names and roughness. Remove such blemishes by grinding, or by welding and grinding prior to cleaning, treating and application of surface finishes. All steel shall be produced and fabricated from sources in the United States.

B. Structural Steel Shapes: ASTM A572-50. (ASTM A992 50 KSI for wide-flange).

C. Rods and Bars: ASTM A575-50.

D. Plate: ASTM A572-50.

E. Hollow Structural Sections (HSS): ASTM A 500, Grade C.

F. Anchor Bolts: ASTM F1554, grade as indicated, weldable, non-headed type unless otherwise indicated.

G. Unfinished Threaded Fasteners: ASTM A 307, Grade A, regular low-carbon steel bolts and nuts. Provide either hexagonal or square, heads and nuts, except use only hexagonal units for exposed connections.

H. High-Strength Threaded Fasteners: Quenched and tempered medium-carbon steel heavy hexagon structural bolts, heavy hexagon nuts and hardened washers, complying with ASTM A 325.
1. Where indicated to be galvanized, provide bolts, nuts and washers zinc coated by hot-dip galvanizing (ASTM A 153) or by mechanical depositing (ASTM B 695, Class 50).

I. Electrodes for Welding: Comply with AWS Code.

J. Structural Steel Primer Paint:
1. SSPC - Paint 25 at all steel not exposed to view in the final structure and not scheduled to receive spray applied fireproofing or be galvanized.

K. Cement Grout: Portland cement (ASTM C 150, Type I or Type III) and clean, uniformly graded, natural sand (ASTM C 404, Size No. 2). Mix at a ratio of 1.0-part cement to 3.0 parts sand, by volume, with minimum water required for placement of hydration.

L. Non-Metallic Shrinkage-Resistant Grout:
1. Pre-mixed, non-metallic, non-corrosive, non-staining product containing selected silica sands, Portland cement, shrinkage compensating agents, plasticizing and water reducing agents, complying with CE-CRD-C621.
2. Subject to compliance with requirements, products which may be used include, but are not limited to, the following:
a) Euco N. S.; Euclid Chemical Company.
b) Crystex; L & M Construction Chemicals.

c) Masterflow 713; Master Builders.
d) Sonogrout G.P.; Sonneborn Building Products.
e) Five Star Grout; U. S. Grout Corp.

M. Shear studs: Shear Studs: Shall be shear connectors with proper ferrules and accessories, especially designed to create composite action between concrete and the supporting beam. Steel for studs shall conform to ASTM A 108, Grades 1015-1020, with a minimum tensile strength of 60,000 psi. Studs shall be of uniform diameter, heads shall be concentric and normal to shaft and the weld end shall be chamfered, welds shall be solid flux.

N. Deformed Bar Anchors: Nelson D2L. (Basis-of-Design product).

2.2 FABRICATION

A. Shop Fabrication and Assembly: Fabricate and assemble structural assemblies in shop to greatest extent possible. Fabricate items of structural steel in accordance with AISC Specifications and as indicated on final shop drawings. Provide camber in structural members where indicated. Structural steel exposed-to-view as a final product shall comply with AISC's "Architecturally Exposed Structural Steel (AESS)" specification including the removal of backer-bars and back-gouging at full-penetration welds.
1. Properly mark and match - mark materials for field assembly. Fabricate for delivery sequence which will expedite erection and minimize field handling of materials.
2. Where shop painting or galvanizing is required, complete assembly, including welding of units, before start of surface preparation for painting or galvanizing.
3. Provide finish surfaces of members exposed in final structure free of markings, burrs, and other defects.

B. Connections: Weld or bolt shop connections, as indicated.

1. Bolt field connections, except where welded connections or other connections are indicated.
2. Provide high-strength threaded fasteners for all bolted connections, except where unfinished bolts are indicated.

C. High-Strength Bolted Construction: Install high-strength threaded fasteners in accordance with AISC "Specifications for Structural Joints using ASTM A 325 or A 490 Bolts."

D. Welded Construction: Comply with AWS Code for procedures, appearance and quality of welds, and methods used in correcting welding work. Assemble and weld built-up sections by methods which will produce true alignment of axes without warp.

E. Holes for Other Work: Provide holes required for securing other work to structural steel framing, and for passage of other work through steel framing members, as shown on final shop drawings.
1. Provide threaded nuts welded to framing, and other specialty items as indicated to receive other work.
2. Cut, drill, or punch holes perpendicular to metal surfaces. Do not flame cut holes or enlarge holes by burning. Drill holes in bearing plates.

2.3 PROTECTIVE COATINGS

A. General: Shop paint structural steel, except galvanized items and members or portions of members to be embedded in concrete and members to receive sprayed on fire proofing. Paint steel which is partially embedded on exposed portions and initial 2" of embedded areas only. Verify primer compatibility with Division 9 requirements.

1. Do not paint surfaces which are to be welded or high-strength bolted with friction-type connections.
2. Apply two (2) coats of paint to surfaces which are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

B. Surface Preparation: After inspection and before shipping, clean steel work to be painted. Remove loose rust, loose mill scale, and spatter, slag or flux deposits. Clean steel in accordance with the following Steel Structures Painting Council (SSPC) specifications:
1. Nuts and bolts are to be cleaned in accordance with SSPC-SP1 prior to shop painting to completely remove all oil, dirt, grease and all other soluble surface contaminants.

C. Painting: Immediately after surface preparation, apply structural steel primer paint in accordance with manufacturer's instructions and at a rate to provide dry film thickness of not less than 1.5 mils for SSPC-Paint 25. Use painting methods that will result in full coverage of joints, corners, edges and exposed surfaces.

D. Galvanizing: ASTM A123/123M and ASTM A153/153M for threaded fasteners. Galvanizing repair compound shall be a two-component zinc-rich paint, ASTM A 780.

PART 3 - EXECUTION

3.1 ERECTION

A. Examination: Check elevations of concrete and masonry bearing surfaces, and locations of anchor bolts and similar devices, before erection work proceeds. Do not proceed with erection until corrections have been made, or until compensating adjustments to structural steel work have been agreed upon with Architect.

B. Temporary Shoring and Bracing: Provide temporary shoring and bracing members with connections of sufficient strength to bear imposed loads. Remove temporary members and connections when permanent members are in place and final connections are made. Provide temporary guy lines to achieve proper alignment of structures as erection proceeds.

C. Setting Bases and Bearing Plates: Clean concrete and masonry bearing surfaces; remove bond-reducing materials and roughen to improve bond. Clean contact surfaces of base and bearing plates.
1. Set loose and attached base plates and bearing plates for structural members on wedges or other adjusting devices.
2. Tighten anchor bolts after supported members have been positioned and plumbed. Do not remove wedges or shims, but if protruding, cut off flush with edge of base or bearing plate prior to packing with grout.
3. Pack grout solidly between bearing surfaces and bases or plates to ensure that no voids remain. Finish exposed surfaces, protect installed materials, and allow it to cure. For proprietary grout materials, comply with manufacturer's instructions.

D. Field Assembly: Set structural frames accurately to lines and elevations indicated. Align and adjust members before permanently fastening. Before assembly, clean bearing surfaces and other surfaces which will be in permanent contact. Perform necessary adjustments to compensate for discrepancies in elevations and alignment. Provide member installation tolerances more stringent than required by AISC where specifically required by the Contract Drawings and Specifications and where required at interfaces with adjoining materials as required to achieve the indicted details of construction.
1. Comply with AISC Specifications for bearing, adequacy of temporary connections, alignment, and removal of paint on surfaces adjacent to field welds.
2. Level and plumb individual members of structure within specified AISC tolerances.

3. Establish required leveling and plumbing measurements on mean operating temperature of structure. Make allowances for difference between temperature at time of erection and mean temperature at which structure will be when completed and in service.
4. Splice members only where indicated and accepted on shop drawings.

E. Erection Bolts: On exposed welded construction, remove erection bolts, fill holes with plug welds and grind smooth at exposed surfaces.

F. Bolted Connections: Do not enlarge unfair holes in members by burning or by use of drift pins, except in secondary bracing members. Ream holes that must be enlarged to admit bolts.

G. Gas Cutting: Do not use gas cutting torches in field for correcting fabrication errors in primary structural framing. Cutting will be permitted only on secondary members which are not under stress, as acceptable to Architect. Finish gas-cut sections, when permitted, equal to a sheared appearance.

H. Touch-Up Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas.
1. Apply paint to exposed areas of shop primed items, using same material as used for shop painting, by brush or spray to provide a minimum dry film thickness of 1.5 mils.
2. Field welded or damaged galvanized surfaces shall be repaired with product specified herein.

I. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Weld shear connectors, shaped as shown, to beams and girders in composite construction. Use automatic end welding of headed stud shear connectors in accordance with manufacturer's printed instructions.
1. Installation of Shear Connectors: Shear studs shall be automatically end welded in accordance with Article 31 of the AWS Structural Welding Code and the specifications of the shear stud manufacturer. After installation, each ceramic ferrule shall be removed prior to placement of concrete. Adequate welding power must be available for studs being welded.
2. All areas to which studs are to be attached shall be cleaned of all rust, oil, grease, and paint. When the mill scale is sufficiently thick to cause difficulty in obtaining proper welds, it shall be removed by grinding or sand blasting.

3.2 QUALITY CONTROL

A. The independent testing and inspection agency shall inspect high-strength bolted and welded connections, perform tests, and submit test reports.
1. Testing agency shall conduct and interpret tests and state in each report whether test specimens comply with requirements, and specifically state any deviations there from.
2. Architect reserves right, at any time before final acceptance, to reject material not complying with specified requirements.

B. Contractor's Responsibilities: Correct deficiencies in structural steel work which inspections and laboratory test reports have indicated to be not in compliance with requirements. Perform additional tests, at Contractor's expense, as may be necessary to reconfirm any noncompliance of original work, and as may be necessary to show compliance of corrected work.

C. Shop Bolted Connections: Inspect in accordance with AISC specifications. Verify that gaps of installed Direct Tension Indicators are less than gaps specified in ASTM F 959, Table 2.

D. Shop Welding: Plant Inspector shall inspect and test during fabrication of structural steel assemblies, as follows:

1. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in work. Record work required and performed to correct deficiencies.

2. Perform visual inspections of all welds.

3. Perform tests on all full-penetration welds as follows: Inspection procedures listed are to be used at Laboratory's option.
   a. Liquid Penetrant Inspection: ASTM E 165.
   b. Magnetic Particle Inspection: ASTM E 109; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration not acceptable.
   c. Radiographic Inspection: ASTM E 94 and ASTM E 142; minimum quality level "2-2T".
   d. Ultrasonic Inspection: ASTM E 164.

E. Field Bolted Connections: Testing Laboratory shall inspect in accordance with AISC Specifications. Verify that gaps of installed Direct Tension Indicators are less than gaps specified in ASTM F 959, Table 2.

F. Field Welding: Testing Laboratory shall inspect and test during erection of structural steel as follows:
   1. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in work. Record work required and performed to correct deficiencies.
   2. Perform visual inspection of all welds.
   3. Perform tests on all full-penetration welds and other welds as required by AISC, as follows:
      a. Liquid Penetrant Inspection: ASTM E 165.
      b. Magnetic Particle Inspection: ASTM E 109; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration not acceptable.
      c. Radiographic Inspection: ASTM E 94 and ASTM E 142; minimum quality level "2-2T."
      d. Ultrasonic Inspection: ASTM E 164.

G. Shear Studs: Testing Laboratory shall inspect and test during erection as follows:
   1. Perform visual inspection of all welds.
   2. Verify stud quantity, diameter, length, and spacing.
   3. Perform bend test at six random studs per floor.
   4. Rubber mallet tap each stud.

END OF SECTION 05 12 00

SECTION 05 21 00 - STEEL JOISTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Divisions 00 & 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Open-web DLH-series steel roof joists.
2. Joist accessories.

B. Related Sections include the following:

1. Division 5 Section "Structural Steel".
2. Division 9 Section "Painting".
3. Division 5 section “Steel Deck”.

1.3 DEFINITIONS

A. Special Joists: Joists requiring modification by the manufacturer to support non-uniform, unequal, or special loading conditions that invalidate SJI's "Standard Specifications Load Tables and Weight Tables for Steel Joists and Joist Girders."

1.4 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads within limits and under conditions indicated. Refer to drawings for specific loading information.

B. Wind Loads: Refer to drawings for components & cladding design pressures, including uplift pressures, and wind design parameters.

C. Design joists to withstand design loads with total load deflections no greater than the following:

1. Vertical deflection of 1/360 of the span.

1.5 SUBMITTALS

A. Product Data: For each type of joist, accessory, and product indicated.

B. Shop Drawings: Show layout, mark, number, type, location, and spacing of joists. Include joining and anchorage details, bracing, bridging, accessories; splice and connection locations and details; and attachments to other construction.
1. Indicate locations and details of anchorage devices and bearing plates to be embedded in other construction.
2. Comprehensive engineering analysis sealed by the qualified Louisiana licensed professional engineer responsible for its preparation.

C. Welding Certificates: Copies of certificates for welding procedures and personnel.

D. Mill certificates signed by manufacturers of bolts certifying that their products comply with specified requirements.

E. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

F. Research/Evaluation Reports: Evidence of steel joists' compliance with building code in effect for Project, from a model code organization acceptable to authorities having jurisdiction.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A firm experienced in manufacturing joists similar to those indicated for this Project and with a record of successful in-service performance.

1. Manufacturer must be certified by SJI to manufacture joists complying with SJI standard specifications and load tables.
2. Assumes responsibility for engineering special joists to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
3. Professional Engineer Qualifications: A professional engineer who is legally authorized to practice in jurisdiction where the project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of joists that are similar to those indicated for this Project in material, design, and extent.

B. SJI Specifications: Comply with SJI's "Standard Specifications Load Tables and Weight Tables for Steel Joists and Joist Girders" (hereafter, "Specifications"), applicable to types of joists indicated.

C. Welding: Qualify procedures and personnel according to AWS D1.1, "Structural Welding Code--Steel"; and AWS D1.3 "Structural Welding Code--Sheet Steel."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications."

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.8 SEQUENCING

A. Deliver steel bearing plates and other devices to be built into concrete and masonry construction.

PART 2 – PRODUCTS

2.1 MATERIALS

A. Steel: Comply with SJI's "Specifications" for chord and web members.

B. Steel Bearing Plates: ASTM A 36.

C. Carbon-Steel Bolts and Threaded Fasteners: ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), carbon-steel, hex-head bolts and threaded fasteners; carbon-steel nuts; and flat, unhardened steel washers.

1. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

D. High-Strength Bolts and Nuts: ASTM A 325 (ASTM A 325M), Type 1, heavy hex steel structural bolts, heavy hex carbon-steel nuts, and hardened carbon-steel washers.

1. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

E. Welding Electrodes: Comply with AWS standards.

2.2 PRIMERS

A. Primer: SSPC-Paint 15, Type I, red oxide; FS TT-P-636, red oxide; or manufacturer's standard shop primer complying with performance requirements of either of these red oxide primers, OSHA compliant.

B. Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer with good resistance to normal atmospheric corrosion, complying with performance requirements in FS TT- P-664, OSHA compliant.

2.3 OPEN-WEB DLH-SERIES STEEL JOISTS

A. Manufacture steel joists according to "Standard Specifications for Open Web Steel Joists, DLH-Series," in SJI's "Specifications," with steel-angle top- and bottom-chord members, underslung ends, and parallel top chord; (unless otherwise indicated), of joist type indicated.

1. Joist Type: DLH-series steel joists.

B. Comply with AWS requirements and procedures for shop welding, appearance, quality of welds, and methods used in correcting welding work.

C. Provide holes in chord members for connecting and securing other construction to joists.

D. Top-Chord Extensions: Extend top chords of joists with SJI's Type S top-chord extensions where indicated, complying with SJI's "Specifications."

E. Extended Ends: Extend bearing ends of joists with SJI's Type R extended ends where indicated, complying with SJI's "Specifications."

F. Camber joists according to SJI's "Specifications."

G. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches.

2.4 JOIST ACCESSORIES

A. Bridging: Provide bridging anchors and number of rows of horizontal or diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span.

B. Bridging: Schematically indicated. Detail and fabricate according to SJI's "Specifications."

C. Supply ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within 1/2 inch (13 mm) of finished wall surface, unless otherwise indicated.

D. Supply miscellaneous accessories, including splice plates and bolts required by joist manufacturer to complete joist installation.

2.5 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories to be primed by power-tool cleaning, SSPC-SP 3.

B. Do not prime paint joists and accessories [to receive sprayed fire-resistive materials].

C. Apply one shop coat of primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil (0.025 mm) thick. Verify primer compatibility with Division 9 painting requirements.

D. Painting of joists and joist accessories is specified in Division 9 Section "Painting."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.

B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's "Specifications," joist manufacturer's written recommendations, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads have been applied.

C. Field weld joists to supporting steel bearing plates. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

D. Bolt joists to supporting steel framework using carbon-steel bolts, unless otherwise indicated.

E. Bolt joists to supporting steel framework using high-strength structural bolts, unless otherwise indicated. Comply with RCSC's "Allowable Stress Design Specification for Structural Joints using ASTM A 325 or ASTM A 490 Bolts" for high-strength structural bolt installation and tightening requirements.

F. Install and connect bridging concurrently with joist erection, before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 FIELD QUALITY CONTROL

A. A qualified independent testing and inspecting agency shall inspect field welds and high-strength bolted connections.

B. All field welds will be visually inspected according to AWS D1.1. Verify welder AWS certifications.

C. Bolted connections will be visually inspected.

1. High-strength, field-bolted connections will be tested and verified according to procedures in RCSC's "Allowable Stress Design Specification for Structural Joints Using ASTM A 325 or ASTM A 490 Bolts."

D. Correct deficiencies in Work that inspections and test reports have indicated are not in compliance with specified requirements.

E. Additional testing will be performed to determine compliance of corrected work with specified requirements.

3.4 REPAIRS AND PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Touchup Painting: After installation, promptly clean, prepare, and prime or re-prime field connections, rust spots, and abraded surfaces of prime-painted joists and accessories and abutting structural steel.

1. Clean and prepare surfaces by hand-tool cleaning, SSPC-SP 2, or power-tool cleaning, SSPC-SP 3.

2. Apply a compatible primer of the same type as the shop primer used on adjacent surfaces.

C. Touchup Painting: Cleaning and touchup painting are specified in Division 9 Section "Painting."

D. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer that ensure joists and accessories are without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 05 31 00 - STEEL DECKING

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including General and Supplementary Conditions and Divisions 00 & 01 Specifications apply to this Section.

1.2 SUMMARY

A. Section Includes: Steel deck units for floor and roof applications.

B. Related Sections:
1. Division 01 Section – “Submittal Procedures”.
2. Testing Laboratory Services.
3. Section 033000 – Cast-in-Place Concrete.
4. Section 051200 - Structural Steel Framing.
5. Section 052100 – Steel Joists

1.3 SUBMITTALS

A. Product Data: Submit manufacturer's specifications and installation instructions for each type of decking, accessories, and galvanizing repair product.

B. Shop Drawings: Hard copies are required. Submit shop drawings showing layout and types of deck units, anchorage details, and conditions requiring closure strips, supplementary framing, cant strips, cut openings, special jointing and other accessories.

1.4 QUALITY ASSURANCE

A. Codes and Standards: Comply with the following codes and standards, except as otherwise indicated:
1. American Iron and Steel Institute (AISI), "Specification for the Design of Cold-Formed Steel Structural Members".
2. American Welding Society (AWS), D1.3 "Structural Welding Code - Sheet Steel".
3. Steel Deck Institute (SDI), "Design Manual for Composite Decks, Form Decks and Roof Decks".

B. Qualification of Field Welding: Use qualified welding processes and welding operators in accordance with "Welder Qualification" procedures of AWS.

C. Underwriters' Label: Provide metal floor deck units listed in Underwriters' Laboratories "Fire Resistance Directory", with each deck unit bearing the UL label and marking for specific system detailed.

D. FM Listing: Provide metal roof deck units that have been evaluated by Factory Mutual System and are listed in "Factory Mutual Approval Guide" for "Class I" fire-rated construction.

E. Testing: Refer to “Testing Laboratory Services”.

1.5 JOB CONDITIONS

A. Coordination: Coordinate and cooperate with structural steel erector in locating decking bundles to prevent overloading structural members.

B. Safety: Do not use deck for storage or working platforms until units are permanently secured. Do not permit storage and operations on installed deck which could damage or deform the deck units.

C. Deck Insulation: Coordinate and cooperate with roof insulation installer to provide deck satisfactory for application of insulation. Provide manufacturer's insulation inserts at acoustical deck.

D. Ceiling Hangers: Coordinate and cooperate with ceiling installers for placing hangers.

PART 2 – PRODUCTS

2.1 STEEL DECK

A. Description: Dimensions and properties of steel deck are shown on the Drawings. Deck configuration shall be similar to that indicated. Allowable stress shall equal or exceed that of the deck specified on the Drawings.

B. Deck Type:
1. Deck sizes and types are indicated on the Drawings. Manufacturers noted are Basis-of-Design products. Pre-bid approval is required for substitutions.

C. Provide shop primer paint at deck scheduled to be painted. Coordinate with Division 9 requirements.

2.2 MATERIALS

A. Steel for Galvanized Metal Deck Units: ASTM A653, Grade as required to comply with SDI Specifications.

B. Miscellaneous Steel Shapes: ASTM A 36.

C. Galvanizing: ASTM A 924, G90.

D. Galvanizing Repair Compound: High zinc dust content paint for repairing damage and re-galvanizing welds, with dry film containing not less than 94% zinc by weight and complying with ASTM A 780.

E. Flexible Closure Strips: Manufacturer's standard vulcanized, closed-cell, synthetic rubber.

2.3 FABRICATION

A. General: Form deck units in lengths to span three or more supports, with flush, telescoped or nested 2-inch laps at ends and interlocking or nested side laps, of metal thickness, depth, and width as indicated.

B. Deck Units: Provide deck configurations that comply with SDI "Specifications and Commentary for Steel Roof Deck".

C. Metal Cover Plates: Fabricate metal cover plates for end-abutting floor deck units of not less than same thickness as decking. Form to match contour of deck units and approximately 6 inches wide.

D. Metal Closure Strips: Fabricate metal closure strips, for cell raceways and openings between decking and other construction, of not less than 0.045-inch min. (18 gage) sheet steel. Form to provide tight-fitting closures at open ends of cells or flutes and sides of decking.

PART 3 – EXECUTION

3.1 INSTALLATION

A. General: Install deck units and accessories in accordance with manufacturer's recommendations, shop drawings, and as specified herein.
   1. Place deck units on supporting steel framework and adjust to final position with ends accurately aligned and bearing on supporting members before being permanently fastened. Do not stretch or contract side lap interlocks.
   2. Align deck units for entire length of run of cells and with close alignment between cells at ends of abutting units.
   3. Place deck units flat and square, secured to adjacent framing without warp or deflection.
   4. Do not place deck units on concrete supporting structure until concrete has cured and is dry.

B. Attachment:

   1. Fasten deck units to steel supporting members and to adjacent deck units as indicated on Drawings.
   2. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work. Use welding washers where recommended by deck manufacturer.

C. Cutting and Fitting: Cut and neatly fit deck units and accessories around other work projecting through or adjacent to the decking.

D. Reinforcement at Openings: Provide additional metal reinforcement and closure pieces as required for strength, continuity of decking and support of other work shown.

E. Hanger Slots or Clips: Provide UL-approved punched hanger slots between cells or flutes of lower element where floor deck units are to receive hangers for support of ceiling construction, air ducts, diffusers, or lighting fixtures.
   1. Hanger clips designed to clip over male side lap joints of floor deck units may be used instead of hanger slots.
   2. Locate slots or clips at not more than 14 inches o.c. in both directions, not over 9 inches from walls at ends, and not more than 12 inches from walls at sides, unless otherwise indicated.
   3. Provide manufacturer's standard hanger attachment devices.

F. Joint Covers: Provide metal joint covers at abutting ends and changes in direction of floor deck units.

G. Closure Strips: Provide metal closure strips at open uncovered ends and edges of roof decking and in voids between decking and other construction. Weld into position to provide a complete decking installation.

1. Provide flexible closure strips instead of metal closures, at Contractor's option, wherever their use will ensure complete closure. Install with adhesive in accordance with manufacturer's instructions.
2. Provide a minimum of ¼" steel bent plate at all floor and roof penetrations.

H. Touch-Up Painting: After decking installation, wire brush, clean and paint scarred areas, welds, and rust spots on top and bottom surfaces of decking units and supporting steel members.
1. Touch-up galvanized surfaces with galvanizing repair paint in accordance with ASTM A 780.

3.2 TESTING LABORATORY SERVICES

A. The independent testing laboratory shall visually inspect all deck attachments to structure and sidelap deck attachment.

END OF SECTION 05 31 00

SECTION 05 40 00 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Exterior non-load-bearing wall framing and soffits.

B. Related Sections include the following:
   1. Division 06 Section 06 10 00 “Rough Carpentry” for treated blocking and plywood sheathing
   2. Division 09 Section 09 22 16 "Non-Structural Metal Framing" for interior non-load-bearing, metal-stud framing and ceiling-suspension assemblies.

1.3 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide cold-formed metal framing capable of withstanding design loads within limits and under conditions indicated.
   1. Design Loads: As indicated.
      a. Dead Loads: Weights of materials and construction
      b. Live Loads: Refer to Structural Drawings
      c. Snow Loads Refer to Structural Drawings
      d. Wind Loads: Refer to Structural Drawings
      e. Seismic Loads: Refer to Structural Drawings
   2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
      a. Per Brick Institute recommendations Exterior Non-Load-Bearing Framing: Horizontal deflection of the wall height at brick veneer or 0.3 inches, whichever is smaller. Horizontal/vertical deflection of L/360 at metal panels with ½” maximum limit.
      b. Ceiling, Rafter and Soffit Framing: Vertical deflection of L/360 at metals panels with ½” maximum limit
   3. Design framing systems to provide for movement of framing members without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
   4. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:
      a. Upward and downward movement of 1 inch

B. Cold-Formed Steel Framing, General: Design according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions."

1. Headers: Design according to AISI's "Standard for Cold-Formed Steel Framing - Header Design."
2. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.

1.4 SUBMITTALS

A. Product Data: For each type of cold-formed metal framing product and accessory indicated.

B. Shop Drawings: Show layout, spacing, sizes, thicknesses, and types of cold-formed metal framing; fabrication; and fastening and anchorage details, including mechanical fasteners. Show reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
1. For cold-formed metal framing indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Welding certificates.

D. Product Test Reports: From a qualified testing agency, unless otherwise stated, indicating that each of the following complies with requirements, based on evaluation of comprehensive tests for current products:
1. Steel sheet.
2. Expansion anchors.
3. Power-actuated anchors.
4. Mechanical fasteners.
5. Vertical deflection clips.
6. Horizontal drift deflection clips
7. Miscellaneous structural clips and accessories.

E. Research/Evaluation Reports: For cold-formed metal framing.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed cold-formed metal framing similar in material, design and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.

C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.

D. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, ductility, and metallic-coating thickness.

E. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code--Steel," and AWS D1.3, "Structural Welding Code--Sheet Steel."

F. Fire-Test-Response Characteristics: Where indicated, provide cold-formed metal framing identical to that of assemblies tested for fire resistance per ASTM E 119 by a testing and inspecting agency acceptable to authorities having jurisdiction.

G. AISI Specifications and Standards: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" and its "Standard for Cold-Formed Steel Framing - General Provisions."
   1. Comply with AISI's "Standard for Cold-Formed Steel Framing - Truss Design."
   2. Comply with AISI's "Standard for Cold-Formed Steel Framing - Header Design."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

C. Store materials protected from exposure to rain, snow or other harmful weather conditions, at temperature and humidity conditions per the recommendations of ASTM C955

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering cold-formed metal framing that may be incorporated into the Work include, but are not limited to, the following:
   1. Allied Studco.
   2. AllSteel Products, Inc.
   3. California Expanded Metal Products Company.
   4. Clark Steel Framing.
   5. Consolidated Fabricators Corp.; Building Products Division.
   6. Craco Metals Manufacturing, LLC.
   7. Custom Stud, Inc.
   8. Dale/Incor.
   9. Design Shapes in Steel.
   10. Dietrich Metal Framing; a Worthington Industries Company.
   11. Formetal Co. Inc. (The).
   12. Innovative Steel Systems.
   13. MarinoWare; a division of Ware Industries.
   14. Quail Run Building Materials, Inc.
   15. SCAFCO Corporation.
   16. Southeastern Stud & Components, Inc.
   17. Steel Construction Systems.
   18. Steeler, Inc.
   19. Super Stud Building Products, Inc.
   20. United Metal Products, Inc

2.2 MATERIALS – **All steel to be Galvanized G90.**

A. Steel Sheet: ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:
   1. Grade: As required by structural performance

2.3 EXTERIOR NON-LOAD-BEARING WALL FRAMING – **All Steel to be Galvanized G90.**

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 18 gauge. Provide 16 ga min. at brick veneer.
   2. Minimum Flange Width: 1-5/8 inches

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:
   1. Minimum Base-Metal Thickness: 16 gauge
   2. Minimum Flange Width: 1-1/4 inches

C. Vertical Deflection Clips: Manufacturer's standard bypass and head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal and lateral loads and transfer them to the primary structure, and as follows:

E. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure.

2.4 FRAMING ACCESSORIES

A. Fabricate **galvanized G90** steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:
   1. Supplementary framing.
   2. Bracing, bridging, and solid blocking.
   3. Web stiffeners.
   4. Anchor clips.
   5. End clips.
   6. Foundation clips.
   7. Gusset plates.
   8. Stud kickers, knee braces, and girts.
   9. Joist hangers and end closures.
   10. Hole reinforcing plates.
   11. Backer plates.

2.5 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel hex-headed bolts and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C

C. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load, as determined by testing per ASTM E 1190 conducted by a qualified independent testing agency.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.
   1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.6 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint ASTM A 780.

B. Shims: Load bearing, high-density multimonomer plastic, nonleaching.

C. Sealer Gaskets: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members. Reference spec section Joint Sealants 07 92 00.

2.7 FABRICATION

A. Fabricate cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.
   1. Fabricate framing assemblies using jigs or templates.
   2. Cut framing members by sawing or shearing; do not torch cut.
   3. Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.
      a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
      b. Locate mechanical fasteners and install according to Shop Drawings, with screw penetrating joined members by not less than three exposed screw threads.
   4. Fasten other materials to cold-formed metal framing by welding, bolting, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.

C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
   1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
   2. Squareness: Fabricate each cold-formed metal framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that are required to obtain fire-resistance rating indicated. Protect remaining fire-resistive materials from damage.

C. Install load bearing shims or grout between the underside of wall bottom track or rim track and the top of foundation wall or slab at stud or joist locations to ensure a uniform bearing surface on supporting concrete or masonry construction.

3.3 INSTALLATION, GENERAL

A. Cold-formed metal framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed metal framing according to AISI's "Standard for Cold-Formed Steel Framing - General Provisions" and to manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.
   1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.

D. Install cold-formed metal framing and accessories plumb, square, and true to line, and with connections securely fastened.
   1. Cut framing members by sawing or shearing; do not torch cut.
   2. Fasten cold-formed metal framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

a. Comply with AWS D1.3 requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
b. Locate mechanical fasteners and install according to Shop Drawings, and complying with requirements for spacing, edge distances, and screw penetration.

E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.

F. Install temporary bracing and supports to secure framing and support loads comparable in intensity to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

G. Do not bridge building expansion and control joints with cold-formed metal framing. Independently frame both sides of joints.

H. Install insulation, specified in Division 07 Section 07 21 00, "Thermal Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

I. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.

J. Erection Tolerances: Install cold-formed metal framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:
1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.4 EXTERIOR NON-LOAD-BEARING WALL INSTALLATION

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure as indicated.

B. Fasten both flanges of studs to top and bottom track, unless otherwise indicated. Space studs as follows:
1. Stud Spacing: 16 inches maximum

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.
1. Install single-leg deflection tracks and anchor to building structure.
2. Install double deep-leg deflection tracks and anchor outer track to building structure.
3. Connect vertical deflection clips to bypassing studs and anchor to building structure.
4. Connect drift clips to cold formed metal framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.
1. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 18 inches of single deflection track. Install a combination of flat, taut, steel sheet straps of width and

thickness indicated and stud or stud-track solid blocking of width and thickness matching studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.

2. Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.

F. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, fasteners, and stud girts, to provide a complete and stable wall-framing system.

3.5 FIELD QUALITY CONTROL

A. Testing: Owner will engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field and shop welds will be subject to testing and inspecting.

C. Testing agency will report test results promptly and in writing to Contractor and Architect.

D. Remove and replace work where test results indicate that it does not comply with specified requirements.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.6 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed metal framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed metal framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION

SECTION 05 45 00 - METAL SUPPORT ASSEMBLIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Above ceiling supports for overhead mounted medical equipment.

B. Slotted channel framing fabrications.

1.2 RELATED REQUIREMENTS

A. Section 05 50 00 - Metal Fabrications

1.3 REFERENCE STANDARDS

A. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2014.

B. ASTM A576 - Standard Specification for Steel Bars, Carbon, Hot-Wrought, Special Quality; 1990b (Reapproved 2012).

C. ASTM A653/A653M - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process; 2015.

D. MFMA-4 - Metal Framing Standards Publication; 2004.

1.4 SUBMITTALS

A. See Section 01 30 00 - for submittal procedures.

B. Product Data:

C. Shop Drawings:
   1. Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.
   2. Include erection drawings, elevations and details where applicable.
   3. Provide design engineer's stamp on shop drawings.

D. Design Data: Provide calculations for loadings and stresses of specially fabricated framing, stamped by a Professional Structural Engineer.

E. Manufacturer's Instructions: Indicate special procedures, conditions requiring special attention.

1.5 QUALITY ASSURANCE

A. Perform design under direct supervision of a Professional Engineer experienced in design of this Work and licensed in the State in which the Project is located.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Unistrut Corp.: www.unistrut.com.

B. B-Line Systems: www.cooperbline.com.

C. Power-Strut: www.power-strut.com.

D. GS Metals Corp.: www.gsmetals.com.

E. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 PERFORMANCE CRITERIA

A. Loading: Design the support structure to support the maximum concentrated load that will be encountered by positioning the equipment at the extremities of its travel at any single point along the exposed rails.

B. Safety Factor: System designed with a minimum safety factor of 3 based upon ultimate strength under static loading conditions.

2.3 MATERIALS

A. Slotted Channel Framing: Cold-formed metal channels with continuous slot complying with MFMA-4.
   1. Size of Channels: 1-5/8 by 1-5/8 inches.
   2. Material: Steel complying with ASTM A653/A653M, structural steel, Grade 33.
   3. Finish: ASTM A653/A653M, G90 coating..
   4. Manufacturer: Unistrut Corp., P1000 and P1001 series.

B. Perforated Tubing: Hot-roll formed square tubular steel with perforated holes on 1 inch centers each face.Tubing capable of telescoping; smaller sizes fitting into next larger size.
   1. Size, Gauge: As selected to meeting loading criteria.
   2. Material: Steel complying with ASTM A1011/A1011M, structural steel, Grade 50.
   3. Finish: ASTM A653/A653M, G90 coating.
   4. Manufacturer: Unistrut Corp., Telespar

2.4 COMPONENTS

A. Fittings, connectors and accessories: ASTM A653/A653M, structural steel, Grade 33.

B. Sintered nuts: ASTM A576, GR1015.

C. Closure strips: Snap-on extruded plastic, 0.085 inch thick; white. Unistrut P3184P.

2.5 FABRICATION

A. Verify dimensions on site prior to shop fabrication.

B. Fit and shop assemble in largest practical sections for delivery to site.

C. Supply components required for anchorage of metal framing. Fabricate anchorage and related components of same material and finish as metal fabrications, except where specifically noted otherwise.

PART 3 EXECUTION

3.1 PREPARATION

A. Make provision for erection loads with temporary bracing. Keep Work in alignment.

B. Supply items required to be cast into concrete or embedded in masonry with setting templates, to appropriate Sections.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install items plumb and level, accurately fitted, free from distortion or defects.

C. Install closure strips at exposed channels in ceiling installations.

3.3 ERECTION TOLERANCES

A. Maximum Variation From True Position: 1/4 inch.

B. Maximum Offset From True Alignment: 1/4 inch.

3.4 SCHEDULES

A. Provide items listed in Schedule or indicated on Drawings with anchorage and attachments necessary for installation.

B. The Schedule is a list of principal items only. Refer to Drawings for items not specifically scheduled.
   1. Ceiling supports for overhead mounted equipment.

END OF SECTION

SECTION 05 50 00 - METAL FABRICATIONS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Shop fabricated steel items.

1.2 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete: Placement of metal fabrications in concrete.

B. Section 04 20 00 - Unit Masonry: Placement of metal fabrications in masonry.

C. Section 05 45 00 - Metal Support Assemblies: Slotted channel framing.

D. Section 05 51 00 - Metal Stairs.

E. Section 05 52 13 - Pipe and Tube Railings.

1.3 REFERENCE STANDARDS

A. ANSI A14.3 - American National Standard for Ladders -- Fixed -- Safety Requirements; 2008.

B. ASCE 7 - Minimum Design Loads for Buildings and Other Structures; 2010, with 2013 Supplements and Errata.

C. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.

D. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2012.

E. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2013.

F. ASTM A325 - Standard Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength; 2014.

G. ASTM A325M - Standard Specification for Structural Bolts, Steel, Heat Treated 830 MPa Minimum Tensile Strength (Metric); 2014.

H. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2014.

I. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

J. ASTM B633 - Standard Specification for Electrodeposited Coatings of Zinc on Iron and Steel; 2013.

K. ASTM E488/E488M - Standard Test Methods for Strength of Anchors in Concrete Elements; 2015.

L. ASTM F593 - Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs; 2013a.

M. ASTM F594 - Standard Specification for Stainless Steel Nuts; 2009 (Reapproved 2015).

N. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2012.

O. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2015.

P. SSPC-Paint 15 - Steel Joist Shop Primer/Metal Building Primer; 1999 (Ed. 2004).

Q. SSPC-SP 2 - Hand Tool Cleaning; 1982 (Ed. 2004).

1.4 SUBMITTALS

A. See Section 01 33 00 for submittal procedures.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories. Include erection drawings, elevations, and details where applicable.
   1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.

C. Welders' Certificates: Submit certification for welders employed on the project, verifying AWS qualification within the previous 12 months

D. Samples for Verification: For each type and finish of extruded nosing.

E. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

F. Qualification Data: For qualified professional engineer.

G. Welding certificates.

H. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

.

D. Design Data: Provide framing member structural and physical characteristics, engineering calculations, dimensional limitations for ceiling hung equipment supports.

1.5 QUALITY ASSURANCE

A. Design ceiling hung equipment supports under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed in the State in which the Project is located.

PART 2 PRODUCTS

2.1 PERFORMANCE CRITERIA

A. Delegated Design: Design ladders and pipe grids, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.
   1. Pipe Grid Design Loads: 200 lbs per linear foot.

B. Structural Performance of Aluminum Ladders: Aluminum ladders, including landings, shall withstand the effects of loads and stresses within limits and under conditions specified in ANSI A14.3.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints,

overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

C. Seismic Loading: Design and install ceiling hung equipment supports for static and for seismic conditions in accordance with regulatory requirements and the following:
   1. Comply with seismic loading requirements of the 2012 International Building Code and ASCE 7; Use Group I, Design Category "C", Site Class "E".

2.2 MATERIALS - STEEL

A. Steel Sections: ASTM A36/A36M.

B. Steel Tubing: ASTM A501/A501M hot-formed structural tubing.

C. Plates: ASTM A283/A283M.

D. Pipe: ASTM A53/A53M, Grade B Schedule 40, black finish.

E. Fasteners: Match or be compatible with metals being fastened.

F. Bolts, Nuts, and Washers: ASTM A325 (ASTM A325M), Type 1, plain.

G. Expansion Anchors: Anchor bolt and sleeve assembly with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.
   1. Material for Anchors in Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633, Class Fe/Zn 5.
   2. Material for Anchors in Exterior Locations: Alloy Group 2 stainless-steel bolts complying with ASTM F593 and nuts complying with ASTM F594.

H. Welding Materials: AWS D1.1/D1.1M; type required for materials being welded.

I. Shop and Touch-Up Primer: SSPC-Paint 15, complying with VOC limitations of authorities having jurisdiction.

2.3 FABRICATION

A. Fit and shop assemble items in largest practical sections, for delivery to site.

B. Fabricate items with joints tightly fitted and secured.

C. Grind exposed joints flush and smooth with adjacent finish surface. Make exposed joints butt tight, flush, and hairline. Ease exposed edges to small uniform radius. Architectural Grade welds AESS 4.

D. Exposed Mechanical Fastenings: Flush countersunk screws or bolts; unobtrusively located; consistent with design of component, except where specifically noted otherwise.

E. Supply components required for anchorage of fabrications. Fabricate anchors and related components of same material and finish as fabrication, except where specifically noted otherwise.

2.4 FABRICATED ITEMS

A. The following is a list of principal items only. Refer to Drawings for items not specifically listed.

B. Ladders: Steel; in compliance with ANSI A14.3; with mounting brackets and attachments; Interior, prime paint finish. Exposed to Outside Atmosphere: Galvanized finish.
   1. Side Rails: 3/8 x 2 inches members spaced at 20 inches.
   2. Rungs: one inch diameter solid round bar spaced 12 inches on center.

3. Space rungs 7 inches from wall surface.

C. Steel angle bucks and supports for lead lined door frames, prime painted.

D. Metal bracing and supports for architectural woodwork; prime paint finish.

E. Above ceiling supports for ceiling hung equipment and special conditions; prime painted.

F. Above ceiling supports for folding panel partition tracks; prime finish.

G. Toilet Partition Suspension Members: Steel angle sections; prime paint finish.

H. Masonry partition bracing; prime painted.

2.5 MANUFACTURED ITEMS

A. Vertical Ladder (Parapet Return): Fixed.
1. Material: ASTM B221, 6061 Alloy, T6 temper, mill finish.
2. Height: Refer to drawings.
3. Parapet Return: Extend rails 42 inches above parapet. Provide rails on opposite side mounted to rear of parapet and extending 42 inches above parapet and below parapet to roof line.
4. Angle: 90 degrees to horizontal.
5. Width: 20-1/4 inch.
6. Rungs: 1-1/8 inch diameter serrated solid round bar spaced 12 inches on center.
7. Railing: 2-1/2 inch "C" channel, 1/8 minimum wall thickness..
8. Security Door: 0.188 inch thick aluminum with piano hinges and padlock hasp.
9. Climbing height 20-30 feet: Install flared cage with 7 vertical bars and hoops at 4'-0" centers.
10. Product: Model 563 manufactured by Alaco Ladder Co.: www.alacoladder.com.

B. Fixed Ships Ladder with Crossover: ASTM B221, 6005 Alloy, T5 temper, mill finish.
1. Model: Precision SL Series
2. Width, inch: 30.
3. Angle: 63 degrees to horizontal.
4. Handrail Diameter, inch: 1-1/4, Schedule 40.
5. Tread Width, inch: 5-3/16.
6. Crossover: Aluminum bar grating.
7. Height/Run: Refer to drawings.

2.6 FINISHES - STEEL

A. Prime paint steel items.
1. Exceptions: Do not prime surfaces in direct contact with concrete, where field welding is required, and items to be covered with sprayed fireproofing.

B. Prepare surfaces to be primed in accordance with SSPC-SP2.

C. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

D. Prime Painting: One coat.

2.7 FABRICATION TOLERANCES

A. Squareness: 1/8 inch maximum difference in diagonal measurements.

B. Maximum Offset Between Faces: 1/16 inch.

C. Maximum Misalignment of Adjacent Members: 1/16 inch.

D. Maximum Bow: 1/8 inch in 48 inches.

E. Maximum Deviation From Plane: 1/16 inch in 48 inches.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.2 PREPARATION

A. Clean and strip primed steel items to bare metal where site welding is required.

B. Supply setting templates to the appropriate entities for steel items required to be cast into concrete or embedded in masonry.

3.3 INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Provide for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

C. Field weld components as indicated on drawings.

D. Perform field welding in accordance with AWS D1.1/D1.1M.

E. Obtain approval prior to site cutting or making adjustments not scheduled.

F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

C. Maximum Out-of-Position: 1/4 inch.

3.5 FIELD QUALITY CONTROL

A. Expansion Anchors: Prior to installation, verify that the expansion anchor complies with the specified loading criteria for material, size, and length. During installation, verify 100 percent of the expansion anchors for the following:
   1. Drilled hole diameter is the same as the anchor diameter.
   2. Anchor is installed to the specified embedment depth.
   3. Verify the installation torque is in compliance with manufacturer's installation instructions.
   4. Anchor is installed in compliance with the manufacturer’s printed instructions.

B. If reinforcement steel, prestressing strands, or other embedded items are encountered in the concrete where the expansion anchor is to be located, notify the Architect and Engineer of such interference.

END OF SECTION

SECTION 05 51 00 - METAL STAIRS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Stairs with concrete treads.

B. Structural steel stair framing and supports.

C. Handrails and guards.

1.2 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete: Placement of metal anchors in concrete.

B. Section 04 20 00 - Unit Masonry: Placement of metal fabrications in masonry.

C. Section 05 50 00 - Metal Fabrications.

1.3 REFERENCE STANDARDS

A. ASTM A6/A6M - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling; 2014.

B. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.

C. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless; 2012.

D. ASTM A283/A283M - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates; 2013.

E. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2013.

F. ASTM A501/A501M - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing; 2014.

G. ASTM A1008/A1008M - Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable; 2015.

H. ASTM A1011/A1011M - Standard Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength; 2014.

I. AWS A2.4 - Standard Symbols for Welding, Brazing, and Nondestructive Examination; 2012.

J. AWS D1.1/D1.1M - Structural Welding Code - Steel; 2015.

K. IAS AC172 - Accreditation Criteria for Fabricator Inspection Programs for Structural Steel; International Accreditation Service, Inc; 2011.

L. NFPA 101 - Life Safety Code; 2015.

M. SSPC-SP 2 - Hand Tool Cleaning; 1982 (Ed. 2004).

1.4 SUBMITTALS

A. See Section 01 33 00 for submittal procedures.

B. Shop Drawings: Indicate profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners, and accessories.
   1. Indicate welded connections using standard AWS A2.4 welding symbols. Indicate net weld lengths.
   2. Include the design engineer's stamp or seal on each sheet of shop drawings
   3. Precast concrete treads
   4. Grout.

C. Welders' Certificates.

D. Fabricator's Qualification Statement: Provide documentation showing steel fabricator is accredited under IAS AC172.

1.5 QUALITY ASSURANCE

A. Structural Designer Qualifications: Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located, or personnel under direct supervision of such an engineer.

B. Welder Qualifications: Show certification of welders employed on the Work, verifying AWS qualification within the previous 12 months.

PART 2 PRODUCTS

2.1 METAL STAIRS – GENERAL

A. Delegated Design: Design metal stairs, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Provide stairs of the design specified, complete with landing platforms, vertical and horizontal supports, railings, and guards, fabricated accurately for anchorage to each other and to building structure.
   1. Regulatory Requirements: Provide stairs and railings complying with the most stringent requirements of local, state, and federal regulations; where requirements of the contract documents exceed those of regulations, comply with the contract documents.
      a. Comply with NFPA 101, Chapter 7 Means of Egress.
   2. Structural Design: Provide complete stair and railing assemblies complying with the applicable local code.

      a Structural Performance of Stairs: Metal stairs shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.

      b Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.

      c. Limit deflection of treads, platforms, and framing members to L/240 or 1/4 inch, whichever is less.

      d. Design and fabricate stair assembly to support uniform and concentrated loads designated on the Drawings with deflection of stringers or landing framing not to exceed 1/180 of span.
   3. Dimensions: As indicated on drawings.
   4. Shop assemble components; disassemble into largest practical sections suitable for transport and access to site.
   5. No sharp or rough areas on exposed travel surfaces and surfaces accessible to touch.
   6. Separate dissimilar metals using paint or permanent tape.

C. Metal Jointing and Finish Quality Levels:

1. Architectural: All joints as inconspicuous as possible, whether welded or mechanical.
   a. Welded Joints: Exposed welds: Continuously welded and ground smooth and flush, **Architecturally Exposed Structural Steel (AESS 4.)**
   b. Mechanical Joints: Butted tight, flush, and hairline; concealed fastenings only.
   c. Exposed Edges and Corners: Eased to small uniform radius.
   d. Metal Surfaces to be Painted: Sanded or ground smooth, suitable for highest quality gloss finish. Exposed welds: Continuously welded and ground smooth and flush, **Architecturally Exposed Structural Steel (AESS 4.)**

D. Fasteners: Same material or compatible with materials being fastened; type consistent with design and specified quality level.

E. Anchors and Related Components: Same material and finish as item to be anchored, except where specifically indicated otherwise; provide all anchors and fasteners required.

2.2 METAL STAIRS

A. Jointing and Finish Quality Level: Architectural, as defined above.

B. Risers: Closed.

C. Concrete Treads and Risers:

Metal pan with field-installed concrete fill.

1. Concrete Depth: 1-1/2 inches, minimum.
2. Tread Pan Material: Steel sheet.
3. Tread Pan Thickness: As required by design; 14 gage, 0.075 inch minimum.
4. Tack weld metal lath to inside bottom of tread and landing pans.
5. Pan Anchorage to Stringers: Continuously welded, from top, to be exposed to view from bottom.
6. Concrete Reinforcement: None.
7. Concrete Finish: Steel troweled.

Risers: Same material and thickness as tread pans.

1. Riser/Nosing Profile: Sloped riser with rounded nosing of minimum radius.
2. Nosing Depth: Not more than 1-1/2 inch overhang.
3. Nosing Return: Flush with top of concrete fill, not more than 1/2 inch wide.

Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.

Railings: Steel pipe railings.

Finish: Shop- or factory-prime painted.

D. Terrazzo Treads and Risers

Metal pan with terrazzo fill. Refer to drawings, plans, sections, details and spec section 096623 Epoxy Terrazzo..

1. Terrazzo Depth: 1-1/2 inches, minimum.
2. Tread Pan Material: Steel sheet.
3. Tread Pan Thickness: As required by design; 14 gage, 0.075 inch minimum.
4. Tack weld metal lath to inside bottom of tread and landing pans.
5. Pan Anchorage to Stringers: Continuously welded, from top, to be exposed to view from bottom.
6. Concrete Reinforcement: None.

Risers: Same material and thickness as tread pans. Refer to stair details.

Landings: Same construction as treads, supported and reinforced as required to achieve design load capacity.

Railings: SS railings, Refer to drawings

2.3 STEEL HANDRAILS AND GUARDS

A. Wall-Mounted Rails: Round pipe or tube rails unless otherwise indicated.
   1. Outside Diameter: 1-1/4 inch, minimum, to 1-1/2 inches, maximum.

B. Guards:
   1. Top Rails: Round pipe or tube rails unless otherwise indicated.
      a. Outside Diameter: 1-1/4 inch, minimum, to 1-1/2 inches, maximum.
   2. Infill at Picket Railings: Vertical pickets.
      a. Horizontal Spacing: Maximum 4 inches on center.
      b. Shape: Round.
      c. Size: 1/2 inch diameter.
      d. Top Mounting: Welded to underside of top rail.
      e. Bottom Mounting: Welded to top surface of stringer.
   3. End and Intermediate Posts: Same material and size as top rails.
      a. Horizontal Spacing: As indicated on drawings.
      b. Mounting: Welded to top surface of stringer.

2.4 MATERIALS

A. Steel Sections: ASTM A36/A36M.

B. Steel Tubing: ASTM A500/A500M or ASTM A501/A501M structural tubing, round and shapes as indicated.

C. Steel Plates: ASTM A6/A6M or ASTM A283/A283M.

D. Pipe: ASTM A 53/A 53M, Grade B Schedule 40, black finish.

E. Ungalvanized Steel Sheet: Hot- or cold-rolled, except use cold-rolled where finished work will be exposed to view.
   1. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, Designation CS (commercial steel).
   2. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Designation CS (commercial steel).

F. Concrete Fill: Portland cement Type I, 3000 psi 28 day strength, 2 to 3 inch slump.

2.5 SHOP FINISHING

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Do not prime surfaces in direct contact with concrete or where field welding is required.

C. Prime Painting: Use specified shop- and touch-up primer.
   1. Preparation of Steel: In accordance with SSPC-SP 2, Hand Tool Cleaning.
   2. Number of Coats: One.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

1. Hot-Rolled Steel Sheet: ASTM A1011/A1011M, Designation CS (commercial steel).
2. Cold-Rolled Steel Sheet: ASTM A1008/A1008M, Designation CS (commercial steel).

F. Concrete Fill: Portland cement Type I, 3000 psi 28 day strength, 2 to 3 inch slump.

2.5 SHOP FINISHING

A. Clean surfaces of rust, scale, grease, and foreign matter prior to finishing.

B. Do not prime surfaces in direct contact with concrete or where field welding is required.

C. Prime Painting: Use specified shop- and touch-up primer.
1. Preparation of Steel: In accordance with SSPC-SP 2, Hand Tool Cleaning.
2. Number of Coats: One.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

3.2 PREPARATION

A. When field welding is required, clean and strip primed steel items to bare metal.

B. Supply items required to be cast into concrete and embedded in masonry with setting templates.

3.3 INSTALLATION

A. Install components plumb and level, accurately fitted, free from distortion or defects.

B. Allow for erection loads, and for sufficient temporary bracing to maintain true alignment until completion of erection and installation of permanent attachments.

C. Provide welded field joints where specifically indicated on drawings. Perform field welding in accordance with AWS D1.1/D1.1M.

D. Other field joints may be either welded or bolted provided the result complies with the limitations specified for jointing quality levels.

E. Obtain approval prior to site cutting or creating adjustments not scheduled.

F. After erection, prime welds, abrasions, and surfaces not shop primed, except surfaces to be in contact with concrete.

G. Stair Nosings: At steel pan stairs, provide continuous nosings less 1/8 inch clearance from ends of treads.

3.4 TOLERANCES

A. Maximum Variation From Plumb: 1/4 inch per story, non-cumulative.

B. Maximum Offset From True Alignment: 1/4 inch.

END OF SECTION

SECTION 05 52 13 - PIPE AND TUBE RAILINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Steel pipe and tube railings.

B. Related Sections:

1. Division 05 Section 05 51 00 "Metal Stairs" for steel tube railings associated with metal stairs.
2. Division 05 Section 05 73 13 "Decorative Metal Railings" for ornamental railings fabricated from pipes, mesh, and tubes.
3. Division 05 Section 05 50 00 "Metal Fabrication" for metal blocking for anchoring railings.

1.3 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design railings, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:

1. Steel: 72 percent of minimum yield strength.

C. Structural Performance: Railings shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Handrails and Top Rails of Guards:

a. Uniform load of 100lbs/ft. in any direction.
b. Concentrated load of 400lbs/ft. any direction.
c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:

a. Concentrated load of 100 lbs. applied horizontally on an area of 1 sq. ft..
b. Infill load and other loads need not be assumed to act concurrently.

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 def F, ambient; 180 deg F, material surfaces.

E. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other

materials from direct contact with incompatible materials.

1.4 SUBMITTALS

A. Product Data: For the following:

1. Manufacturer's product lines of mechanically connected railings.
2. Railing brackets.
3. Grout, and anchoring cement.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

C. Samples for Initial Selection: For products involving selection of color, texture, or design.

D. Samples for Verification: For each type of exposed finish required.

1. Sections of each distinctly different linear railing member.
2. Fittings and brackets.

E. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

F. Qualification Data: For qualified professional engineer.

G. Welding certificates.

H. Paint Compatibility Certificates: Refer to Division 09 painting Sections.

I. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E 894 and ASTM E 935.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of railing from single source from single manufacturer.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code – Steel and Architectural AESS 4 standards.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

1.7 COORDINATION AND SCHEDULING

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible

with one another.

B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

C. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Steel Pipe and Tube Railings:

a. Pisor Industries, Inc.
b. Wagner, R & B, Inc.; a division of the Wagner Companies.
c. Approved Equal.

2.2 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails unless otherwise indicated.

2.3 STEEL AND IRON

A. Recycled Content of Steel Products: Provide products with average recycled content of steel products so postconsumer recycled content plus one-half of preconsumer recycled content is as follows:

1. Structural sections (W-Shapes, channels, angles, etc), decking and plate: Not less than 75 percent.
2. Hollow tubes and all other steel material: Not less than 25 percent.

B. Tubing: ASTM A 500 (cold formed).

C. Pipe: ASTM A 53/A 53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.

1. Provide galvanized finish for exterior installations and where indicated.

D. Plates, Shapes, and Bars: ASTM A 36/A 36M.

E. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M, unless otherwise indicated.

2.4 FASTENERS

A. General: Provide the following:

1. Ungalvanized-Steel Railings: Plated steel fasteners complying with ASTM B 633 or , Class Fe/Zn 5 for zinc coating.
2. Hot-Dip Galvanized Railings: Type 304 stainless-steel or hot-dip zinc-coated steel fasteners complying with ASTM A 153/A 153M or ASTM F 2329 for zinc coating.

B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.

C. Fasteners for Interconnecting Railing Components:

1. Provide welded connections for interconnecting railing components and concealed fasteners for attaching them to other work, unless otherwise indicated to Architectural AESS 4 standards.
2. Provide tamper-resistant flat-head machine screws for instances where exposed fasteners are indicated.

D. Post-Installed Anchors: Torque-controlled expansion anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488, conducted by a qualified independent testing agency.

1. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or , Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy Group stainless-steel bolts, , and nuts, .

2.5 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Etching Cleaner for Galvanized Metal: Complying with MPI#25.

C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

D. Shop Primers: Provide primers that comply with Division 09 painting Sections.

E. Intermediate Coats and Topcoats: Provide products that comply with Division 09 painting Sections.

F. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

G. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

H. Anchoring Cement: Factory-packaged, nonshrink, nonstaining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.

1. Water-Resistant Product: At exterior locations and where indicated provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.6 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.

B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately .09375 inches unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form work true to line and level with accurate angles and surfaces.

E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

G. Connections: Fabricate railings with welded connections unless otherwise indicated.

H. Nonwelded Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.

1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.

I. Form changes in direction as follows:

1. As detailed.
2. By bending or by inserting prefabricated elbow fittings.

J. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

K. Close exposed ends of railing members with prefabricated end fittings.

L. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is or less.

M. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.

N. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

O. For railing posts set in concrete, provide steel sleeves not less than long with inside dimensions not less than greater than outside dimensions of post, with metal plate forming bottom closure.

P. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

2.7 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.8 STEEL AND IRON FINISHES

A. Galvanized Railings:

1. Hot-dip galvanize exterior steel and iron railings, including hardware, after fabrication.
2. Comply with ASTM A 123/A 123M for hot-dip galvanized railings.
3. Comply with ASTM A 153/A 153M for hot-dip galvanized hardware.
4. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.
5. Fill vent and drain holes that will be exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

B. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

C. Preparing Galvanized Railings for Shop Priming: After galvanizing, thoroughly clean railings of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.

D. For nongalvanized steel railings, provide nongalvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors to be embedded in exterior concrete or masonry.

E. Preparation for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with requirements indicated below:

1. Railings Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
2. Other Railings: SSPC-SP 3, "Power Tool Cleaning."

F. Primer Application: Apply shop primer to prepared surfaces of railings unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

1. Shop prime uncoated railings with universal shop primer unless zinc-rich primer is indicated.
2. Do not apply primer to galvanized surfaces.

G. Shop-Painted Finish: Comply with Division 09 Section "Interior Painting" for back-of-house functions, and “High Performance Coatings” for exterior applications.

1. Colors: As selected by Architect from manufacturer's full range, allowing for the possibility of several color choices within each category.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location,

alignment, and elevation; measured from established lines and levels and free of rack.

1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
2. Set posts plumb within a tolerance of. 1/8"
3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed ¼ inch in 12 feet.

C. Corrosion Protection: Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

D. Adjust railings before anchoring to ensure matching alignment at abutting joints.

E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.2 RAILING CONNECTIONS

A. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

B. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within of post.

3.3 ANCHORING POSTS

A. Use metal sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with non-shrink, nonmetallic grout or anchoring cement, mixed and placed to comply with anchoring material manufacturer's written instructions.

B. Cover anchorage joint with flange of same metal as post, attached to post with set screws.

C. Anchor posts to metal surfaces with oval flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:

1. For steel pipe railings, weld flanges to post and bolt to metal supporting surfaces.

3.4 ATTACHING RAILINGS

A. Anchor railing ends at walls with round flanges anchored to wall construction and connected to railing ends using nonwelded connections.

B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and connected to railing ends using nonwelded connections.

C. Secure wall brackets and railing end flanges to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.
3. For steel-framed partitions, use self-tapping screws fastened to steel framing or to concealed steel reinforcements.

3.5 ADJUSTING AND CLEANING

A. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 09 painting Sections.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.6 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

END OF SECTION 05 52 13

SECTION 05 73 13 - GLAZED DECORATIVE METAL RAILINGS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Tempered Laminated glass railings at balconies and glass railings at Stair #2

1.2 RELATED REQUIREMENTS

A. Section 08 80 00 - Glazing: Glass used for other purposes.

1.3 REFERENCE STANDARDS

A. 16 CFR 1201 - Safety Standard for Architectural Glazing Materials; current edition.

B. ANSI Z97.1 - American National Standard for Safety Glazing Materials Used in Buildings, Safety Performance Specifications and Methods of Test; 2010.

C. ASTM C1048 - Standard Specification for Heat-Strengthened and Fully Tempered Flat Glass; 2012.

D. ASTM E935 - Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings; 2013.

E. ASTM E985 - Standard Specification for Permanent Metal Railing Systems and Rails for Buildings; 2000 (Reapproved 2006).

1.4 PERFORMANCE REQUIREMENTS , PRODUCTS AND MANUFACTURERS

A. Delegated Design: Design the entirety of railing assemblies, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B Structural Performance: Railings, including attachment to building construction, shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:

1. Handrails and Top Rails of Guards:

    a. Uniform load of 50 lbf/ft. (0.73 kN/m) applied in any direction.
    b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
    c. Uniform and concentrated loads need not be assumed to act concurrently.

2. Infill of Guards:

    a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
    b. Infill load and other loads need not be assumed to act concurrently.

3. Glass-Supported Railings: Support each section of top rail by a minimum of three glass panels or by other means so top rail will remain in place if any one panel fails.

C.. Manufacturers

1.Basis of Design : C.R. Laurence Co., Inc.: www.crlaurence.com.

2.Blumcraft of Pittsburgh: www.blumcraft.com.

3.Or approved equal.

D. Structural Glass Railing Systems

1. Minimum specs for Base Shoe Type HG-7GS for 13/16" glass heavy structural aluminum base with Stainless steel cladding is a pre-engineered structural component minimum yield for 42" tall railing

2. Minumum specs for Top cap 2" diameter for 13/16" glass stainless steel minimum 18 gauge with u-channel insert for attachment. Part #HG-200RTC

3. Minimum specs for stainless steel cladding 18 ga. 304 grade #4 lineal finish

4. Minimum specs for glass; 13/16" ultra clear, low iron, laminated and tempered with make-up of 3/8" clear tempered laminated with .060 interlayer on 3/8" clear tempered. Minimum interlayer to be .060 PVB for interior and SGP for exterior applications

5. On site mock-up required for Architect's approval

1.5 SUBMITTALS

A. Summary: Section Includes:

1. Glass infill with railings at balcony and Stair #2.

1.2 ACTION SUBMITTALS

A. Product Data: For the following:

1. Manufacturer's product lines of railings assembled from standard components.
2. Grout, anchoring cement.

B. Shop Drawings: Include plans, elevations, sections, and attachment details.

C. Samples: For each type of exposed finish required.

D. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **professional engineer** and **testing agency**

B. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E894 and ASTM E935.

C. Preconstruction test reports.

D. Evaluation Reports: For post-installed anchors, from ICC-ES.

1.4 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockups for each form and finish of railing consisting of two posts, top rail, infill area, and anchorage system components.

1.5 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: [**Owner will engage**] [**Engage**] a qualified testing agency to perform preconstruction testing on laboratory mockups. Payment for these services will be made [**by Owner**] [**from the testing and inspecting allowance, as authorized by Change Orders**] [**by Contractor**]. Retesting of products that fail to meet specified requirements shall be done at Contractor's expense.

1. Build laboratory mockups at testing agency facility; use personnel, materials, and methods of construction that will be used at Project site.
2. Test railings according to ASTM E894 and ASTM E935.

B. Product Data: For the following:

1. Manufacturer's product lines of railings assembled from standard components.
2. Grout, anchoring cement, and paint products.

C. Shop Drawings: Indicate profiles, sizes, connection attachments, anchorage, size and type of fasteners, and accessories.
1. Provide details and calculations for railing system, stamped by a Professional Structural Engineer.

D. Design Data: Provide member structural and physical characteristics and engineering calculations, and identify dimensional limitations as prepared, sealed and signed by a structural engineer licensed in the State in which the Project is located.

E. Selection Samples: For each metal finish specified, two complete sets of finish samples, 3 x 5 inches.

F. Test Reports: Submit test reports indicating compliance with ASTM E985.

G. Maintenance Instructions: Submit manufacturer’s maintenance and cleaning instructions.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the types of products specified in this section, and with minimum three years of documented experience.
   1. All metal fabrication performed by a single source fabricator.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum three years of experience.

C. Perform design and prepare shop drawings under direct supervision of a Professional Structural Engineer experienced in design of this work and licensed in the State in which the Project is located.

PART 2 PRODUCTS

2.1 RAILINGS - GENERAL REQUIREMENTS

A. Design, and fabricate railing assemblies in accordance with the most stringent requirements of ASTM E985 and applicable local code. Test in accordance with ASTM E935.

B. Safety Glazing Products: Comply with 16 CFR 1201 and ANSI Z97.1 requirements.

C. Allow for expansion and contraction of members and building movement without damage to connections or members.

D. Provide anchors and other components as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.

E. Manufacturer all mechanical fasteners used in assembly of stainless steel railings stainless steel.

2.2 FABRICATION

A. Orient pattern and draw of glass pieces in same direction. Place waves in sheet glass parallel to floor.

B. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage[**, but not less than that required to support structural loads**].

C. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints

D. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage[, but not less than that required to support structural loads].

E. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.

F. Form changes in direction [by bending] [or] [by inserting prefabricated elbow fittings].

G. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

H. Close exposed ends of hollow railing members with prefabricated end fittings.

I. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work where indicated

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions and as indicated on drawings.

B. Fit exposed connections accurately together to form tight joints except as necessary for expansion.

C. Perform cutting, drilling, and fitting required for installation of handrails. Accurately set handrails in location, alignment, and elevation, measured from established lines and levels.

D. Install components plumb and level, accurately fitted, free from distortion or defects, with tight joints.

E. Provide anchors and other components as required to attach to structure, made of same materials as railing components unless otherwise indicated; where exposed fasteners are unavoidable provide flush countersunk fasteners.

1. For anchorage to concrete, provide inserts to be cast into concrete, for welding anchors.

F. Structural Glass Railings: Anchor to substrate in strict accordance with tested anchorage system.

G. Remove protective film promptly so that it does not set.

H. Clean glass and metal surfaces.

3.4 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

DIVISION

06

WOOD, PLASTICS AND COMPOSITES

SECTION 06 10 00 - ROUGH CARPENTRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Wood blocking, cants, and nailers.
   2. Interior and exterior wood sheathing panels.

1.3 DEFINITIONS

A. Exposed Framing: Framing not concealed by other construction.

1.4 SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

   1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
   2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
   3. For fire-retardant treatments specified to be High-Temperature (HT) type, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency according to ASTM D 5664.
   4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.
   5. Include copies of warranties from chemical treatment manufacturers for each type of treatment.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Stack lumber flat with spacers beneath and between each bundle to provide air circulation. Protect lumber from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings

1.6 WOOD PRODUCTS, GENERAL

A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry lumber.
3. Provide dressed lumber, S4S, unless otherwise indicated.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

A. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, provide lumber that complies with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Provide lumber graded by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.

1. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry lumber.

B. Plywood: Either DOC PS 1 or DOC PS 2 unless otherwise indicated.

2.2 FIRE-RETARDANT-TREATED MATERIALS

A. General: Where fire-retardant-treated materials are indicated, use materials complying with requirements in this article, that are acceptable to authorities having jurisdiction, and with firetest-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame spread index of 25 or less when tested according to ASTM E 84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet beyond the centerline of the burners at any time during the test.
1. Use treatment that does not promote corrosion of metal fasteners.
2. Exterior Type: Treated materials shall comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering according to ASTM D 2898. Use for exterior locations and where indicated.
3. Interior Type A: Treated materials shall have a moisture content of 28 percent or less when tested according to ASTM D 3201 at 92 percent relative humidity. Use where exterior type is not indicated.
4. Design Value Adjustment Factors: Treated lumber shall be tested according ASTM D 5664 and design value adjustment factors shall be calculated according to ASTM D 6841.

C. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Kiln-dry plywood after treatment to a maximum moisture content of 15 percent.

D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency.

E. Application: Treat items indicated on Drawings, and the following
   1. Concealed blocking.
   2. Plywood equipment backing panels

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Set rough carpentry to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry to other construction; scribe and cope as needed for accurate fit. Locate nailers, blocking, and similar supports to comply with

B. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant treated plywood backing panels with classification marking of testing agency exposed to view.

C. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

D. Provide fire blocking in concealed cavities as indicated.

E. Sort and select lumber so that natural characteristics will not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.

F. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
   1. NES NER-272 for power-driven fasteners.
   2. Table 2304.9.1, "Fastening Schedule," in ICC's International Building Code.

3.2 WOOD BLOCKING, AND NAILER INSTALLATION

A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.

B. Attach items to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.

3.3 PROTECTION

A. Protect wood that has been treated with inorganic boron (SBX) from weather. If, despite protection, inorganic boron-treated wood becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

B. Protect rough carpentry from weather. If, despite protection, rough carpentry becomes wet, apply EPA-registered borate treatment. Apply borate solution by spraying to comply with EPA-registered label.

END OF SECTION 06 10 00

SECTION 06 10 53 - MISCELLANEOUS CARPENTRY

PART 1 – GENERAL (NOT APPLICABLE)

PART 2 - PRODUCTS

A. Lumber, General: Comply with PS 20 and with applicable grading rules; factory-mark with grade, species, moisture content at time of surfacing, and mill; dressed lumber, S4S, unless otherwise indicated.

B. Concealed Dimension Lumber: As follows:

1. Species: Any wood species listed by PS 20.
2. Moisture Content: S-DRY, KD 19 or MC 19 (19 percent maximum moisture content).
3. Grade: No. 2 or standard grade.

C. Exposed Dimension Lumber: As follows:

1. Moisture Content: S-DRY, KD 19 or MC 19 (19 percent maximum moisture content).
2. Grade: No. 1 or construction grade.

D. Concealed Boards: As follows:

1. Species: Any wood species listed by PS 20.
2. Moisture Content: S-DRY, KD 19 or MC 19 (19 percent maximum moisture content).
3. Grade: No. 2, 2 Common, or Construction Boards.

E. Exposed Boards: As follows:

1. Moisture Content: S-DRY, KD 19 or MC 19 (19 percent maximum moisture content).
2. Grade: No. 1, 1 Common, Construction Heart, or Select Merchantable Boards.

F. Miscellaneous Concealed Plywood: PS 1, C-C Plugged Exterior, thickness as indicated but not less than 1/2 inch nominal.

G. Electrical/Telephone Backing Panels: APA-RATED SHEATHING, Exposure 1, fire-retardant treated, thickness as indicated but not less than 15/32 inch.

H. Preservative Treatment: Obtain preservative-treated lumber complying with AWPA Standard C2. Mark each treated item with AWPB or SPIB Quality Mark Requirements. Coat surfaces cut after treatment to comply with AWPA M4.

1. Above-Ground Wood Treatment: Pressure treat with waterborne preservatives to a minimum retention of 0.25 pcf. Treat wood items indicated and in contact with roofing, flashing, waterproofing, masonry, concrete, and within 18 inches of grade. Kiln-dry interior dimension lumber and construction panels after treatment to 19 and 15 percent maximum moisture content, respectively.

PART 3 - EXECUTION

A. Cut and fit miscellaneous carpentry accurately and securely fasten. Install members plumb and true to line and level.

B. Countersink nail and bolt heads on exposed carpentry work and fill holes.

C. Install wood grounds, nailers, blocking, and sleepers where shown and where required for screeding or attachment of other work.

END OF SECTION 06 10 53

SECTION 06 36 61.13 - PLASTIC-LAMINATE-CLAD COUNTERTOPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes plastic-laminate-clad countertops.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.

B. Shop Drawings: For plastic-laminate-clad countertops.

1. Include plans, sections, details, and attachments to other work. Detail fabrication and installation, including field joints.
2. Show locations and sizes of cutouts and holes for items installed in plastic-laminate-clad countertops.

C. Samples for Verification: As follows:

1. Plastic Laminates: For each type, color, pattern, and surface finish required, 8 by 10 inches (200 by 250 mm) in size.
2. Wood-Grain Plastic Laminates: For each type, color, pattern, and surface finish required, 8 by 10 inches (200 by 250 mm) in size.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For the following:

1. Composite wood and fiber products.
2. High-pressure decorative laminate.
3. Chemical-resistant, high-pressure decorative laminate.
4. Adhesives.

B. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver countertops only after casework and supports on which they will be installed have been completed in installation areas.

B. Store countertops in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

C. Keep surfaces of countertops covered with protective covering during handling and installation.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install countertops until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.

B. Environmental Limitations: Do not deliver or install countertops until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

C. Field Measurements: Where countertops are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

D. Established Dimensions: Where countertops are indicated to fit to other construction, establish dimensions for areas where countertops are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.1 PLASTIC-LAMINATE-CLAD COUNTERTOPS

A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of plastic-laminate-clad countertops indicated for construction, finishes, installation, and other requirements.

1. Provide inspections of fabrication and installation together with labels and certificates from AWI certification program indicating that countertops comply with requirements of grades specified.
2. The Contract Documents contain requirements that are more stringent than the referenced quality standard. Comply with requirements of Contract Documents in addition to those of the referenced quality standard.

B. Grade: Premium

C. High-Pressure Decorative Laminate: NEMA LD 3, Grade HGS

D. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

1. As indicated by manufacturer's designations.
2. Match Architect's sample.
3. As selected by Architect from manufacturer's full range in the following categories:

a. Solid colors, matte finish.
b. Solid colors with core same color as surface, gloss finish.
c. Wood grains, matte finish with grain running parallel to length of countertop.

E. Edge Treatment: 3-mm (0.12 inch) PVC edging

F. Core Material: Fire-retardant-treated plywood

G. Core Material at Sinks: Exterior-grade plywood

H. Core Thickness: 3/4 inch (19 mm)

1. Build up countertop thickness to 1-1/2 inches (38 mm) at front, back, and ends with additional layers of core material laminated to top.

2.2 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard unless otherwise indicated.

1. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

2.3 FIRE-RETARDANT-TREATED MATERIALS

A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products according to test method indicated by a qualified testing agency.

1. Use treated materials that comply with requirements of referenced quality standard. Do not use materials that are warped, discolored, or otherwise defective.
2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.

B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E84, with no evidence of significant progressive combustion when the test is

extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.

1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
2. For items indicated to receive a stained or natural transparent finish, use organic resin chemical formulation.
3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
4. Mill lumber before treatment and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of exposed treated woodwork.

C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less when tested according to ASTM E84.
   1. For panels 3/4 inch (19 mm) thick and less, comply with ANSI A208.1 for Grade M-2 except for the following minimum properties: modulus of rupture, 1600 psi (11 MPa); modulus of elasticity, 300,000 psi (2070 MPa); internal bond, 80 psi (550 kPa); and screw-holding capacity on face and edge, 250 and 225 lbf (1100 and 1000 N), respectively.

D. Fire-Retardant MDF: Medium-density fiberboard panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less according to ASTM E84.

2.4 ACCESSORIES

A. Wire-Management Grommets: Circular, molded-plastic grommets and matching plastic caps with slot for wire passage.

2.5 MISCELLANEOUS MATERIALS

A. Adhesive

   1. Adhesive for Bonding Edges: Hot-melt adhesive

   2. Do not use adhesives that contain urea formaldehyde.

2.6 FABRICATION

A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.

B. Fabricate countertops to dimensions, profiles, and details indicated. Provide front and end overhang of 1 inch (25 mm) over base cabinets. Ease edges.

C. Complete fabrication, including assembly, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify Architect seven days in advance of the dates and times countertop fabrication will be complete.
2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended, and check measurements of assemblies against field measurements before disassembling for shipment.

D. Shop cut openings to maximum extent possible to receive appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately, and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

1. Seal edges of cutouts by saturating with varnish.

PART 3 - EXECUTION

3.1 PREPARATION

A. Before installation, condition countertops to average prevailing humidity conditions in installation areas.

B. Before installing countertops, examine shop-fabricated work for completion and complete work as required, including removal of packing.

3.2 INSTALLATION

A. Grade: Install countertops to comply with same grade as item to be installed.

B. Assemble countertops and complete fabrication at Project site to the extent that it was not completed in the shop.

1. Provide cutouts for appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately, and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.
2. Seal edges of cutouts by saturating with varnish.

C. Field Jointing: Where possible, make in the same manner as shop jointing, using dowels, splines, adhesives, and fasteners recommended by manufacturer. Prepare edges to be joined in shop so Project-site processing of top and edge surfaces is not required. Locate field joints where shown on Shop Drawings.

1. Secure field joints in countertops with concealed clamping devices located within 6 inches (150 mm) of front and back edges and at intervals not exceeding 24 inches (600 mm). Tighten according to manufacturer's written instructions to exert a constant, heavy-clamping pressure at joints.

D. Scribe and cut countertops to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical-treatment manufacturer's written instructions, including those for adhesives used to install woodwork.

F. Countertop Installation: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.

1. Install countertops level and true in line. Use concealed shims as required to maintain not more than a 1/8-inch-in-96-inches (3-mm-in-2400-mm) variation from a straight, level plane.
2. Secure backsplashes
3. Seal joints between countertop and backsplash, if any, and joints where countertop and backsplash abut walls with mildew-resistant silicone sealant or another permanently elastic sealing compound recommended by countertop material manufacturer.

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective countertops, where possible, to eliminate functional and visual defects. Where not possible to repair, replace countertops. Adjust joinery for uniform appearance.

B. Clean countertops on exposed and semi-exposed surfaces.

C. Protection: Provide Kraft paper or other suitable covering over countertop surfaces, taped to underside of countertop at a minimum of 48 inches (1220 mm) o.c. Remove protection at Substantial Completion.

END OF SECTION 06 36 61.13

SECTION 06 36 61.16 - SOLID SURFACE FABRICATIONS

PART 1 — GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the contract, including general and supplementary conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following horizontal and trim solid surface product types:

1. Countertops with sinks
2. Reception areas/nurses stations
3. Backsplashes

B. Related Sections include the following:

1. Division 6 Section 06 10 00 "Rough Carpentry" for Blocking.
2. Division 22 Section "Plumbing Fixtures."
3. Division 26 Section "Wiring Devices."

1.3 DEFINITION

A. Solid surface is defined as nonporous, homogeneous material maintaining the same composition throughout the part with a composition of acrylic polymer, aluminum trihydrate filler and pigment.

1.4 SUBMITTALS

A. Product data:

1. For each type of product indicated.

B. Shop drawings:

1. Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices and other components.
    a. Show full-size details, edge details, thermoforming requirements, attachments, etc.
    b. Show locations and sizes of furring, blocking, including concealed blocking and reinforcement specified in other Sections.
    c. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets, soap dispensers, waste receptacle and other items installed in solid surface.

C. Samples:

1. For each type of product indicated.
    a. Submit minimum 6-inch by 6-inch sample in specified gloss.
    b. Cut sample and seam together for representation of inconspicuous seam.
    c. Indicate full range of color and pattern variation.
2. Approved samples will be retained as a standard for work.

D. Product data:

1. Indicate product description, fabrication information and compliance with specified performance requirements.

E. LEED Data: NOT USED

F. Product certificates:
1. For each type of product, signed by product manufacturer.

G. Fabricator/installer qualifications:
1. Provide copy of certification number.

H. Manufacturer certificates:
1. Signed by manufacturers certifying that they comply with requirements.

J. Maintenance data:
1. Submit manufacturer's care and maintenance data, including repair and cleaning instructions.
a. Maintenance kit for finishes shall be submitted.
2. Include in project closeout documents.

1.5 QUALITY ASSURANCE

A. Qualifications:
1. Shop that employs skilled workers who custom fabricate products similar to those required for this project and whose products have a record of successful in-service performance.

B. Fabricator/installer qualifications:
1. Work of this section shall be by a certified fabricator/installer, certified in writing by the manufacturer.

C. Applicable standards:
1. Standards of the following, as referenced herein:
a. American National Standards Institute (ANSI)
b. American Society for Testing and Materials (ASTM)
c. National Electrical Manufacturers Association (NEMA)
d. NSF International
2. Fire test response characteristics:
a. Provide with the following Class A (Class I) surface burning characteristics as determined by testing identical products per UL 723 (ASTM E84) or another testing and inspecting agency acceptable to authorities having jurisdiction:
1) Flame Spread Index: 25 or less.
2) Smoke Developed Index: 450 or less.

D. Coordination drawings:
1. Shall be prepared indicating:
a. Plumbing work.
b. Electrical work.
c. Miscellaneous steel for the general work.
d. Indicate location of all walls (rated and non-rated), blocking locations and recessed wall items, etc.
2. Content:
a. Project-specific information, drawn accurately to scale.
b. Do not base coordination drawings on reproductions of the contract documents or standard printed data.
c. Indicate dimensions shown on the contract drawings and make specific note of dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements.

d. Provide alternate sketches to designer for resolution of such conflicts.
1) Minor dimension changes and difficult installations will not be considered changes to the contract.

E. Drawings shall:
1. Be produced in 1/2-inch scale for all fabricated items.

F. Drawings must be complete and submitted to the architect within 60 days after award of contract for record only.
1. Not Used
2. Coordination drawings are required for the benefit of contractor's fabricators/installers as an aid to coordination of their work so as to eliminate or reduce conflicts that may arise during the installation of their work.

G. Pre-installation conference:
1. Conduct conference at project site to comply with requirements in Division 1.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver no components to project site until areas are ready for installation.
B. Store components indoors prior to installation.
C. Handle materials to prevent damage to finished surfaces.
1. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

1.7 WARRANTY

A. Provide manufacturer's warranty against defects in materials.
1. Warranty shall provide material and labor to repair or replace defective materials.
2. Damage caused by physical or chemical abuse or damage from excessive heat will not be warranted.

1.8 MAINTENANCE

A. Provide maintenance requirements as specified by the manufacturer.

PART 2 — PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers:
1. Subject to compliance with requirements, provide products by one of the following:
a. Wilsonart® Solid Surface (basis of design).
b. Approved equal
2. See Finish Standards on drawing sheets for color selections.

2.2 MATERIALS

A. Solid polymer components
1. Cast, nonporous, filled polymer, not coated, laminated or of composite construction with through body colors meeting ANSI Z124.3 or ANSI Z124.6, having minimum physical and performance properties specified.
2. Superficial damage to a depth of 0.010 inch (.25 mm) shall be repairable by sanding and/or polishing.

B. Thickness:
1. 1/2 inch

C. Performance characteristics:

Properties	Typical Results	Test
Tensile Strength	6800 psi*	ASTM D 638
Tensile Modulus	1.5 x106 psi	ASTM D 638
Tensile Elongation	0.4% min.	ASTM D 638
Flexural Strength	10,400 psi*	ASTM D 790
Flexural Modulus	1.73 x106 psi	ASTM D 790
Thermal Expansion Coefficient	1.37 x10-5 in./in./°F	ASTM D 696
Hardness (Barcol Impressor)	60	ASTM D 2583
Impact Resistance	144 in. drop[A]	ISO 4586
Izod Impact	0.28 (ft-lb.)/in	ASTM D 256
Method A Light Resistance - Xenon	No effect	ISO 4586
Stain Resistance	Pass	ANSI Z-124.3 modified
Wear and Cleanability	Pass	ANSI Z-124.3
Fungi Resistance	Pass	ASTM G 21
Bacterial Resistance	Pass	ASTM G 22
Boiling Water Resistance	No effect	ISO 4586
High Temperature Resistance	No effect[B]	ISO 4586
Weatherability	ΔE>5	ASTM G 155
Moisture Absorption	<.025%	ASTM D 570 Long Term
Specific Gravity	1.7 gram/cm^3	ASTM D 792
Approximate Weight	4.4 lb./ft^2	
Fire Behavior	Class 1 and Class A	ASTM E 84

* test results vary slightly depending on pattern

[A] No fracture

[B] High temperature resistance tests may have an effect on the surface; however, the surface can be renewed to 'No Effect'.

2.3 ACCESSORIES

A. Joint adhesive:

1. Manufacturer's standard one- or two-part adhesive kit to create inconspicuous, nonporous joints.

B. Sealant:

1. Manufacturer's standard mildew-resistant, FDA-compliant, NSF 51-compliant (food zone — any type), UL-listed silicone sealant in colors matching components.

C. Sink/lavatory mounting hardware:

1. Manufacturer's standard bowl clips, panel inserts and fasteners for attachment of undermount sinks/lavatories.

D. Conductive tape:

1. Manufacturer's standard aluminum foil tape, with required thickness, for use with cutouts near heat sources.

E. Insulating felt tape:

1. Manufacturer's standard for use with conductive tape in insulating solid surface material from adjacent heat source.

2.4 FACTORY FABRICATION

A. Shop assembly

1. Fabricate components to greatest extent practical to sizes and shapes indicated, in accordance with approved shop drawings and manufacturer's printed instructions and technical bulletins.
2. Form joints between components using manufacturer's standard joint adhesive without conspicuous joints.
    a. Reinforce with strip of solid polymer material, 2" wide.
3. Provide factory cutouts for plumbing fittings and bath accessories as indicated on the drawings.
4. Rout and finish component edges with clean, sharp returns.
    a. Rout cutouts, radii and contours to template.
    b. Smooth edges.
    c. Repair or reject defective and inaccurate work.

2.5 FINISHES

A. As selected from full range of samples

PART 3 — EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with fabricator present for compliance with requirements for installation tolerances and other conditions affecting performance of work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install components plumb, level and rigid, scribed to adjacent finishes, in accordance with approved shop drawings and product data.
    1. Provide product in the largest pieces available.
    2. Form field joints using manufacturer's recommended adhesive, with joints inconspicuous in finished work.
    a. Exposed joints/seams shall not be allowed.
    3. Reinforce field joints with solid surface strips extending a minimum of 1 inch on either side of the seam with the strip being the same thickness as the top.
    4. Cut and finish component edges with clean, sharp returns.
    5. Rout radii and contours to template.
    6. Anchor securely to base cabinets or other supports.
    7. Align adjacent countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop.
    8. Carefully dress joints smooth, remove surface scratches and clean entire surface.
    9. Install countertops with no more than 1/8-inch (3 mm) sag, bow or other variation from a straight line.
B. Backsplashes and applied sidesplashes:
    1. Provide coved backsplashes and sidesplashes at all walls and adjacent millwork.
    2. Install applied sidesplashes using manufacturer's standard color-matched silicone sealant.
    3. Adhere applied sidesplashes to countertops using manufacturer's standard color-matched silicone sealant.

3.3 REPAIR

A. Repair or replace damaged work which cannot be repaired to architect's satisfaction.

3.4 CLEANING AND PROTECTION

A. Keep components clean during installation.

B. Remove adhesives, sealants and other stains.

END OF SECTION 06650

SECTION 06 36 61 – SIMULATED STONE FABRICATIONS

PART 1 GENERAL

1.01 SECTION INCLUDES

A. Quartz surfacing fabrication.

1.02 RELATED REQUIREMENTS

A. Section 06 40 23 – Interior Architectural Woodwork: Shop-fabricated custom casework.

1.03 REFERENCE STANDARDS

A. ASTM C 97 – Standard Test Methods for Absorption and Bulk Specific Gravity of Dimension Stone; 2009.

B. AWI (QCP) – Architectural Woodwork Standards (Quality Certification Program), www.awiqcp.org; current edition at www.awiqcp.org.

C. AWMAC (GIS) – Architectural Woodwork Manufacturers Association of Canada (Guarantee and Inspection Services Program); current edition at www.awmac.com/gis.php.

D. AWS (AWI/AWMAC/WI) - Architectural Woodwork Standards (Architectural Woodwork Institute / Architectural Woodwork Manufacturers Association of Canada / Woodwork Institute) (www.awinet.org - www.awmac.com - www.woodworkinstitute.com); Edition 1, 2009.

E. MIA-DSDM – Marble Institute of America, Dimension Stone Design Manual; 2005.

F. WI (CCP) – Woodwork Institute (Certified Compliance Program); current edition at www.woodworkinstitute.com/certification.

G. WI (MCP) – Woodwork Institute (Monitored Compliance Program); current edition at www.woodworkinstitute.com/certification.

1.04 SUBMITTALS

A. Comply with Section 01 33 00 Submittal Procedures for administrative and procedural requirements for processing of submittals during the construction phase.

B. Product Data: Provide data on material characteristics, performance criteria and limitations, installation instructions, and cleaning and maintenance instructions.

C. Shop Drawings: Provide complete detailed and dimensioned drawings combined with shop drawings of cabinets and casework specified in other sections showing fabrication details, edging, sink installation, coving, seams, fastener types and locations, use and type of sealant, and fabrication details for support brackets.

D. Samples: Provide samples of colors as indicated on Drawings; submit 4 x 4 inch samples showing each color and finish.
   1. When colors are not indicated on Drawings, submit manufacturer's standard color book showing colors of actual material in greater than 1 1/2 inch (36mm) size.
   2. Upon selection of colors, submit samples as indicated above.

E. Test Reports: Chemical resistance testing, showing compliance with specified requirements.

F. Certificates: Certify that products meet or exceed specified requirements.
   1. Low emitting VOC.
   2. Does not support growth of mold, mildew and bacteria on surface.

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: Prestige Stone Quartz Surfacing or approved equal.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Storage and Handling: Store materials in clean, dry, interior area in accordance with manufacturer's instructions. Protect materials from damage during handling and installation.

1.07 AMBIENT CONDITIONS

A. Maintain ambient temperature of 50 to 95 degrees F (10 to 35 degrees C) for 48 hours before, during and for minimum 7 days after installation.

1.08 WARRANTY

A. Manufacturer Warranty: Submit manufacturer's standard 10 year warranty.

PART 2 PRODUCTS

2.01 MANUFACTURER

A. Cambria Torquey, or approved equal

2.02 QUARTZ SURFACING COUNTERTOPS

A. Architect to choose from manufacturer's full line of products

B. Natural Quartz and Resin Composite Countertops: Non-porous blend of natural quartz, 93 percent, and polyester resin, 7 percent, formed into flat slabs over continuous substrate
   1. Overall Slab Size: 120 x 55 inches (3m x 1.4m).
   2. Flat Sheet Thickness: 25/32 inch (20mm
   3. Slab Weight:
      a. Slab – 25/32 Inch: 463 lbs (210 kg).
   4. Edge Detail: Flat Polish
      a. Surface Finish: Polished
      b. Color: Architect to choose from manufacturer's full line of products

C. Performance Criteria:
   1. ASTM C97; Moisture Absorption: typical results negligible.
   2. ASTM C99; Modulus of Rupture: typical results 6,800 psi.
   3. ASTM C170; Compressive Strength: typical results 24,750 psi.
   4. ASTM C501; Abrasion Resistance: typical results 223.
   5. ASTM C482; Bond Strength: typical results 205 psi.
   6. ASTM 484; Thermal Shock: Passes 5 cycles.
   7. ASTM C531; Coefficient of Thermal Expansion: typical results 1.2x10-5 inch/°F.
   8. ASTM C648; Breaking Strength of Tile: typical results 3,661 lbf.
   9. ASTM C1026; Resistance to Freeze-Thaw Cycling: Unaffected 15 cycles.
   10. ANSI A137.1; Wet Dynamic Coefficient of Friction [0.34 polish] / [0.47 matte].
   11. ANSI A137.1; Dry Dynamic Coefficient of Friction [0.72 polish] / [0.80 matte].
   12. ASTM E84; Surface Burning Characteristics: typical results 17 (Class A/1 Rating).
   13. ASTM E662; Smoke Density: Flaming 196, Non-flaming 69.
   14. ANSI Z124.6; Stain Resistance: Unaffected.
   15. ASTM 650-04; Chemical Resistance: Unaffected.

2.03 FABRICATION

A. Fabricate components to greatest extent practical in sizes and shapes as indicated and in accordance with MIA-DSDM.
   1. Inspect Quartz Surfacing prior to fabrication.

B. Fabricate joints between components using manufacturer's recommended, color matched, joint adhesive, reinforce as required.
   1. Maximum Joint Width: 1/32 inch (.75 mm)

C. Fabricate factory cutouts for plumbing fittings and bath accessories as indicated on the Drawings.

D. Fabricate and finish routed edges of component with clean, sharp returns.

E. Fabricate cutouts, radii and contours using template to ensure clean, sharp edges.

F. Fabricate backsplash height and profile as indicated on the Drawings.

G. Fabricate countertop components with finish as indicated.

H. Provide insulation between countertop material and adjacent hot water pans and food warmers.

I. Provide thermal isolation between hot and cold applications.

J. Provide venting of cabinets as required.

2.04 FABRICATION TOLERANCE

A. Panel Thickness Tolerance:
   1. Thickness of 3/8 to 1/2 Inch (9.5mm to 12.7mm): Plus or minus 1/32 inch (0.8mm).
   2. Thickness of 3/4 to 1 5/8 Inch (19mm to 41.3mm): Plus or minus 1/8 inch (3.2mm).
   3. Thickness Greater Than 1 5/8 Inch (41.3mm): Plus or minus 1/4 inch (6.4mm).

B. Panel Face Dimension: Plus or minus 1/16 inch (1.6mm).

C. Rectangular Face Variation (Maximum out of Square): Plus or minus 1/16 inch (1.6mm).

D. Heads and Calibrated Edges: Plus or minus 1/16 inch (1.6mm).

PART 3 EXECUTION

3.01 VERIFICATION OF CONDITIONS

A. Verify that field conditions are acceptable and are ready to receive this work.

B. Verify that related items provided under other sections are properly sized and located.

C. Verify that built-in items are in proper location, and ready for installation of this work.

3.03 INSTALLATION

A. Install countertop materials in accordance with manufacturer's instructions.

B. Install components plumb and level and in accordance with approved shop drawings and installation details.
   1. Tops: Within 1/8 inch (3.2mm) of a flat surface over a 10 foot (0.3m) length.
      a. Install with at least 1/16 inch (1.6mm) to at most 1/8 inch (3.2 mm) clearance between surface perimeter and wall.

C. Install backsplashes and endsplashes as indicated on the Drawings.
   1. Adhere to countertops using appropriate adhesive and color matched silicone sealant.

D. Interface with Other Work: Provide proper installation of other materials and work as necessary for a complete and properly functioning system.

3.05 CLEANING

A. Remove adhesives, sealants and other stains from surfaces in accordance with manufacturer's instructions.

B. Clean countertops prior to date of Substantial Completion.

3.06 PROTECTION

A. Protect surfaces from damage during construction until date of Substantial Completion, replace damaged work.

END OF SECTION 12 36 61

SECTION 06 40 23- INTERIOR ARCHITECTURAL WOODWORK

(includes Plastic Laminate Cabinets)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Plastic-laminate cabinets.
   2. Shop finishing of interior woodwork.

B. Related Sections include the following:
   1. Division 06 Section 06 10 00 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing woodwork and concealed within other construction before woodwork installation.
   2. Division 06 Section 06 36 61 “Simulated Stone Fabrications”
   3. Division 06 Sectin 06 36 61.13 “Plastic-Laminate-Clad Fabrications”
   4. Division 06 Section06 36 61.16 “Solid Surface Fabrications”

1.3 DEFINITIONS

A. Interior architectural woodwork includes wood furring, blocking, shims, and hanging strips for installing woodwork items unless concealed within other construction before woodwork installation.

1.4 SUBMITTALS

B. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

   1. Show details full size.
   2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
   3. Show locations and sizes of cutouts and holes for plumbing fixtures, faucets and other items installed in architectural woodwork

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in- service performance

B. Quality Standard: Unless otherwise indicated, comply with AWI's "Architectural Woodwork Quality Standards" for **Premium Grade** of interior architectural woodwork indicated for construction, finishes, installation, and other requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver woodwork until painting and similar operations that could damage woodwork have been completed in installation areas. If woodwork must be stored in other than installation areas, store only in areas where environmental conditions comply with requirements specified in "Project Conditions" Article.

1.7 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install woodwork until building is enclosed, wet work is complete, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Field Measurements: Where woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being enclosed, and indicate measurements on Shop Drawings.
2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating woodwork without field measurements. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.8 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that interior architectural woodwork can be supported and installed as indicated.

PART 2 – PRODUCTS

2.1 MATERIALS

A. General: Provide materials that comply with requirements of AWI's quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.

B. Wood Products: Comply with the following:
1. Hardboard: AHA A135.4.
2. Medium-Density Fiberboard: ANSI A208.2, Grade MD.
3. Particleboard: ANSI A208.1, Grade M-2.
4. Softwood Plywood: DOC PS 1.
5. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.

C. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1.

D. Provide PVC 3 mm edge banding complying with LMA EDG-1 on components with exposed or semi-exposed edges and as indicated on drawings sheets.

E. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or, if not indicated, as required by woodwork quality standard.
   1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering high-pressure decorative laminates that may be incorporated into the Work include, but are not limited to, the following:
      a. Wilsonart International; Div. of Premark International, Inc.
      b. Or approved equal

2.2 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items specified in Division 08 Section "Door Hardware (Scheduled by Describing Products)."

B. Frameless Concealed Self-Closing Hinges (European Type): BHMA A156.9, B01602, 120 degrees of opening. Approved manufacturers: Blum, Grass, Mepla or Salcie.

C. Continuous Hinges: BHMA A156.26.

D. Wire Pulls: Back mounted, solid dull chrome, 4 inches long, 5/16 inch in diameter.

E. Catches: Push-in magnetic catches, BHMA A156.9, B03131.

F. Shelf Rests: 5 mil metal pin style; clear finish.

G. Door Locks: Magnetic touch latch unless otherwise indicated on drawings.

H. Coat Hooks for Lockers

I. Concealed Joint Fasteners: Threaded steel KV 516.

J. Drawer Slides: KV 8400 Accuride 3/4” extension types 3832 series.

   1. Heavy Duty (Grade 1HD-100 and Grade 1HD-200): Side mounted; 3/4 extension type; zinc-plated steel ball-bearing slides.
   2. Box Drawer Slides: Grade 1HD-100; for drawers not more than 6 inches high and 24 inches wide. 75 lb rated. Approved Manufacturer: Blum.

K. Grommets for Cable Passage through Countertops: 2-inch OD, color as selected by Architect, molded-plastic grommets and matching plastic caps with slot for wire passage. Field located per Owner.

L. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.

   1. Satin Stainless Steel.

M. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

N. Concealed brackets by A & M C/EC Flat Concealed Brackets. Color to be selected by Architect.

2.3 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.

B. In-wall Blocking: Fire-retardant-treated softwood lumber, kiln dried to less than 15 percent moisture content.

C. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

D. Adhesives, General: Do not use adhesives that contain urea formaldehyde.

E. Use silicone-type for solid surface materials.

2.4 FABRICATION, GENERAL

A. Interior Woodwork Grade: Unless otherwise indicated, provide Custom-grade interior woodwork complying with referenced quality standard.

B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:

1. Edges of Rails and Similar Members More Than 3/4 Inch Thick: 1/8 inch.

D. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.

E. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.

F. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

G. Seal edges of openings in countertops with a coat of varnish.

H. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

2.5 PLASTIC-LAMINATE CABINETS

A. AWI Type of Cabinet Construction: Flush overlay.

B. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:

1. Horizontal Surfaces Other Than Tops: Grade HGS/GP-50.
2. Postformed Surfaces: Grade HGP/PF-42.
3. Vertical Surfaces: Grade VGS
4. Edges: 3 mm PVC matching laminate in color, pattern, and finish as manufactured by Canplast Inc. (800)-599-4455 or approved equal. Provide architect with full range of edge banding color selections for review and selection.

C. Materials for Semiexposed surfaces
1. Surfaces Other Than Drawer Bodies: Thermoset decorative panels.
    a. Edges of Plastic-Laminate Shelves: 3mm PVC edge banding, 0.12 inch thick, matching laminate in color, pattern, and finish. Provide architect with full range of edge banding color selections for review and selection.
    b. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, Grade CLS.
2. Drawer Sides and Backs: Thermoset decorative panels.
3. Drawer Bottoms: Thermoset decorative panels.
4. Provide dust panels of 1/4-inch plywood or tempered hard board above compartments and drawers except where located directly under tops.

D. Shelving: Provide adjustable shelf multiple holes, min 5 mil with 5mil metal pin style; clear finish.

E. Concealed Backs of Panels with Exposed Plastic Laminate Surfaces: High-pressure decorative laminate, Grade BKL.

F. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces scheduled in the Drawings.

PART 3 - EXECUTION

3.1 PREPARATION

A. Before installation, condition woodwork to average prevailing humidity conditions in installation areas.

B. Before installing architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming.

3.2 INSTALLATION

A. Grade: Install woodwork to comply with requirements for the same grade specified in Part 2 for fabrication of type of woodwork involved.

B. Assemble woodwork and complete fabrication at Project site to comply with requirements for

fabrication in Part 2, to extent that it was not completed in the shop.

C. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.

D. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use fine finishing nails or finishing screws for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.

F. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Install cabinets with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
2. Maintain veneer sequence matching of cabinets.
3. Fasten wall cabinets through back, near top and bottom, at ends and not more than 16 inches o.c. with No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish.

G. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
1. Align adjacent solid-surfacing-material countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
2. Install countertops with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
3. Secure backsplashes to tops with concealed metal brackets at 16 inches o.c. and to walls with adhesive.
4. Calk space between backsplash and wall with sealant specified in Division 07 Section "Joint Sealants."

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

B. Clean, lubricate, and adjust hardware.

C. Clean woodwork on exposed and semiexposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 40 23

DIVISION

07

THERMAL AND MOISTURE PROTECTION

SECTION 07 13 00 - SHEET WATERPROOFING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Sheet Waterproofing:
   1. Modified bitumen sheet membrane.

1.2 RELATED REQUIREMENTS

A. Section 07 21 00 - Thermal Insulation: Insulation used for protective cover.

B. Section 07 90 05 - Joint Sealers: Sealant for joints in substrates.

1.3 ABBREVIATIONS

1.4 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2006a (Reapproved 2013).

B. ASTM D570 - Standard Test Method for Water Absorption of Plastics; 1998 (Reapproved 2010).

C. ASTM D5957 - Standard Guide for Flood Testing Horizontal Waterproofing Installations; 1998 (Reapproved 2013).

D. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2014.

E. NRCA (WM) - The NRCA Waterproofing Manual; 2005.

1.5 SUBMITTALS

A. See Section 01 33 00 for submittal procedures.

B. Product Data: Provide data for membrane.

C. VOC Content: certification of data indicating VOC (Volatile Organic Compound) content of all components of waterproofing system.

D. Certificate: Certify that products meet or exceed specified requirements.

E. Manufacturer's Installation Instructions: Indicate special procedures.

F. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Membrane Manufacturer Qualifications: Company specializing in manufacturing products specified in this section

B. Installer Qualifications: Company specializing in performing work of the type specified

1.7 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application and until liquid or mastic accessories have cured.

1.8 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for waterproofing failing to resist penetration of water, except where such failures are the result of structural failures of building. Hairline cracking of concrete due to temperature change or shrinkage is not considered a structural failure.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Grace Construction Products; Product Bituthene 3000; www.na.graceconstruction.com.

B. Other Acceptable Manufacturers:
   1. Henry Company; Product Blueskin WP200: www.henry.com.
   2. W.R. Meadows, Inc; Product Mel-Rol: www.wrmeadows.com.
   3. Carlisle Coatings & Waterproofing Incorporated; MiraDRI 860/861: www.carlisle-ccw.com.
   4. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 MEMBRANE MATERIALS

A. Modified Bituminous Sheet Membrane: Asphalt and polymer modifiers of SBS type, reinforced with non-woven polyester; smooth surfaced.
   1. Formulated for seaming by contact adhesive.
   2. Thickness: 1/16 inch.
   3. Sheet Width: 36 inch, minimum.
   4. Tensile Strength: 325 psi, measured in accordance with ASTM D412.
   5. Ultimate Elongation: 300 percent, measured in accordance with ASTM D412.
   6. Water Absorption: 0.1 percent increase in weight, maximum, measured in accordance with ASTM D570, water immersion.
   7. Water Vapor Permeability: 0.05 perm inch, measured in accordance with ASTM E96/E96M.

B. Primer: Compatible with membrane; as recommended by membrane manufacturer.

C. Rubberized Mastic: Compatible with membrane; as recommended by membrane manufacturer.

D. Liquid Membrane: Compatible with membrane; as recommended by membrane manufacturer.

2.3 ACCESSORIES

A. Protection Board: 1/8 inch thick bitumen impregnated glass fiberboard .

B. Cant Strips: Premolded composition material.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions are acceptable prior to starting this work.

B. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of waterproofing system.

C. Verify items that penetrate surfaces to receive waterproofing are securely installed.

3.2 PREPARATION

A. Protect adjacent surfaces from damage not designated to receive waterproofing.

B. Clean and prepare surfaces to receive waterproofing in accordance with manufacturer's instructions; vacuum substrate clean.

C. Do not apply waterproofing to surfaces unacceptable to membrane manufacturer.

D. Seal cracks and joints with sealant using depth to width ratio as recommended by sealant manufacturer.

E. Surfaces for Adhesive Bonding: Apply surface conditioner at a rate recommended by manufacturer, and protect conditioner from rain or frost until dry.

3.3 INSTALLATION - MEMBRANE

A. Install membrane waterproofing in accordance with manufacturer's instructions and NRCA (WM) applicable requirements.

B. Roll out membrane, and minimize wrinkles and bubbles.

C. Self-Adhering Membrane: Remove release paper layer, and roll out onto substrate with a mechanical roller to provide full contact bond.

D. Overlap edges and ends, minimum 3 inches, seal permanently waterproof by method recommended by manufacturer, and apply uniform bead of sealant to joint edge.

E. Reinforce membrane with multiple thickness of membrane material over joints, whether joints are static or dynamic.

F. Weather lap joints on sloped substrate in direction of drainage, and seal joints and seams.

G. Coordinate with drain installation; see Division 22.

H. Flexible Flashings: Seal items watertight that penetrate through waterproofing membrane with flexible flashings.

I. Seal membrane and flashings to adjoining surfaces.

3.4 INSTALLATION - DRAINAGE PANEL and PROTECTION BOARD

A. Place drainage panel directly against membrane, butt joints, place to encourage drainage downward. Scribe and cut boards around projections, penetrations, and interruptions.

B. Protection board not required when drainage matting or insulation board is applied over membrane material.

C. Place protection board directly against drainage panel; butt joints. Scribe and cut boards around projections, penetrations, and interruptions.

D. Adhere protection board to substrate with compatible adhesive.

3.5 FIELD QUALITY CONTROL

A. On completion of horizontal membrane installation, dam installation area in preparation for flood testing in accordance with ASTM D5957.

B. Flood to minimum depth of 1 inch with clean water, and after 48 hours inspect for leaks.

C. If leaking is found, remove water, repair leaking areas with new waterproofing materials as directed by Architect; repeat flood test, and repair damage to building.

D. When area is proven watertight, drain water and remove dam.

3.6 PROTECTION

A. Do not permit traffic over unprotected or uncovered membrane.

3.7 SCHEDULE

A. Modified bituminous membrane, self-adhering.
   1. Elevator pit walls.
   2. Planter basin, vertical sides and bottom slab.
   3. Exterior side of pool walls
   4. Retaining walls.

END OF SECTION

SECTION 07 13 13 - UNDERSLAB VAPORPROOFING / WATERPROOFING MEMBRANE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Underslab vaporproofing/waterproofing membrane in horizontal applications.

1.2 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-In-Place Concrete

B. Section 03 30 01 Under Slab Vapor Barrier

C. Section 07 13 00 - Sheet Waterproofing

D. Section 07 62 00 - Sheet Metal Flashing and Trim

1.3 REFERENCE STANDARDS

A. ASTM D5957 - Standard Guide for Flood Testing Horizontal Waterproofing Installations; 1998 (Reapproved 2013).

B. ASTM E154/E154M - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover; 2008a (Reapproved 2013).

C. ASTM E1993/E1993M - Standard Specification for Bituminous Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs; 1998 (Reapproved 2013).

D. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2014.

E. ASTM F1249 - Standard Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor; 2006 (Reapproved 2011).

F. NRCA ML104 - The NRCA Roofing and Waterproofing Manual; Fifth Edition, with interim updates.

1.4 SUBMITTALS

A. See Section 01 33 00, for submittal procedures.

B. Product Data: Provide data for membrane and accessories.

C. Manufacturer's Installation Instructions: Indicate special procedures.

D. Certificate: Certify that products meet or exceed specified requirements.

E. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with NRCA ML104 for waterproofing system.

B. Membrane Manufacturer Qualifications: Company specializing in waterproofing sheet membranes with three years experience.

C. Installer Qualifications: Company specializing in performing the work of this section with minimum three years experience.

1.6 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application and until liquid or mastic accessories have cured.

1.7 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide two year manufacturer warranty for waterproofing failing to resist penetration of water, except where such failures are the result of structural failures of building. Hairline cracking of concrete due to temperature change or shrinkage is not considered a structural failure.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. W.R. Meadows, Inc: www.wrmeadows.com.or approved equal.

B. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 MEMBRANE MATERIALS

A. Bituminous Vaporproofing / Waterproofing Membrane: ASTM E1993/E1993M, seven-ply, asphalt-coated, permanently bonded, semi-flexible bituminous core board composed of a 3-ply plasmatic matrix, sealed between liners of asphalt-impregnated felt and a glass mat liner and covered with a polyethylene anti-stick sheet.
   1. Weight: 1.60 lb/ sq ft.
   2. Width: 48 inch, minimum.
   3. Water Vapor Permeability: 0.0011 perms, minimum in accordance with ASTM F1249, calibrated to ASTM E96/E96M, Water Method.
   4. Tensile Strength: 156 lb force/inch, measured in accordance with ASTM E154/E154M, Section 9.
   5. Puncture Resistance: 149 lb. force in accordance with ASTM E154/E154M.
   6. Product: Premolded Membrane Vapor Seal with Plasmatic Core manufactured by W. R. Meadows.

2.3 ACCESSORIES

A. Bonding Asphalt: Catalytic Bonding Asphalt manufactured by W. R. Meadows.

B. Adhesive: Pointing Mastic manufactured by W. R. Meadows.

C. Joint Tape: PMPC Tape manufactured by W. R. Meadows.

D. Pointing Mastic: Pointing Mastic manufactured by W. R. Meadows.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of membrane system.

C. Verify that items that penetrate surfaces to receive membrane are securely installed.

3.2 PREPARATION

A. Prepare surfaces to receive membrane in accordance with manufacturer's instructions.

B. Do not apply membrane to surfaces unacceptable to membrane manufacturer.

3.3 INSTALLATION - MEMBRANE

A. Apply membrane in accordance with manufacturer's instructions to provide a permanent, monolithic vapor seal without voids or open seams.

B. Ensure accessory materials are compatible with membrane and approved by membrane manufacturer.

C. Place membrane in position by either Dutch lap method with laps sealed with bonding asphalt or by butt joint method with joints sealed with joint tape.

D. Point exposed edges with pointing mastic to prevent water from traveling under membrane.

E. Coordinate with drain installation; see Section 22 10 10 Plumbing Piping
Extend waterproofing material into drain clamp
flange; apply adequate coating of bonding asphalt to assure clamp ring seal.

F. In accordance with manufacturer's installation instructions, place membrane collar around penetrations through concrete slab, including pipes, conduits and utility devices to create a positive seal between penetrations and membrane. Seal in place with joint tape and point around penetrations with pointing mastic.

G. Adhere membrane to vertical surfaces with adhesive.

H. Install counterflashing over all exposed edges.

3.4 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. On completion of horizontal membrane installation, dam installation area in preparation for flood testing in accordance with ASTM D5957.

C. Flood to minimum depth of 2 inch with clean water. After 48 hours, inspect for leaks.

D. If leaking is found, remove water, repair leaking areas with new membrane materials as directed by Architect; repeat flood test. Repair damage to building.

E. When area is proven watertight, drain water and remove dam.

F. Representatives of Contractor and membrane manufacturer shall be present for final inspection.

3.5 PROTECTION

A. Protect membrane from damage until placement of concrete.

3.6 SCHEDULE

A. Bituminous Vaporproofing / Waterproofing Membrane:
1. Install at grade supported slabs. Extend membrane 3 feet beyond perimeter of such areas. Seal membrane edges with adjacent below-grade sheet vapor retarders.
2. Install at grade supported slabs located below water table.
3. Horizontal underslab applications beneath cast-in place concrete

END OF SECTION

SECTION 07 16 14 - POLYMER MODIFIED CEMENT WATERPROOFING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Polymer modified cement waterproofing.

1.2 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete: Concrete to be waterproofed.

1.3 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens); 2013.

B. ASTM C666/C666M - Standard Test Method for Resistance of Concrete to Rapid Freezing and Thawing; 2015.

C. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2006a (Reapproved 2013).

D. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2014.

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
   4. Details of joints and intersections.

C. Certification: Provide manufacturer's certification that waterproofing to be provided is suitable for the purpose specified and the locations where it is intended to be installed and that the requirements of the contract documents do not preclude satisfactory installation and performance.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified in this section with minimum three years of documented experience and approved by manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to project site in manufacturer's original packaging, marked with manufacturer's product identification.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Keep stored products dry; store under cover and elevated above grade.

1.7 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.8 WARRANTY

A. See Section 01 77 00 Closeout Procedures or additional warranty requirements.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Polymer-Modified Cement Waterproofing:
   1. BASF Construction Chemicals-Building Systems MasterSeal 550: www.buildingsystems.basf.com.

2.2 MATERIALS

A. Polymer-Modified Cement Waterproofing : Manufactured slurry coating of Portland or hydraulic cement, aggregates, polymer admixtures, and water; no solvents; for application directly to cementitious substrate.
   1. Explicitly recommended by manufacturer as waterproofing, not simply as dampproofing.
   2. Requiring green concrete cure time of not more than 28 days.
   3. Elongation at Failure: 20 percent, minimum, when tested in accordance with ASTM D412.
   4. Water Vapor Transmission: MINIMUM permeance of finished coating of 1 perm, when tested in accordance with ASTM E96/E96M.
   5. Freeze-Thaw Durability: No change when tested in accordance with ASTM C666/C666M for 300 cycles.
   6. Compressive Strength: 5,000 psi, minimum, at 28 days, when tested in accordance with ASTM C109/C109M.
   7. Finished Coating Thickness: As recommended by manufacturer for the specific application but not less than 1/16 inch.

B. Crack Repair Material, Joint Tape, and Reinforcing: Type and application as recommended by waterproofing manufacturer.

C. Water: Clean, clear, non-alkaline potable water, free of salts and other harmful elements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine surfaces where waterproofing is to be applied for conditions detrimental to satisfactory performance.

B. Do not begin installation until substrates have been properly prepared.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Remove defective concrete and rebuild to original profiles.

B. Plug active leaks according to waterproofing manufacturer's instructions.

C. Patch holes and non-moving cracks and joints.

D. Clean and prepare surfaces thoroughly prior to installation; schedule cleaning and preparation so that residue will not fall on newly coated, uncured surfaces.

E. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions. Use sandblasting, water blasting, or acid etching as recommended.

F. Application of waterproofing constitutes acceptance of substrates.

G. Protect other work from fallout, overspray, and spatter from waterproofing application; provide temporary enclosures and covers as necessary to do so.

3.3 INSTALLATION

A. Install waterproofing in accordance with manufacturer's instructions and recommendations unless more stringent requirements are indicated.

B. Perform installation only during ambient and substrate conditions recommended by manufacturer; provide temporary enclosures and/or temporary heating as necessary to do so.

C. Fill voids and holes prior to application of first coat.

D. Apply the number of coats and at the rates recommended by manufacturer for the specific application but not less than specified minimum thickness; apply at least two coats unless one coat is specifically indicated.

E. At surfaces exposed to view, apply a uniformly textured finish without major variations in appearance.

F. Extend waterproofing to all surfaces in areas indicated to form continuous waterproofed surfaces.

G. Cure waterproofing by recommended methods for recommended period prior to making waterproofed area available for use or occupancy; protect from too rapid drying, severe weather exposure, and water accumulation.
   1. Hot, Dry Weather: Use wet-cure methods regardless of manufacturer's instructions.
   2. Do not use covers that could stain waterproofing surfaces.
   3. Do not use chemical curing agents unless explicitly approved by waterproofing manufacturer.
   4. Do not expose waterproofing to sunlight for minimum of 72 hours after placement.

H. Do not backfill, fill water or liquid holding structures, or apply finish coatings until time period recommended by manufacturer has passed.

3.4 FIELD QUALITY CONTROL - WATER HOLDING STRUCTURES

A. Flood test waterproofing application by filling to capacity and allowing to stand for not less than 24 hours.

B. If any leaks appear, notify Architect and drain.
   1. Repair leaks at no additional cost to Owner.
   2. Repeat flood test until all leakage is eliminated.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 SCHEDULE

A. Surface - applied above or on concrete (vertical /horizontal) protection from water intrusion

B. Pool and water holding structures.

END OF SECTION

SECTION 071616 - CRYSTALLINE WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Crystalline waterproofing.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference TBD.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.4 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Product test reports.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: A firm experienced in applying crystalline waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

1.6 FIELD CONDITIONS

A. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.

B. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at 40 deg F (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

C. Surface shall be protected from rain, frost, or excessive drying for minimum 48 hours following application.

PART 2 – PRODUCTS

2.1 WATERPROOFING MATERIALS

A. Crystalline Waterproofing: Prepackaged, [gray] [white]-colored proprietary blend of portland cement, specially treated sand, and active chemicals that, when mixed with

water and applied, penetrates into concrete and concrete unit masonry and reacts chemically with the byproducts of cement hydration in the presence of water to develop crystalline growth within substrate capillaries to produce an impervious, dense, waterproof substrate; with properties complying with or exceeding the criteria specified below.

1. Schomburg / AQUAFIN or approved equal suitable for Houma, Louisiana.

2. Water Permeability: Maximum [zero for water at 30 feet (9 m)] hydrostatic pressure when tested according to COE CRD-C 48.

3. Compressive Strength: Minimum [4000 psi (27.6 MPa)] at 28 days when tested according to ASTM C109/C109M.

2.2 ACCESSORY MATERIALS

A. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; and compatible with substrate and other materials indicated.

B. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); and compatible with substrate and other materials indicated.

C. Water: Potable.

2.3 MIXES

A. Crystalline Waterproofing: Add prepackaged dry ingredients to water according to manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.

B. Mix only enough material for immediate use; use within working time specified by manufacturer (typically 20 to 30 minutes).

PART 3 - EXECUTION

3.1 PREPARATION

A. Comply with manufacturer's written instructions and the following practices:

1. Surfaces shall be structurally sound, fully cured, and free of dust, dirt, oil, grease, curing compounds, laitance, paint, form release agents, or other contaminants.

2. Prepare surface by high-pressure water blasting, sandblasting, or equivalent mechanical method to open capillaries and ensure absorption.

3. Do not use acid etching.

4. Ensure surface is in saturated surface-dry (SSD) condition at time of application: uniformly damp but free of standing water.

B. Protect adjacent work from damage caused by preparation or application of waterproofing.

C. Do not allow waterproofing, patching, and plugging materials to enter annular spaces intended for resilient sealants or gaskets.

D. Plug active leaks using manufacturer-approved plugging compound prior to waterproofing.

E. Repair damaged or unsatisfactory substrate with patching compound.

1. At holes and cracks 1/16 inch (1.6 mm) wide or larger, remove loose material, cut to reveal with sides perpendicular to surface, minimum 1 inch (25 mm) deep. Fill flush with patching compound.

3.2 INSTALLATION

A. Comply with waterproofing manufacturer's written instructions for application and curing.

1. Saturate prepared surface with clean water for several hours prior to application. Maintain SSD condition.

2. Apply waterproofing uniformly by brush, spray, or trowel in [two] [three] <Insert number> coats to required thickness.

3. Apply second and subsequent coats while the previous coat is green (not fully dry), or pre-dampen if fully dried.

4. Extend waterproofing onto adjacent surfaces:

a. Onto integral columns and footings within treated areas.

b. Minimum 12 inches (300 mm) up vertical surfaces from treated floors.

c. Onto intersecting walls (interior and exterior) as specified.

d. At trenches, sumps, pits, pipe chases, and similar elements.

5. Application shall be continuous and uniform with full contact to substrate and complete coverage of pores and irregularities.

6. Provide neat termination lines and prevent bridging or buildup at edges.

7. Dampen surface between coats.

B. Final Coat Finish: [Smooth] [Brushed] [Spray textured] as required.

C. Do not apply during rain or when substrate is frozen.

D. Coordinate sequencing with other trades to ensure penetrations, embedded items, and surface preparation is complete before application.

3.3 CURING AND PROTECTION

A. Moist-Cure: Begin immediately after final coat has set.

1. Keep surface damp using misting, fog spray, or wet burlap for a minimum of [3] days.

2. Prevent surface from drying out during curing period; protect from frost, rain, and direct sun.

3. Do not use curing compounds or plastic sheeting unless approved by manufacturer.

B. Prevent damage to installed coating by foot traffic, backfill operations, or other construction activity.

C. Do not expose treated surfaces to hydrostatic pressure or submersion until full cure is achieved.

END OF SECTION 071616

SECTION 07 18 00 - TRAFFIC COATINGS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fluid-applied membrane coating for waterproofing and traffic surface.

1.2 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2006a (Reapproved 2013).

B. ASTM D4259 - Standard Practice for Abrading Concrete; 1988 (Reapproved 2012).

C. ASTM D5295/D5295M - Standard Guide for Preparation of Concrete Surfaces for Adhered (Bonded) Membrane Waterproofing Systems; 2014.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2015a.

E. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2014.

F. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2011.

G. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2011.

H. SCAQMD 1168 - South Coast Air Quality Management District Rule No.1168; current edition.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting at least one week prior to the start of the work of this section; require attendance by all affected installers.

1.4 SUBMITTALS

A. See Section 01 33 00 - Submittal Requirements, for submittal procedures.

B. Product Data: Include product characteristics and limitations. Identify dissolving solvents, fuels, and potential destructive compounds.

C. Shop Drawings: Indicate special joint or termination conditions and conditions of interface with other materials.

D. Samples: Submit two samples of cured membrane, 4x4 inch in size, illustrating color, surface texture, and variations.

E. Certificate: Certify that products meet or exceed specified requirements.

F. Manufacturer's Installation Instructions: Include special field conditions required to install traffic membrane and potential incompatibilities with adjacent materials.

G. Maintenance Data: Include procedures for stain removal, repairing surface, and cleaning.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than three years of documented experience.

B. Applicator Qualifications: Company specializing in performing installation of traffic membrane, with minimum three years documented experience and approved by manufacturer.

C. Compatibility: Provide traffic coating, joint sealants, backings, and other related materials that are compatible with one another and with substrates under conditions of service and application, as demonstrated by traffic coating manufacturer, based on testing and field experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Maintain storage area at minimum ambient temperature of 55 degrees F.

B. Keep away from fire or open flame.

1.7 FIELD CONDITIONS

A. Do not install materials when temperature is below 40 degrees F or when surface temperature is above 115 degrees F.

B. Maintain this temperature range, 24 hours before, during and 72 hours after application.

C. Restrict traffic from area where materials are being installed or are curing.

D. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.

1.8 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Manufacturer's Warranty: Manufacturer's standard form in which traffic coating manufacturer agrees to repair or replace traffic coatings that deteriorate during the specified warranty period. Warranty does not include deterioration or failure of traffic coating due to unusual weather phenomena, failure of prepared and treated substrate, formation of new substrate cracks exceeding 1/16 inch in width, fire, vandalism, or abuse by snowplow, maintenance equipment, and truck traffic.
   1. Deterioration of traffic coatings includes the following:
      a. Adhesive or cohesive failures.
      b. Abrasion or tearing failures.
      c. Surface crazing or spalling.
      d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
   2. Warranty Period: Five years from date of Substantial Completion.

C. Applicator's Warranty: Correct defective Work within a two year period after Date of Substantial Completion.
   1. Non-compliance and defective work includes the following:
      a. Adhesive or cohesive failures.
      b. Abrasion or tearing failures.
      c. Surface crazing or spalling.
      d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
   2. Warranty does not include deterioration or failure of traffic coating due to unusual weather phenomena, failure of prepared and treated substrate, formation of new substrate cracks exceeding 1/16 inch in width, fire, vandalism, or abuse by snowplow, maintenance equipment, and truck traffic.

3. Applicator Maintenance: For two years after completion and acceptance of the traffic coating membrane, provide a 24 hour/7 days per week 1-hour call back response for repair of system failures including leaks.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Polyurethane Traffic Coating:
   1. BASF; MasterSeal Traffic 1500: www,master-builders-solutions.basf.us.
   2. Substitutions: See Section 01 25 00 Substitution Procedures and Substitution Request Form

2.2 TRAFFIC COATINGS

A. Pedestrian Polyurethane Waterproof Coating System: Fluid applied, moisture-curing, polyurethane system with base and top coat.
   1. Finished Coating Thickness: 55 mils, 0.055 inch, minimum.
   2. Color: As selected by Architect.
   3. Manufacturers:
      a. BASF; MasterSeal Traffic 1500: www,master-builders-solutions.basf.us.

2.3 MATERIALS

A. Coatings - General: Provide only products having lower volatile organic compound (VOC) content than required by SCAQMD 1168.

B. Membrane: Fluid applied two component polyurethane; waterproof; color as selected; conforming to the following:
   1. Type TC-1, Pedestrian 2 coat system
      a. Base coat, 30 dry mils minimum
      b. Top coat, 15 dry mils minimum
   2. Physical Properties: Meet or exceed manufacturer's published properties.

C. Surfacing: Silica sand, compatible with coating compound, as recommended by coating manufacturer.

D. Elastic Flashings: 60 mil thick neoprene as recommended by coating manufacturer.

E. Joint Cover Sheet: 60 mil think elastic sheet material designed for and compatible with coating.

F. Filler and Primer: As recommended by membrane manufacturer.

G. Sealant: PVC Membrane, butyl rod or other support material, as recommended by membrane manufacturer, and compatible with system and adjacent materials.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing dimensions and details prior to installation of materials.

B. Verify that substrate is ready to receive work, surface is clean, dry and free of substances that could adversely affect bond.

C. Do not begin work until concrete substrate has cured at least 28 days and moisture content is 16 percent or less.

D. Ensure that curing compound and hardener are compatible with specified coating. Remove incompatible hardeners and compounds according to manufacturer's instructions.

E. Verify that concrete sub-floor surfaces are ready for traffic coating installation by testing for moisture emission rate and alkalinity according to ASTM F1869 procedures; obtain instructions if test results are not within limits recommended by traffic coating manufacturer.
   1. At lightweight concrete, gypsum concrete and patching and leveling compounds, test in accordance with ASTM F2170.

F. Ensure that drains, sleeves and curbs that pass through surfaces to receive coating are properly and rigidly installed.

G. Ensure that surfaces are free of cracks, depressions, waves or projections that may be detrimental to proper installation of coating membrane.

3.2 PREPARATION

A. Clean substrate surface free of foreign matter.

B. Patch concrete substrate with filler to produce surface conducive to bond.

C. Apply 12 inch wide strip of joint cover sheet over cracks, non-working joints, and expansion joints over 1/16 inch, but not exceeding 1/2 inch wide.

D. At expansion joints from 1/2 inch to 1 inch in width, loop cover sheet down into joint a distance of 1-1/4 to 1-3/4 inches. Extend sheet minimum of 6 inches on both sides of expansion joint.

E. Center cover over cracks and joints. Roll sheet into 1/8 inch coating of waterproof membrane. Apply second coat over sheet edge extending a minimum of 6 inches beyond sheet edges.

F. Protect adjacent surfaces.

G. Concrete Surfaces for Adhesive Bonding: Prepare concrete substrate according to ASTM D5295/D5295M.
   1. Remove substances that inhibit adhesion including form release agents, curing compounds admixtures, laitance, moisture, dust, dirt, grease and oil.
   2. Repair surface defects including honeycombs, fins, tie holes, bug holes, sharp offsets, rutted cracks, ragged corners, deviations in surface plane, spalling and delaminations, as described in the reference standard.
   3. Remove and replace areas of defective concrete as specified in Section 03 30 00.
   4. Prepare concrete for adhesive bonded traffic coating using mechanical methods in accordance with ASTM D4259.

H. Temporarily close off deck drains and other deck penetrations to prevent spillage and migration of traffic-coating fluids. Re-open deck drains at the end of each work day or when rain is imminent.

3.3 INSTALLATION

A. Apply system materials in accordance with manufacturer's instructions.

B. Apply primer to prepared substrate at rate recommended by manufacturer.

C. When base coat is tack free, apply one coat of top coating to a minimum dry film thickness recommended by coating manufacturer.

D. Extend primer, base and top coats up intersecting and perimeter vertical surfaces, 4 inches. Terminate top edge in a straight line.

E. Finish to smooth surface sloped to drains. Cove at vertical surfaces.

F. Seal items projecting through coating.

G. Install coating over joints, both static and moving.

H. Do not apply traffic paint for striping and other markings until traffic coating has cured according to manufacturer's written recommendations.

3.4 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Verify the applied thickness before the material attains final set, by use of a mil-thickness gauge as the work progresses. Immediately apply additional coating to produce required thickness where readings indicate a thickness less than that specified.

C. Visually inspect areas which cannot be water tested for voids, damage, or rupture. Repair as required.

D. Replace Work or materials damaged beyond repair, in opinion of Architect, at no cost to Owner.

3.5 PROTECTION

A. Allow top coating to cure for 48 hours minimum before permitting traffic on surfaces. At temperatures less than 75 degrees F and relative humidity less the 50 percent, extend curing time.

3.6 CLEANING

A. Clean stains from adjacent surfaces with cleaning agent recommended by coating manufacturer.

B. Remove foreign matter from finished coating surfaces.

END OF SECTION

SECTION 07 19 00 - WATER REPELLENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes penetrating water-repellent treatments for the following vertical and horizontal surfaces:

1. Cast stone.

1.3 PERFORMANCE REQUIREMENTS

A. General Performance: Water repellents shall meet performance requirements indicated without failure due to defective manufacture, fabrication, or installation.

1. Water Repellents: Comply with performance requirements specified, as determined by testing on manufacturer's standard substrate assemblies representing those indicated for this Project.

B. Water Absorption: Minimum 90 percent reduction of water absorption after 24 hours in comparison of treated and untreated specimens.

1. Cast Stone: ASTM C 1195.

C. Water-Vapor Transmission: Comply with one or both of the following:

1. Maximum 15 percent reduction in rate of vapor transmission in comparison of treated and untreated specimens, according to ASTM E 96/E 96M.
2. Minimum 90 percent water-vapor transmission in comparison of treated and untreated specimens, according to ASTM D 1653.

D. Water Penetration and Leakage through Masonry: Minimum 90 percent reduction in leakage rate in comparison of treated and untreated specimens, according to ASTM E 514.

E. Durability: Maximum 5 percent loss of water-repellent properties after 2500 hours of weathering according to ASTM G 154 in comparison to water-repellent-treated specimens before weathering.

F. Visual Evidence of Water Repulsiveness: Visual inspection.

1. Treated materials give visual evidence of widespread surface hydrophobia: visible beading.

a. Minimum surface area displaying water beading: 100% for first 18 months, 90% through remainder of warranty.

2. Treated materials give little to no evidence of water absorption: surface discoloration, deepening of hue, indicating water penetration.

a. Maximum surface area visibly wetted: 0% for first 18 months, 10% through remainder of warranty.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

1. Include manufacturer's printed statement of VOC content.
2. Include manufacturer's standard colors.
3. Include manufacturer's recommended number of coats for each type of substrate and spreading rate for each separate coat.

B. Samples: For each type and color of water repellent and substrate indicated, 12 by 12 inches in size, with specified water-repellent treatment applied to half of each Sample.

C. Qualification Data: For qualified Applicator.

D. Product Certificates: For each type of water repellent, from manufacturer.

E. Preconstruction Testing Reports: For water-repellent-treated substrates.

F. Field quality-control reports.

G. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: An employer of workers trained and approved by manufacturer.

B. MPI Standards: Comply with MPI standards indicated and provide water repellents listed in its "MPI Approved Products List."

C. Mockups: Apply water repellent to each type of substrate required.

1. Locate each test application as directed by Architect.
2. Size: 25 sq. ft..
3. Final approval by Architect of color and water-repellent application will be from test applications.

1.6 PROJECT CONDITIONS

A. Limitations: Proceed with application only when the following existing and forecasted weather and substrate conditions permit water repellents to be applied according to manufacturers' written instructions and warranty requirements:

1. Concrete surfaces and mortar have cured for not less than 28 days.
2. Building has been closed in for not less than 30 days before treating wall assemblies.
3. Ambient temperature is above 40 deg F and below 100 deg F and will remain so for 24 hours.
4. Substrate is not frozen and substrate-surface temperature is above 40 deg F and below 100 deg F.
5. Rain or snow is not predicted within 24 hours.
6. Not less than three days have passed since surfaces were last wet.
7. Windy conditions do not exist that might cause water repellent to be blown onto vegetation or surfaces not intended to be treated.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer and Applicator agree(s) to repair or replace materials that fail to maintain water repellency specified in "Performance Requirements" Article within specified warranty period, as well as materials and surrounding construction damaged from

subsequent water infiltration. This warranty is to include both the replacement of the materials themselves and the cost of the labor to make them seamless.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PENETRATING WATER REPELLENTS

A. Siloxane, Penetrating Water Repellent: Clear, containing 15 percent or more solids of oligomerous alkylalkoxysiloxanes; with alcohol, ethanol, mineral spirits, water, or other proprietary solvent carrier; and with 400 g/L or less of VOCs.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Chemical Products Industries, Inc.; CP-500W.
b. ChemMasters; Aquanil Plus WB.
c. Conproco Corporation; Conpro Shield MX.
d. Dayton Superior Corporation; Weather Worker WB Heavy Duty (J-27-WB).
e. Diedrich Technologies, Inc.; 303-C.
f. Euclid Chemical Company (The), an RPM company; Euco-Guard VOX.
g. H&C Concrete Care Products, Sherwin-Williams Company (The); H&C SX-7.
h. Price Research, Ltd.; Price Aqua Seal-20.
i. Rainguard Products Company; MicroSeal.
j. SaverSystems; DEFY Water Repellent for Brick.
k. Specco Industries, Inc.; Waterstopper S-10 WB Siloxane.
l. Tamms Industries, Inc., Euclid Chemical Company (The); Baracade M.E.
m. Textured Coatings of America, Inc.; Rainstopper 1500.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of the Work.

1. Verify that surfaces are clean and dry according to water-repellent manufacturer's requirements. Check moisture content in three representative locations by method recommended by manufacturer.
2. Inspect for previously applied treatments that may inhibit penetration or performance of water repellents.
3. Verify that there is no efflorescence or other removable residues that would be trapped beneath the application of water repellent.
4. Verify that required repairs are complete, cured, and dry before applying water repellent.

B. Test pH level according to water-repellent manufacturer's written instructions to ensure chemical bond to silica-containing or siliceous minerals.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Cleaning: Before application of water repellent, clean substrate of substances that could impair penetration or performance of product according to water-repellent manufacturer's written instructions and as follows:

1. Cast Stone: Remove oil, curing compounds, laitance, and other substances that inhibit penetration or performance of water repellents according to ASTM E 1857.
2. Portland Cement Plaster (Stucco): ASTM E 1857.

B. Protect adjoining work, including mortar and sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live vegetation.

C. Coordination with Mortar Joints: Do not apply water repellent until pointing mortar for joints adjacent to surfaces receiving water-repellent treatment has been installed and cured.

D. Coordination with Sealant Joints: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.

1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those required.

3.3 APPLICATION

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.

B. Apply a heavy-saturation coating of water repellent, on surfaces indicated for treatment, using 15 psi-pressure spray with a fan-type spray nozzle to the point of saturation. Apply coating in dual passes of uniform, overlapping strokes. Remove excess material; do not allow material to puddle beyond saturation. Comply with manufacturer's written instructions for application procedure unless otherwise indicated.

1. Cast Stone: At Contractor's option, first application of water repellent on units may be completed before installing them. Mask mortar and sealant bond surfaces to prevent water repellent from migrating onto joint surfaces.

C. Apply a second saturation coating, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

3.4 CLEANING

A. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Correct damage to work of other trades caused by water-repellent application, as approved by Architect.

B. Comply with manufacturer's written cleaning instructions.

END OF SECTION 07 19 00

SECTION 07 21 00 – THERMAL INSULATION

PART 1 – GENERAL

1.1 SUMMARY A. Section Includes:

1. Extruded Polystyrene (XPS) Foam-Plastic Board Insulation – Continuous insulation behind masonry, foundation walls, and brick veneer.
2. Polyisocyanurate (Polyiso) Foam-Plastic Board Insulation – Continuous insulation behind metal panels, sheathing, and roofing assemblies.
3. Glass-Fiber Blanket Insulation – Interior soffits, partitions, suspended ceilings; thermal and acoustic applications.
4. Mineral Fiber Board Insulation – Curtain wall spandrel zones, backup walls, and exterior sheathing.
5. Mineral Wool Batt Insulation – Interior and exterior framed walls, spandrels, floors, and soffits; thermal, acoustic, and fire-rated applications.
6. Batt Insulation – Interior framed partitions, floors, and soffits; acoustic and fire-rated applications.
7. Insulation for Miscellaneous Voids – Glass-fiber loose fill or spray polyurethane foam for gaps, shim spaces, and irregular cavities.

B. Related Requirements:

1. Section 05 40 00 – Cold-Formed Metal Framing
2. Section 07 27 26 – Fluid Applied Waterproofing Assembly. s.
3. Section 07 52 16 - Styrene-Butadiene-Styrene (SBS) Modified Bituminous Roofing
4. Section 07 84 46 Fire Resistive Joint systems
5. Section 09 21 16 – Gypsum Board Assemblies: Acoustic insulation.

1.2 REFERENCE STANDARDS

A. ASTM C518 – Thermal Conductivity of Insulation Materials.

B. ASTM C578 – Extruded Polystyrene Foam Board.

C. ASTM C612 – Mineral Fiber Board.

D. ASTM C665 – Glass-Fiber Batt Insulation.

E. ASTM C1289 – Polyisocyanurate Board Insulation.

F. ASTM C764 – Loose-Fill Glass-Fiber Insulation.

G. ASTM C1029 – Spray Polyurethane Foam.

H. ASTM E84 – Surface-Burning Characteristics.

I. ASTM E119 – Fire-Resistance Ratings.

J. UL 263 – Fire-Resistance Assemblies.

K. NFPA 285 – Fire Propagation.

L. ASTM C1114 – Mineral Wool Batt Insulation.

1.3 SUBMITTALS

A. Action Submittals:

1. Product Data – Manufacturer's installation instructions, R-value labeling, accessory data; applicable to XPS board, Polyiso board, Glass-fiber blanket, Mineral fiber board, Mineral wool batt, Batt insulation, Miscellaneous void insulation, Accessories.Installation Methods – Detailed installation methods for rated assemblies, cavity walls, framed construction, and miscellaneous voids; applicable to all insulation types.
2. Sample R-Value Labels – Demonstrate correct labeling and dimension compliance; applicable to XPS, Polyiso, Glass-fiber blanket, Mineral fiber board, Batt insulation.
3. Fire-Rated Assembly Compliance – Verification of insulation products in UL or equivalent rated assemblies; applicable to XPS, Polyiso, Mineral fiber board, Batt insulation.
4. Fire-Rated Assembly Compliance – Verification of insulation products in UL or equivalent rated assemblies; applicable to XPS, Polyiso, Mineral fiber board, Mineral wool batt, Batt insulation.

B. Informational Submittals:

1. Product Test Reports – High-heat performance, flame spread, smoke development, surface-burning, and fire propagation; applicable to XPS, Polyiso, Glass-fiber blanket, Mineral fiber board, Batt insulation, Loose-fill, Spray polyurethane foam.
2. ASTM Compliance Reports – Documentation confirming compliance with ASTM standards (C518, C578, C612, C665, C1289, C764, C1029, E84, E119, UL 263, NFPA 285); applicable to all insulation types.
3. Manufacturer Certifications – Verification of product origin, quality, and conformance to specified standards; applicable to all insulation types and accessories.

4. UL / Agency Listings – Copies of listings for rated assemblies, where insulation is part of fire-resistance or high-heat assemblies; applicable to XPS, Polyiso, Mineral fiber board, Batt insulation.

1.4 QUALITY ASSURANCE

A. Prefer insulation products from a single manufacturer where feasible.

B. Fire-rated and UL-rated assemblies must use insulation approved by the applicable testing agency.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Protect foam-plastic board insulation as follows:

1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

1.6 FIELD CONDITIONS

A. Do not install on wet or frozen substrates or in unsuitable weather conditions.

PART 2 – PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes less than 25 and 450 when tested in accordance with ASTM E84.

B. Fire-Resistance Ratings: Comply with ASTM E119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from listings of another qualified testing agency.

C. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

D. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

E. Thermal-Resistance Value (R-Value): R-value as indicated on Drawings in accordance with ASTM C518.

2.2 EXTRUDED POLYSTYRENE (XPS) BOARD

A. For use on exterior walls outside of sheathing line for continuous insulation as required by Energy Code behind brick veneer locations.

B. Extruded Polystyrene Board Insulation, Type IV, with Drainage Panels : ASTM C578, Type IV, 25-psi minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Owens Corning; Foamular NGX 250 or comparable product by one of the following:
   a. Atlas Wall Insulation (Energy Shield XR)
   b. DuPont de Nemours, Inc. (Styrofoam Square Edge)
2. AT RATED ASSEMBLIES: Where indicated in the Contract Documents provide rigid insulation as specifically required by the UL Listed Assembly or Assemblies indicated regardless of whether or not product appears in the list above as the insulation indicated would be required in order to achieve the rating. When and wherever possible keep insulation in same manufacturer as rest of the Project.

2.3 POLYISOCYANURATE (POLYISO) BOARD

A. For use on exterior walls outside of sheathing line for continuous insulation as required by Energy Code behind metal panel locations

B. Polyisocyanurate Board Insulation, Foil Faced : ASTM C1289, foil faced, Type I, Class 1 or 2.

1. Basis-of-Design Product: Subject to compliance with requirements, provide DuPont de Nemours, Inc.; Thermax™ Basic NH or comparable product by one of the following:
   a. Atlas Polyiso Roof and Wall Insulation - Energy Shield Pro.
   b. Johns Manville; a Berkshire Hathaway company - AP Foil 25.
2. AT RATED ASSEMBLIES: Where indicated in the Contract Documents provide rigid insulation as specifically required by the UL Listed Assembly or Assemblies indicated regardless of whether or not product appears in the list above as the insulation indicated would be required in order to achieve the rating. When and wherever possible keep insulation in same manufacturer as rest of the Project.

2.4 GLASS-FIBER BLANKET INSULATION

A. Glass-Fiber Blanket Insulation, Unfaced : ASTM C665, Type I; passing ASTM E136 for combustion characteristics.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. CertainTeed; SAINT-GOBAIN.

b. Johns Manville; a Berkshire Hathaway company.
c. Knauf Insulation.
d. Owens Corning.

2.5 MINERAL FIBER BOARD INSULATION

A. ASTM C612, semi-rigid or rigid.

B. Basis-of-Design – Thermafiber FireSpan 90 or equal.

C. Applications – Curtain wall spandrels, backup walls, exterior sheathing.

2.6 BATT INSULATION

A. ASTM C665, unfaced or kraft-faced; flame-spread and smoke-developed per ASTM E84 limits.

B. Basis-of-Design –Basis-of-Design – CertainTeed, Johns Manville, or Owens Corning (glass-fiber batt).Interior framed partitions, floors, soffits; acoustic or fire-rated walls.

C. Applications – Interior framed partitions, floors, soffits; acoustic or fire-rated walls.

2.7 MINERAL WOOL BATT INSULATION

A. ASTM C1114, unfaced or kraft-faced; flame-spread ≤25, smoke-developed ≤50..

B. Basis-of-Design – Roxul ComfortBatt, Thermafiber SAFB, or equal..

C. Applications – Interior and exterior framed walls, spandrels, floors, soffits; acoustic, thermal, or fire-rated assemblies

2.8 INSULATION FOR MISCELLANEOUS VOIDS

A. Glass-fiber loose fill – ASTM C764 Type II, flame-spread 5 (ASTM E84).

B. Spray polyurethane foam – ASTM C1029 Type II, closed-cell; flame-spread ≤75, smoke ≤450.

C. Applications – Fill gaps, shim spaces, and irregular cavities around MEP penetrations.

D. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

2.9 ACCESSORIES

A. Mechanical fasteners, insulation washers, adhesive, support bars, wire mesh, and other components as required.

B. Vapor retarders/barriers where indicated on Drawings, compatible with insulation type.

C. Joint sealing tapes, sealants, and closure strips per manufacturer's instructions.

PART 3 – EXECUTION

3.1 PREPARATION

A. Clean substrates; remove sharp projections.

B. Verify substrates are dry and suitable for insulation adhesion or mechanical fastening.

3.2 INSTALLATION – GENERAL

A. Install per manufacturer instructions.

B. Fit insulation tightly; avoid voids or compression of blanket/batt insulation.

C. Coordinate with other trades for penetrations, flashing, and rated assemblies.

3.3 INSTALLATION BY APPLICATION

A. XPS Board – Continuous behind masonry, foundation walls, slab edges; adhere or mechanically fasten.

B. Polyiso Board – Continuous behind metal panels, sheathing, roofing systems.

C. Glass-Fiber Blanket – Above ceiling grids or within soffit framing; prevent sagging.

D. Mineral Fiber Board – Fit in curtain wall spandrels; use retainers or T-bars.

E. Mineral Wool Batt – Place in stud wall cavities or framed spandrels; support with wire, mesh, or friction fit; avoid compression to maintain R-value.

F. Batt Insulation – Place in stud wall cavities; support with wire or mesh if exposed.

G. Miscellaneous Voids – Fill with loose-fill glass-fiber or spray polyurethane foam.

3.4 INSTALLATION IN FRAMED CONSTRUCTION

A. Cut insulation to fit cavities; friction-fit or mechanically support as required.

B. Maintain clearances around non-rated recessed lighting.

C. For high metal-stud walls, support unfaced blankets mechanically; tape flanges for faced blankets.

3.5 INSTALLATION OF RIGID BOARD INSULATION

A. Install per manufacturer instructions and project drawings.

B. Abut joints tightly; do not tape or seal unless specified. C. Avoid small, irregular infill pieces.

3.6 PROTECTION

A. Protect installed insulation from moisture, weather, and physical damage.

B. Provide temporary coverings if permanent concealment is not immediate.

END OF SECTION 07 21 00

SECTION 072119 – FOAMED-IN-PLACE INSULATION

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:

1. Closed-cell spray polyurethane foam (SPF) insulation.
2. Open-cell spray polyurethane foam (SPF) insulation.
3. Ignition barriers for spray foam insulation.

B. Related Requirements:

1. Section 075700 "Coated Foamed Roofing" for spray polyurethane foam insulation used in roofing applications.

1.2 ACTION SUBMITTALS

A. Product Data: For each insulation and ignition barrier product, include:

1. Manufacturer’s technical data sheets.
2. Installation instructions.
3. Surface preparation and curing requirements.

1.3 INFORMATIONAL SUBMITTALS

A. Product Test Reports: Indicate compliance with ASTM, ICC-ES, and NFPA standards.

B. Research Reports: Provide ICC-ES evaluation reports or equivalent.

PART 2 – PRODUCTS

2.1 CLOSED-CELL SPRAY POLYURETHANE FOAM

A. Closed-Cell SPF Insulation:

1. Type: ASTM C1029, Type II.
2. Minimum Density: 1.5 lb/cu. ft. (24 kg/cu. m).
3. Minimum Aged R-Value at 1 inch (25.4 mm): 6.2°F·h·ft^2/Btu at 75°F (43 K·m^2/W at 24°C).
4. Manufacturers:
   - Johns Manville, or approved equal.

B. Surface-Burning Characteristics (ASTM E84):

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

C. Fire Propagation Characteristics:

1. Complies with NFPA 285 as part of an approved wall assembly.

D. Standards Compliance:
- ASTM C1029
- ASTM E84
- NFPA 285
- ICC-ES AC377

2.2 IGNITION BARRIERS FOR SPRAY FOAM INSULATION

A. Products:

1. Ignition barrier materials compliant with building code for SPF applications in attics, crawl spaces, or concealed areas.
2. Must meet ICC-ES AC377, Appendix X or other applicable standards.

B. Fire Testing Standards:
1. ASTM E84
2. ASTM E119
3. NFPA 286
4. ICC-ES AC377, Appendix X

C. Submittals:

1. Product data sheets for ignition barriers.
2. Fire test reports from approved laboratories.
3. Manufacturer's installation guidelines.

D. Quality Assurance:

1. Installer Qualifications:
   - Manufacturer-trained and certified for SPF and coatings.
2. Mock-Up:
   - Provide a sample area for Owner/Architect review.

E. Delivery, Storage, and Handling:
- Deliver in original sealed containers with clear identification.
- Store in dry, covered conditions per manufacturer's instructions.

2.3 OPEN-CELL SPRAY POLYURETHANE FOAM

A. Open-Cell SPF Insulation:

1. Blowing Agent: Water-based.
2. Minimum Density: 0.4 lb/cu. ft. (6.4 kg/cu. m).
3. Minimum Aged R-Value at 1 inch (25.4 mm): 3.4°F·h·ft^2/Btu at 75°F (24 K·m^2/W at 24°C).

4. Manufacturers:
   - Johns Manville, or approved equal.

B. Surface-Burning Characteristics (ASTM E84):

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

C. Fire Propagation Characteristics:

1. Complies with NFPA 285 as part of an approved wall assembly.

D. Standards Compliance:
- ASTM E84
- NFPA 285
- ICC-ES AC377

PART 3 – EXECUTION

3.1 INSTALLATION

A. General:
- Install in accordance with manufacturer's written instructions.

B. Application:

1. Apply foam to completely envelop all insulated areas and fill voids.
2. Apply in multiple lifts, not exceeding manufacturer's recommended maximum thickness per pass.
3. Do not apply into rising foam; allow curing between passes as required.

C. Ignition Barrier Application:
- Install ignition barrier coating where required, in accordance with manufacturer's installation guidelines and code requirements.

END OF SECTION 072119

SECTION 072726 –

FLUID-APPLIED MEMBRANE AIR BARRIERS

FLUID- APPLIED MEMBRANE VAPOR BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections.

1.2 SUMMARY

A. Section Includes:

1. Fluid-applied, vapor-permeable air barrier system.
   Basis-of-Design: PROSOCO R-Guard Cat 5 or approved equal.
2. Fluid-applied, vapor-impermeable air and vapor barrier system.
   Basis-of-Design: PROSOCO R-Guard VB.or approved equal.

B. Related Requirements:

1. Section 061600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
2. Division 07 sections for coordination with roofing, waterproofing, and below-grade vapor barriers.

1.3 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

C. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

D. Vapor-Barrier. is a continuous barrier with very low water vapor permeance, intended to prevent or significantly limit water vapor transmission from one side of a wall, ceiling, or floor to the other.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site .

1. Review air and vapor barrier requirements and installation, special details, mockups, air-leakage and bond testing, barrier protection, and work scheduling that covers both barriers.
2. Coordination with other envelope trades to ensure continuity of air and vapor barrier assemblies.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; wet and dry film thickness; and tested physical and performance properties of products.
2. Include letter from manufacturer that indicates acceptable other flashing materials for adhered or other acceptable means of installation for flashing materials and their integration with the fluid applied system that does not negatively affect the system or warranty.
3. Include letters confirming compatibility with other air / vapor -barrier, vapor barrier or waterproofing systems.

B. Sustainable Design Submittals:

1. Product Data: For coatings, indicating VOC content.
2. Laboratory Test Reports: For coatings, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For air / vapor-barrier assemblies.

1. Show locations and extent of air / vapor barrier materials, vapor-barrier materials, accessories, and assemblies specific to Project conditions.
2. Include details for substrate joints and cracks, adhered flashings, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
3. Include details of interfaces with other materials that form part of air and vapor barrier.
4. Consult air barrier and vapor barrier manufacturer for additional installation guidelines illustrations to assist with meeting shop drawing requirements.
5. Provide detailing of transitions to roof, floor slabs, and other envelope components.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: From air-barrier and vapor barrier manufacturer, certifying compatibility of barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.

.

C. Product Test Reports: For each barrier assembly, for tests performed by a qualified testing agency.

D. Field quality-control reports.

E. Include documentation of environmental limitations and substrate conditions at time of installation.

1.7 QUALITY ASSURANCE

A. Pre-Construction Meeting.

1. Contractor to provide written agenda and hold meeting prior to any work in order to review mock ups and project specifics, unique conditions and provide minutes of the meeting.

B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1. A company experienced in applying air and vapor barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
2. Verification that Installer completed SWR Institute's Validated Air Barrier and Vapor Barrier Training Program and is approved to perform work as herein specified by air/vapor and water-resistive barrier system and manufacturer.
3. Verification of completion of ABAA or SWR Institute training program

C. Mockups: Build mockups to set quality standards for materials and execution.

1. Build integrated mockups of exterior wall assembly , 150 sq. ft. , incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, vapor barriers and sealing of gaps, terminations, and penetrations of air-barrier and vapor barrier assembly. Include roof tie-ins and foundation intersections in mockup scope.
   a. Coordinate construction of mockups to permit inspection and testing of air and vapor barriers before external insulation and cladding are installed.
   b. Include junction with roofing membrane , building corner condition, and foundation wall intersection.
   c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air and vapor barriers until mockups are approved.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

D. Manufacturer's Representative: Manufacture's authorized representative is required to visit the site and submit approval in writing that the installation has met the manufacturer's written installation instructions.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on field mockups.

B. Mockup Testing: Air-barrier and Vapor Barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.

1. Air-Leakage-Location Testing: Mockups will be tested for evidence of air leakage according to ASTM E 1186, chamber pressurization or depressurization with smoke tracers .
2. Air-Leakage-Volume Testing: Mockups will be tested for air-leakage rate according to ASTM E 783 or ASTM E 2357.
3. Adhesion Testing: Mockups will be tested for required air-barrier and vapor barrier adhesion to substrate according to ASTM D 4541.
4. Alternative Adhesion Testing: Mock-ups will be tested for minimum air-barrier and vapor barrier adhesion using the ABAA 16psi air-barrier and vapor barrier membrane requirement as a minimum adhesion of all non-sealant materials using the PROSOCO Field Adhesion Tester or a unit described in ASTM D 4541. All non-sealant items shall be adhesion-tested in the same manner as the air-barrier and vapor barrier membrane. Sealant adhesion testing shall be performed in accordance with the Dow Corning Americas Technical Manual (page 74).
5. Compatibility Determinations: Mock-ups will be inspected for visual signs of decay, chemical attack, or degradation of any kind. Suspect instances shall be reported to the corresponding manufacturer who shall provide a letter that approves moving forward with the project or rejects the use of the product or rejects the method or circumstances of installation with an appropriate explanation of the position taken.
6. When the mock-up testing and compatibility determinations are complete, the Contractor shall submit documentation clarifying all conditions that were reviewed in the mock-up, stating all materials, details and assemblies that are: 1.) exhibited in the mock-up that are in compliance with the Contract Documents, 2.) exhibited in the mock-up that vary from the Contract Documents, and the reasons they vary, and 3.) exhibited in the mock-up that are not shown in the Contract Documents and why they need to be addressed and reviewed now as part of the mock-up process. Decisions made as a result of the mock-up reviews should be noted in this document and accepted via sign-off by all parties.
7. Submit full documentation clarifying all reviewed mockup conditions and deviations from contract documents.
8. Notify Architect seven days in advance of the dates and times when mockups will be tested.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Sequence deliveries to avoid delays, and to minimize on-site storage.

B. Remove and replace liquid materials that cannot be applied within their stated shelf life.

C. Deliver materials and products in labeled packages.

D. Store and handle in strict compliance with manufacturer's instructions and recommendations.

E. Protect from damage, weather, excessive temperatures, and construction operations.

F. Remove damaged material from site and dispose of in accordance with applicable regulations.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier and vapor barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier and vapor barrier manufacturer.

1. Protect substrates from environmental conditions that affect air-barrier and vapor barrier performance.
2. Do not apply air barrier or vapor barrier to a damp or wet substrate or during snow, rain, fog, or mist.
3. Verify moisture content on concrete via ASTM D 4263 plastic sheet test if applicable

PART 2 - PRODUCTS

2.1 MATERIALS

A. Source Limitations: Obtain primary air-/ vapor barrier materials and air/ vapor barrier accessories from single source from single manufacturer.

B. Low-Emitting Materials: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 PERFORMANCE REQUIREMENTS

For PROSOCO R-Guard Cat 5 (vapor-permeable):

PRODUCT TEST RESULTS
R-Guard Cat 5™

PROSOCO

ICC-ES AC212[1] Acceptance Criteria for Water-Resistive Coatings Used as Water-Resistive Barriers Over Exterior Sheathing			
TEST	**METHOD**	**CRITERIA**	**RESULTS**
Tensile Bond	ASTM C 297	Minimum 15 psi (105 kPa)	Pass
Freeze-Thaw	ICC-ES AC212	No cracking, checking, crazing, erosion, delamination or other deleterious effects	Pass
Water Resistance	ASTM D 2247	No cracking, checking, crazing, erosion, delamination, or other deleterious effects	Pass
Water Vapor Transmission	ASTM E 96 Wet Cup	Report	14 perms
Water Penetration	ASTM E 331	No visible water penetration at the sheathing joints as viewed from the back of the panel	Pass
Structural, Racking, Restrained Environmental Conditioning & Water Penetration	ASTM E 1233 A ASTM E 72 ICC-ES AC212 ASTM E 331	No cracking of the coating	Pass
Weathering	ICC-ES AC212 AATCC[2] 127	No cracking of the coating; no water penetration	Pass
Air Permeance	ASTM E 2178	≤ 0.02 L / s·m² at 75 Pa (≤ 0.004 cfm / ft² at 1.57 psf)	Pass: 0.0007 L / s·m² at 75 Pa (0.000 cfm / ft² at 1.57 psf)
ABAA: Air Barrier Association of America Acceptance Criteria for Liquid Applied Membranes			
TEST	**METHOD**	**CRITERIA**	**RESULTS**
Air Permeance	ASTM E 2178	≤ 0.02 L / s·m² at 75 Pa (≤ 0.004 cfm / ft² at 1.57 psf)	Pass: 0.0007 L / s·m² at 75 Pa (0.000 cfm / ft² at 1.57 psf)
Air Leakage of Air Barrier Assemblies	ASTM E 2357	≤ 0.2 L / s·m² at 75 Pa (≤ 0.04 cfm / ft² at 1.57 psf)	Pass: 0.0009 L / s·m² at 75 Pa (0.0028 cfm / ft² at 1.57 psf)
Water Resistance	AATCC 127	No water infiltration after exposure to 55 cm head of water for 5 hours	Pass
Fastener Sealability	ASTM D 1970	No water infiltration	Pass
Pull Adhesion	ASTM D 4541	110 kPa (16 psi) or substrate failure	Pass
Crack Bridging	ASTM C 1305	Pass	Pass
Water Vapor Transmission	ASTM E 96 Wet Cup Dry Cup	Report	Wet Cup: 14 perms Dry Cup: 10 perms
Fire Testing			
TEST	**METHOD**	**CRITERIA**	**RESULTS**
Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies	NFPA[3] 285	Must resist flame propagation and flame spread	See Report 10261K Rev. 6 from Priest & Associates Consulting, LLS
Surface Burning Characteristics	ASTM E 84	Criteria for ICC and NFPA Class A Building Material: Flame Spread ≤ 25 Smoke Developed ≤450	Meets Class A Building Material Flame Spread: 25 Smoke Developed: 10

All testing conducted by independent, accredited laboratories.

NOTES:
1: International Code Council Evaluation Service Acceptance Criteria 212
2: American Association of Textile Chemists and Colorists
3: National Fire Protection Association

For PROSOCO R-Guard VB (vapor-impermeable):

PRODUCT TEST RESULTS
R-Guard VB

PROSOCO

TEST	METHOD	CRITERIA	RESULTS
Water Vapor Transmission	ASTM E 96 Dry Cup	Measure	0.063 perms
Water Resistance	ICC-ES AC212[1] AATCC[2] 127	No water infiltration after exposure to 55 cm head of water for 5 hours	Pass
Air Permeance	ASTM E 2178	≤ 0.02 L / s·m² at 75 Pa (≤ 0.004 cfm / ft² at 1.57 psf)	Pass
Air Leakage of Air Barrier Assemblies	ASTM E 2357	≤ 0.2 L / s·m² at 75 Pa (≤ 0.04 cfm / ft² at 1.57 psf)	Pass
Fastener Sealability	ASTM D 1970	No water infiltration	Pass
Pull Adhesion	ASTM D 4541	110 kPa (16 psi) or substrate failure	Pass
Surface Burning Characteristics	ASTM E 84	Criteria for ICC and NFPA Class A Building Material: Flame Spread ≤ 25 Smoke Developed ≤450	Meets Class A Building Material Pass
Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies	NFPA[3] 285	Must resist flame propagation and flame spread.	See Report 10261K Rev. 6 from Priest & Associates Consulting, LLS

All testing was completed by independent, accredited laboratories.

NOTES:
1: International Code Council Evaluation Service Acceptance Criteria 212
2: American Association of Textile Chemists and Colorists
3: National Fire Protection Association

2.3 ACCESSORY MATERIALS

A. Requirement: Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier and vapor barrier manufacturer to produce a complete air-barrier and vapor barrier assembly and that are compatible with primary air-barrier and vapor barrier material and adjacent construction to which they may seal.

Accessories shall also be compatible with the vapor barrier properties of the primary material where vapor-retarding performance is required.

1. Liquid-type auxiliary materials shall comply with VOC requirements.
2. Wet-weather accessories compatible with the primary Wet-Weather Fluid Applied Vapor-Permeable Membrane System shall be comprised of Silyl-Terminated-Poly-Ether (STPe).

B. Primer: If and as required by manufacturer / system and applicable locations provide liquid waterborne primer recommended for field-cut edges of external gypsum board substrate by air-barrier/vapor barrier material manufacturer for the purpose of consolidating friable edges.

Primer shall not adversely affect vapor permeability or vapor-retarding properties of air / vapor barrier.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD GypPrime or comparable product by one of the following:
   a. Primers by barrier manufacturer or as recommened or approved for use with manufacturer's product provided on Project .

C. Joint Reinforcing: Sheathing and rough opening seams and joints Filler Material. Liquid Silyl-Terminated-Poly-Ether (STEp) as recommended for treatment of rough openings.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD Joint & Seam or comparable product by one of the following:
   a. WR Grace .
   b. Henry

D. Rough Opening Flashing Material: Liquid Silyl-Terminated-Poly-Ether (STPe) as recommended for treatment of rough openings.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD FastFlash or comparable product by one of the following:
   a. WR Grace .
   b. Henry

E. Substrate-Patching Material: Manufacturer's standard substrate filler as recommended for preparation of cracks and overdriven fasteners, as recommended by barrier manufacturer.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD Joint & Seam Filler per manufacturer’s recommendations or comparable product by one of the following:
   a. Carlisle
   b. GCP .
   c. Henry
   d. Prosoco
   e. Tremco

F. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, 0.0187 inch thick, and Series 300 stainless-steel fasteners.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

G. Preformed Extrusion: If and as required by Manufacturer, provide manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Carlisle
   b. GCP .
   c. Henry
   d. Prosoco
   e. Tremco

H. Interior Air or vapor Sealant: Single component, moisture curing, 98 percent solids Silyl-Terminated-Polyether (STPe) to produce a durable, high-performance, high-movement sealant for windows and doors.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD Dam or comparable product by one of the following:
   a. WR Grace .
   b. Henry
2. Backer Rod: Compressible, closed cell rod stock as recommended by manufacturer for compatibility with sealant. Provide size and shape of rod to control joint depth.

PART 3 - EXECUTION

3.1 GENERAL

A. It is the intent that installation of Fluid Applied Membrane Air Barriers and Vapor Barriers will create a continuous, non interrupted barrier throughout the entire plane in which it is installed. Contractor is responsible to identify and address all penetrations, bridging conditions and tie ins with other materials as required to achieve a continuous barrier as noted herein.

B. Provide overlapping of membranes by a minimum of 12” with taped joints.

3.2 EXAMINATION

- Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that substrates have cured and aged for minimum time recommended in writing by barrier manufacturers.
3. Verify that substrates are visibly dry and free of moisture, unless approved by air / vapor barrier manufacturer. Test concrete substrates for capillary moisture by plastic sheet method according to ASTM D 4263.
4. Verify that masonry joints are flush and completely filled with mortar.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 SURFACE PREPARATION

A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate according to manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air/vapor barrier application.

1. Surfaces STPe accessory materials may be dry, damp, or wet to the touch. Brush away any standing water present before application. The products will tolerate rain immediately after application.
2. If installing directly over metal studs provide over only un-punched, solid, studs.

B. Mask off adjoining surfaces not covered by barriers to prevent spillage and overspray affecting other construction.

C. Remove film-forming coatings, curing compounds, and form-release agents from concrete, and grease, oil, bitumen, paints, and other contaminants from all substrates.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.

E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another. See STPe product manufacturer's installation guidelines illustrations.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for barriers.

H. Bridge isolation joints expansion joints and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air/ vapor barrier accessory material that accommodates joint movement according to manufacturer's written instructions and details.

I. Exterior Sheathing:

1. Ensure that sheathing is properly installed with ends, corners, and edges properly fastened. Remove and replace damaged sheathing.

2. Mechanical fasteners used to secure sheathing boards or penetrate sheathing boards shall be set flush with sheathing, fastened and spotted with substrate patching material, and fastened into solid backing.
3. Consolidate and seal the cut edges of gypsum wall boards exposed in rough openings for windows and doors at corners. The treated edge provides a suitable surface for application of joint reinforcing, fiber-reinforced coat and seam treatment.

J. Apply primer to substrates at required rate and allow it to dry, as recommended by barrier manufacturers.

3.4 JOINT TREATMENT

A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.

1. Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and barrier manufacturer's written instructions.
2. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.

B. Gypsum Sheathing: Fill joints greater than 1/2 inch with joint reinforcing according to barrier manufacturer's written instructions.

1. Fill surface defects and over driven fasteners.
2. Using a dry knife, trowel, or spatula, tool and spread the product. Spread 1 inch beyond seam at each side to manufacturer's recommended thickness. See manufacturer's product data sheet.
3. Allow to skin before installing other waterproofing or barrier components.
4. Apply in accordance with barrier manufacturer's written instructions.

3.5 ACCESSORIES INSTALLATION

A. Install accessory materials according to barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of barrier.

1. Coordinate the installation of barrier with installation of roofing membrane and base flashing to ensure continuity of barrier with roofing membrane. See manufacturer's installation guidelines illustrations.
2. Install transition strip or liquid-seal materials on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.

B. Connect and seal exterior wall barrier material continuously to roofing-membrane barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

C. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, penetrations, and doors to seal and waterproof rough openings, as recommended by barrier

manufacturer. Substrates for STPe products do not require primers other than field-cut edges of external gypsum board, such as around rough openings.

1. Apply a thick bead of Rough Opening Joint & Seam Filler over all joints and seams of the rough opening.
2. Apply Rough Opening Filler Material within temperature and weather limitations as required by manufacturer.
3. Apply Rough Opening Filler Material to perimeters, sills, and adjacent sheathing and building face, in accordance with manufacturer's product data sheet and manufacturer's Installation Guidelines illustrations.
4. Apply liquid STPe flashing product to interior surfaces of rough opening and out onto the sheathing or CMU per manufacturer’s instructions.
5. Preformed Silicone Extrusion: Install as recommended by air / vapor barrier manufacturer.

D. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air/ vapor barrier material as recommended by air / vapor barrier manufacturer.

E. Seal masonry reinforcing or ties and penetrations as recommended by air / vapor barrier manufacturer.

F. Seal top of through-wall flashings to air / vapor barrier as recommended by air / vapor barrier manufacturer.

G. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets as recommended by air / vapor barrier manufacturer.

H. Repair punctures, voids, and deficient lapped seams in strips and transition strips as recommended by air / vapor barrier manufacturer.

3.6 PRIMARY BARRIER MATERIAL INSTALLATION

A. Apply barrier material to form a seal with strips and transition strips and to achieve a continuous barrier per manufacturer's written instructions and details. Apply barrier material within manufacturer's recommended application temperature ranges. Air / vapor barrier to be installed so as to create a continuous barrier tying separate components of the building envelope together. This includes connection to the slab and roof systems as well as all other components of the building envelope. The barrier is to be continuous at all joints, terminations and penetrations even where not specifically detailed as such.

1. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
2. Where multiple prime coats are needed to achieve required bond, allow adequate drying time between coats.

B. Medium-Build Barriers: Apply continuous unbroken barrier material to substrates according to the thickness required by the barrier manufacturer for the Project conditions. Apply an increased thickness of air / vapor barrier material in full contact around protrusions such as masonry ties.

1. Barrier: Apply dry film thickness as recommended by barrier manufacturer's literature to comply with performance requirements. Apply additional material as needed to achieve void- and pinhole-free surface.

C. Low-Build Barriers: Apply continuous unbroken air / vapor barrier material to substrates according to the following thickness. Apply an increased thickness of air / vapor-barrier material in full contact around protrusions such as masonry ties if applicable.

1. Vapor-Permeable, Low-Build Barrier: Apply dry film thickness as recommended by air / vapor barrier manufacturer's literature to comply with performance requirements. Apply additional material as needed to achieve void- and pinhole-free surface, but do not exceed thickness on which required vapor permeability is based.

D. Do not cover air /vapor barrier until it has been tested and inspected by testing agency.

E. Correct deficiencies in air / vapor barrier that does not comply with requirements; repair substrates and reapply air / vapor-barrier components.

3.7 FIELD QUALITY CONTROL

A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Inspections: Manufacturer's authorized representative shall inspect the following and submit a report of his findings to the Architect. Air/ vapor barrier materials, accessories, and installation are subject to inspection for compliance with requirements.

1. Continuity of barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Wet mil thickness readings: Take during material application with photo documentation provided with daily field reports. Provide 1 gauge reading for every 500 SF of installed material and not less than a minimum of 1 per wall face.
3. Air / vapor barrier dry film thickness.
4. Continuous structural support of air/vapor-barrier system has been provided.
5. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
6. Site conditions for application temperature and dryness of substrates have been maintained.
7. Maximum exposure time of materials to UV deterioration has not been exceeded.
8. Surfaces have been primed, if applicable.
9. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
10. Termination mastic has been applied on cut edges.
11. Strips and transition strips have been firmly adhered to substrate.
12. Compatible materials have been used.
13. Transitions at changes in direction and structural support at gaps have been provided.

14. Connections between assemblies (air / vapor barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
15. Tie offs and connections to disparate systems such as the roof have been made in accordance with the manufacturer's requirements.
16. All penetrations have been sealed.

D. Tests: As determined by testing agency from among the following tests:

1. Air-Leakage-Location Testing: Air / vapor-barrier assemblies will be tested for evidence of air leakage according to ASTM E 1186, chamber pressurization or depressurization with smoke tracers .
2. Air-Leakage-Volume Testing: Air / vapor-barrier assemblies will be tested for air-leakage rate according to ASTM E 783 or ASTM E 2357.
3. Adhesion Testing: Air / vapor barrier assemblies will be tested for required adhesion to substrate according to ASTM D 4541 for each 600 sq. ft. of installed air vapor barrier or part thereof.

E. Barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air / vapor -barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air/ vapor barrier components for retesting as specified above.

F. Repair damage to barriers caused by testing; follow manufacturer's written instructions.

G. Prepare test and inspection reports.

3.8 CLEANING AND PROTECTION

A. Protect air/vapor-barrier system and vapor- barrier from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace barrier or install additional, full-thickness, barrier application after repairing and preparing the overexposed materials according to barrier manufacturer's written instructions.
2. Protect air / vapor barrier from contact with incompatible materials and sealants not approved by barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

C. Remove masking materials after installation.

END OF SECTION 072726

SECTION 07 4213.24 ALUMINUM METAL WALL

PART 1- GENERAL

1.01 SECTION INCLUDES

A. Aluminum metal plate wall panels

1.02 RELATED REQUIREMENTS

A. Section 05 40 00 – Cold-Formed Metal Framing: Wall panel substrates support framing.

B. Section 06 10 00 – Rough Carpentry: Plywood substrate wall sheathing.

C. Section 07 27 26 – Fluid Applied Membrane Barriers: Air and moisture barrier required as part of metal wall panel assembly.

D. Section 07 62 00 – Sheet Metal Flashing and Trim: Field formed flashings and other sheet metal work.

E. Section 07 92 00 – Joint Sealants: Perimeter sealant.

1.03 DEFINITION

A. Metal Plate Wall Panel and Soffit Assemblies: Metal plate wall panels, attachment system components, miscellaneous metal framing, and accessories necessary for a complete weather tight wall system based on AAMA CW-RS-1.

1.04 REFERENCE STANDARDS

A. AAMA - American Architectural Manufacturers Association (www.aamanet.org)

10. ASTM E1233/E1233M – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights, and Curtain Walls by Cyclic Air Pressure Differential; 2014 [Testing based on 2006 Edition]

C. TAS - Testing Application Standards; Florida Building Code, 2010
1. TAS 202 – Criteria for Testing Impact and Non-Impact Resistant Building Envelope Components Using Uniform Static Air Pressure Loading; 1994
2. TAS 203 – Criteria for Testing Products Subject to Cyclic Wind Pressure Loading; 1994

D. NAAMM – National Association of Architectural Metal Manufacturers

E. SMACNA – Sheet Metal and Air Conditioning Contractor's National Association

F. PS - Voluntary Product Standard; National Institute of Standards and Technology (NIST)
1. PS-1 – Structural Plywood; 2009

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate panel assemblies with rain drainage, flashing, trim, stud back-up, soffits, and other adjoining work.

B. Preinstallation Meeting:
1. Attendees:
   a. Owner.
   b. Architect.
   c. Installer.
   d. Panel manufacturer's representative.
   e. Structural support installer's.
   f. Installer's whose work interfaces with or affects wall panels including installers of doors, windows, and louvers.
2. Review and finalize construction schedule.
3. Verify availability of materials, installer's personnel, equipment, and facilities needed to maintain schedule.
4. Review means and methods related to installation, including manufacturer's written instructions.
5. Examine support conditions for compliance with requirements, including alignment and attachment to structural members.
6. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affects this Work.
7. Review temporary protection requirements for during and after installation of this Work.

1.06 SUBMITTALS

A. See Section 01 3000 – Administrative Requirements, for submittal procedures.

B. Product Data: Submit for each type of product indicated, include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal plate wall panel and accessory.

C. Shop Drawings: Submit fabrication and installation layouts of metal plate wall panels; including details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
1. Provide distinction between factory-assembled, shop-assembled, and field-assembled work.
2. Provide details of following items at full scale.
   a. Manufacturer's standard sheet metal trims.
   b. Components of wall panel construction, anchorage methods, and hardware.

D. Coordination Drawings: Submit exterior elevations, drawn to scale, that have the following items shown and coordinated with each other, using input from installers of the following items:
   1. Metal plate wall panels and attachments.
   2. Girts.
   3. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
   4. Penetrations of wall by pipes and utilities.

E. Samples: Submit for each type of exposed finish required, and prepared on samples of size as follows:
   1. Aluminum Metal Plate Wall Panels: At least 2 inch by 3 inch.

F. Test and Inspection Reports: Submit test and inspection reports on each type of wall panel system provided for project based on evaluation of comprehensive tests performed by qualified testing agency.

G. Maintenance Data: Submit maintenance data for metal plate wall panels.

H. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with at least five years of documented experience.

B. Installer: Company specializing in performing work of this section and approved by manufacturer.
   1. Install system in strict compliance with manufacturer’s installation instructions.

C. Anodized Finish Applicator: Provide either caustic (traditional) or eco-friendly (acid) etching technologies.
   1. Use fully automated, computer-controlled process lines for consistency of finish throughout project.
   2. Use documented production line quality control protocols in accordance with AAMA 611 test procedures.

D. Source Limitations: Obtain each type of metal plate wall panel from single source and from single manufacturer.

1.08 MOCKUPS

A. Mockups: Provide mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and to establish quality standards for fabrication and installation.
   1. Build mockup of typical wall panel assembly**,** including corners and corner soffits, supports, attachments, and accessories.
      a. Include at least four panels to represent a four-way panel joint and showing full thickness.
   2. Water Spray Test: Conduct water-spray test of mockup metal panel assembly, test water penetration in accordance with AAMA 501.2.
   3. Approval of mockups does not constitute approval of deviation from Contract Documents within mockups unless these deviations are approved by Architect in writing.
   4. Subject to compliance with requirements, approved mockups **[may]** or **[may not]** become part of completed Work if undisturbed upon Date of Substantial Completion.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer’s original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Storage and Handling: Store materials in clean, dry, interior area in accordance with manufacturer’s instructions.

C. Deliver panels, components, and other manufactured items without damage or deformation.

D. Protect panels during transportation, handling, and installation from weather, excessive temperatures and construction operations.

E. Handle panels in strict compliance with manufacturer's instructions and recommendations, and in a manner to prevent bending, warping, twisting, and surface damage.
   1. Store panels vertically with top of panel down, storage of panels horizontally is not permitted.

F. Store panels covered with suitable weather tight and ventilated covering.

G. Provide storage of panels to ensure dryness, with positive slope for drainage of moisture.

H. Do not store panels in contact with other materials that might cause staining, denting, or other surface damage.

I. Remove strippable protective covering from aluminum panel prior to installation.

1.10 SITE CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of this Work to be performed according to manufacturer's installation instructions and warranty requirements.

B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before panel fabrication and indicate measurements on Shop Drawings.
   1. Coordinate with construction schedule.

1.11 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Wall System Warranty: Provide wall panel manufacturer warranty, agreeing to correct defects in manufacturing of materials within a one year period after Date of Substantial Completion.
   1. Failures include, but are not limited to, the following:
      a. Structural failures, including rupturing, cracking, or puncturing.
      b. Deterioration: Beyond normal weathering of wall system metals and other materials.

C. Panel Material Warranty: Provide panel material manufacturer warranty, agreeing to repair finish of metal plate wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Finish Warranty Period: 30 years from Date of Substantial Completion. Warranties for all coating systems to be the same.
   2. Warranty Coverage: In accordance with AAMA 2605 for 70 percent PVDF resin on aluminum finish requirements.
      a. Fading, Loss of Color Retention: Loss of 5 Delta E units (Hunter) or less, in accordance with ASTM D2244.
      b. Chalking, Chalky White Powder on Panel Surface: Chalking at No. 8 or less for colors, or No. 6 for white, in accordance with ASTM D4214.
      c. Loss of Adhesion: Loss of 10 percent due to cracking, checking or peeling, or failure to adhere to bare metal.
      d. Gloss Retention: 50 percent or less in accordance with ASTM D523.
      e. Salt Spray, Accelerated: At least 4,000 hours in accordance with ASTM B117.
      f. Humidity Testing, Accelerated: At least 4,000 hours in accordance with ASTM D2247.
   3. Warranty Coverage: In accordance with AAMA 611 Class 1 anodized aluminum finish requirements.
      a. Loss of Adhesion: Resists cracking, crazing, flaking, and blistering when forming and welding completed prior to finishing; post forming or welding voids warranty.
      b. Fading - Loss of Color Retention: Loss of 5 Delta E units (Hunter) or less, in accordance with ASTM D2244.
      c. Chalking, Chalky White Powder on Panel Surface: Chalking at No. 8 or less in accordance with ASTM D4214.
      d. Test Chlorine resistance in accordance with ASTM rD543.
      e. Coating shall show no blistering, rusting, or degradation after 3,000 hours exposure in a modified ASTM B117 test using a 0.5% sodium hypochlorite solution."

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Dri-Design – Aluminum Wall Panel System or approved equal, Basis of Design.
   1. Address: 12480 Superior Ct., Holland, Michigan 49424.
   2. P.O. Box 1286 Holland, Michigan 49422-1286.
   3. Phone: (616) 355-2970; Fax: (616) 355-2972; Website: www.dri-design.com.

2.02 PERFORMANCE REQUIREMENTS

Delegated Design for Metal Wall: Basis of Design: Dri-Design

A. Metal panels and support framing, including panel attachment clips, sub girts, zee clips, sill angles, fasteners for miscellaneous metal framing, plates and bars, Tubes and pipes, joints, etc.

B. Metal Plate Wall Panel Assemblies: Comply with performance requirements without failure due to defective manufacturing, fabrication, installation, or other construction defects

C. Design, fabricate, and erect a dry joint, pressure equalized rainscreen aluminum wall panel system without use of sealants, gaskets, or butyl tape, tested as installed in compliance with AAMA 508, and as follows:
   1. Cyclic Static Air Pressure Differential: Pass cycled pressure loading at 25 psf in 100 three-second cycles in accordance with ASTM E1233/E1233M.
   2. Air Infiltration: Pass when tested at 1.57 psf (25 mph) in accordance with ASTM E283.
   3. Water Penetration:
      a. Static: Pass water penetration test under 25.0 psf positive static air pressure difference for at least 15 minutes with 5 gallons per sf per hour of water applied in accordance with ASTM E331.
      b. Dynamic: Pass water penetration test under 15.0 psf dynamic pressure difference for at least 15 minutes with 5 gallons per sf per hour of water applied in accordance with AAMA 501.1.
   4. Structural: Provide systems tested in accordance with ASTM E330/E330M and certified to be without permanent deformation or failure of structural members.

D. High Velocity Hurricane Zone (HVHZ): Comply with ASTM E8/E8M test methods and performance requirements of Florida Building Code and Miami-Dade County test protocols TAS-202 and TAS-203 for HVHZ with at least plus 61 psf to minus 80 psf design pressure rating.
   1. Application: For aluminum plate thickness of 0.080 inch only.

2.03 MATERIALS

A. Dri -Design - Aluminum Plate: Alloy and temper as recommended by manufacturer for application and in compliance with manufacturers design requirements. Refer to drawings for locations.
   1. Aluminum Material: Tension-leveled, [flouropolymer PVDF painted finish, 3003-H14 manganese alloy] or [anodized finish, 5005-AQ manganese alloy].
   2. Thickness: 0.080 inch.
   3. Weight: Less than 2 lbs per sf.
   4. Color: Refer to drawings for color selections.
   5. Panel Depth: 1-1/4 inch, nominal.
   6. Specifier Note: Maximum panel size for aluminum is 48w x 48h inch, square; 24w x 72h inch, rectangular; 60w x 30h inch, rectangular; 120w x 24h inch, long rectangular.
   7. Panel Size: As indicated on Drawings
   8. Specifier Note: Panel joints are typically 1/2 inch wide for horizontal joints and 5/8 inch wide for vertical joints; 1 inch maximum for each.
   9. Panel Joints: As indicated on Drawings.

2.04 FABRICATION

A. Fabricate and finish wall panels within manufacturer's facilities and fulfill indicated performance requirements demonstrated by laboratory testing.
   1. Comply with indicated profiles and with dimensional and structural requirements.

B. Provide post-finishing of panels, paint aluminum wall panels only after completion of panel fabrication and ensure exposed edges are coated.

C. Provide post anodizing of panels, anodize aluminum wall panels only after completion of panel fabrication and ensure exposed edges are anodic coated without crazing of surface at formed edges.

2.05 FINISHES

A. Comply with NAAMM's - Metal Finishes Manual for Architectural and Metal Products, for recommendations of designating finishes.

B. Superior Performance Organic Coating System: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride (PVDF) resin system.
   1. **All metal wall panels located within the natatorium** and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.
   2. **All metal wall panels located elsewhere in project shall receive Two-Coat Fluropolymer** AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.
   3. **No anodized Finish allowed within the natatorium** and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure. These areas shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

C. Color Anodized Finish: AAMA 611, Architectural Class I, color anodized coating of 0.0007 inch (0.7 mils) minimum thickness.
   1. Color: From Manufacture's full range. See drawings.

D. Clear Anodized Finish: AAMA 611, Architectural Class I, clear anodized coating of 0.0007 inch (0.7 mils) minimum thickness.

E. Field Touch-Up Materials: As recommended by coating manufacturer for field application.

2.06 ACCESSORIES

A. Metal Plate Wall Panel Accessories: Provide components required for a complete metal plate wall panel assembly including trim, copings, fascia, mullions, sills, corner units, flashings, and similar items. Match material and finish of panels unless otherwise indicated.

B. Provide integral drainage system and manufactures standard extrusions at termination of dissimilar materials.

C. Flashing and Trim: Match material, finish, and color of adjacent wall panels.
   1. Thickness: At least 0.040 inch.
   2. Refer to Section 07 62 00 Sheet Metal Flashing and Trim..

D. Panel Fasteners: Designed to withstand design loads, with at least 7/16 inch diameter head and neoprene washer.
   1. Aluminum Wall Panel Material: Provide stainless steel fasteners, or coated fastener approved by panel manufacturer or project wall consultant.

E. Sub-Girts: Galvanized, provide size and gage in accordance with project requirements.
   1. Furring Channel: Provide Hat, C, U or Z type as recommended by manufacturer.

2. Flat Strap: At least 14 gage, 0.0747 inch (1.90 mm) thick.
3. Refer to Section 05 40 00 Cold Formed Framing.

F. Substrate Wall Sheathing: Plywood, PS 1, Grade C-D, Exposure I, at least 5/8 inch thick.
1. Refer to Drawings and Section 06 1000 Rough Carpentry for requirements.

G. Weather Barriers: Provide climate specific weather barrier with performance characteristics for air penetration, water vapor transmission, and water penetration resistance. Refer to Section 07 27 26 Fluid Applied Membrane Air Barriers for requirements.

H. Sealants: As recommended by metal panel manufacturer for openings within wall panels and perimeter conditions.
1. Refer to Section 07 92 00 Joint Sealants for requirements.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, and Work areas and conditions with Installer present for compliance with requirements for installation tolerances, wall panel supports, and other conditions affecting performance of this Work.

B. Examine wall framing to verify that girts, angles, channels, studs, and other structural wall panel support members and anchorage have been installed within alignment tolerances required by wall panel manufacturer.

C. Verify that weather barrier has been installed over sheathing or substrate to prevent air infiltration or water penetration.

D. Examine rough-in for components and systems penetrating wall panels to coordinate actual penetration locations relative to wall panel joint locations prior to installation.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Miscellaneous Framing: Install sub girt, base angles, sills, furring, and other wall panel support members and provide anchorage in accordance with ASTM C754 for gypsum panel type substrates and panel manufacturer’s installation instructions.

3.03 INSTALLATION

A. Install wall and soffit panels in accordance with manufacturer's installation instructions, including pressure equalized rainscreen installation method and installation guidelines.
1. Metal panels consist of single sheets of metal formed with interlocking gutter and drainage system integral to the panel with single horizontal attachment for dry-joint rainscreen assembly.
2. Use of secondary drainage channels, brackets, support pins, joint sealants or gaskets to manage the drainage of wall panel system is not permitted.
3. Attach metal panels using progressive interlocking method, engaging bottom of panel in top of previous panel working bottom up, and left to right.
4. Install metal panels with single top attachment in pre-punched holes to allow individual panels to move due to thermal expansion.
5. Do not compromise internal gutter.

B. Install metal panels for orientation, sizes, and locations as indicated on Drawings.

C. Install metal panels with proper anchorage and other components for this Work securely in place.

D. Install metal panels with provisions for thermal and structural movement.

E. Install shims to plumb substrates as necessary for installation of wall panels.

F. Install weather tight seals at perimeter of wall panel openings.
   1. Test for proper adhesion on small unexposed area of solid surfacing prior to use.
   2. Refer to Section 07 9200.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA - Architectural Sheet Metal Manual.
   1. Provide concealed fasteners where possible, and set units true to line and level as indicated.
   2. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
   3. Install flashing and trim as wall panel Work proceeds.

H. Install weather tight escutcheons for pipe and conduit penetrating exterior walls.

I. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by wall panel manufacturer.

J. Install attachment system to support wall and soffit panels and with provisions to provide a complete weather tight wall system, including sub girts, extrusions, flashings and trim.
   1. Include attachment to supports and trims at locations using dissimilar materials.
   2. Do not apply sealants to joints, unless noted otherwise on Drawings or Shop Drawings.
   3. Install starter extrusion at base course and at cut panel locations.

K. Install accessories with positive anchorage to building and weather tight mounting and provisions for thermal expansion, and coordinate installation with flashings and other components.
   1. Install components required for a complete wall panel assembly including trim, copings, flashings and other accessory items.

L. Weather Barrier: Install weather barrier behind wall panels and over substrate in accordance with requirements of Section 07 2500.

3.04 TOLERANCES

A. Shim and align wall panel units with installed tolerances of 1/4 inch in 20 feet, non-cumulative, on level, plumb, and location lines as indicated.

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage qualified independent testing agency to perform field tests and inspections.

B. Water-Spray Test: After installation and in coordination with Mockup requirements, test area of assembly **as directed by Architect** for water penetration in accordance with AAMA 501.2.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.

D. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.

E. Perform additional tests and inspections, at Contractor's expense, to verify compliance of replaced wall panels or necessary additional work with specified requirements.

F. Prepare test and inspection reports.

3.06 CLEANING

A. Upon completion of wall panel installation, clean finished surfaces as recommended by panel manufacturer.

B. Upon completion of wall panel installation, clear weep holes and drainage channels of obstructions and dirt.

3.07 PROTECTION

A. Protect installed products from damage during subsequent construction.

B. Replace metal panels damaged or deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 42 64 METAL COMPOSITE MATERIAL WALL PANEL

PART 1 – GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

1.02 SUMMARY

A. Definition:

1. Metal Composite Material (MCM) System includes MCM, joints, attachment system components and miscellaneous materials as appropriate for the design of the project to provide a weather-resistant exterior cladding system.

B. Section Includes: MCM system installations

1. Applications of MCM system installations include:

a. Exterior installation and performance of MCM and MCM system components.

b. Interior installation and performance of MCM and MCM system components (if applicable).

C. Delegated Design

1. Design of the Metal Composite Material (MCM) system, including engineering of all support, anchorage, and attachment systems, is delegated to the Contractor in accordance with the requirements of Division 01 Section "Delegated Design Requirements

2. The Contractor shall engage a qualified professional engineer, licensed in the project jurisdiction, to prepare all design documentation, including calculations and shop drawings, demonstrating compliance with performance requirements.

D. Related Sections: Section(s) related to this section include:

1. Cold-Formed Metal Framing: Division 05, 05 40 00 Cold Formed Framing
2. Weather Barrier in Cavity Behind MCM: Division 07, 07 27 27 Fluid Applied Membrane air Barrier
3. Sheet Metal Flashing and Trim: Division 07, 07 62 00 Flashing and Trim
4. Joint Sealants: Division 07, 07 90 00 Joint Sealers
5. Glazing: Division 08, 08 44 13 Glazed Aluminum Curtain Walls

1.03 REFERENCES

A. General: Standards listed by reference, including revisions by issuing authority, form a part of this specification section to the extent indicated. Standards listed have either been identified by the International Building Code (IBC), local building code, or specific requirement for this building construction type.

   2. ASTM D1781 Standard Test Method for Climbing Drum Peel for Adhesives
   3. ASTM D1929 Standard Test Method for Determining Ignition Temperature of Plastics
   4. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
   5. ASTM E283 Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen
   6. ASTM E330 Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference
   7. ASTM E331 Standard Test Method for Water Penetration of Exterior Windows, Curtain Wall, and Doors By Uniform Static Air Pressure Difference
   8. ASTM E1233 Standard test Method for Structural Performance of Exterior Windows, Doors, Skylights, and Curtain Walls by Cyclic Air Pressure Differential

E. American Architectural Manufacturers Association (AAMA):
   1. AAMA 2605 Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels
   2. AAMA 501 Methods of Test for Exterior Walls

F. National Fire Protection Association (NFPA):
   1. NFPA 285 Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components

1.04 SYSTEM DESCRIPTION

A. Performance Requirements:
   1. Delegated Design
   2. General Performance: Provide installed MCM system designed to withstand specified loadings while maintaining allowable deflection, thermal movement performance as defined by the Manufacturer, Fabricator, or Installer required by this section without defects, damage or failure

B. Deflection and Thermal Movement: Provide installed MCM systems that have been designed to resist to the wind loading, acting inward and outward, defined for this project:
   1. Perimeter Framing Deflection: Deflection of panel perimeter framing member shall not exceed L/175 normal to plane of the wall where L is the unsupported span of the perimeter framing member.
   2. Panel Deflection: Deflection of the panel face shall not exceed L/60 at design load where L is the unsupported span of the panel.
   3. Anchor Deflection: At connection points of framing members to anchors, anchor deflection in any direction shall not exceed 0.0625 inch (1.6 mm).
   4. At 150% pressure, no permanent deformation exceeding L/1000 or failure to structural members is permitted.

5. Thermal Movements: Allow for free and noiseless horizontal and vertical thermal movement due to expansion and contraction of component parts over a temperature range of -20°F (-29°C) to +180°F (82.2°C) at the material surface.
    a. Buckling, opening of joints, undue stress on fasteners, failure of sealants, or any other detrimental effects of thermal movement will not be permitted.
    b. Fabrication, assembly and erection procedures shall take into account the ambient temperature range at the time of the respective operation.

C. System Requirements:
    1. Wet System – (Tested to AAMA 501 Standard)
        a. ASTM E283 – Air Leakage – Not more than 0.06 cfm per ft^2 of wall area (0.3 L/s▪m^2) when tested at 6.24 psf (300 Pa).
            b. ASTM E331 – Static Water Penetration – When tested under static pressure at 12.0 psf (575 Pa) minimum, for a time period of 15 minutes. MCM systems must have:
            i. No uncontrolled water leakage to the room side of the assembly when tested as defined by the procedure.
        c. AAMA 501.1 – Dynamic Water Penetration – When tested with a wall pressure equivalent to 12.0 psf (575 Pa) for a time period of 15 minutes, the MCM system must have:
            i. No uncontrolled water leakage to the room side of the assembly when tested as defined by the procedure.
        d. ASTM E330 – Structural Performance – MCM system must be engineered to meet the project design loads, however the MCM system must meet or exceed the following criteria when tested to a minimum pressure of 30.0 psf (1436 Pa):
            i. Deflections do not exceed limitations defined within the section on Deflection and Thermal Movement.

D. Fire Performance: Where required by governing code, provide fire retardant MCM that has been evaluated and is in compliance with code requirements specified herein.
    1. Fire Performance: Wall assemblies containing MCM System shall meet the requirements of the Intermediate Scale Multi-story test, NFPA 285, where required by code based for the design of this project.

1.05 SUBMITTALS

A. General: Provide submittals in accordance with Conditions of the Contract and Division 01 Submittal Procedures Section.

B. Product Data: For each type of product indicated, include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of MCM System and accessory.

C. Shop Drawings: Submit shop drawings showing elevations and layouts, profiles, and product components, including anchorage, accessories, finish colors, and textures.
    1. Include details showing thickness and dimensions of the system parts, details of edge conditions, attachment system, corners, fastening and anchoring methods, locations of joints and gaskets, location and configuration of joints necessary to accommodate thermal movement, and all trim and flashings.
    2. Provide signed and sealed drawings by a qualified Design Professional licensed in the project jurisdiction, demonstrating conformance with the delegated design scope and the performance requirements identified for this project.

D. System Calculations: Submit MCM System Fabricator's complete system design and engineering

analysis/calculations including, but not limited to the following:

1. Show governing MCM types, mounting system including anchorages, connections, and fasteners. Indicate location, type magnitude, and direction of loads imposed on the building structural frame.
2. Analysis/Calculations shall be signed and sealed by a qualified Design Professional licensed in the project jurisdiction and shall demonstrate that the MCM system conforms to the delegated design scope and specified performance requirements.

E. Samples: Submit selection and verification samples for finishes, colors and textures

1. Selected Samples: Manufacturer's color charts or chips illustrating full range of colors, finishes and patterns available for MCM with factory applied finishes. Custom color selection requires color sample to be submitted for approval. Approval signatures are required by Architect.
    a) MCM System Fabricator shall not have filed for protection from creditors under state or federal insolvency or debtor relief statues or codes.
    b) MCM System Fabricator shall substantiate a track record of one of the Manufacturers listed in this specification working with the Fabricator/Installer for three (3) consecutive years and at a scale of operations cited above.
2. MCM System Installer Qualifications:
    a. The MCM System Installer shall have been in business under the present name for at least five (5) years prior to the start of this project and have experience with similar sized MCM system projects. The MCM System Installer must be capable of providing field service representation during construction.
    b. The MCM System Installer must be an approved installer by a MCA Certified Fabricator for the installation of their MCM System and have undergone proper training for the specified system thereof.

F. Regulatory Code Agencies Requirements: Provide MCM system which have been evaluated and are in compliance with the following, where required:

1. International Code Council (ICC)
2. Miami/Dade County Florida (Notice of Acceptance)
3. State of Florida (Florida Product Approval)

G. Mock-Ups: Install at project site a job mock-up using acceptable products and Fabricator approved details. Obtain Owner's and Architect's acceptance of finish color (draw down samples to be used for color approval of nonstandard coil coated colors), texture and pattern and workmanship standard. Comply with Division 01 Quality Control, 01 90 00, Mock-Up Requirements Section.

1. Mock-Up Size: To provide as detailed in the construction documents
2. Maintenance: Maintain mock-up during construction for workmanship comparison; remove and legally dispose of mock-up when no longer required.
3. Incorporation: Mock-up may be incorporated into final construction upon Architect's approval.
4. Provide Material required for custom color mock-ups at no cost to Owner. (consider special small quantity material runs may increase cost and require additional time to obtain material.

H. Pre-installation Meetings: Conduct pre-installation meeting to verify project requirements, substrate conditions, and system Fabricator's installation details.

1.06 PROJECT CONDITIONS

A. Substrate Tolerances: The General Contractor is responsible for providing a substrate with a tolerance of 1/4 inch in 20.0 feet (6mm in 6m), on level, plumb, and location control lines as

indicated and within 1/8 inch (3mm) offset of adjoining faces of alignment of matching profiles tolerances are noncumulative.

B. Field Measurements: Verify locations of wall framing members and wall opening dimensions by field measurements prior the fabrication of the MCM System. Indicate measurements on the “As Built Shop Drawings”. Field measurements to be taken once all substrate materials and adjacent materials are installed.

C. Project Schedule: Provisions in the project schedule must accommodate the time interval between field measurements and fabrication/installation.

1.07 WARRANTY

A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.

B. MCM Manufacturer’s Material Warranty: Submit, to the Owner, the manufacturer’s standard warranty.

1. Warranty Period:

a. MCM Material Integrity: Five (5) plus 1 years from date of Substantial Completion
b. MCM Painted Finish: Twenty (20) plus 1 years date of Substantial Completion.
c. MCM Natural Metal Surface: No finish warranty

C. MCM System and System Installation Warranty: Submit to the Owner, the MCM Fabricator system’s standard warranty document executed by authorized company official. The MCM system’s assembly warranty is in addition to and not a limitation of, other rights Owner may have under the Contract Documents.

1. Warranty Period

a. MCM System Workmanship: One (1) year warranty period commencing on Date of Substantial Completion.

b. Special Warranty: The MCM System Fabricator will repair or replace components of the MCM System that fails in materials or workmanship within the specified one (1) year warranty period above.

i. Failures include: deterioration of metals and other materials beyond normal weathering; structural failures including rupturing, cracking, puncturing, or loss of bond/adhesion characteristics.

PART 2 – PRODUCTS

2.01 METAL COMPOSITE MATERIAL (MCM) Manufacturers and Premium MCM System Fabricators

A. MCM Manufacturers:

1. Alpolic material manufactured by Mitsubishi Chemicals – www.alpolic-americas.com
2. Alucobond material manufactured by 3A Composites USA, Inc. – www.alucobondusa.com
3. larson material manufactured by Alucoil North America – www.alucoilnorthamerica.com
4. Reynobond material manufactured by Alcoa Architectural Products – www.reynobond.com

B. MCM System Fabricators:

1. Basis of Design: The Miller-Clapperton Partnership, Inc. – www.millerclapperton.com
2. Premium Certified MCM Fabricators recognized by the Metal Construction Association

2.02 METAL COMPOSITE MATERIAL (MCM

A. Material Description
   1. MCM Composition:
      a. Two sheets of aluminum sandwiching a solid core of extruded thermoplastic material formed in a continuous process with no glues or liquid adhesives between dissimilar materials. The core material shall be free of voids and/or air spaces and not contain foamed insulation material. Products that are laminated sheet by sheet in a batch process using glues or adhesives between materials shall not be acceptable.
   2. MCM Thickness: 4mm (0.157 inch)
   3. MCM Face Sheets:
      a. Thickness: 0.5mm (0.02 inch) (nominal)
   4. MCM Product:
      a. Standard core material product acceptable for use:
         i. Less than 40 feet (12.2m) above grade in general accordance with the provisions of IBC Section 1407, or
         ii. Up to 50 feet (15.2m) above grade when used in general accordance with the specific provisions of IBC Section 1407.11.2 and complying with the performance requirements of ASTM D1929, or
         iii. Up to 75 feet (22.9m) above grade when used in general accordance with the specific provisions of IBC Section 1407.11.3 and complying with the performance requirements of ASTM D1929, ASTM D635 or
         iv. Up to 75 feet (22.9) above grade when used in general accordance with the specific provisions of IBC Section 1407.11.4 and complying with the performance requirements of ASTM D1929, ASTM D635 or
      b. Fire Retardant core material product acceptable for use:
         i. On Construction Type I, see drawings.
   5. Fire Performance: (Class A Material)
      a. ASTM E84: MCM shall have a flame spread index of not more than 25 when tested in the maximum thickness intended for use.
      b. ASTM E84: MCM shall have a smoke developed index of not more than 450 when tested in the maximum thickness intended for use.
   6. Bond Integrity: Tested for resistance to delamination as follows:
      a. Peel Strength (ASTM D1781): 22.5 in-lb/in (100 N-m/m) minimum as manufactured.
      b. No degradation in bond performance after 8 hours of submersion in water at 212°F (100°C) or 21 days of immersion in water at 70°F (21°C).
      c. Thermally bonded to the core material in a continuous process under heat, pressure, and tension.

2.03 FINISH

A. Exterior Finish: Finish shall meet the performance criteria of AAMA 2605.

B. All metal wall panels located within the natatorium and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

C. All metal wall panels located elsewhere in project shall receive Two-Coat Fluropolymer AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

D. No anodized Finish allowed within the natatorium and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure. These areas shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

E. Standard 2-coat and 3 coat finish:

   a. See drawings for color selections.

2.04 ACCESSORIES

A. General: Provide Fabricator’s standard MCM system accessories, including fasteners, clips, anchorage devices, and attachments for specific applications indicated on contract documents.

2.05 RELATED MATERIALS

A. General: Refer to other related sections in Related Sections paragraph specified herein for related materials, including cold-form metal framing, flashing and trim, joint sealants, aluminum windows, glass and glazing and curtain walls.

2.06 FABRICATION

A. General: Shop-fabricate panels to sizes and joint configurations indicated on drawings.

   1. Fabricate panels to dimensions indicated on drawings based on an assumed design temperature of 70°F (21°C). Allow for ambient temperature range at time of fabrication.
   2. Formed MCM panel lines, breaks and angles to be sharp and true, with surfaces that are free from warp or buckle.
   3. Fabricate panels with sharply cut edges and no displacement of face sheet or protrusion of core.

B. Fabrication Tolerances: Shop-fabricate panels to sizes and joint configurations indicated on drawings.

   1. Width: +/- 0.079 inch (+/- 2mm) @ 70°F (21°C)
   2. Length: +/- 0.079 inch (+/- 2mm) @ 70°F (21°C)
   3. Squareness: +/- 0.079 inch (+/- 2mm) @ 70°F (21°C)

C. System Type

   1. Wet System
      a. The system must provide a wet seal (caulked) panel joint and must feature provisions to drain to the exterior face of the wall any leakage of water at joints and any condensation that may occur within the wall cavity as tested per AAMA 501. The sealant type shall be as specified in Section 07900 and with foamed type backer rod as indicated on architectural drawings.

D. Attachment System Components

   1. Formed from extruded aluminum as indicated on Contract Drawings to meet the specified design loads and system test performance according to each MCM System Fabricator’s design. Galvanized cold formed steel clips or staggered aluminum angles are not acceptable for panel to panel attachment.
   2. Panel stiffeners, as required, shall be positively engaged in the perimeter extrusion or mechanically fastened to the perimeter extrusion and *shall* be secured to the rear face of the

composite panel with silicone or high-strength double-sided bonding tape of sufficient size and strength to maintain panel's specified deflection under load. Structural calculations shall be provided to show the adequacy of this connection to resist the applied loads. Galvanized steel and MCM are not to be used as stiffener elements. Only panel stiffeners composed of extruded aluminum or 300 Series stainless steel shapes shall be adequate.

PART 3 – EXECUTION

3.01 MCM FABRICATOR/INSTALLER INSTRUCTIONS

Compliance: Comply with Manufacturer's product data, including product technical bulletins and product packaging instructions.

3.02 EXAMINATION

A. Site Verification of Conditions: Verify that conditions of substrates previously installed under other sections are acceptable for the MCM system installation. Documentation should be provided indicating any conditions detrimental to the performance of the MCM System.

3.03 PREPARATION

A. Miscellaneous Framing: Install miscellaneous MCM system support members and anchorage according to MCM System written instructions and drawings supplied by the MCM System Fabricator.

B. If required per project conditions, field measurements of the site condition are to be taken prior to beginning fabrication work and notification of any material modifications and resulting schedule adjustment shall be formally documented.

3.04 INSTALLATION

A. General:

1. Install the MCM system plumb, level and true in compliance with MCM System fabricator's recommendations.
2. Anchor the MCM system securely in place in accordance with Fabricator's approved shop drawings.
3. Comply with the MCM System Fabricator's instructions for installation of concealed fasteners and with provisions of Section 07 92 00 for installation of joint sealants.
4. Installation Tolerances: Maximum deviation from horizontal and vertical alignment of installed panels: 0.25 inch in 20 feet (6.4mm in 6.1m), noncumulative.
5. Do not cut, trim, weld, or braze component parts during erection in a manner which would damage the finish, decrease strength, or result in visual imperfection or a failure in performance. Return component parts which require alteration to shop for modification, if possible, or for replacement with new parts.
6. Separate contact of dissimilar metals with bituminous paint, approved plastic shims, or other approved methods as defined within the Aluminum Design Manual (ASD). Use gasketed or approved coated fasteners where needed to eliminate the possibility of corrosive or electrolytic action between metals.

B. Related Products Installation Requirements: Refer to other sections in Related Sections paragraph herein for installation of related products.

3.05 FIELD QUALITY REQUIREMENTS

A. Field Quality Control: When required by contract, mock up shall be constructed and tested at the expense of the General Contractor, conduct water-spray test on the mock-up of the MCM System, testing for water penetration according to AAMA 501.2.

B. Testing Agency: the Owner shall engage a qualified testing agency top perform tests and inspections.

3.06 ADJUSTING and Cleaning

A. Adjusting:

1. Remove and replace panels damaged beyond repair as a direct result of the panel installation. After installation, panel repair and replacement shall become the responsibility of the General Contractor.
2. Removal of panels damaged by other trades shall be the responsibility of the General Contractor.
3. Repair components of the MCM system with minor damage such that repairs are not discernible at a distance of 10 feet (3m) from the surface at a 90° angle per AAMA 2605.
4. Remove and replace components of the MCM system damaged beyond repair.
5. Remove protective film immediately after installation of MCM and immediately prior to completion of the MCM system work. Masking intentionally left in place after panel installation on an elevation at the direction of the General Contractor, shall become the responsibility of the General Contractor.
6. Any additional protection, after installation, shall be the responsibility of the General Contractor.
7. Make sure weep holes and drainage channels are unobstructed and free of dirt and sealants.
8. Remove from project site damaged MCM panels, protective film and other debris attributable to work of this section.

B. Cleaning:

1. Final cleaning shall not be part of the work of this section.

END OF SECTION

SECTION 074293 - SOFFIT PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes metal soffit panels.

B. Delegated Design: Design of metal soffit panel system, including support framing, anchorage, fasteners, and verification of structural performance requirements and venting requirements.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference TBD

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.

C. Samples: For each type of metal panel indicated.

D. Delegated-Design Submittal: For metal soffit panels indicated to comply with delegated design requirements, including:
   1. Design calculations signed and sealed by a qualified professional engineer licensed in the jurisdiction of the Project.
   2. Analysis data to demonstrate compliance with performance requirements, including wind loads, deflection limits, and thermal movement.
   3. Details of panel anchorage, furring/support system, and interface with adjacent construction.

1.4 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Warranties: Samples of special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Finish Warranty Period: 30 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592 and per drawings:

1. Serviceability Requirements: No oil canning, vibration, or fluttering under design wind pressure.

B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E283 at:

1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E331 at:

1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 180 deg F (100 deg C) material surface variation.

E. Provide ventilation per SMACNA recommendations and guidelines for Soffit venting.

2.2 METAL SOFFIT PANELS

A. V-Groove-Profile Metal Soffit Panels.
1. Manufacturers and Products:
a. PAC-CLAD – Type H
i. V Groove

ii. 1” x 12”
iii. Flush wall panels
iv. Precision Series Box Rib with 1 Pencil Rib
v. Finish: From manufacturer’s full range of colors

B. Aluminum Plank Soffit Panels (Longboard):
1. Manufacturer: Longboard

2. Product Type:
a. Type F (Refer to Drawings)
b. V Groove Profile
c. Vented, Perforated Planks
d. Application: Exterior
e. Finish: From manufacturer’s full range of colors

3. Material: Extruded aluminum alloy 6063 T5 or T6.

4. Finish: AAMA 2605-compliant powder coating or anodized finish.

5. Panel Dimensions: As indicated on drawings or approved shop drawings.

6. Mounting: Use manufacturer’s proprietary concealed fastener system.

2.3 ACCESSORIES

A. Provide factory-formed flashings, trim, and accessories required for complete installation.

B. Fasteners: Corrosion-resistant, self-tapping stainless steel screws with EPDM washers, concealed where possible.

C. Sealants: As recommended by panel manufacturer, compatible with panel materials and adjacent substrates.

2.4 UNDERLAYMENT

A. Self-adhering, high-temperature modified bituminous membrane, minimum 40 mils thick and as required for this location.

B. Compliant with ASTM D1970.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions with Installer present for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Do not proceed with installation until unsatisfactory conditions are corrected.

3.2 METAL PANEL INSTALLATION

A. Metal Soffit Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.

1. Apply panels and associated items true to line for neat and weathertight enclosure.
2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.

B. Watertight Installation:

1. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels and elsewhere as needed to make panels watertight.
2. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
3. At panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with sealant and fastened together by interlocking clamping plates.

C. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

D. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.

E. Coordinate with adjacent materials i.e. curtain walls, soffit vents and seatlant joints.

3.3 CLEANING

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed unless otherwise indicated in manufacturer's written installation instructions. On

completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

END OF SECTION 074293

SECTION 075216 - STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS MEMBRANE ROOFING

GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Styrene-butadiene-styrene (SBS)-modified bituminous membrane roofing.
2. Roof insulation.
3. Cover board.
4. Walkways.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking, and for wood-based, structural-use roof deck panels.
2. Section 061600 "Sheathing" for wood-based, structural-use roof deck panels.
3. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
4. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
5. Section 221423 "Storm Drainage Piping Specialties" for roof drains.

1.3 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D 1079 and glossary of NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to Work of this Section.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site .

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.

3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For insulation and roof system component fasteners, include copy of FM Approvals' RoofNav listing or other approved testing showing compliance with IBC Code.
2. Provide information indicating sole sourcing. If other manufacturer’s and products are acceptable to roofing manufacturer as part of their warranted system include such materials and data with product submittal along with manufacturer’s written acceptance letter stating material use is acceptable and does not affect performance and warranty.

B. Shop Drawings: Include plans, sections, details, and attachments to other work, including the following:

1. Layout and thickness of insulation.
2. Base flashings and membrane terminations.
3. Flashing details at penetrations.
4. Roof plan showing orientation of steel roof deck and orientation of roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
5. Crickets, saddles, and tapered edge strips, including slopes.
6. Insulation fastening patterns for corner, perimeter, and field-of-roof locations. Confirm patterns as listed in Part 3 and modify as required by manufacturer and installation method for project conditions and wind loads indicated for Project in coordination with applicable codes and design requirement indicated in structural drawings.
7. Tie-in with adjoining air barrier.
8. Provide “End of Day’s work” or “night” seal details to show how section of roof work are to be sealed from moisture infiltration to completed areas.

C. Wind Uplift Resistance Submittal: For roofing system indicating compliance with wind uplift performance requirements.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer manufacturer .

B. Product Test Reports: For roof membrane and insulation, tests performed by a qualified testing agency, indicating compliance with specified requirements.

C. Evaluation Reports: For components of membrane roofing system, from ICC-ES.

D. Sample Warranties: For manufacturer's special warranties.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is UL listed for roofing system identical to that used for this Project.

B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1. If a subcontractor is utilized for installation, the subcontracted installer must possess manufacturer's certification.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer.

1. Protect stored liquid material from direct sunlight.
2. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources.

1. Store in a dry location.
2. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.10 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.11 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.

1. Special warranty includes roof membrane, base flashings, roof insulation, fasteners, cover boards, and other components of roofing system.
   a. Warranty shall be considered "edge-to-edge" inclusive of all trim and accessories.
2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing system and flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings shall remain watertight.

1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
2. Impact Resistance: Roof membrane shall resist impact damage when tested according to ASTM D 3746/D 3746M, ASTM D 4272/D 4272M, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.

C. Wind Uplift Resistance: Design roofing system to resist the following wind uplift pressures when tested according to FM Approvals 4474, UL 580, or UL 1897:

1. Zone 1 (Roof Area Field): Per Structural; or as engineered by roofing manufacturer for the project conditions .
2. Zone 2 (Roof Area Perimeter): Per Structural; or as engineered by roofing manufacturer for the project conditions .
   a. Location: From roof edge to Specified dimensions inside roof edge.
3. Zone 3 (Roof Area Corners): Per Structural; or as engineered by roofing manufacturer for the project conditions .
   a. Location: Specified dimensions in each direction from each building corner.

2.2 MANUFACTURERS

A. Source Limitations: Obtain components for roofing system from roof membrane manufacturer or manufacturer approved by roof membrane manufacturer.

B. Subject to compliance with the project requirements, provide products by one of the following:

1. Johns Manville

2. Soprema

2.3 BASE SHEET MATERIALS

A. SBS-Modified Bitumen Polyester Mat Base Sheet: ASTM D 6164/D 6164M, Type I, Grade S, SBS-modified asphalt sheet, reinforced with polyester fabric, smooth surfaced, suitable for cold adhesive application method.

2.4 STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS CAP SHEET

A. Granule-Surfaced Roofing Cap Sheet: ASTM D 6164/D 6164M, Type I, Grade G, SBS-modified asphalt sheet, reinforced with polyester fabric, suitable for cold adhesive or hot asphalt application method.

1. Granule Color: White .

2.5 BASE FLASHING SHEET MATERIALS

A. Backer Sheet: ASTM D 4601/D 4601M, Type I , asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.

B. Granule-Surfaced Flashing Sheet: ASTM D 6164/D 6164M, Type I or II, Grade G, SBS-modified asphalt sheet, reinforced with polyester fabric , granule surfaced, suitable for application method specified, and as follows:

1. Granule Color: White .

C. Liquid Flashing System: Roof membrane manufacturer's standard one- or two-part moisture curing resin with low solvent content, consisting of a primer, flashing cement, and scrim.

2.6 AUXILIARY ROOFING MATERIALS

A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.

1. Adhesives and Sealants: Comply with VOC limits of authorities having jurisdiction.

B. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.

C. Roof Vents: As recommended by roof membrane manufacturer.

1. Size: Not less than4-inch diameter.

D. Sheathing Paper (for wood decks): Red-rosin type, minimum 3 lb/100 sq. ft..

E. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.

F. Asphalt Roofing Cement: ASTM D 4586/D 4586M, asbestos free, of consistency required by roofing system manufacturer for application.

G. Mastic Sealant: Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, nonskinning, and nondrying.

H. Fasteners: Factory-coated steel fasteners and metal insulation plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.

I. Roofing Granules: Ceramic-coated roofing granules, No. 11 screen size with 100 percent passing No. 8 sieve and 98 percent of mass retained on No. 40 sieve; color to match roof membrane.

J. Miscellaneous Accessories: Provide those recommended by roofing system manufacturer.

K. Roofing Membrane Adhesive: SBS modified bitumen membrane adhesive for use with sanded base ply and granule surfaced cap sheet membranes. Manufacturer's approved membrane adhesive meeting or exceeding ASTM D3019 Type III. VOC Content 250 g/L or less/.

L. Asphalt Primer: Manufacturer's approved asphalt primer meeting ASTM D41 Type I.

2.7 SUBSTRATE/COVER BOARDS

A. Cover Board: Mineral-fortified asphaltic core reinforced with asphalt-saturated glass mat.

1. Products: Subject to compliance with the project requirements, provide:
   a. Soprema: Sopraboard - 1/4"
   b. IKO
   c. Blue Ridge

2.8 ROOF INSULATION

A. General: Preformed roof insulation boards, manufactured or approved by roof membrane manufacturer,.

B. Polyisocyanurate Board Insulation: ASTM C 1289 Type II Class I, felt or glass-fiber mat facer on both major surfaces.

1. Thickness:
   a. 4-1/2 inches minimum unless otherwise indicated on drawings. Provide in multiple layers, staggered in largest size permissible. 2.5" Base Layer with 2" Top Layer.

C. Tapered Crickets: Provide factory-tapered insulation boards.

1. Material: Match roof insulation .
2. Minimum Thickness: 1/2 inch.
3. Slope:
   a. Saddles and Crickets: 1/2 inch per foot unless otherwise indicated on Drawings.

2.9 INSULATION ACCESSORIES

A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.

B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.

C. Wood Nailer Strips: Comply with requirements in Section 061000 "Rough Carpentry."

1. Note: The owner will not accept expanded "Perlite" insulation or similar eave or tapered insulation or cants. All cants shall be treated wood. All tapered board shall be polyiso.

2.10 WALKWAYS

A. Walkway Cap-Sheet Strips: ASTM D 6164/D 6164M, Type I or II, Grade G, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers); granule surfaced; suitable for application method specified, and as follows:

1. Size: 36 by 60 inches .
2. Granule Color: White .

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
2. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
4. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch out of plane relative to adjoining deck.
5. Provide information in daily field reports that checks and documents moisture content of the roofing substrate. Preferable method is by RH probe. Plastic sheet method or electronic concrete meter may also be used for this Project.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions.

1. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction.

1. Remove roof-drain plugs when no work is taking place or when rain is forecast.

3.3 ROOFING INSTALLATION, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions, FM Approvals' RoofNav assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.

B. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast.

1. Remove and discard temporary seals before beginning work on adjoining roofing.

3.4 INSULATION AND COVER BOARD INSTALLATION

A. Coordinate installing roofing system components, so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.

C. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing system with vertical surfaces or angle changes greater than 45 deg F.

1. Note: The owner will not accept Perlite or similar expanded board/cellulose insulation cants. All cants shall be treated wood.

D. Installation Over Metal Decking:

1. Fasten base layer, top layer, Crickets and cover board to deck specified insulation fasteners and plates. Evenly distribute fasteners as required by the board manufacturer’s published requirements.
2. Fasten insulation to meet specified wind uplift pressure requirements and warranty requirements.
3. Minimum Fastening requirement: Coordinate fastening patterns with Part 1 and modify as needed.
    1. Field Zone 1 16 fasteners per 4x8 board
    2. Field Zone 1 16 fasteners per 4x8 board
    3. Perimeter Zone 2 24 fasteners per 4x8 board
    4. Corner Zone 3 32 fasteners per 4x8 board

4. For insulation/cover board located partially within the defined perimeter and or corners, nstall fastening for the entire board as specified herein.

3.5 INSULATION AND COVER BOARD SYSTEM APPLICATION

A. Follow insulation system component product data sheets, published general requirements and approvals.

B. Install all insulation system components on clean, dry, uniform, and properly prepared substrates.

C. All Insulation system boards shall be carefully installed and fitted against adjoining sheets to form tight joints.

D. Insulation system boards that must be cut to fit shall be saw cut or knife cut in a straight line, not broken. Chalk lines shall be used to cut insulation components. Uneven or broken edges shall not be accepted. Remove dust and debris that develops during cutting operations.

E. Stagger successive layers of insulation 12 in vertically and laterally to ensure board joints do not coincide with joints from the layers above and below.

F. Crickets, saddles, and tapered edge strips shall be installed before installing cover boards.

G. Install tapered insulation, saddles, and crickets as required to ensure positive slope for complete roof drainage.

H. Cover boards shall be installed to fit tight against adjacent boards. When required by the cover board manufacturer a uniform gap shall be provided between cover boards using a uniform guide placed between board joints to form a gap between all boards during installation.

I. The finished insulation system surface shall be tight to, and flush with, adjacent substrates to form a satisfactory substrate to install specified roof membrane and flashings.

J. Install specified cants where required for membrane flashing transitions.

3.6 ROOFING MEMBRANE INSTALLATION, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."

B. Start installation of roofing in presence of roofing system manufacturer's technical personnel and Owner's testing and inspection agency.

C. Where roof slope exceeds 1/2 inch per 12 inches , install roofing membrane sheets parallel with slope.

D. Coordinate installation of roofing system so insulation and other components of the roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

1. Provide tie-offs at end of each day's work to cover exposed roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.

2. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system.
3. Remove and discard temporary seals before beginning work on adjoining roofing.

3.7 MEMBRANE ADHESIVE APPLICATION

A. The ambient temperature shall be above 50 degrees and the adhesive temperature shall be a minimum of 70 degrees at the point of membrane application.

B. To ensure the adhesive is applied at 70 degrees during cold weather drums and 5 gallon pails shall be stored in heated areas. Drums and 5 gallon pails exposed to cold temperature on the roof shall be provided with heaters when necessary to ensure the minimum application temperature is maintained.

C. Priming substrates is optional when solvent based membrane adhesives are used. Primer may be applied to reduce adhesive consumption rates for some absorptive surfaces.

D. Membrane adhesive shall be applied using 3/16 – 3/8 inch notched squeegee, brush, or spray equipment.

E. Apply adhesive to clean, dry, and prepared compatible substrates as required to ensure full adhesion.

F. Follow the adhesive product data sheet requirements for application rates.

G. Apply a uniform application of membrane adhesive at the application rate published by the product data sheet.

H. Apply 1-1/2 – 2-1/2 gallons per square between membrane plies. The application rate is 3 to 4 gallons per square over absorptive substrates and over granule surfaces. Refer to manufacturer's product data sheet and adjust application rate based upon surface conditions.

I. Install SBS membrane ply before the adhesive begins to skim over. Once adhesive skims over, the membrane ply will not adhere.

3.8 SBS-MODIFIED COLD ADHESIVE MEMBRANE INSTALLATION

A. Follow material product data sheets and published general requirements for installation instructions.

B. Ensure environmental conditions are satisfactory and will remain satisfactory during the application o the membrane adhesive and membrane plies.

C. Unroll membrane onto the roof surface and allow the membrane to relax prior to installing the membrane.

D. Re-roll the membrane in order for the plies to be rolled into the adhesive while ensuring the specified side and end laps are maintained.

E. Starting at the low point of the roof, lay out the membrane to ensure the plies are installed perpendicular to the roof slope, shingled to prevent back water laps.

F. Cut rolls to working lengths and widths to conform to roof conditions and lay out to always work to a selvage edge.

G. Ensure all roofing and flashing substrates are prepared as necessary, and all substrates are acceptable to receive the specified adhesive and membrane.

H. Install the specified membrane adhesive ahead of the membrane application. Do not allow the adhesive to skim over before the membrane is applied into the adhesive. The membrane will not adhere where the adhesive has skimmed over.

I. Where laps are adhered using membrane adhesive, apply sufficient adhesive coverage to ensure 1/8 to ¼ inch bleedout is present at all laps.

J. Once set in place, ensure specified side-laps and end-laps are maintained.

K. At the end laps cut a 45 degree dog ear away from the selvage edge for all T-joints.

L. For low slope areas ¼ inch per foot, or where otherwise specified/required leave all membrane side and end laps dry to hot air weld or torch all laps water-tight. Embed granules, where present, when heat welding sheets.

M. Use a follow tool, weighted roller or broom the leading edge of the membrane to the substrate, working forward and outward as necessary to remove wrinkles. Avoid walking over the membrane during application.

N. Each day, physically inspect all side and end laps and ensure the membrane is sealed water-tight. Where necessary use a torch or hot air welder and a clean trowel to ensure all laps are fully sealed.

O. Inspect the installation each day to ensure the plies are fully adhered. Repair all voids, wrinkles, open laps, and all other deficiencies.

P. Offset the cap sheet side and end laps away from the base ply laps so that cap sheet laps are not located within 18 inches of the base ply laps.

Q. Immediately broadcast matching granules into adhesive bleed-out at cap sheet laps or otherwise treat bitumen bleed-out once adhesive has dried and cured.

3.9 FLASHING APPLICATION HEAT WELDED

A. Refer to SBS manufacturer’s membrane application instructions, flashing detail drawings, and follow product data sheets and other published requirements for installation instructions. Refer to manufacturer’s membrane flashing detail drawings.

B. The contractor is responsible for project safety. Refer to NRCA CERTA recommendations and building owner requirements for hot work operations.

C. Where required to seal substrates for fire safety, install specified adhered, self-adhered or fastened backer ply to the substrate. Ensure backer-ply covers and seals all substrates requiring protection from exposure to torch operations.

D. Ensure all flashing substrates that require primer are primed, and the primer is fully dry.

E. Unroll the flashing base ply and flashing cap sheet onto the roof surface to their complete length. Once relaxed, cut the membrane to the required working lengths to accommodate the flashing height, cants, and the required over-lap onto the horizontal roof surface.

F. Cut the flashing membrane from the end of the roll to always install flashings to the side-lap line or selvage edge line.

G. Lay out the flashing base ply and flashing Cap Sheet to offset all side-laps a minimum of 12 inches so that side-laps are never aligned on top of the ply beneath. Shingle the flashing ply laps to prevent back-water laps.

H. Install non-combustible cant strips at transitions where required.

I. Ensure correct membrane and flashing sequencing to achieve redundant, multi-ply, watertight flashings.

J. ROOF MEMBRANE BASE PLY:

1. Before installing flashings, install the roof membrane base ply in the horizontal field of the roof, and extend the base ply up to the top of the cant, where present, at roof terminations, transitions, and penetrations.

K. FLASHING BASE PLY:

1. Install the flashing base ply starting at the top leading edge of the vertical flashing substrate, down over the cant and onto the horizontal surface of the roof a minimum of 3 inches beyond the of base of the cant onto the roof. Cut the base ply at corners to form 3-inch side-laps. Install gussets to seal corner transitions.
2. Install one or more flashing base ply(s) at all roof terminations, transitions, and penetrations.

L. ROOF MEMBRANE CAP SHEET:

1. Install the roof membrane Cap Sheet in the horizontal field of the roof over the flashing base ply up to the roof termination, transition, or penetration, and up to the top of cants where present.
2. Using a chalk line, mark a line on the membrane cap sheet a minimum of 4 inches from the base of the cant onto the roof. Where granules are present, embed the cap sheet granules using a torch and trowel or granule embedder to prepare the surface to receive the flashing cap sheet.

M. FLASHING CAP SHEET:

1. Install the flashing Cap Sheet starting at the top leading edge on the vertical substrate, over the cant and onto the roof surface 4 inches from the base of the cant onto the roof.

2. Install the flashing Cap Sheet to ensure a minimum two (2) ply flashing system is present at all roof terminations, transitions, and penetrations.

N. During the membrane and flashing installation, ensure all plies are completely adhered into place, with no bridging, voids, or openings. Ensure bitumen or flashing cement bleed-out is present at all flashing side and end-laps.

O. Use a damp sponge float or damp rag to press-in the heat-welded flashing plies during installation.

P. Where sufficient bitumen bleed-out is not present, and for all self-adhered plies, apply specified gun-grade sealant or mastic to seal the membrane termination along all roof terminations, transitions, and penetrations. These include gravel stop edge metal, pipe penetrations, along the top edge of curb and wall flashing, and all other flashing terminations where necessary to seal flashings watertight.

Q. Fasten the top leading edge of the flashing 8 in on-centers with appropriate 1 in metal cap nails or other specified fasteners and plates. Seal fastener penetrations watertight using specified sealant or mastic.

R. Manufacturer's liquid-applied, reinforced flashing systems shall be installed where conditions are not favorable to install SBS modified bitumen flashings. Such conditions include irregular shapes penetrating roof surfaces (I-beams), confined areas and low flashing heights. Manufacturer's liquid-applied, reinforced flashing systems are recommended in lieu of pitch pans and lead pipe flashings.

3.10 WALKWAY INSTALLATION

A. Walkway Cap Sheet Strips: Install walkway cap sheet strips over roofing membrane, using same application method as used for roofing cap sheet.

1. Install walkways strips at the following locations:
   a. Perimeter of each rooftop unit.
   b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
   c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
   d. Top and bottom of each roof access ladder.
   e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
   f. Locations indicated on Drawings.
   g. As required by roof membrane manufacturer's warranty requirements.
2. Provide 3-inch clearance between adjoining strips.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, roof membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.

B. Perform the following tests: REVISION 1 - ASI #4 - 09-25-2024 Perform one of the following tests noted in items 3 or 4 below to determine if there are any moisture issues or leaks. Before performing such testing provide costs associated with each test to the Owner and gain Owner direction in writing prior to engaging and performing such testing.

1. Visually inspect roofing system by walking roof after any rain events during construction and after completion of an individual roof area to verify that there is no ponding. Note any such areas by photograph and written notes and diagrams and repair to eliminate such ponding.
2. Infrared Thermography: Testing agency shall survey entire roof area using infrared color thermography according to ASTM C 1153.
    a. Perform tests before overlying construction is placed.
    b. After infrared scan, locate specific areas of leaks by electrical capacitance/impedance testing, or by nuclear hydrogen detection testing.
    c. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
        1) Cost of retesting is Contractor's responsibility.
    d. Testing agency shall prepare survey report of initial scan indicating locations of entrapped moisture if any.
3. Electrical Capacitance/Impedance Testing: Testing agency shall survey entire roof area for entrapped water within roof assembly according to ASTM D 7954/D 7954M.
    a. Perform tests before overlying construction is placed.
    b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
        1) Cost of retesting is Contractor's responsibility.
    c. Testing agency shall prepare survey report indicating locations of entrapped moisture, if any.
4. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.

C. Test Cuts: Remove test specimens to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:

1. Determine approximate quantities of components within roofing membrane according to ASTM D 3617/D 3617M.
2. Examine test specimens for interply voids according to ASTM D 3617/D 3617M and to comply with criteria established in Appendix 3 of ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
3. Repair areas where test cuts were made according to roofing system manufacturer's written instructions.

D. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.

1. Notify Architect and Owner 48 hours in advance of date and time of inspection.

E. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

F. Roofing system will be considered defective if it does not pass tests and inspections.

1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.12 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period.

1. When remaining construction does not affect or endanger roofing, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 075216

SECTION 076200 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Formed roof-drainage sheet metal fabrications.
2. Formed low-slope roof sheet metal fabrications.
3. Formed steep-slope roof sheet metal fabrications.
4. Formed equipment support flashing.
5. Formed overhead-piping safety pans.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking.
2. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
3. Section 079500 "Expansion Control" for manufactured sheet metal expansion-joint covers.

1.3 COORDINATION

A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.
2. Provide test data indicating compliance with SPRI ES-1, RE1, RE2, and RE3, as applicable to the Project, for uplift resistance criteria of edge metal(s) meeting conditions of the Project. May be indicated in separate product information submittal or indicated in Shop Drawings.

B. Shop Drawings: For sheet metal flashing and trim.

1. Include plans, elevations, sections, and attachment details.
2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.
3. Include identification of material, thickness, weight, and finish for each item and location in Project.
4. Include details for forming, including profiles, shapes, seams, and dimensions.
5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
6. Include details of termination points and assemblies.
7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
8. Include details of roof-penetration flashing.
9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
10. Include details of special conditions.
11. Include details of connections to adjoining work.
12. Detail formed flashing and trim at scale of not less than 3 inches per 12 inches.
13. Include test data indicating compliance with SPRI ES-1, RE1, RE2, and RE3 as applicable to the Project, for uplift resistance crieterir of edge metal(s) meeting conditions of the Project.

C. Samples for Verification: For each type of exposed finish.

1. Sheet Metal Flashing: 12 incheslong by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 incheslong and in required profile. Include fasteners and other exposed accessories.
3. Unit-Type Accessories and Miscellaneous Materials: Full-size Sample.
4. Anodized Aluminum Samples: Samples to show full range to be expected for each color required.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.

1. For copings and roof edge flashings that are SPRI ES-1 tested, shop shall be listed as able to fabricate required details as tested and approved.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. Sheet Metal Standard for Copper: Comply with CDA's "Copper in Architecture Handbook." Conform to dimensions and profiles shown unless more stringent requirements are indicated.

D. SPRI Wind Design Standard: Manufacture and install copings and roof edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressure:

1. Design Pressure: As indicated on Drawings.
2. SPRI ES-1 tests RE 2 and RE-3.

E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 SHEET METALS

A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.

B. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, dead soft, fully annealed; with smooth, flat surface.

1. Finish: 2D (dull, cold rolled).

C. Metallic-Coated Steel Sheet: Provide zinc-coated (galvanized) steel sheet according to ASTM A 653/A 653M, G90coating designation or aluminum-zinc alloy-coated steel sheet according to ASTM A 792/A 792M, Class AZ50coating designation, Grade 40; prepainted by coil-coating process to comply with ASTM A 755/A 755M.

1. Surface: Smooth, flat.

2. Exposed Coil-Coated Finish:
   a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
3. Color: As selected by Architect from manufacturer's full range.
4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.

2.3 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, solder, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.

B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
   a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
   b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
   c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
2. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
3. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

C. Solder:

1. For Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.

D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inchwide and 1/8 inchthick.

E. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

F. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

G. High-Temperature Self-Adhered Membrane Flashings.

1. Where required in the drawings for use under metal copings, metal panels and other sheet metal flashings subject to direct sunlight and/or high temperatures provide 40 mil thick product capable of handling such high temperatures. With product provide data indicating product is acceptable for use for such areas and compatible with substrate it is being applied to.
   a. Atlas WeatherMaster Pro-Grade Ice and Water Underlayment.
   b. Grace Ice and Water Shield HT.
   c. Other approved equal.

2.4 FABRICATION, GENERAL

A. General: Custom fabricate sheet metal flashing and trim to comply with details shown and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required. Fabricate sheet metal flashing and trim in shop to greatest extent possible.

1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
2. Obtain field measurements for accurate fit before shop fabrication.
3. Form sheet metal flashing and trim to fit substrates without excessive oil canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
4. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.

B. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feeton slope and location lines indicated on Drawings and within 1/8-inchoffset of adjoining faces and of alignment of matching profiles.

C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inchdeep, filled with butyl sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.

D. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.

E. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard for application, but not less than thickness of metal being secured.

F. Do not use graphite pencils to mark metal surfaces.

2.5 ROOF-DRAINAGE SHEET METAL FABRICATIONS

A. Hanging Gutters: Fabricate to cross section required, complete with end pieces, outlet tubes, and other accessories as required. Fabricate in minimum 96-inch-long sections. Furnish flat-stock

gutter brackets and flat-stock gutter spacers and straps fabricated from same metal as gutters, of size recommended by cited sheet metal standard but with thickness not less than twice the gutter thickness. Fabricate expansion joints, expansion-joint covers, gutter bead reinforcing bars, and gutter accessories from same metal as gutters. Shop fabricate interior and exterior corners.

1. Gutter Profile: Style A according to cited sheet metal standard.
2. Expansion Joints: Butt type with cover plate.
3. Accessories: Continuous, removable leaf screen with sheet metal frame and hardware cloth screen.
4. Gutters with Girth up to 15 Inches: Fabricate from the following materials:
    a. Galvanized Steel: 0.022 inch thick.

B. Downspouts: Fabricate rectangular downspouts to dimensions indicated, complete with mitered elbows. Furnish with metal hangers from same material as downspouts and anchors. Shop fabricate elbows.

1. Fabricated Hanger Style: Fig 1-35A according to SMACNA's "Architectural Sheet Metal Manual."
2. Fabricate from the following materials:
    a. Galvanized Steel: 0.022 inch thick.

C. Parapet Scuppers: Fabricate scuppers to dimensions required, with closure flange trim to exterior, 4-inch-wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scupper. Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick.

D. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes, exterior flange trim, and built-in overflows. Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

E. Splash Pans: Fabricate to dimensions and shape required and from the following materials:

1. Stainless Steel: 0.019 inch thick.

2.6 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

A. Roof Edge Flashing (Gravel Stop) and Fascia Cap: Fabricate in minimum 96-inch-long, but not exceeding 12-foot-long sections. Furnish with 6-inch- wide, joint cover plates. Shop fabricate interior and exterior corners.

1. Joint Style: Butted with expansion space and 6-inch-wide, concealed backup plate.
2. Fabricate from the Following Materials:
    a. Galvanized Steel: 0.028 inch thick.

B. Copings: Fabricate in minimum 96-inch-long, but not exceeding 12-foot-long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of

external leg and drill elongated holes for fasteners on interior leg. Miter corners (welded or continuous one piece fabrication), fasten and seal watertight. Shop fabricate interior and exterior corners.

1. Joint Style: Butted with expansion space and 6-inch-wide, concealed backup plate.
2. Fabricate from the Following Materials:
   a. Galvanized Steel: 0.040 inch thick.

C. Roof Expansion-Joint Cover: Fabricate from the following materials: Shop fabricate interior and exterior corners.

1. Galvanized Steel: 0.034 inch thick.

D. Base Flashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

E. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

F. Flashing Receivers: Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

G. Roof-Penetration Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

H. Roof-Drain Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.016 inch thick.

2.7 STEEP-SLOPE ROOF SHEET METAL FABRICATIONS

A. Apron, Step, Cricket, and Backer Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.016 inch thick.

B. Valley Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

C. Drip Edges: Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

D. Eave, Rake, Ridge, and Hip Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

E. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

F. Roof-Penetration Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

2.8 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Equipment Support Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

B. Overhead-Piping Safety Pans: Fabricate from the following materials:

1. Galvanized Steel: 0.040 inch thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.

1. Verify compliance with requirements for installation tolerances of substrates.
2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.

3. Space cleats not more than 12 inchesapart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
4. Install exposed sheet metal flashing and trim with limited oil canning, and free of buckling and tool marks.
5. Torch cutting of sheet metal flashing and trim is not permitted.
6. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.

1. Coat concealed side of stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of 10 feet with no joints within 24 inchesof corner or intersection.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inchdeep, filled with sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.

D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

F. Seal joints as required for watertight construction.

1. Use sealant-filled joints unless otherwise indicated. Embed hooked flanges of joint members not less than 1 inchinto sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

G. Rivets: Rivet joints in zinc where necessary for strength.

3.3 ROOF-DRAINAGE SYSTEM INSTALLATION

A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system according to cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.

B. Hanging Gutters: Join sections with joints sealed with sealant. Provide for thermal expansion. Attach gutters at eave or fascia to firmly anchor them in position. Provide end closures and seal watertight with sealant. Slope to downspouts.

1. Fasten gutter spacers to front and back of gutter.
2. Anchor and loosely lock back edge of gutter to continuous cleat.
3. Anchor back of gutter that extends onto roof deck with cleats spaced not more than 24 inches apart.
4. Anchor gutter with gutter brackets spaced not more than 24 inches apart to roof deck, unless otherwise indicated, and loosely lock to front gutter bead.
5. Install gutter with expansion joints at locations indicated, but not exceeding, 50 feet apart. Install expansion-joint caps.
6. Install continuous gutter screens on gutters with noncorrosive fasteners, hinged to swing open for cleaning gutters.

C. Downspouts: Join sections with 1-1/2-inchtelescoping joints.

1. Provide hangers with fasteners designed to hold downspouts securely to walls. Locate hangers at top and bottom and at approximately 60 incheso.c.
2. Provide elbows at base of downspout to direct water away from building.
3. Connect downspouts to underground drainage system.

D. Splash Pans: Install where downspouts discharge on low-slope roofs. Set in asphalt roofing cement or elastomeric sealant compatible with the substrate.

E. Parapet Scuppers: Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.

1. Anchor scupper closure trim flange to exterior wall and solder or seal with elastomeric sealant to scupper.
2. Loosely lock front edge of scupper with conductor head.
3. Solder or seal with elastomeric sealant exterior wall scupper flanges into back of conductor head.

F. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of 1 inchbelow scupper discharge.

3.4 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

B. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at staggered 3-inch centers or as otherwise required to comply with ANSI/SPRI/ES-1 for the design conditions indicated.

C. Copings: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated.

1. Anchor interior leg of coping with washers and screw continuous cleat(s) anchored to substrate fasteners as required to comply with ANSI/SPRI/ES-1 for the design conditions indicated.

D. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inchesover base flashing. Install stainless-steel draw band and tighten.

E. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inchesover base flashing. Lap counterflashing joints minimum of 4 inches. Secure in waterproof manner by means of interlocking folded seam or blind rivets and sealant unless otherwise indicated.

F. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

3.5 MISCELLANEOUS FLASHING INSTALLATION

A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

B. Overhead-Piping Safety Pans: Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings. Pipe and install drain line to plumbing waste or drainage system.

3.6 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feeton slope and location lines indicated on Drawings and within 1/8-inchoffset of adjoining faces and of alignment of matching profiles.

B. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

3.7 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean off excess sealants.

C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.

D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 076200

SECTION 07 71 00 - ROOF SPECIALTIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Manufactured roof specialties, including copings, fascias, and penetration flashing.

1.2 RELATED REQUIREMENTS

A. Section 07 52 16 Styrene-Butadiene - Styrene (SBS Modified Bituminous Membrane Roofing

B. Section 07 62 00 - Sheet Metal Flashing and Trim

C. Section 07 72 00 - Roof Accessories: Manufactured curbs, roof hatches, and snow guards.

D. Section 07 90 00- Joint Sealers.

1.3 REFERENCE STANDARDS

A. ANSI/SPRI/FM 4435/ES-1 - Wind Design Standard for Edge Systems Used with Low Slope Roofing Systems; 2011.

B. NRCA (RM) - The NRCA Roofing Manual; 2017.

C. SPRI ES-1 - Wind Design Standard for Edge Systems Used with Low Slope Roofing Systems; 2011.

1.4 SUBMITTALS

A. See Section 01 33 00 for submittal procedures

B. Product Data: Provide data on shape of components, materials and finishes, anchor types and locations.

C. Manufacturer's Installation Instructions: Indicate special procedures, fasteners, supporting members, and perimeter conditions requiring special attention.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Specialty Penetration Flashings:
   1. York Manufacturing, Inc.: www.yorkmfg.com.
   2. Roof Products & Systems Corp.: www.rpscurbs.com.
   3. Portals Plus, Inc.: www.portalsplus.com.
   4. Pate Company: www.patecurbs.com.

2.2 COMPONENTS

A. Roof Edge Flashings: Factory fabricated to sizes required; mitered, welded corners; concealed fasteners.
   1. Configuration: Fascia, cant, and edge securement for roof membrane.
   2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 RE-1 and RE-2 to positive and negative design wind pressure as defined by applicable code.

B. Copings: Factory fabricated to sizes required; mitered, welded corners; concealed fasteners.

1. Configuration: Concealed continuous hold down cleat at both legs; internal splice piece at joints of same material, thickness and finish as cap; concealed stainless steel fasteners.
2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 RE-3 to positive and negative design wind pressure as defined by applicable code.

C. Control and Expantion Joint Covers: Composite construction of flexible EPDM flashing of white color with closed cell urethane foam backing, each edge seamed to aluminum sheet metal flanges, designed for nominal joint width of 5 inches. Include special formed corners, tees, intersections, and wall flashings, each sealed watertight.

D. Specialty Penetration Flashings: Preformed EPDM pipe and penetration seals designed for waterproof seal of individual, and clustered, roof penetrations.
1. Provide size and configuration required by each specific condition to provide maximum height above roof surface to the stainless steel clamping ring.
2. Where a preformed flashing boot will not slide over a penetrating item, provide "Retrofit Flashing" by Portals Plus Inc. designed to wrap around the item and closed with a weatherproof seal.
3. Where a metal base is required by the roofing membrane manufacturer for tie-in to the roof membrane, provide one of the following:
   a. Alumi-Flash System manufactured by Portals Plus Inc.
   b. Alumi Flash manufactured by Roof Products & Systems Corp.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that deck, curbs, roof membrane, base flashing, and other items affecting work of this Section are in place and positioned correctly.

3.2 INSTALLATION

A. Install components in accordance with manufacturer's instructions and NRCA (RM) applicable requirements.

B. Coordinate installation of components of this section with installation of roofing membrane and base flashings.

C. Coordinate installation of sealants and roofing cement with work of this section to ensure water tightness.

D. Provide weathertight installation.

END OF SECTION

SECTION 07 71 23 - MANUFACTURED GUTTERS AND DOWNSPOUTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Pre-finished aluminum gutters and downspouts.

B. Precast concrete splash pads.

1.2 REFERENCE STANDARDS

A. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels; 2013.

B. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2014.

C. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric]; 2014.

D. SMACNA (ASMM) - Architectural Sheet Metal Manual; 2012.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Conform to SMACNA (ASMM) for sizing components for rainfall intensity determined by a storm occurrence of 1 in 5 years.

B. Conform to applicable code for size and method of rain water discharge.

1.4 SUBMITTALS

A. See Section 01 33 00 for submittal procedures

B. Product Data: Provide data on prefabricated components.

C. Shop Drawings: Indicate locations, configurations, jointing methods, fastening methods, locations, and installation details.

D. Samples: Submit two samples, 12 inch long illustrating component design, finish, color, and configuration.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Stack material to prevent twisting, bending, or abrasion, and to provide ventilation. Slope to drain.

B. Prevent contact with materials that could cause discoloration, staining, or damage.

PART 2 PRODUCTS

2.1 MATERIALS

A. Pre-Finished Aluminum Sheet: ASTM B209 (ASTM B209M); 0.032 inch thick.

1. Finish: Plain, shop pre-coated with modified silicone coating.
2. Color: To match Architect's sample.

2.2 COMPONENTS

A. Gutters: SMACNA rectangular style profile.

B. Downspouts: SMACNA Rectangular profile.

C. Anchors and Supports: Profiled to suit gutters and downspouts.
   1. Anchoring Devices: In accordance with SMACNA requirements.
   2. Gutter Supports: Brackets.
   3. Downspout Supports: Brackets.

D. Fasteners: Galvanized steel, with soft neoprene washers.

2.3 ACCESSORIES

A. Splash Pads: Precast concrete type, size and profiles indicated; minimum 3000 psi at 28 days, with minimum 5 percent air entrainment.

2.4 FABRICATION

A. Form gutters and downspouts of profiles and size indicated.

B. Fabricate with required connection pieces.

C. Form sections square, true, and accurate in size, in maximum possible lengths, free of distortion or defects detrimental to appearance or performance. Allow for expansion at joints.

D. Hem exposed edges of metal.

E. Fabricate gutter and downspout accessories; seal watertight.

2.5 FINISHES

A. Fluoropolymer Coating: High Performance Organic Finish, AAMA 2604; multiple coat, thermally cured fluoropolymer finish system; custom color to match approved sample.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that surfaces are ready to receive work.

3.2 PREPARATION

A. Paint concealed metal surfaces and surfaces in contact with dissimilar metals with protective backing paint to a minimum dry film thickness of 15 mil.

3.3 INSTALLATION

A. Install gutters, downspouts, and accessories in accordance with manufacturer's instructions.

B. Sheet Metal: Join lengths with formed seams sealed watertight. Flash and seal gutters to downspouts and accessories.

C. Slope gutters 1 unit in 96 units along entire length.

D. Set splash pans under downspouts.

END OF SECTION

SECTION 07 72 00 - ROOF ACCESSORIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Roof hatches, manual and automatic operation, including smoke vents.

1.2 RELATED REQUIREMENTS

A. Section 07 52 00 - Modified Bituminous Membrane Roofing.

B. Section 07 62 00 - Sheet Metal Flashing and Trim: Counterflashing.

C. Section 09 96 00 High Performance Coatings

D. Division 26 - Electrical: Fire alarm interconnection.

1.3 REFERENCE STANDARDS

A. 29 CFR 1910.23 - Guarding floor and wall openings and holes; current edition.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2015.

C. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2014.

D. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2013.

E. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel; 2015.

F. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2015.

G. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

H. NRCA ML104 - The NRCA Roofing and Waterproofing Manual; Fifth Edition, with interim updates.

1.4 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used.
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
   4. Maintenance requirements.

B. Lifeline Design Data: Two copies of comprehensive design calculations for lifeline, connection and anchorage devices. Review of design calculations shall not alter manufacturer's design responsibility for system and connectors.

C. Manufacturer's Certification: Certify that walkway and railings have been designed to meet the design criteria of the specified code; include all conditions or limitations of the design necessary to achieve the necessary strength for the loading specified.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store products under cover and elevated above grade.

PART 2 PRODUCTS

2.1 DESIGN REQUIREMENTS - LIFELINE

A. Design, engineer, construct and load-test system.

B. Provide supports, and anchors designed and constructed to suit building configuration and in accordance with the contract documents and applicable regulations and codes.

C. Design all anchor components to provide adequate attachment to building and to suit current maintenance practices; ensure compatibility with industry standard equipment.

D. Design calculations performed and certified by a professional engineer licensed in the State where the project is located for structural adequacy of system. Coordinate structural calculations with submittals.

2.2 PERFORMANCE REQUIREMENTS - LIFELINE

A. Safety Factor: Design primary support equipment to sustain without failure at least four times the maximum static working load applied or transmitted to the components. In no case shall the combined live and dead loads be calculated at less than 1000 pounds.

B. Base plates and sockets: Total safety factor of 4 to 1 against the overturning moment through 360-degree rotation.

C. Wire rope rated capacity: To resist the combined live and dead load with a factor of safety of 6 to 1 against yield.

D. Fall Arrest Safety Anchors: Designed to a maximum fall arresting force of typically 1800 lbs. when wearing a body harness with a safety factor of 2 without any permanent deformation and to 5000 lbs. against fracture or detachment.

2.3 ROOF HATCHES

A. Manufacturers - Roof Hatches:
   1. Bilco Company; Type F (equipment access, 4 ft square): www.bilco.com.
   2. Milcor by Commercial Products Group of Hart & Cooley, Inc; Model RD-4x4 EE: www.milcorinc.com.
   3. Substitutions: See Section 01 60 00 - Product Requirements.

B. Roof Hatches and Smoke Vents, General: Factory-assembled steel frame and cover, complete with operating and release hardware.
   1. Style: Provide flat metal covers unless otherwise indicated.
   2. Mounting: Provide frames and curbs suitable for mounting on flat roof deck.
   3. For Ships Ladder Access: Single leaf; 48 by 48 inches.

C. Frames/Curbs: One-piece curb and frame with integral cap flashing to receive roof flashings; extended bottom flange to suit mounting.
   1. Material: Mill finished aluminum, 11 gage, 0.0907 inch thick.
   2. Insulation: Manufacturer's standard; 1 inch rigid glass fiber, located on outside face of curb.
   3. Curb Height: 12 inches from finished surface of roof, minimum.

D. Metal Covers: Flush, insulated, hollow metal construction.
   1. Capable of supporting 40 psf live load.
   2. Material: Mill finished aluminum; outer cover 11 gage, 0.0907 inch thick, liner 0.04 inch thick.

3. Insulation: Manufacturer's standard 1 inch rigid glass fiber.
4. Gasket: Neoprene, continuous around cover perimeter.

E. Ladder Safety Post: Tubular steel telescopic post that automatically locks when fully extended through hatchway. Stainless steel spring balancing mechanism to provide controlled upward and downward operation. Release lever to disengage the post to allow return to lowered position. Adjustable mounting brackets to fit ladder rung spacing up to 14-inches on center; clamp brackets to accommodate ladder rungs up to 1-3/4-inch in diameter.

F. Safety Railing System: Manufacturer's standard accessory safety rail system mounted directly to curb.
1. Comply with 29 CFR 1910.23, with a safety factor of two.
2. Posts and Rails: Aluminum tube.
3. Finish: Manufacturer's standard, factory applied finish.
4. Manufacturers:
a. Bilco Company: www.bilco.com/sle.

G. Hardware: Steel, zinc coated and chromate sealed, unless otherwise indicated or required by manufacturer.
1. Lifting Mechanisms: Compression or torsion spring operator with shock absorbers that automatically opens upon release of latch; capable of lifting covers despite 10 psf load.
2. Hinges: Manufacturer’s recommended type.
3. Hold open arm with vinyl-coated handle for manual release.
4. Latch: Upon closing, engage latch automatically and reset manual release.
5. Manual Release: Pull handle on interior.
6. Locking: Padlock hasp on interior.
7. All hardware to be stainless steel

2.4 HORIZONTAL CABLE LIFELINES

A. Manufacturers:
1. Pro-Bel Group: www.pro-bel.ca.
2. Guardian Fall Protection: www.guardianfall.com.
3. Capital Safety: www.capitalsafety.com.
4. XS Platforms: www.xsplatforms.com.
5. 01 25 00 Substitution Procedures and Substituion Request Form

B. Horizontal Lifeline System: Hands-free cable type.
1. Cable: 5/16 inch or 1/2 inch diameter Type 316 stainless steel with minimum breaking strength of 19,125 pounds, complete with permanently swedged cable ends.
2. Data Plate: At cable system entry points, provide prominently displayed non-corrodible data plate clearly stating Maximum Service Capacity and Number of Users.
3. Intermediate Support Brackets: Multi-position Type 316 stainless steel secured using 1/2 inch diameter fasteners.
4. Entry/Exit Brackets: Type 316 stainless steel.
5. Connector: Type 316 stainless steel, with automatic connector bypass feature for continuous hands-free operation, and detachability feature for window cleaning operations.
6. Tensioner Units: Type 316 stainless steel with polished finish.
7. Harness: Manufacturer's standard hands-free full body harness and lanyard complete with shock absorber.
8. Accessories: Manufacturers standard corner units as required.
9. Product: Hands-Free Horizontal Lifeline System manufactured by Pro-Bel Group: www.pro-bel.ca

C. Roof Anchors:
1. Safety and Tie-Back Anchors: U-bar type; ASTM A666 Type 304 stainless steel with yield strength of 36 Ksi, of not less than 3/4 inch diameter material with 1-1/2 inch eye opening.

2. Piers: ASTM A500/A500M seamless round steel tubing with yield strength of 50 Ksi, hot dipped galvanized to ASTM A123/A123M, with wall thickness to suit application.
3. Base Plates and Other Sections: ASTM A572/A572M galvanized mild steel as above with yield strength of 44 Ksi. Thickness and securement to suit application.
4. Miscellaneous Bolts, Nuts and Washers: ASTM A307 with yield strength of 44 Ksi, hot dipped galvanized to ASTM A123/A123M or Type 304 stainless steel with yield strength of 35 Ksi.
5. Flashing for Roof Mounted Supports and Anchors in Bituminous Roofing: Seamless spun aluminum flashing, ASTM B221, Type 6061-T6 alloy with deck flange flashed in to NRCA ML104 recommendations.
6. Product: Roof Anchors manufactured by Pro-Bel Group: www.pro-bel.ca

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Supply items required to be cast into concrete with setting templates, to appropriate Sections.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions, in manner that maintains roofing weather integrity.

B. Coordinate with installation of roofing system and related flashings.

C. Apply bituminous paint on metal surfaces of roof hatches to be in contact with cementitious materials and dissimilar metals.

3.4 CLEANING

A. Clean installed work to like-new condition.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 07 76 13 - ROOF PAVERS AND BALLAST MATERIALS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Pavers for roofing ballast.

1.2 RELATED REQUIREMENTS

A. Section 07 52 00 - Modified Bituminous Membrane Roofing.

1.3 REFERENCE STANDARDS

A. ASTM C140/C140M - Standard Test Methods of Sampling and Testing Concrete Masonry Units and Related Units; 2014.

B. ASTM C293/C293M - Standard Test Method for Flexural Strength of Concrete (Using Simple Beam With Center-Point Loading); 2016.

1.4 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

B. Selection Samples: Two complete sets of color chips representing manufacturer's full range of colors and patterns available from regional plant.

C. Verification Samples: Two samples, minimum size 12 inches square, representing actual product to be supplied from regional plant, color, and patterns.

D. Specimen warranty.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging, with labels intact, until ready for installation.

B. Store products off the ground; if stored on the roof, do not exceed structural capacity of deck.

1.6 WARRANTY

A. See Section 01 77 00 - Closeout Proceduresfor additional warranty requirements.

B. Ballast Pavers: Provide manufacturer's 20-year limited material warranty.

C. Ballast Pavers: Provide manufacturer's limited wind uplift warranty for 3 years after Substantial Completion.

1.7 MAINTENANCE TOOLS

A. Paver Lifter: Provide one Probst Slab Grabber; deliver to Owner at location directed; provide 3-year warranty.

PART 2 PRODUCTS

2.1 ROOF DECK APPLICATIONS (OCCASIONAL FOOT TRAFFIC ONLY)

A. Ballast Pavers: Precast concrete units with integral color and tooled joint pattern.
   1. Basis of Design: Tectura Lok Down pedestal system manufactured by Wausau Tile, Inc.
   2. Products:
      a. Pavers on Pedestals manufactured by Hanover Architectural Products: www.hanoverpavers.com.
      b. Roofblok Ballast Systems manufactured by Roofscape Architectural Pavers: www.roofblok.com.
   3. Size:
      a. 24 by 48 inches
      b. 30 by 30 inches
   4. Thickness: 2-3/4 inches.
   5. Compressive Strength: 7000 psi, minimum, air entrained mix, after 28 days cure, when tested in accordance with ASTM C140/C140M.
   6. Flexural Strength: 400 psi, when tested in accordance with ASTM C293/C293M.
   7. Density: 145 pcf, maximum.
   8. Water Absorption: 5 percent (nominal), when tested in accordance with ASTM C140/C140M.
   9. Color: As selected.

B. Protection Mat: Nonwoven polyester.

C. Mechanical Clips: Galvanized sheet metal.

D. Adjustable Height Paver Pedestals: High impact styrene adjustable paver pedestals telescope from 2 inch to 5-1/2 inch, tilt to accommodate sub-surface slope and create a smooth, uniform, paver surface.
   1. Provide sizes and height required to make top surface of pavers a single plane without abrupt changes in surface plane.
   2. Product: Terra-Tab manufactured by Tectura Designs0

E. Perimeter Attachments: Products made by one of the following:
   1. Metal Era: www.metalera.com.
   2. W.P. Hickman: www.wphickman.com.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until all roofing or waterproofing work is completed, including work penetrating waterproof plane.

3.2 PREPARATION

A. Clean roof surfaces thoroughly prior to installation.

B. Plan sequence of transporting and placing pavers to avoid damage to waterproof membrane and already installed pavers; place 3/4 inch thick plywood in traffic paths or use carts with pneumatic tires.

3.3 ROOF BALLAST

A. Install pavers on paver pedestals in accordance with manufacturer's instructions. Provide approximately 1/4 inch space between pavers to permit surface water drainage.

B. Install pavers in locations and pattern indicated on drawings.

C. Install protection mat wherever required by roof membrane manufacturer.

D. Install perimeter retainer around entire perimeter.

3.4 PROTECTION

A. Protect installed products until completion of project. Prohibit construction traffic unless adequate precautions are taken.

B. Repair or replace products damaged due to inadequate protection.

END OF SECTION

SECTION 07 81 00 - APPLIED FIREPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Concealed SFRM.
   2. Exposed SFRM.
   3. Exposed intumescent mastic fire-resistive coatings.

B. Related Sections include the following:
   1. Division 05 Section "Structural Steel Framing" for surface conditions required for structural steel receiving SFRM.
   2. Division 07 Section "Thermal Insulation" for fire-safing insulation.
   3. Division 07 Section "Penetration Firestopping" for fire-resistance-rated firestopping systems.
   4. Division 07 Section "Fire-Resistive Joint Systems" for fire-resistance-rated joint systems.

1.3 DEFINITIONS

A. SFRM: Sprayed fire-resistive material.

B. Concealed: Fire-resistive materials applied to surfaces that are concealed from view behind other construction when the Work is completed and have not been defined as exposed.

C. Exposed: Fire-resistive materials applied to surfaces that are exposed to view when the Work is completed, and that are identified as exposed on Drawings.

1.4 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design SFRM thickness and application according to the hour ratings listed in Schedule, performance requirements and design criteria indicated, including comprehensive engineering analysis by a qualified professional engineer.

1.5 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Structural framing plans indicating the following:
   1. Locations and types of surface preparations required before applying SFRM. Include locations for Architect’s review and approval of all locations receiving Level 3 finish as described below, 2.3 1, a.
   2. Extent of SFRM for each construction and fire-resistance rating, including the following:

      a. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.

For steel joist assemblies, include applicable fire-resistance design designations, with each steel joist tested with the same maximum tensile stress as each steel joist indicated. Design designations with steel joists tested at lower maximum tensile stress than those indicated are not permitted.

b. Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies.

3. Treatment of SFRM after application.

C. Samples for Initial Selection: For each type of colored, exposed SFRM indicated.

D. Delegated Design Submittal: For installed SFRM indicated to comply with performance requirements, and design criteria including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

E. SFRM Schedule: Tabulated schedule of SFRM with information including, but not limited to, application areas, surface finish for exposed, and color.

F. Samples for Verification: For each type of colored, exposed SFRM, two Samples, each 4 inches square, of each color, texture, and material formulation to be applied. Where finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.

G. Product Certificates: For each type of SFRM, signed by product manufacturer.

H. Qualification Data: For Installer, manufacturer, professional engineer, and testing agency.

I. Compatibility and Adhesion Test Reports: From SFRM manufacturer indicating the following:
1. Materials have been tested for bond with substrates.
2. Materials have been verified by SFRM manufacturer to be compatible with substrate primers and coatings.
3. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.

J. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for proposed SFRM.

K. Research/Evaluation Reports: For SFRM.

L. Warranties: Special warranties specified in this Section.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by SFRM manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements. A manufacturer's willingness to sell its SFRM to Contractor or to an installer engaged by Contractor does not in itself confer qualification on the buyer.

B. Source Limitations: Obtain SFRM through one source from a single manufacturer.

C. SFRM Testing: By a qualified testing and inspecting agency engaged by Contractor or manufacturer to test for compliance with specified requirements for performance and test methods.
1. SFRMs are randomly selected for testing from bags bearing the applicable classification marking of UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
2. Testing is performed on specimens of SFRMs that comply with laboratory testing requirements specified in Part 2 and are otherwise identical to installed fire-resistive materials, including application of accelerant, sealers, topcoats, tamping, troweling, rolling, and water overspray, if any of these are used in final application.

3. Testing is performed on specimens whose application the independent testing and inspecting agency witnessed during preparation and conditioning. Include in test reports a full description of preparation and conditioning of laboratory test specimens.

D. Compatibility and Adhesion Testing: Engage a qualified testing and inspecting agency to test for compliance with requirements for specified performance and test methods.
1. Test for bond per ASTM E 736 and requirements in UL's "Fire Resistance Directory" for coating materials. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
2. Verify that manufacturer, through its own laboratory testing or field experience, has not found primers or coatings to be incompatible with SFRM.

E. Fire-Test-Response Characteristics: Provide SFRM with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify bags containing SFRM with appropriate markings of applicable testing and inspecting agency.
1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" acceptable to authorities having jurisdiction, for SFRM serving as direct-applied protection tested per ASTM E 119.
2. Surface-Burning Characteristics: ASTM E 84.

F. Provide products containing no detectable asbestos as determined according to the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."

G. Mockups: Apply mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Extent of Mockups: Approximately 100 sq. ft. of surface for each product indicated.
2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, shelf life if applicable, and fire-resistance ratings applicable to Project.

B. Use materials with limited shelf life within period indicated. Remove from Project site and discard materials whose shelf life has expired.

C. Store materials inside, under cover, and aboveground; keep dry until ready for use. Remove from Project site and discard wet or deteriorated materials.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not apply SFRM when ambient or substrate temperature is **40 deg F** or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.

B. Ventilation: Ventilate building spaces during and after application of SFRM. Use natural means or, if they are inadequate, forced-air circulation until fire-resistive material dries thoroughly.

1.9 COORDINATION

A. Sequence and coordinate application of SFRM with other related work specified in other Sections to comply with the following requirements:

1. Provide temporary enclosure as required to confine spraying operations and protect the environment.
2. Provide temporary enclosures for applications to prevent deterioration of fire-resistive material due to exposure to weather and to unfavorable ambient conditions for humidity, temperature, and ventilation.
3. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.
4. Do not apply fire-resistive material to metal roof deck substrates until concrete topping, if any, has been completed. For metal roof decks without concrete topping, do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material.
5. Do not apply fire-resistive material to metal floor deck substrates until concrete topping has been completed.
6. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
7. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.
8. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, and tested and corrections have been made to defective applications.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form, signed by Contractor and by Installer, in which manufacturer agrees to repair or replace SFRMs that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Cracking, flaking, spalling, or eroding in excess of specified requirements; peeling; or delaminating of SFRM from substrates.
      b. Not covered under the warranty are failures due to damage by occupants and Owner's maintenance personnel, exposure to environmental conditions other than those investigated and approved during fire-response testing, and other causes not reasonably foreseeable under conditions of normal use.
   2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CONCEALED SFRM

A. Products: Subject to compliance with requirements, provide one of the following:
   1. Concealed Cementitious SFRM:
      a. Carboline Co., Fireproofing Products Div.; AD Southwest Type 5GP.
      b. Carboline Co., Fireproofing Products Div.; A-20 Accelerator.
      c. Grace, W. R. & Co. - Conn., Construction Products Div.; Monokote Type MK-6, MK-6/HY, and MK-6s.
      d. Grace, W. R. & Co. - Conn., Construction Products Div.; Retro-Gard.
      e. Isolatek International Corp.; Cafco 300.
      f. Isolatek International Corp.; Cafco 300 SB.

B. Material Composition: Manufacturer's standard product, as follows:
   1. Concealed Cementitious SFRM: Factory-mixed, dry formulation of gypsum or portland cement binders, additives, and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.

C. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
1. Dry Density: 15 lb/cu. ft. for average and individual densities, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
2. Thickness: Minimum average thickness required for fire-resistance design indicated according to the following criteria, but not less than 0.375 inch, per ASTM E 605:

    a. Where the referenced fire-resistance design lists a thickness of 1 inch or more, the minimum allowable individual thickness of SFRM is the design thickness minus 0.25 inch.
    b. Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of SFRM is the greater of 0.375 inch or 75 percent of the design thickness.
    c. No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 15 lb/cu. ft..
3. Bond Strength: 150 lbf/sq. ft. minimum per ASTM E 736 based on laboratory testing of 0.75-inch minimum thickness of SFRM.
4. Compressive Strength: 5.21 lbf/sq. in. minimum per ASTM E 761. Minimum thickness of SFRM tested shall be 0.75 inch and minimum dry density shall be as specified but not less than 15 lb/cu. ft..
5. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
6. Deflection: No cracking, spalling, or delamination per ASTM E 759.
7. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
8. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of SFRM is 0.75 inch, maximum dry density is 15 lb/cu. ft., test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.
9. Fire-Test-Response Characteristics: Provide SFRM with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

    a. Flame-Spread Index: 10 or less.
    b. Smoke-Developed Index: 0.
10. Fungal Resistance: No observed growth on specimens per ASTM G 21.

2.2 EXPOSED SFRM

A. Products: Subject to compliance with requirements, provide one of the following:
1. Exposed Cementitious SFRM:

    a. Carboline Co., Fireproofing Products Div.; AD Southwest Type 5MD.
    b. Carboline Co., Fireproofing Products Div.; A-20 Accelator.
    c. Carboline Co., Fireproofing Products Div.; Pyrocrete 40.
    d. Carboline Co., Fireproofing Products Div.; Pyrocrete 240 High Yield.
    e. Carboline Co., Fireproofing Products Div.; Pyrocrete 241.
    f. Grace, W.R. & Co. - Conn., Construction Products Div.; Monokote Type Z106G.
    g. Grace, W.R. & Co. - Conn., Construction Products Div.; Monokote Type Z106.
    h. Grace, W.R. & Co. - Conn., Construction Products Div.; Monokote Type Z106/HY.
    i. Grace, W.R. & Co. - Conn., Construction Products Div.; Monokote Type Z146.
    j. Isolatek International Corp.; Cafco 400.
    k. Isolatek International Corp.; Fendolite M-II.

B. Material Composition: Manufacturer's standard product, as follows:
1. Exposed Cementitious SFRM: Factory-mixed, dry, cement aggregate formulation; or chloride-free formulation of gypsum or portland cement binders, additives, and inorganic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.

C. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
1. Dry Density: Values for average and individual densities as required for fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method," but with an average density of not less than 22 lb/cu. ft..
2. Bond Strength: 434 lbf/sq. ft. minimum per ASTM E 736.
3. Compressive Strength: 51 lbf/sq. in. minimum per ASTM E 761.
4. Dry Density: Values for average and individual densities as required for fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method," but with an average density of not less than 39 lb/cu. ft..
5. Bond Strength: 1000 lbf/sq. ft. minimum per ASTM E 736.
6. Compressive Strength: 300 lbf/sq. in. minimum per ASTM E 761.
7. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
8. Deflection: No cracking, spalling, or delamination per ASTM E 759.
9. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
10. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. per ASTM E 859.
11. Combustion Characteristics: Passes ASTM E 136.
12. Fire-Test-Response Characteristics: Provide SFRM with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

    a. Flame-Spread Index: 10 or less.
    b. Smoke-Developed Index: 0.
13. Fungal Resistance: No observed growth on specimens per ASTM G 21.
14. For exterior applications of SFRM, provide formulation listed and labeled by testing and inspecting agency acceptable to authorities having jurisdiction for surfaces exposed to exterior.

2.3 INTUMESCENT MASTIC FIRE-RESISTIVE COATINGS

A. Products: Subject to compliance with requirements, provide one of the following:
1. Fire-Resistive, Water-Based, Intumescent Mastic Coating Material:

    a. Carboline Company, Fireproofing Products Div.; Firefilm III Topcoat is required for those areas receiving color only.

        Level 3 Finish: for all or portions of exposed steel receiving intumescent coatings, provide Level 3 finish, back rolled and sanded to a smooth finish before top coated for color. Provide locations to Architect for review and approvals.

    b. Level 1 or Level 2 is sufficient for all concealed steel receiving intumescent coatings.

    c. Carboline Solvent based Intumescent ThermoSorb VOC Topcoat is optional for color only
    d. Isolatek International Corp.; Cafco SprayFilm-WB 2 Basecoat and Topseal.
    e. Isolatek International Corp.; Cafco SprayFilm-WB 3 Basecoat and topcoat recommended by manufacturer of basecoat.

B. Fire-Resistive, Intumescent Mastic Coating: Factory-mixed formulation.
1. Water-Based Formulation: Approved by manufacturer and authorities having jurisdiction and investigated for Interior General Purpose by UL.
2. Multicomponent system consisting of intumescent base coat and topcoat.

C. Color and Gloss: As selected by Architect from manufacturer's full range.

2.4 AUXILIARY FIRE-RESISTIVE MATERIALS

A. General: Provide auxiliary fire-resistive materials that are compatible with SFRM and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.

B. Substrate Primers: For use on each substrate and with each sprayed fire-resistive product, provide primer that complies with one or more of the following requirements:
   1. Primer's bond strength complies with requirements specified in UL's "Fire Resistance Directory" for coating materials based on a series of bond tests per ASTM E 736.
   2. Primer is identical to those used in assemblies tested for fire-test-response characteristics of SFRM per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

C. Adhesive for Bonding Fire-Resistive Material: Product approved by manufacturer of SFRM.

D. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required to comply with fire-resistance designs indicated and fire-resistive material manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive SFRM.

E. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by manufacturer of SFRM.

F. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by manufacturer of intumescent mastic coating fire-resistive material. Include pins and attachment.

G. Sealer for Sprayed-Fiber Fire-Resistive Material: Transparent-drying, water-dispersible, tinted protective coating recommended in writing by manufacturer of sprayed-fiber fire-resistive material.
   1. Product: Subject to compliance with requirements, provide Carboline TC-55 Bond sealer
   2. "Cafco Bond-Seal" by Isolatek International Corp.

H. Topcoat: Type recommended in writing by manufacturer of each SFRM for application over exposed SFRM

2.5 NATATORIUM – CONCEALED AND EXPOSED INTUMESCENT MASTIC FIRE-RESISTIVE AND HIGH-PERFORMANCE COATING SYSTEM.

A. Description:

Provide a complete, high-performance, corrosion-resistant intumescent fireproofing system suitable for use in interior humid and chlorinated natatorium environments.

System shall be by Carboline Company and shall consist of compatible primer, intumescent fireproofing, and topcoat products applied in strict accordance with manufacturer’s written instructions.

B. System Components (in order of application):
   1. Primer
      a. Product: Carboline Carbomastic 94
      b. Type: High solids, aluminum-pigmented epoxy mastic coating.
      c. Purpose: Provides corrosion-resistant base and enhances adhesion of intumescent coating to structural steel in high humidity and chlorinated atmospheres.
      d. Application: Apply to clean, prepared steel surfaces prior to application of intumescent coating.
      e. Dry Film Thickness (DFT): 4–6 mils per manufacturer’s recommendation.
      f. VOC: <340 g/L.
      g. Color: Aluminum gray.
      h. Reference Standard: SSPC-PA 1; compatible with Thermolag E100S.

2. Intumescent Fireproofing
   a. Product: Carboline *Thermolag E100S*
   b. Type: Two-component, epoxy-based, intumescent fire-resistive material (IFRM).
   c. Purpose: Provides fire-resistance rating of 1- to 3-hours (UL design dependent) for structural steel members.
   d. Application: Spray-applied or trowel-applied to achieve required thickness in accordance with UL design assemblies.
   e. Typical DFT Range: 150–700 mils, depending on required fire rating.
   f. Performance Requirements:
      - Tested in accordance with ASTM E119 / UL 263.
      - UL Listed and approved for both interior and exterior exposures.
      - Bond Strength: Minimum 150 psi (ASTM E736).
      - Hardness: >65 Shore D.
      - Thermal Expansion: Intumescent expansion factor 5–10x original thickness when exposed to fire.
   g. **Environmental Suitability:**
      - Suitable for chlorine/chloramine-rich atmospheres typical of natatorium environments.
      - High humidity and chemical exposure resistant.
      - **Color:** Off-white (field topcoated as specified).

3. TopCoat Intumescent Fireproofing
   a. Product: Carboline Carbomastic 94 (same as primer) or other Carboline-approved compatible topcoat.
   b. Purpose: Protects intumescent coating from moisture, chemicals, and abrasion while providing uniform architectural appearance.
   c. Application: Apply only after Thermolag E100S has fully cured.
   d. DFT: 4–6 mils per coat; minimum 8 mils total for humid pool environments.
   e. Color and Finish: As selected by Architect from manufacturer's full range.
   f. Optional Alternate Topcoat: Carboline ThermoSorb VOC (for aesthetic topcoat only).

C. System Performance:
   1. Fire Rating: UL Listed 1- to 3-hour protection for steel beams, columns, and joists per UL designs (e.g., UL Design No. WJ110, Y737, X777 or equivalent).
   2. Humidity/Corrosion Resistance: Complies with ASTM B117 and ISO 12944 for immersion-grade epoxy coatings; resistant to chloramine exposure.
   3. Adhesion Compatibility: Primer and topcoat fully compatible with Thermolag E100S system as tested and warranted by Carboline.
   4. Temperature Range: Continuous service –20°F to 200°F; intermittent up to 300°F.
   5. VOC Compliance: Complies with SCAQMD Rule 1113 and national VOC regulations.

D. Submittals:

   Provide the following in addition to Section 1.5 requirements:
   1. Manufacturer's system data sheet listing all components, application sequence, cure times, and UL design references.
   2. Compatibility documentation confirming primer, intumescent, and topcoat are part of a tested and approved system.
   3. Project-specific written warranty covering adhesion, corrosion, and fire-resistance performance for minimum 5 years.
   4. Certificates of Compliance verifying product suitability for humid, chlorinated environments.

E. Application Notes:
   1. All steel surfaces shall be cleaned to SSPC-SP6 (Commercial Blast) minimum prior to primer application.
   2. Primer shall be fully cured prior to application of Thermolag E100S.
   3. Intumescent coating shall be applied in multiple passes as required to achieve total DFT.

4. Final topcoat shall be applied only after full cure of Thermolag E100S, typically 7–14 days depending on temperature and humidity
5. All application work shall be performed by a Carboline-certified applicator experienced with Thermolag systems.

F. Warranty:

Provide Carboline 5-Year System Warranty covering adhesion, corrosion, and fire performance for the full coating assembly (primer, intumescent, topcoat).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of work. A substrate is in satisfactory condition if it complies with the following:
1. Substrates comply with requirements in the Section where the substrate and related materials and construction are specified.
2. Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, incompatible paints, incompatible encapsulants, or other foreign substances capable of impairing bond of fire-resistive materials with substrates under conditions of normal use or fire exposure.
3. Objects penetrating fire-resistive material, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
4. Substrates are not obstructed by ducts, piping, equipment, and other suspended construction that will interfere with applying fire-resistive material.

B. Verify that concrete work on steel deck has been completed.

C. Verify that roof construction, installation of roof-top HVAC equipment, and other related work are completed.

D. Conduct tests according to fire-resistive material manufacturer's written recommendations to verify that substrates are free of substances capable of interfering with bond.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application.

B. Clean substrates of substances that could impair bond of fire-resistive material, including dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, and incompatible primers, paints, and encapsulants.

C. Prime substrates where recommended in writing by SFRM manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive SFRM.

D. For exposed applications, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of SFRM. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.3 APPLICATION, GENERAL

A. Comply with fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and spray on fire-resistive material, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.

B. Apply SFRM that is identical to products tested as specified in Part 1 "Quality Assurance" Article and substantiated by test reports, with respect to rate of application, accelerator use, sealers, topcoats, tamping, troweling, water overspray, or other materials and procedures affecting test results.

C. Install metal lath and reinforcing fabric as required to comply with fire-resistance ratings and fire-resistive material manufacturer's written recommendations for conditions of exposure and intended use, whether explicitly indicated or not. Securely attach lath and fabric to substrate in position required for support and reinforcement of fire-resistive material. Use anchorage devices of type recommended in writing by SFRM manufacturer. Attach accessories where indicated or required for secure attachment of lath and fabric to substrate.

D. Coat substrates with bonding adhesive before applying fire-resistive material where required to achieve fire-resistance rating or as recommended in writing by SFRM manufacturer for material and application indicated.

E. Extend fire-resistive material in full thickness over entire area of each substrate to be protected. Unless otherwise recommended in writing by SFRM manufacturer, install body of fire-resistive covering in a single course.

F. Spray apply fire-resistive materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by SFRM manufacturer.

G. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply SFRM that differs in color from that of encapsulant over which it is applied.

H. Where sealers are used, apply products that are tinted to differentiate them from SFRM over which they are applied.

3.4 APPLICATION, CONCEALED SFRM

A. Apply concealed SFRM in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition, but apply in greater thicknesses and densities if specified in Part 2 "Concealed SFRM" Article.

B. Cure concealed SFRM according to product manufacturer's written recommendations.

3.5 APPLICATION, EXPOSED SFRM

A. Apply exposed SFRM in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition, but apply in greater thicknesses and densities if indicated.
   1. For steel beams and bracing, provide a thickness of not less than 1 inch.
   2. For metal floor or roof decks, provide a thickness of not less than 1/2 inch.

B. Provide a uniform finish complying with description indicated for each type of material and matching Architect's sample or, if none, finish approved for field-erected mockup.

C. Apply exposed cementitious SFRM to produce one of the following finishes, as directed by Architect:
   1. Skip-troweled finish with leveled surface, smoothed-out texture, and neat edges.
   2. Smooth, troweled finish with surface markings eliminated and edges squared.

D. Apply exposed sprayed-fiber fire-resistive material to produce the following finish:
   1. Spray-textured finish.
   2. Sealer.
   3. Topcoat.

E. Cure exposed SFRM according to product manufacturer's written recommendations.

3.6 APPLICATION, INTUMESCENT MASTIC FIRE-RESISTIVE COATINGS

A. Apply intumescent mastic fire-resistive coatings in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition. Apply where indicated, and wherever application of SFRM would produce dimensional conflicts and where intumescent coating would not produce similar conflicts.

B. Apply intumescent mastic fire-resistive coating as follows:
   1. Install reinforcing fabric as required to obtain designated fire-resistance rating and where indicated.
   2. Finish: Even, spray-textured finish produced by lightly rolling flat surfaces of fire-protected members before fire-resistive material dries, to smooth out surface irregularities and to seal in surface fibers.

3.7 FIELD QUALITY CONTROL

A. Special Inspections: Engage a qualified special inspector to perform the following special inspection and prepare reports:
   1. SFRM.
   2. Intumescent mastic coasting.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.
   1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.

C. Tests and Inspections: Testing and inspecting of completed applications of SFRM shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with application of SFRM for the next area until test results for previously completed applications of SFRM show compliance with requirements. Tested values must equal or exceed values indicated and required for approved fire-resistance design.
   1. Thickness for Floor, Roof, and Wall Assemblies: For each 1000-sq. ft. area, or partial area, on each floor, from the average of 4 measurements from a 144-sq. in. sample area, with sample width of not less than 6 inches per ASTM E 605.
   2. Thickness for Structural Frame Members: From a sample of 25 percent of structural members per floor, taking 9 measurements at a single cross section for structural frame beams or girders, 7 measurements of a single cross section for joists and trusses, and 12 measurements of a single cross section for columns per ASTM E 605.
   3. Density for Floors, Roofs, Walls, and Structural Frame Members: At frequency and from sample size indicated for determining thickness of each type of construction and structural framing member, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
   4. Bond Strength for Floors, Roofs, Walls, and Structural Framing Members: For each 10,000-sq. ft. area, or partial area, on each floor, cohesion and adhesion from one sample of size indicated for determining thickness of each type of construction and structural framing member, per ASTM E 736.

      a. Field test SFRM that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.
      b. If surfaces of structural steel receiving SFRM are primed or otherwise painted for coating materials, perform series of bond tests specified in UL's "Fire Resistance Directory." Provide bond strength indicated in referenced UL fire-resistance criteria, but not less than 150 lbf/sq. ft. minimum per ASTM E 736.

5. If testing finds applications of SFRM are not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.

D. Remove and replace applications of SFRM that do not pass tests and inspections for cohesion and adhesion, for density, or for both and retest as specified above.

E. Apply additional SFRM, per manufacturer's written instructions, where test results indicate that thickness does not comply with specified requirements, and retest as specified above.

3.8 CLEANING, PROTECTING, AND REPAIR

A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

B. Protect SFRM, according to advice of product manufacturer and Installer, from damage resulting from construction operations or other causes so fire protection will be without damage or deterioration at time of Substantial Completion.

C. Coordinate application of SFRM with other construction to minimize need to cut or remove fire protection. As installation of other construction proceeds, inspect SFRM and patch any damaged or removed areas.

D. Repair or replace work that has not successfully protected steel.

END OF SECTION 07 81 00

SECTION **07 84 13** - **PENETRATION FIRESTOPPING**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Penetrations in fire-resistance-rated walls.
   2. Penetrations in horizontal assemblies.
   3. Penetrations in smoke barriers.

B. Related Sections:
   1. Division 07 Section 07 84 46 "Fire-Resistive Joint Systems" for joints in or between fire-resistance-rated construction, at exterior curtain-wall/floor intersections, and in smoke barriers.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Not used.

C. Product Schedule: For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency.

D. Qualification Data: For qualified Installer.

E. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written recommendations.

F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for penetration firestopping.

1.4 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Penetration firestopping shall comply with the following requirements:
   1. Penetration firestopping tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.

2. Penetration firestopping is identical to those tested per testing standard referenced in "Penetration Firestopping" Article. Provide rated systems complying with the following requirements:
   a. Penetration firestopping products bear classification marking of qualified testing and inspecting agency.
   b. Classification markings on penetration firestopping correspond to designations listed by the following:
      1) UL in its "Fire Resistance Directory."

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not install penetration firestopping when ambient or substrate temperatures are outside limits permitted by penetration firestopping manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.

B. Install and cure penetration firestopping per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.6 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping is installed according to specified requirements.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. A/D Fire Protection Systems Inc.
   2. Grace Construction Products.
   3. Hilti, Inc.
   4. Johns Manville.
   5. Nelson Firestop Products.
   6. NUCO Inc.
   7. Passive Fire Protection Partners.
   8. RectorSeal Corporation.
   9. Specified Technologies Inc.
   10. 3M Fire Protection Products.
   11. Tremco, Inc.; Tremco Fire Protection Systems Group.
   12. USG Corporation.

2.2 PENETRATION FIRESTOPPING

A. Provide penetration firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance

rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

B. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
   1. Fire-resistance-rated walls include fire walls fire-barrier walls smoke-barrier walls and fire partitions.
   2. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

C. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
   1. Horizontal assemblies include floors and floor/ceiling assemblies.
   2. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
   3. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.

D. Penetrations in Smoke Barriers: Provide penetration firestopping with ratings determined per UL 1479.
   1. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at 0.30-inch wg at both ambient and elevated temperatures.

E. W-Rating: Provide penetration firestopping showing no evidence of water leakage when tested according to UL 1479.

F. Exposed Penetration Firestopping: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

G. Omit

H. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping manufacturer and approved by qualified testing and inspecting agency for firestopping indicated.
   1. Permanent forming/damming/backing materials, including the following:
      a. Slag-wool-fiber or rock-wool-fiber insulation.
      b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
      c. Fire-rated form board.
      d. Fillers for sealants.
   2. Temporary forming materials.
   3. Substrate primers.
   4. Collars.
   5. Steel sleeves.

2.3 FILL MATERIALS

A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.

C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized-steel sheet.

E. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.

F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.

G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.

H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.

I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
   1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and sloped surfaces, unless indicated firestopping limits use of nonsag grade for both opening conditions.

2.4 MIXING

A. For those products requiring mixing before application, comply with penetration firestopping manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean out openings immediately before installing penetration firestopping to comply with manufacturer's written instructions and with the following requirements:
   1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping.
   2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping. Remove loose particles remaining from cleaning operation.
   3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.

3.3 INSTALLATION

A. General: Install penetration firestopping to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
   1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestopping.

C. Install fill materials for firestopping by proven techniques to produce the following results:
   1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
   2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
   3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Identify penetration firestopping with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of firestopping edge so labels will be visible to anyone seeking to remove penetrating items or firestopping. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
   1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
   2. Contractor's name, address, and phone number.
   3. Designation of applicable testing and inspecting agency.
   4. Date of installation.

5. Manufacturer's name.
6. Installer's name.

3.5 CLEANING AND PROTECTION

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping and install new materials to produce systems complying with specified requirements.

3.6 PENETRATION FIRESTOPPING SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.

B. Firestopping with No Penetrating Items:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 0001-0999.
   2. Type of Fill Materials: As required to achieve rating.

C. Firestopping for Metallic Pipes, Conduit, or Tubing:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 1001-1999.
   2. Type of Fill Materials: As required to achieve rating.

D. Firestopping for Electrical Cables:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 3001-3999.
   2. Type of Fill Materials: As required to achieve rating.

E. Firestopping for Insulated Pipes:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 5001-5999.
   2. Type of Fill Materials: As required to achieve rating.

F. Firestopping for Miscellaneous Electrical Penetrants:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 6001-6999.
   2. Type of Fill Materials: As required to achieve rating.

G. Firestopping for Miscellaneous Mechanical Penetrants:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 7001-7999.
   2. Type of Fill Materials: As required to achieve rating.

H. Firestopping for Groupings of Penetrants:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 8001-8999.
   2. Type of Fill Materials: As required to achieve rating.

END OF SECTION 07 84 13

SECTION 07 84 46 - FIRE-RESISTIVE JOINT SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Joints in or between fire-resistance-rated constructions.
   2. Joints at exterior curtain-wall/floor intersections including Perimeter fire containment at slab edges, including fire safing between floor slabs and curtain walls
   3. Joints in smoke barriers.

B. Related Sections:
   1. Division 07 Section 07 84 13 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Product Schedule: For each fire-resistive joint system. Include location and design designation of qualified testing agency.
   1. Where Project conditions require modification to a qualified testing agency's illustration for a particular fire-resistive joint system condition, submit illustration, with modifications marked, approved by fire-resistive joint system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

C. Qualification Data: For qualified Installer.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for fire-resistive joint systems.

1.4 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Fire-resistive joint systems shall comply with the following requirements:
   1. Fire-resistive joint system tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
   2. Fire-resistive joint systems are identical to those tested per testing standard referenced in "Fire-Resistive Joint Systems" Article. Provide rated systems complying with the following requirements:
      a. Fire-resistive joint system products bear classification marking of qualified testing agency.
      b. Fire-resistive joint systems correspond to those indicated by reference to designations listed by the following:
         1) UL in its "Fire Resistance Directory."

B. Preinstallation Conference: Conduct conference at Project site.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not install fire-resistive joint systems when ambient or substrate temperatures are outside limits permitted by fire-resistive joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.

B. Install and cure fire-resistive joint systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.6 COORDINATION

A. Coordinate construction of joints to ensure that fire-resistive joint systems are installed according to specified requirements.

B. Coordinate sizing of joints to accommodate fire-resistive joint systems.

C. Notify Owner's testing agency at least seven days in advance of fire-resistive joint system installations; confirm dates and times on day preceding each series of installations.

PART 2 - PRODUCTS

2.1 FIRE-RESISTIVE JOINT SYSTEMS

A. Where required, provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which fire-resistive joint systems are installed. Fire-resistive joint systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.

B. Joints in or between Fire-Resistance-Rated Construction: Provide fire-resistive joint systems with ratings determined per ASTM E 1966 or UL 2079:
   1. Joints include those installed in or between fire-resistance-rated walls floor or floor/ceiling assemblies and roofs or roof/ceiling assemblies.
   2. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of construction they will join.
   3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. A/D Fire Protection Systems Inc.
      b. CEMCO.
      c. Fire Trak Corp.
      d. Grace Construction Products.
      e. Hilti, Inc.
      f. Johns Manville.
      g. Nelson Firestop Products.
      h. NUCO Inc.
      i. Passive Fire Protection Partners.
      j. RectorSeal Corporation.
      k. Specified Technologies Inc.
      l. 3M Fire Protection Products.
      m. Tremco, Inc.; Tremco Fire Protection Systems Group.
      n. USG Corporation.

C. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079.

1. L-Rating: Not exceeding 5.0 cfm/ft of joint at 0.30 inch wg at both ambient and elevated temperatures.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    a. A/D Fire Protection Systems Inc.
    b. Grace Construction Products.
    c. Hilti, Inc.
    d. Johns Manville.
    e. Nelson Firestop Products.
    f. NUCO Inc.
    g. Passive Fire Protection Partners.
    h. RectorSeal Corporation.
    i. Specified Technologies Inc.
    j. 3M Fire Protection Products.
    k. Tremco, Inc.; Tremco Fire Protection Systems Group.
    l. USG Corporation.

3. **Perimeter Fire Containment**: At intersections between horizontal floor assemblies and nonrated exterior curtain walls, provide fire-resistive joint systems (fire safing insulation and sealant) tested in accordance with ASTM E2307.

D. Exposed Fire-Resistive Joint Systems: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

E. VOC Content: Provide fire-resistive joint systems that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Architectural Sealants: 250 g/L.
2. Sealant Primers for Nonporous Substrates: 250 g/L.
3. Sealant Primers for Porous Substrates: 775 g/L.

F. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials that are needed to install fill materials and to maintain ratings required. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing agency for systems indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean joints immediately before installing fire-resistive joint systems to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of fill materials.
2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with fill materials. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by fire-resistive joint system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent fill materials of fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing fire-resistive joint system's seal with substrates.

3.3 INSTALLATION

A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.

C. Install fill materials for fire-resistive joint systems by proven techniques to produce the following results:
1. Fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
2. Apply fill materials so they contact and adhere to substrates formed by joints.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Identify fire-resistive joint systems with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of joint edge so labels will be visible to anyone seeking to remove or penetrate joint system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
1. The words "Warning - Fire-Resistive Joint System - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.5 FIELD QUALITY CONTROL

A. Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Where deficiencies are found or fire-resistive joint systems are damaged or removed due to testing, repair or replace fire-resistive joint systems so they comply with requirements.

C. Proceed with enclosing fire-resistive joint systems with other construction only after inspection reports are issued and installations comply with requirements.

3.6 CLEANING AND PROTECTING

A. Clean off excess fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by fire-resistive joint system manufacturers and that do not damage materials in which joints occur.

B. Provide final protection and maintain conditions during and after installation that ensure fire-resistive joint systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

3.7 FIRE-RESISTIVE JOINT SYSTEM SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHBN or Category XHDG.

B. Floor-to-Floor, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.
   3. W-Rating: No leakage of water at completion of water leakage testing.

C. Wall-to-Wall, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

D. Floor-to-Wall, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

E. Head-of-Wall, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

F. Bottom-of-Wall, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

G. Wall-to-Wall, Fire-Resistive Joint Systems Intended for Use as Corner Guards:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

H. Perimeter Fire-Resistive Joint Systems:
   1. Integrity Rating: 2 hours.
   2. Insulation Rating: 1 hour.
   3. Linear Opening Width: As indicated, maximum

I: Perimeter Fire-Resistive Joint Systems – Fire Safing at Slab Edge and Curtain Wall

1. Location: Between horizontal concrete slabs and nonrated exterior curtain walls

2. Test Standard: ASTM E2307

3. Assembly Rating (Integrity): 2 hours

4. Insulation Rating: 1 hour

5. Linear Opening Width: As indicated on Drawings, maximum

6. Movement Capability: As tested; accommodate expected building movement

7. System Type: UL-classified perimeter fire containment system

8. Typical System Numbers (select based on tested configurations and manufacturer):
   - Hilti CW-D-1014
   - STI ASJ120-07
   - 3M CW-S-1016
   - Tremco FAS 0099

END OF SECTION 07 84 46

SECTION 079200 - JOINT SEALANTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Urethane joint sealants.
2. Mildew-resistant joint sealants.
3. Butyl joint sealants.
4. Latex joint sealants.
5. Compressible foam sealants

B. Related Requirements:

1. Section 03 30 00 Cast -In-Place Concrete for Concrete Sealants
2. Section 04 20 00 Unit Masonry
3. Section 05 40 00 Cold Formed Metal Framing for Compressible Joint Sealants
4. Section 07 84 46 fire-Resistive Joint Systems
5. Section 32, Exterior Improvements, Concrete Paving Joint Sealant for sealing joints in paved roads, parking lots, walkways, and curbing.

1.3 ACTION SUBMITTALS

A. Product Data: For each joint-sealant product.

B. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.

1.4 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each kind of joint sealant, for tests performed by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Product Testing: Test joint sealants using a qualified testing agency.

1. Testing Agency Qualifications: Qualified according to ASTM C 1021 to conduct the testing indicated.

1.6 PRECONSTRUCTION TESTING

A. Provide sealant adhesion pull testing in accordance with ASTM C1521 for mock up(s).

1.7 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.8 WARRANTY

A. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

2.2 URETHANE JOINT SEALANTS

A. Urethane, S, NS, 100/50, T, NT: Single-component, nonsag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C 920, Type S, Grade NS, Class 100/50, Uses T and NT.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Bostik, Arkema
   b. Master Builders Solutions, brand of MBCC Group, a Sika Company
   c. PPG Paints: PPG Industries, Inc.
   d. Pecora Corporation
   e. Sika Corporation – Building Componants
   f. Tremco Incorporated

2.3 MILDEW-RESISTANT JOINT SEALANTS

A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.

B. Silicone, Mildew Resistant, Acid Curing, S, NS, 25, NT: Mildew-resistant, single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, acid-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 25, Use NT.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. PPG Paints; PPG Industries, Inc.
   b. Sika Corporation - Building Components.
   c. The Dow Chemical Company.
   d. Tremco Incorporated.

2.4 BUTYL JOINT SEALANTS

A. Butyl-Rubber-Based Joint Sealants: ASTM C 1311.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Bostik, Inc.
   b. Pecora Corporation.

2.5 LATEX JOINT SEALANTS

A. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Pecora Corporation.
   b. Sherwin-Williams Company (The).
   c. Tremco Incorporated.

2.6 SILICONE JOINT SEALANTS

A. Silicone Joint Sealants

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. GE Construction Sealants: Momentive Performance Materials, Inc.
   b. Pecora Corporation
   c. Sika Corporation – Building Componants
   d. The Dow Chemical Company
   e. Tremco Incorporated

2. Silicone Joint Sealants in Natatorium and adjacent areas:
   a. To be chlorine Resistant. Provide all product documentation and warranties.

2.7 JOINT-SEALANT BACKING

A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

2.1 COMPRESSIBLE FOAM SEALANTS

A. A. Material: Pre-compressed, impregnated open-cell polyurethane or acrylic foam sealant, factory pre-coated with an adhesive or mastic facing and packaged in a pre-compressed state for field expansion after installation.

B. Performance Requirements:

1. Movement Capability: Minimum ±25 percent of nominal joint width.
2. Air Infiltration: ≤ 0.01 cfm/ft² at 1.57 psf (per ASTM E283).
3. Water Penetration: No leakage at 6.24 psf (per ASTM E331).
4. Temperature Range: Serviceable from -40°F to +185°F (-40°C to +85°C).
5. UV and Ozone Resistance: No deterioration per ASTM G155.

C. Compatibility: Confirm compatibility with adjacent sealants, coatings, and substrates.

D. Basis-of-Design Product:

1. EMSEAL – Emseal Emseal IB or AST Sealant (Watertight Impregnated Foam Seal).
2. Sika – Sika Emprise or Emseal WFR2.
3. BASF – MasterSeal NP 1 Pre-Compressed Foam Seal (or equal).

E. Color: As selected by Architect from manufacturer’s full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
    a. Concrete.
    b. Masonry.
    c. Unglazed surfaces of ceramic tile.
    d. Cast Stone
3. Remove laitance and form-release agents from concrete.
4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
    a. Metal.
    b. Glass.
    c. Porcelain enamel.
    d. Glazed surfaces of ceramic tile.

B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of sealant backings.
2. Do not stretch, twist, puncture, or tear sealant backings.
3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint profile per Figure 8A in ASTM C 1193 unless otherwise indicated.
4. Provide flush joint profile at locations indicated on Drawings according to Figure 8B in ASTM C 1193.
5. Provide recessed joint configuration of recess depth and at locations indicated on Drawings according to Figure 8C in ASTM C 1193.
    a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.4 FIELD QUALITY CONTROL

A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured sealant joints as follows:
    a. Perform 5 tests for the first 500 feet of joint length for each kind of sealant and joint substrate.

b. Perform one test for each 500 feet of joint length thereafter or one test per each floor per elevation.

2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
   a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
3. Inspect tested joints and report on the following:
   a. Whether sealants filled joint cavities and are free of voids.
   b. Whether sealant dimensions and configurations comply with specified requirements.
   c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.
4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 JOINT-SEALANT SCHEDULE

A. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces.

1. Joint Locations:
   a. Control and expansion joints in unit masonry.

b. Joints in dimension stone cladding.
c. Joints between metal panels.
d. Joints between different materials listed above.
e. Perimeter joints between materials listed above and frames of doors windows and louvers.
f. .
g. Other joints as indicated on Drawings.

2. Joint Sealant: Silicone, nonstaining, S, NS, 50, NT .
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors .

B. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces not subject to significant movement.

1. Joint Locations:
   a. Control joints on exposed interior surfaces of exterior walls.
   b. Perimeter joints between interior wall surfaces and frames of interior doorsandwindows .
   c. .
   d. Other joints as indicated on Drawings.
2. Joint Sealant: Acrylic latex .
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors .

C. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces.

1. Joint Locations:
   a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
   b. Tile control and expansion joints where indicated.
   c. .
   d. Other joints as indicated on Drawings.
2. Joint Sealant: Silicone, mildew resistant, acid curing, S, NS, 25, NT .
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors .

END OF SECTION 079200

SECTION 07 95 13 - EXPANSION JOINT COVER ASSEMBLIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Expansion joint cover assemblies for floor, wall, and ceiling surfaces.

1.2 RELATED REQUIREMENTS

A. Section 07 71 00 - Roof Specialties: Roof expansion joints.

B. Section 07 90 05 - Joint Sealers: Expansion and control joint finishing utilizing a sealant and bond breaker.

C. Section 09 21 16 - Gypsum Board Assemblies: Placement of expansion joint assemblies in gypsum board walls and ceilings.

1.3 REFERENCE STANDARDS

A. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

B. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric]; 2013.

C. ASTM B308/B308M - Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles; 2010.

D. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2015.

E. ASTM E1399/E1399M - Standard Test Method for Cyclic Movement and Measuring the Minimum and Maximum Joint Widths of Architectural Joint Systems; 1997 (2013).

F. ASTM E1612/E1612M - Standard Specification for Preformed Architectural Compression Seals for Buildings and Parking Structures; 1994 (Change 1, 2013).

G. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops; 2013a.

1.4 SUBMITTALS

A. See Section 01 33 00 for submittal procedures.

B. See Section 01 33 00 - Submittal Procedures, for submittal procedures.

C. Product Data: Provide joint assembly profiles, profile dimensions, anchorage devices and available colors and finish.

D. Shop Drawings: Indicate joint and splice locations, miters, layout of the work, affected adjacent construction and anchorage locations.

E. Samples: Submit two samples 12 inch long, illustrating profile, dimension, color, and finish selected.

F. Test Reports.

G. Manufacturer's Installation Instructions: Indicate rough-in sizes and required tolerances for item placement.

1.5 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for expansion joint covers.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Expansion Joint Cover Assemblies:
   1. Construction Specialties, Inc: www.c-sgroup.com. BASIS-OF-DESIGN (see drawings)
   2. Inpro: www.inprocorp.com.
   3. MM Systems Corp: www.mmsystemscorp.com.
   4. Watson Bowman Acme Corp.: www.wbacorp.com.
   5. Balco Inc.: www.balcousa.com.

B. Preformed Compressible Expansion Joint Seal:
   1. Emseal Joint Systems: www.emseal.com.
   2. Watson Bowman Acme Corp.: www.wbacorp.com.
   3. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 EXPANSION JOINT COVER ASSEMBLIES

A. Expansion Joint Cover Assemblies - General: Factory-fabricated and assembled; designed to completely fill joint openings, sealed to prevent passage of air, dust, water, smoke; suitable for traffic expected.
   1. Joint Dimensions and Configurations: As indicated on drawings.
   2. Joint Cover Sizes: Selected to suit joint width and configuration, based on manufacturer's published recommendations and limitations.
   3. Joint Cover Styles: As scheduled.
   4. Joint Movement Capability: If not indicated, provide minimum plus/minus 25 percent joint movement capability.
   5. Lengths: Provide covers in full lengths required; avoid splicing wherever possible.
   6. Anchors, Fasteners, and Fittings: Provided by cover manufacturer.
   7. Provide inside and outside corner joint cover for wall-to-wall junction to complement wall-to-wall joint cover.

B. Floor Joint Covers: Coordinate with indicated floor coverings.
   1. If floor covering is not indicated, obtain instructions from Architect before proceeding.
   2. If style is not indicated, provide extruded aluminum frame both sides, resilient seals, and minimize exposed metal.
   3. Joint Cover Styles: No Bump.
   4. Centering Bar: Provide to maintain position of center cover plate between side frames.
   5. Provide joint cover for floor-wall junction to complement floor-to-floor joint cover.

C. Recessed Cover Plate: Recessed to accept field-applied finish materials.
   1. Recess Depth: As required to accommodate adjacent flooring.

D. Sliding Cover Plate Type Covers: Provide plate with beveled edges and neat fit that does not collect dirt.

E. Covers In Gypsum Board Assemblies: Provide style with surface mounted snap-on receivers with sliding center plate.

F. Covers In Fire Rated Assemblies: Provide cover assembly having fire rating equivalent to that of assembly into which it is installed.

2.3 PREFORMED COMPRESSIBLE EXPANSION JOINT SEAL

A. Flexible profile manufactured from open-cell polyether urethane foam with a factory applied elastomeric silicone membrane coating designed to provide protection against moisture and water intrusion on vertical surfaces.
   1. Profile capable of providing a minimum of plus or minus 25 percent building movement and accommodate moderate variations in width of opening, complex directional change transitions and resist ultraviolet degradation.
   2. Coated on one side with pressure-sensitive adhesive and covered with protective wrapping
   3. Profile installed without use of field applied adhesives or invasive anchor systems.
   4. 100 percent free of wax or asphalt compounds.

2.4 PERFORMANCE REQUIREMENTS

A. Materials and systems tested to provide fire rating equal to that of the adjacent construction.
   1. Tested under positive pressure according to ASTM E119 or ASTM E814.

B. Floor covers shall resist a maximum point load of 2000 pounds without damage or permanent deflection.

C. Movement capacity of joint covers in compliance with test results of ASTM E1399/E1399M.

2.5 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper; or ASTM B308/B308M, 6061 alloy, T6 temper.
   1. Exposed Finish at Floors: Mill finish or natural anodized.
   2. Exposed Finish at Walls: Natural anodized.
   3. Exposed Finish at Ceilings: Painted white finish.

B. Resilient Seals:
   1. For Ceilings: Neoprene or Santoprene resilient material, flush, pleated, or hollow gasket; Shore A hardness of 40 to 75 Durometer.
   2. For Pedestrian Traffic Applications: EPDM rubber, Neoprene, or Santoprene; no PVC; Shore A hardness of 40 to 50 Durometer.

C. Silicone Facing: Custom color as selected.

D. Anchors and Fasteners: As recommended by cover manufacturer.

E. Compression Seals: ASTM E1612/E1612M preformed elastomeric extrusions.

F. Resilient Filler Exposed to View: Gray.

G. Threaded Fasteners: Stainless steel.

H. Backing Paint for Aluminum Components in Contact with Cementitious Materials: Asphaltic type.

I. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required rating period.

J. Moisture Barrier: 7-ply laminate reinforced polyethylene.

2.6 ACCESSORIES

A. Manufacturer's standard anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that joint preparation and dimensions are acceptable and in accordance with manufacturer's requirements.

B. Furnish frame depth for floor joints to accommodate floor finish thickness.

3.2 PREPARATION

A. Provide anchoring devices for installation and embedding under Section 03 30 00.
   1. Provide templates and rough-in measurements.

3.3 INSTALLATION

A. Install components and accessories in accordance with manufacturer's instructions.

B. Fire-Resistance-Rated Assemblies: Coordinate installation of architectural joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.
   1. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.

C. Align work plumb and level, flush with adjacent surfaces.

D. Rigidly anchor to substrate to prevent misalignment.

E. Precompressed Expansion Joint Seal: Do not stretch; avoid joints except at corners, ends, and intersections; install with face 1/8 to 1/4 inch below adjoining surface.

3.4 PROTECTION

A. Do not permit traffic over unprotected floor joint surfaces.

B. Provide strippable coating to protect finish surface.

3.5 SCHEDULE

		Model #	Comments
1ST FLOOR	**2" Expansion Joint**		
	Floor	NONE	
	Wall	FWF 200M FB	FIRE BARRIER
		FWF 200	
	Ceiling	PCW 200	
		ASM 200	
		FCF 200

	Exterior	VRF+SF 400	
		BRJ WC R 400	

3.6 SCHEDULE (EXTERIOR)

A. Wall to Wall Joint, Recess Mounted: Preformed compressible expansion joint seal.
   1. Basis of Design: Emseal, Colorseal
   2. Type: Compression Seal.
   3. Face color: Silicone facing in selected color to match adjacent wall color.
   4. Size as required to provide weathertight seal when installed.

END OF SECTION

DIVISION

07

THERMAL AND MOISTURE PROTECTION

SECTION 07 13 00 - SHEET WATERPROOFING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Sheet Waterproofing:
   1. Modified bitumen sheet membrane.

1.2 RELATED REQUIREMENTS

A. Section 07 21 00 - Thermal Insulation: Insulation used for protective cover.

B. Section 07 90 05 - Joint Sealers: Sealant for joints in substrates.

1.3 ABBREVIATIONS

1.4 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2006a (Reapproved 2013).

B. ASTM D570 - Standard Test Method for Water Absorption of Plastics; 1998 (Reapproved 2010).

C. ASTM D5957 - Standard Guide for Flood Testing Horizontal Waterproofing Installations; 1998 (Reapproved 2013).

D. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2014.

E. NRCA (WM) - The NRCA Waterproofing Manual; 2005.

1.5 SUBMITTALS

A. See Section 01 33 00 for submittal procedures.

B. Product Data: Provide data for membrane.

C. VOC Content: certification of data indicating VOC (Volatile Organic Compound) content of all components of waterproofing system.

D. Certificate: Certify that products meet or exceed specified requirements.

E. Manufacturer's Installation Instructions: Indicate special procedures.

F. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Membrane Manufacturer Qualifications: Company specializing in manufacturing products specified in this section

B. Installer Qualifications: Company specializing in performing work of the type specified

1.7 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application and until liquid or mastic accessories have cured.

1.8 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for waterproofing failing to resist penetration of water, except where such failures are the result of structural failures of building. Hairline cracking of concrete due to temperature change or shrinkage is not considered a structural failure.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Grace Construction Products; Product Bituthene 3000; www.na.graceconstruction.com.

B. Other Acceptable Manufacturers:
   1. Henry Company; Product Blueskin WP200: www.henry.com.
   2. W.R. Meadows, Inc; Product Mel-Rol: www.wrmeadows.com.
   3. Carlisle Coatings & Waterproofing Incorporated; MiraDRI 860/861: www.carlisle-ccw.com.
   4. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 MEMBRANE MATERIALS

A. Modified Bituminous Sheet Membrane: Asphalt and polymer modifiers of SBS type, reinforced with non-woven polyester; smooth surfaced.
   1. Formulated for seaming by contact adhesive.
   2. Thickness: 1/16 inch.
   3. Sheet Width: 36 inch, minimum.
   4. Tensile Strength: 325 psi, measured in accordance with ASTM D412.
   5. Ultimate Elongation: 300 percent, measured in accordance with ASTM D412.
   6. Water Absorption: 0.1 percent increase in weight, maximum, measured in accordance with ASTM D570, water immersion.
   7. Water Vapor Permeability: 0.05 perm inch, measured in accordance with ASTM E96/E96M.

B. Primer: Compatible with membrane; as recommended by membrane manufacturer.

C. Rubberized Mastic: Compatible with membrane; as recommended by membrane manufacturer.

D. Liquid Membrane: Compatible with membrane; as recommended by membrane manufacturer.

2.3 ACCESSORIES

A. Protection Board: 1/8 inch thick bitumen impregnated glass fiberboard .

B. Cant Strips: Premolded composition material.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions are acceptable prior to starting this work.

B. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of waterproofing system.

C. Verify items that penetrate surfaces to receive waterproofing are securely installed.

3.2 PREPARATION

A. Protect adjacent surfaces from damage not designated to receive waterproofing.

B. Clean and prepare surfaces to receive waterproofing in accordance with manufacturer's instructions; vacuum substrate clean.

C. Do not apply waterproofing to surfaces unacceptable to membrane manufacturer.

D. Seal cracks and joints with sealant using depth to width ratio as recommended by sealant manufacturer.

E. Surfaces for Adhesive Bonding: Apply surface conditioner at a rate recommended by manufacturer, and protect conditioner from rain or frost until dry.

3.3 INSTALLATION - MEMBRANE

A. Install membrane waterproofing in accordance with manufacturer's instructions and NRCA (WM) applicable requirements.

B. Roll out membrane, and minimize wrinkles and bubbles.

C. Self-Adhering Membrane: Remove release paper layer, and roll out onto substrate with a mechanical roller to provide full contact bond.

D. Overlap edges and ends, minimum 3 inches, seal permanently waterproof by method recommended by manufacturer, and apply uniform bead of sealant to joint edge.

E. Reinforce membrane with multiple thickness of membrane material over joints, whether joints are static or dynamic.

F. Weather lap joints on sloped substrate in direction of drainage, and seal joints and seams.

G. Coordinate with drain installation; see Division 22.

H. Flexible Flashings: Seal items watertight that penetrate through waterproofing membrane with flexible flashings.

I. Seal membrane and flashings to adjoining surfaces.

3.4 INSTALLATION - DRAINAGE PANEL and PROTECTION BOARD

A. Place drainage panel directly against membrane, butt joints, place to encourage drainage downward. Scribe and cut boards around projections, penetrations, and interruptions.

B. Protection board not required when drainage matting or insulation board is applied over membrane material.

C. Place protection board directly against drainage panel; butt joints. Scribe and cut boards around projections, penetrations, and interruptions.

D. Adhere protection board to substrate with compatible adhesive.

3.5 FIELD QUALITY CONTROL

A. On completion of horizontal membrane installation, dam installation area in preparation for flood testing in accordance with ASTM D5957.

B. Flood to minimum depth of 1 inch with clean water, and after 48 hours inspect for leaks.

C. If leaking is found, remove water, repair leaking areas with new waterproofing materials as directed by Architect; repeat flood test, and repair damage to building.

D. When area is proven watertight, drain water and remove dam.

3.6 PROTECTION

A. Do not permit traffic over unprotected or uncovered membrane.

3.7 SCHEDULE

A. Modified bituminous membrane, self-adhering.
   1. Elevator pit walls.
   2. Planter basin, vertical sides and bottom slab.
   3. Exterior side of pool walls
   4. Retaining walls.

END OF SECTION

SECTION 07 13 13 - UNDERSLAB VAPORPROOFING / WATERPROOFING MEMBRANE

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Underslab vaporproofing/waterproofing membrane in horizontal applications.

1.2 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-In-Place Concrete

B. Section 03 30 01 Under Slab Vapor Barrier

C. Section 07 13 00 - Sheet Waterproofing

D. Section 07 62 00 - Sheet Metal Flashing and Trim

1.3 REFERENCE STANDARDS

A. ASTM D5957 - Standard Guide for Flood Testing Horizontal Waterproofing Installations; 1998 (Reapproved 2013).

B. ASTM E154/E154M - Standard Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover; 2008a (Reapproved 2013).

C. ASTM E1993/E1993M - Standard Specification for Bituminous Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs; 1998 (Reapproved 2013).

D. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2014.

E. ASTM F1249 - Standard Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor; 2006 (Reapproved 2011).

F. NRCA ML104 - The NRCA Roofing and Waterproofing Manual; Fifth Edition, with interim updates.

1.4 SUBMITTALS

A. See Section 01 33 00, for submittal procedures.

B. Product Data: Provide data for membrane and accessories.

C. Manufacturer's Installation Instructions: Indicate special procedures.

D. Certificate: Certify that products meet or exceed specified requirements.

E. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with NRCA ML104 for waterproofing system.

B. Membrane Manufacturer Qualifications: Company specializing in waterproofing sheet membranes with three years experience.

C. Installer Qualifications: Company specializing in performing the work of this section with minimum three years experience.

1.6 FIELD CONDITIONS

A. Maintain ambient temperatures above 40 degrees F for 24 hours before and during application and until liquid or mastic accessories have cured.

1.7 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide two year manufacturer warranty for waterproofing failing to resist penetration of water, except where such failures are the result of structural failures of building. Hairline cracking of concrete due to temperature change or shrinkage is not considered a structural failure.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. W.R. Meadows, Inc: www.wrmeadows.com.or approved equal.

B. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 MEMBRANE MATERIALS

A. Bituminous Vaporproofing / Waterproofing Membrane: ASTM E1993/E1993M, seven-ply, asphalt-coated, permanently bonded, semi-flexible bituminous core board composed of a 3-ply plasmatic matrix, sealed between liners of asphalt-impregnated felt and a glass mat liner and covered with a polyethylene anti-stick sheet.
   1. Weight: 1.60 lb/ sq ft.
   2. Width: 48 inch, minimum.
   3. Water Vapor Permeability: 0.0011 perms, minimum in accordance with ASTM F1249, calibrated to ASTM E96/E96M, Water Method.
   4. Tensile Strength: 156 lb force/inch, measured in accordance with ASTM E154/E154M, Section 9.
   5. Puncture Resistance: 149 lb. force in accordance with ASTM E154/E154M.
   6. Product: Premolded Membrane Vapor Seal with Plasmatic Core manufactured by W. R. Meadows.

2.3 ACCESSORIES

A. Bonding Asphalt: Catalytic Bonding Asphalt manufactured by W. R. Meadows.

B. Adhesive: Pointing Mastic manufactured by W. R. Meadows.

C. Joint Tape: PMPC Tape manufactured by W. R. Meadows.

D. Pointing Mastic: Pointing Mastic manufactured by W. R. Meadows.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify substrate surfaces are durable; free of matter detrimental to adhesion or application of membrane system.

C. Verify that items that penetrate surfaces to receive membrane are securely installed.

3.2 PREPARATION

A. Prepare surfaces to receive membrane in accordance with manufacturer's instructions.

B. Do not apply membrane to surfaces unacceptable to membrane manufacturer.

3.3 INSTALLATION - MEMBRANE

A. Apply membrane in accordance with manufacturer's instructions to provide a permanent, monolithic vapor seal without voids or open seams.

B. Ensure accessory materials are compatible with membrane and approved by membrane manufacturer.

C. Place membrane in position by either Dutch lap method with laps sealed with bonding asphalt or by butt joint method with joints sealed with joint tape.

D. Point exposed edges with pointing mastic to prevent water from traveling under membrane.

E. Coordinate with drain installation; see Section 22 10 10 Plumbing Piping
Extend waterproofing material into drain clamp
flange; apply adequate coating of bonding asphalt to assure clamp ring seal.

F. In accordance with manufacturer's installation instructions, place membrane collar around penetrations through concrete slab, including pipes, conduits and utility devices to create a positive seal between penetrations and membrane. Seal in place with joint tape and point around penetrations with pointing mastic.

G. Adhere membrane to vertical surfaces with adhesive.

H. Install counterflashing over all exposed edges.

3.4 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. On completion of horizontal membrane installation, dam installation area in preparation for flood testing in accordance with ASTM D5957.

C. Flood to minimum depth of 2 inch with clean water. After 48 hours, inspect for leaks.

D. If leaking is found, remove water, repair leaking areas with new membrane materials as directed by Architect; repeat flood test. Repair damage to building.

E. When area is proven watertight, drain water and remove dam.

F. Representatives of Contractor and membrane manufacturer shall be present for final inspection.

3.5 PROTECTION

A. Protect membrane from damage until placement of concrete.

3.6 SCHEDULE

A. Bituminous Vaporproofing / Waterproofing Membrane:
1. Install at grade supported slabs. Extend membrane 3 feet beyond perimeter of such areas. Seal membrane edges with adjacent below-grade sheet vapor retarders.
2. Install at grade supported slabs located below water table.
3. Horizontal underslab applications beneath cast-in place concrete

END OF SECTION

SECTION 07 16 14 - POLYMER MODIFIED CEMENT WATERPROOFING

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Polymer modified cement waterproofing.

1.2 RELATED REQUIREMENTS

A. Section 03 30 00 - Cast-in-Place Concrete: Concrete to be waterproofed.

1.3 REFERENCE STANDARDS

A. ASTM C109/C109M - Standard Test Method for Compressive Strength of Hydraulic Cement Mortars (Using 2-in. or (50-mm) Cube Specimens); 2013.

B. ASTM C666/C666M - Standard Test Method for Resistance of Concrete to Rapid Freezing and Thawing; 2015.

C. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2006a (Reapproved 2013).

D. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2014.

1.4 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
   4. Details of joints and intersections.

C. Certification: Provide manufacturer's certification that waterproofing to be provided is suitable for the purpose specified and the locations where it is intended to be installed and that the requirements of the contract documents do not preclude satisfactory installation and performance.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section, with not less than three years of documented experience.

B. Installer Qualifications: Company specializing in performing work of the type specified in this section with minimum three years of documented experience and approved by manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to project site in manufacturer's original packaging, marked with manufacturer's product identification.

B. Store products in manufacturer's unopened packaging until ready for installation.

C. Keep stored products dry; store under cover and elevated above grade.

1.7 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.8 WARRANTY

A. See Section 01 77 00 Closeout Procedures or additional warranty requirements.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Polymer-Modified Cement Waterproofing:
   1. BASF Construction Chemicals-Building Systems MasterSeal 550: www.buildingsystems.basf.com.

2.2 MATERIALS

A. Polymer-Modified Cement Waterproofing : Manufactured slurry coating of Portland or hydraulic cement, aggregates, polymer admixtures, and water; no solvents; for application directly to cementitious substrate.
   1. Explicitly recommended by manufacturer as waterproofing, not simply as dampproofing.
   2. Requiring green concrete cure time of not more than 28 days.
   3. Elongation at Failure: 20 percent, minimum, when tested in accordance with ASTM D412.
   4. Water Vapor Transmission: MINIMUM permeance of finished coating of 1 perm, when tested in accordance with ASTM E96/E96M.
   5. Freeze-Thaw Durability: No change when tested in accordance with ASTM C666/C666M for 300 cycles.
   6. Compressive Strength: 5,000 psi, minimum, at 28 days, when tested in accordance with ASTM C109/C109M.
   7. Finished Coating Thickness: As recommended by manufacturer for the specific application but not less than 1/16 inch.

B. Crack Repair Material, Joint Tape, and Reinforcing: Type and application as recommended by waterproofing manufacturer.

C. Water: Clean, clear, non-alkaline potable water, free of salts and other harmful elements.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine surfaces where waterproofing is to be applied for conditions detrimental to satisfactory performance.

B. Do not begin installation until substrates have been properly prepared.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Remove defective concrete and rebuild to original profiles.

B. Plug active leaks according to waterproofing manufacturer's instructions.

C. Patch holes and non-moving cracks and joints.

D. Clean and prepare surfaces thoroughly prior to installation; schedule cleaning and preparation so that residue will not fall on newly coated, uncured surfaces.

E. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions. Use sandblasting, water blasting, or acid etching as recommended.

F. Application of waterproofing constitutes acceptance of substrates.

G. Protect other work from fallout, overspray, and spatter from waterproofing application; provide temporary enclosures and covers as necessary to do so.

3.3 INSTALLATION

A. Install waterproofing in accordance with manufacturer's instructions and recommendations unless more stringent requirements are indicated.

B. Perform installation only during ambient and substrate conditions recommended by manufacturer; provide temporary enclosures and/or temporary heating as necessary to do so.

C. Fill voids and holes prior to application of first coat.

D. Apply the number of coats and at the rates recommended by manufacturer for the specific application but not less than specified minimum thickness; apply at least two coats unless one coat is specifically indicated.

E. At surfaces exposed to view, apply a uniformly textured finish without major variations in appearance.

F. Extend waterproofing to all surfaces in areas indicated to form continuous waterproofed surfaces.

G. Cure waterproofing by recommended methods for recommended period prior to making waterproofed area available for use or occupancy; protect from too rapid drying, severe weather exposure, and water accumulation.
   1. Hot, Dry Weather: Use wet-cure methods regardless of manufacturer's instructions.
   2. Do not use covers that could stain waterproofing surfaces.
   3. Do not use chemical curing agents unless explicitly approved by waterproofing manufacturer.
   4. Do not expose waterproofing to sunlight for minimum of 72 hours after placement.

H. Do not backfill, fill water or liquid holding structures, or apply finish coatings until time period recommended by manufacturer has passed.

3.4 FIELD QUALITY CONTROL - WATER HOLDING STRUCTURES

A. Flood test waterproofing application by filling to capacity and allowing to stand for not less than 24 hours.

B. If any leaks appear, notify Architect and drain.
   1. Repair leaks at no additional cost to Owner.
   2. Repeat flood test until all leakage is eliminated.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

3.6 SCHEDULE

A. Surface - applied above or on concrete (vertical /horizontal) protection from water intrusion

B. Pool and water holding structures.

END OF SECTION

SECTION 071616 - CRYSTALLINE WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Crystalline waterproofing.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference TBD.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.4 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Product test reports.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: A firm experienced in applying crystalline waterproofing similar in material, design, and extent to that indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

1.6 FIELD CONDITIONS

A. Proceed with waterproofing work only after pipe sleeves, vents, curbs, inserts, drains, and other projections through the substrate to be waterproofed have been completed. Proceed only after substrate defects, including honeycombs, voids, and cracks, have been repaired to provide a sound substrate free of forming materials, including reveal inserts.

B. Ambient Conditions: Proceed with waterproofing work only if temperature is maintained at 40 deg F (4.4 deg C) or above during work and cure period, and space is well ventilated and kept free of water.

C. Surface shall be protected from rain, frost, or excessive drying for minimum 48 hours following application.

PART 2 – PRODUCTS

2.1 WATERPROOFING MATERIALS

A. Crystalline Waterproofing: Prepackaged, [gray] [white]-colored proprietary blend of portland cement, specially treated sand, and active chemicals that, when mixed with

water and applied, penetrates into concrete and concrete unit masonry and reacts chemically with the byproducts of cement hydration in the presence of water to develop crystalline growth within substrate capillaries to produce an impervious, dense, waterproof substrate; with properties complying with or exceeding the criteria specified below.

1. Schomburg / AQUAFIN or approved equal suitable for Houma, Louisiana.

2. Water Permeability: Maximum [zero for water at 30 feet (9 m)] hydrostatic pressure when tested according to COE CRD-C 48.

3. Compressive Strength: Minimum [4000 psi (27.6 MPa)] at 28 days when tested according to ASTM C109/C109M.

2.2 ACCESSORY MATERIALS

A. Patching Compound: Factory-premixed cementitious repair mortar, crack filler, or sealant recommended by waterproofing manufacturer for filling and patching tie holes, honeycombs, reveals, and other imperfections; and compatible with substrate and other materials indicated.

B. Plugging Compound: Factory-premixed cementitious compound with hydrophobic properties and recommended by waterproofing manufacturer; resistant to water and moisture but vapor permeable for all standard applications (vertical, overhead, and horizontal surfaces not exposed to vehicular traffic); and compatible with substrate and other materials indicated.

C. Water: Potable.

2.3 MIXES

A. Crystalline Waterproofing: Add prepackaged dry ingredients to water according to manufacturer's written instructions. Mix together with mechanical mixer or by hand to required consistency.

B. Mix only enough material for immediate use; use within working time specified by manufacturer (typically 20 to 30 minutes).

PART 3 - EXECUTION

3.1 PREPARATION

A. Comply with manufacturer's written instructions and the following practices:

1. Surfaces shall be structurally sound, fully cured, and free of dust, dirt, oil, grease, curing compounds, laitance, paint, form release agents, or other contaminants.

2. Prepare surface by high-pressure water blasting, sandblasting, or equivalent mechanical method to open capillaries and ensure absorption.

3. Do not use acid etching.

4. Ensure surface is in saturated surface-dry (SSD) condition at time of application: uniformly damp but free of standing water.

B. Protect adjacent work from damage caused by preparation or application of waterproofing.

C. Do not allow waterproofing, patching, and plugging materials to enter annular spaces intended for resilient sealants or gaskets.

D. Plug active leaks using manufacturer-approved plugging compound prior to waterproofing.

E. Repair damaged or unsatisfactory substrate with patching compound.

1. At holes and cracks 1/16 inch (1.6 mm) wide or larger, remove loose material, cut to reveal with sides perpendicular to surface, minimum 1 inch (25 mm) deep. Fill flush with patching compound.

3.2 INSTALLATION

A. Comply with waterproofing manufacturer's written instructions for application and curing.

1. Saturate prepared surface with clean water for several hours prior to application. Maintain SSD condition.

2. Apply waterproofing uniformly by brush, spray, or trowel in [two] [three] <Insert number> coats to required thickness.

3. Apply second and subsequent coats while the previous coat is green (not fully dry), or pre-dampen if fully dried.

4. Extend waterproofing onto adjacent surfaces:

a. Onto integral columns and footings within treated areas.

b. Minimum 12 inches (300 mm) up vertical surfaces from treated floors.

c. Onto intersecting walls (interior and exterior) as specified.

d. At trenches, sumps, pits, pipe chases, and similar elements.

5. Application shall be continuous and uniform with full contact to substrate and complete coverage of pores and irregularities.

6. Provide neat termination lines and prevent bridging or buildup at edges.

7. Dampen surface between coats.

B. Final Coat Finish: [Smooth] [Brushed] [Spray textured] as required.

C. Do not apply during rain or when substrate is frozen.

D. Coordinate sequencing with other trades to ensure penetrations, embedded items, and surface preparation is complete before application.

3.3 CURING AND PROTECTION

A. Moist-Cure: Begin immediately after final coat has set.

1. Keep surface damp using misting, fog spray, or wet burlap for a minimum of [3] days.

2. Prevent surface from drying out during curing period; protect from frost, rain, and direct sun.

3. Do not use curing compounds or plastic sheeting unless approved by manufacturer.

B. Prevent damage to installed coating by foot traffic, backfill operations, or other construction activity.

C. Do not expose treated surfaces to hydrostatic pressure or submersion until full cure is achieved.

END OF SECTION 071616

SECTION 07 18 00 - TRAFFIC COATINGS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fluid-applied membrane coating for waterproofing and traffic surface.

1.2 REFERENCE STANDARDS

A. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers--Tension; 2006a (Reapproved 2013).

B. ASTM D4259 - Standard Practice for Abrading Concrete; 1988 (Reapproved 2012).

C. ASTM D5295/D5295M - Standard Guide for Preparation of Concrete Surfaces for Adhered (Bonded) Membrane Waterproofing Systems; 2014.

D. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials; 2015a.

E. ASTM E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials; 2014.

F. ASTM F1869 - Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride; 2011.

G. ASTM F2170 - Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using in situ Probes; 2011.

H. SCAQMD 1168 - South Coast Air Quality Management District Rule No.1168; current edition.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Meeting: Conduct a preinstallation meeting at least one week prior to the start of the work of this section; require attendance by all affected installers.

1.4 SUBMITTALS

A. See Section 01 33 00 - Submittal Requirements, for submittal procedures.

B. Product Data: Include product characteristics and limitations. Identify dissolving solvents, fuels, and potential destructive compounds.

C. Shop Drawings: Indicate special joint or termination conditions and conditions of interface with other materials.

D. Samples: Submit two samples of cured membrane, 4x4 inch in size, illustrating color, surface texture, and variations.

E. Certificate: Certify that products meet or exceed specified requirements.

F. Manufacturer's Installation Instructions: Include special field conditions required to install traffic membrane and potential incompatibilities with adjacent materials.

G. Maintenance Data: Include procedures for stain removal, repairing surface, and cleaning.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products of the type specified in this section, with not less than three years of documented experience.

B. Applicator Qualifications: Company specializing in performing installation of traffic membrane, with minimum three years documented experience and approved by manufacturer.

C. Compatibility: Provide traffic coating, joint sealants, backings, and other related materials that are compatible with one another and with substrates under conditions of service and application, as demonstrated by traffic coating manufacturer, based on testing and field experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Maintain storage area at minimum ambient temperature of 55 degrees F.

B. Keep away from fire or open flame.

1.7 FIELD CONDITIONS

A. Do not install materials when temperature is below 40 degrees F or when surface temperature is above 115 degrees F.

B. Maintain this temperature range, 24 hours before, during and 72 hours after application.

C. Restrict traffic from area where materials are being installed or are curing.

D. Ventilate enclosed areas to assist cure of materials, to dissipate humidity, and to prevent accumulation of dust, fumes, vapors, or gases.

1.8 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Manufacturer's Warranty: Manufacturer's standard form in which traffic coating manufacturer agrees to repair or replace traffic coatings that deteriorate during the specified warranty period. Warranty does not include deterioration or failure of traffic coating due to unusual weather phenomena, failure of prepared and treated substrate, formation of new substrate cracks exceeding 1/16 inch in width, fire, vandalism, or abuse by snowplow, maintenance equipment, and truck traffic.
   1. Deterioration of traffic coatings includes the following:
      a. Adhesive or cohesive failures.
      b. Abrasion or tearing failures.
      c. Surface crazing or spalling.
      d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
   2. Warranty Period: Five years from date of Substantial Completion.

C. Applicator's Warranty: Correct defective Work within a two year period after Date of Substantial Completion.
   1. Non-compliance and defective work includes the following:
      a. Adhesive or cohesive failures.
      b. Abrasion or tearing failures.
      c. Surface crazing or spalling.
      d. Intrusion of water, oils, gasoline, grease, salt, deicer chemicals, or acids into deck substrate.
   2. Warranty does not include deterioration or failure of traffic coating due to unusual weather phenomena, failure of prepared and treated substrate, formation of new substrate cracks exceeding 1/16 inch in width, fire, vandalism, or abuse by snowplow, maintenance equipment, and truck traffic.

3. Applicator Maintenance: For two years after completion and acceptance of the traffic coating membrane, provide a 24 hour/7 days per week 1-hour call back response for repair of system failures including leaks.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Polyurethane Traffic Coating:
   1. BASF; MasterSeal Traffic 1500: www,master-builders-solutions.basf.us.
   2. Substitutions: See Section 01 25 00 Substitution Procedures and Substitution Request Form

2.2 TRAFFIC COATINGS

A. Pedestrian Polyurethane Waterproof Coating System: Fluid applied, moisture-curing, polyurethane system with base and top coat.
   1. Finished Coating Thickness: 55 mils, 0.055 inch, minimum.
   2. Color: As selected by Architect.
   3. Manufacturers:
      a. BASF; MasterSeal Traffic 1500: www,master-builders-solutions.basf.us.

2.3 MATERIALS

A. Coatings - General: Provide only products having lower volatile organic compound (VOC) content than required by SCAQMD 1168.

B. Membrane: Fluid applied two component polyurethane; waterproof; color as selected; conforming to the following:
   1. Type TC-1, Pedestrian 2 coat system
      a. Base coat, 30 dry mils minimum
      b. Top coat, 15 dry mils minimum
   2. Physical Properties: Meet or exceed manufacturer's published properties.

C. Surfacing: Silica sand, compatible with coating compound, as recommended by coating manufacturer.

D. Elastic Flashings: 60 mil thick neoprene as recommended by coating manufacturer.

E. Joint Cover Sheet: 60 mil think elastic sheet material designed for and compatible with coating.

F. Filler and Primer: As recommended by membrane manufacturer.

G. Sealant: PVC Membrane, butyl rod or other support material, as recommended by membrane manufacturer, and compatible with system and adjacent materials.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing dimensions and details prior to installation of materials.

B. Verify that substrate is ready to receive work, surface is clean, dry and free of substances that could adversely affect bond.

C. Do not begin work until concrete substrate has cured at least 28 days and moisture content is 16 percent or less.

D. Ensure that curing compound and hardener are compatible with specified coating. Remove incompatible hardeners and compounds according to manufacturer's instructions.

E. Verify that concrete sub-floor surfaces are ready for traffic coating installation by testing for moisture emission rate and alkalinity according to ASTM F1869 procedures; obtain instructions if test results are not within limits recommended by traffic coating manufacturer.
   1. At lightweight concrete, gypsum concrete and patching and leveling compounds, test in accordance with ASTM F2170.

F. Ensure that drains, sleeves and curbs that pass through surfaces to receive coating are properly and rigidly installed.

G. Ensure that surfaces are free of cracks, depressions, waves or projections that may be detrimental to proper installation of coating membrane.

3.2 PREPARATION

A. Clean substrate surface free of foreign matter.

B. Patch concrete substrate with filler to produce surface conducive to bond.

C. Apply 12 inch wide strip of joint cover sheet over cracks, non-working joints, and expansion joints over 1/16 inch, but not exceeding 1/2 inch wide.

D. At expansion joints from 1/2 inch to 1 inch in width, loop cover sheet down into joint a distance of 1-1/4 to 1-3/4 inches. Extend sheet minimum of 6 inches on both sides of expansion joint.

E. Center cover over cracks and joints. Roll sheet into 1/8 inch coating of waterproof membrane. Apply second coat over sheet edge extending a minimum of 6 inches beyond sheet edges.

F. Protect adjacent surfaces.

G. Concrete Surfaces for Adhesive Bonding: Prepare concrete substrate according to ASTM D5295/D5295M.
   1. Remove substances that inhibit adhesion including form release agents, curing compounds admixtures, laitance, moisture, dust, dirt, grease and oil.
   2. Repair surface defects including honeycombs, fins, tie holes, bug holes, sharp offsets, rutted cracks, ragged corners, deviations in surface plane, spalling and delaminations, as described in the reference standard.
   3. Remove and replace areas of defective concrete as specified in Section 03 30 00.
   4. Prepare concrete for adhesive bonded traffic coating using mechanical methods in accordance with ASTM D4259.

H. Temporarily close off deck drains and other deck penetrations to prevent spillage and migration of traffic-coating fluids. Re-open deck drains at the end of each work day or when rain is imminent.

3.3 INSTALLATION

A. Apply system materials in accordance with manufacturer's instructions.

B. Apply primer to prepared substrate at rate recommended by manufacturer.

C. When base coat is tack free, apply one coat of top coating to a minimum dry film thickness recommended by coating manufacturer.

D. Extend primer, base and top coats up intersecting and perimeter vertical surfaces, 4 inches. Terminate top edge in a straight line.

E. Finish to smooth surface sloped to drains. Cove at vertical surfaces.

F. Seal items projecting through coating.

G. Install coating over joints, both static and moving.

H. Do not apply traffic paint for striping and other markings until traffic coating has cured according to manufacturer's written recommendations.

3.4 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for additional requirements.

B. Verify the applied thickness before the material attains final set, by use of a mil-thickness gauge as the work progresses. Immediately apply additional coating to produce required thickness where readings indicate a thickness less than that specified.

C. Visually inspect areas which cannot be water tested for voids, damage, or rupture. Repair as required.

D. Replace Work or materials damaged beyond repair, in opinion of Architect, at no cost to Owner.

3.5 PROTECTION

A. Allow top coating to cure for 48 hours minimum before permitting traffic on surfaces. At temperatures less than 75 degrees F and relative humidity less the 50 percent, extend curing time.

3.6 CLEANING

A. Clean stains from adjacent surfaces with cleaning agent recommended by coating manufacturer.

B. Remove foreign matter from finished coating surfaces.

END OF SECTION

SECTION 07 19 00 - WATER REPELLENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes penetrating water-repellent treatments for the following vertical and horizontal surfaces:

1. Cast stone.

1.3 PERFORMANCE REQUIREMENTS

A. General Performance: Water repellents shall meet performance requirements indicated without failure due to defective manufacture, fabrication, or installation.

1. Water Repellents: Comply with performance requirements specified, as determined by testing on manufacturer's standard substrate assemblies representing those indicated for this Project.

B. Water Absorption: Minimum 90 percent reduction of water absorption after 24 hours in comparison of treated and untreated specimens.

1. Cast Stone: ASTM C 1195.

C. Water-Vapor Transmission: Comply with one or both of the following:

1. Maximum 15 percent reduction in rate of vapor transmission in comparison of treated and untreated specimens, according to ASTM E 96/E 96M.
2. Minimum 90 percent water-vapor transmission in comparison of treated and untreated specimens, according to ASTM D 1653.

D. Water Penetration and Leakage through Masonry: Minimum 90 percent reduction in leakage rate in comparison of treated and untreated specimens, according to ASTM E 514.

E. Durability: Maximum 5 percent loss of water-repellent properties after 2500 hours of weathering according to ASTM G 154 in comparison to water-repellent-treated specimens before weathering.

F. Visual Evidence of Water Repulsiveness: Visual inspection.

1. Treated materials give visual evidence of widespread surface hydrophobia: visible beading.

a. Minimum surface area displaying water beading: 100% for first 18 months, 90% through remainder of warranty.

2. Treated materials give little to no evidence of water absorption: surface discoloration, deepening of hue, indicating water penetration.

a. Maximum surface area visibly wetted: 0% for first 18 months, 10% through remainder of warranty.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

1. Include manufacturer's printed statement of VOC content.
2. Include manufacturer's standard colors.
3. Include manufacturer's recommended number of coats for each type of substrate and spreading rate for each separate coat.

B. Samples: For each type and color of water repellent and substrate indicated, 12 by 12 inches in size, with specified water-repellent treatment applied to half of each Sample.

C. Qualification Data: For qualified Applicator.

D. Product Certificates: For each type of water repellent, from manufacturer.

E. Preconstruction Testing Reports: For water-repellent-treated substrates.

F. Field quality-control reports.

G. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: An employer of workers trained and approved by manufacturer.

B. MPI Standards: Comply with MPI standards indicated and provide water repellents listed in its "MPI Approved Products List."

C. Mockups: Apply water repellent to each type of substrate required.

1. Locate each test application as directed by Architect.
2. Size: 25 sq. ft..
3. Final approval by Architect of color and water-repellent application will be from test applications.

1.6 PROJECT CONDITIONS

A. Limitations: Proceed with application only when the following existing and forecasted weather and substrate conditions permit water repellents to be applied according to manufacturers' written instructions and warranty requirements:

1. Concrete surfaces and mortar have cured for not less than 28 days.
2. Building has been closed in for not less than 30 days before treating wall assemblies.
3. Ambient temperature is above 40 deg F and below 100 deg F and will remain so for 24 hours.
4. Substrate is not frozen and substrate-surface temperature is above 40 deg F and below 100 deg F.
5. Rain or snow is not predicted within 24 hours.
6. Not less than three days have passed since surfaces were last wet.
7. Windy conditions do not exist that might cause water repellent to be blown onto vegetation or surfaces not intended to be treated.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer and Applicator agree(s) to repair or replace materials that fail to maintain water repellency specified in "Performance Requirements" Article within specified warranty period, as well as materials and surrounding construction damaged from

subsequent water infiltration. This warranty is to include both the replacement of the materials themselves and the cost of the labor to make them seamless.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PENETRATING WATER REPELLENTS

A. Siloxane, Penetrating Water Repellent: Clear, containing 15 percent or more solids of oligomerous alkylalkoxysiloxanes; with alcohol, ethanol, mineral spirits, water, or other proprietary solvent carrier; and with 400 g/L or less of VOCs.

1. Products: Subject to compliance with requirements, provide one of the following:

a. Chemical Products Industries, Inc.; CP-500W.
b. ChemMasters; Aquanil Plus WB.
c. Conproco Corporation; Conpro Shield MX.
d. Dayton Superior Corporation; Weather Worker WB Heavy Duty (J-27-WB).
e. Diedrich Technologies, Inc.; 303-C.
f. Euclid Chemical Company (The), an RPM company; Euco-Guard VOX.
g. H&C Concrete Care Products, Sherwin-Williams Company (The); H&C SX-7.
h. Price Research, Ltd.; Price Aqua Seal-20.
i. Rainguard Products Company; MicroSeal.
j. SaverSystems; DEFY Water Repellent for Brick.
k. Specco Industries, Inc.; Waterstopper S-10 WB Siloxane.
l. Tamms Industries, Inc., Euclid Chemical Company (The); Baracade M.E.
m. Textured Coatings of America, Inc.; Rainstopper 1500.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements and conditions affecting performance of the Work.

1. Verify that surfaces are clean and dry according to water-repellent manufacturer's requirements. Check moisture content in three representative locations by method recommended by manufacturer.
2. Inspect for previously applied treatments that may inhibit penetration or performance of water repellents.
3. Verify that there is no efflorescence or other removable residues that would be trapped beneath the application of water repellent.
4. Verify that required repairs are complete, cured, and dry before applying water repellent.

B. Test pH level according to water-repellent manufacturer's written instructions to ensure chemical bond to silica-containing or siliceous minerals.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Cleaning: Before application of water repellent, clean substrate of substances that could impair penetration or performance of product according to water-repellent manufacturer's written instructions and as follows:

1. Cast Stone: Remove oil, curing compounds, laitance, and other substances that inhibit penetration or performance of water repellents according to ASTM E 1857.
2. Portland Cement Plaster (Stucco): ASTM E 1857.

B. Protect adjoining work, including mortar and sealant bond surfaces, from spillage or blow-over of water repellent. Cover adjoining and nearby surfaces of aluminum and glass if there is the possibility of water repellent being deposited on surfaces. Cover live vegetation.

C. Coordination with Mortar Joints: Do not apply water repellent until pointing mortar for joints adjacent to surfaces receiving water-repellent treatment has been installed and cured.

D. Coordination with Sealant Joints: Do not apply water repellent until sealants for joints adjacent to surfaces receiving water-repellent treatment have been installed and cured.

1. Water-repellent work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those required.

3.3 APPLICATION

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect the substrate before application of water repellent and to instruct Applicator on the product and application method to be used.

B. Apply a heavy-saturation coating of water repellent, on surfaces indicated for treatment, using 15 psi-pressure spray with a fan-type spray nozzle to the point of saturation. Apply coating in dual passes of uniform, overlapping strokes. Remove excess material; do not allow material to puddle beyond saturation. Comply with manufacturer's written instructions for application procedure unless otherwise indicated.

1. Cast Stone: At Contractor's option, first application of water repellent on units may be completed before installing them. Mask mortar and sealant bond surfaces to prevent water repellent from migrating onto joint surfaces.

C. Apply a second saturation coating, repeating first application. Comply with manufacturer's written instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats. Consult manufacturer's technical representative if written instructions are not applicable to Project conditions.

3.4 CLEANING

A. Immediately clean water repellent from adjoining surfaces and surfaces soiled or damaged by water-repellent application as work progresses. Correct damage to work of other trades caused by water-repellent application, as approved by Architect.

B. Comply with manufacturer's written cleaning instructions.

END OF SECTION 07 19 00

SECTION 07 21 00 – THERMAL INSULATION

PART 1 – GENERAL

1.1 SUMMARY A. Section Includes:

1. Extruded Polystyrene (XPS) Foam-Plastic Board Insulation – Continuous insulation behind masonry, foundation walls, and brick veneer.
2. Polyisocyanurate (Polyiso) Foam-Plastic Board Insulation – Continuous insulation behind metal panels, sheathing, and roofing assemblies.
3. Glass-Fiber Blanket Insulation – Interior soffits, partitions, suspended ceilings; thermal and acoustic applications.
4. Mineral Fiber Board Insulation – Curtain wall spandrel zones, backup walls, and exterior sheathing.
5. Mineral Wool Batt Insulation – Interior and exterior framed walls, spandrels, floors, and soffits; thermal, acoustic, and fire-rated applications.
6. Batt Insulation – Interior framed partitions, floors, and soffits; acoustic and fire-rated applications.
7. Insulation for Miscellaneous Voids – Glass-fiber loose fill or spray polyurethane foam for gaps, shim spaces, and irregular cavities.

B. Related Requirements:

1. Section 05 40 00 – Cold-Formed Metal Framing
2. Section 07 27 26 – Fluid Applied Waterproofing Assembly. s.
3. Section 07 52 16 - Styrene-Butadiene-Styrene (SBS) Modified Bituminous Roofing
4. Section 07 84 46 Fire Resistive Joint systems
5. Section 09 21 16 – Gypsum Board Assemblies: Acoustic insulation.

1.2 REFERENCE STANDARDS

A. ASTM C518 – Thermal Conductivity of Insulation Materials.

B. ASTM C578 – Extruded Polystyrene Foam Board.

C. ASTM C612 – Mineral Fiber Board.

D. ASTM C665 – Glass-Fiber Batt Insulation.

E. ASTM C1289 – Polyisocyanurate Board Insulation.

F. ASTM C764 – Loose-Fill Glass-Fiber Insulation.

G. ASTM C1029 – Spray Polyurethane Foam.

H. ASTM E84 – Surface-Burning Characteristics.

I. ASTM E119 – Fire-Resistance Ratings.

J. UL 263 – Fire-Resistance Assemblies.

K. NFPA 285 – Fire Propagation.

L. ASTM C1114 – Mineral Wool Batt Insulation.

1.3 SUBMITTALS

A. Action Submittals:

1. Product Data – Manufacturer's installation instructions, R-value labeling, accessory data; applicable to XPS board, Polyiso board, Glass-fiber blanket, Mineral fiber board, Mineral wool batt, Batt insulation, Miscellaneous void insulation, Accessories.Installation Methods – Detailed installation methods for rated assemblies, cavity walls, framed construction, and miscellaneous voids; applicable to all insulation types.
2. Sample R-Value Labels – Demonstrate correct labeling and dimension compliance; applicable to XPS, Polyiso, Glass-fiber blanket, Mineral fiber board, Batt insulation.
3. Fire-Rated Assembly Compliance – Verification of insulation products in UL or equivalent rated assemblies; applicable to XPS, Polyiso, Mineral fiber board, Batt insulation.
4. Fire-Rated Assembly Compliance – Verification of insulation products in UL or equivalent rated assemblies; applicable to XPS, Polyiso, Mineral fiber board, Mineral wool batt, Batt insulation.

B. Informational Submittals:

1. Product Test Reports – High-heat performance, flame spread, smoke development, surface-burning, and fire propagation; applicable to XPS, Polyiso, Glass-fiber blanket, Mineral fiber board, Batt insulation, Loose-fill, Spray polyurethane foam.
2. ASTM Compliance Reports – Documentation confirming compliance with ASTM standards (C518, C578, C612, C665, C1289, C764, C1029, E84, E119, UL 263, NFPA 285); applicable to all insulation types.
3. Manufacturer Certifications – Verification of product origin, quality, and conformance to specified standards; applicable to all insulation types and accessories.

4. UL / Agency Listings – Copies of listings for rated assemblies, where insulation is part of fire-resistance or high-heat assemblies; applicable to XPS, Polyiso, Mineral fiber board, Batt insulation.

1.4 QUALITY ASSURANCE

A. Prefer insulation products from a single manufacturer where feasible.

B. Fire-rated and UL-rated assemblies must use insulation approved by the applicable testing agency.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Protect foam-plastic board insulation as follows:

1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site until just before installation time.
3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

1.6 FIELD CONDITIONS

A. Do not install on wet or frozen substrates or in unsuitable weather conditions.

PART 2 – PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Maximum flame-spread and smoke-developed indexes less than 25 and 450 when tested in accordance with ASTM E84.

B. Fire-Resistance Ratings: Comply with ASTM E119 or UL 263; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from listings of another qualified testing agency.

C. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

D. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

E. Thermal-Resistance Value (R-Value): R-value as indicated on Drawings in accordance with ASTM C518.

2.2 EXTRUDED POLYSTYRENE (XPS) BOARD

A. For use on exterior walls outside of sheathing line for continuous insulation as required by Energy Code behind brick veneer locations.

B. Extruded Polystyrene Board Insulation, Type IV, with Drainage Panels : ASTM C578, Type IV, 25-psi minimum compressive strength; unfaced; fabricated with shiplap or channel edges and with one side having grooved drainage channels.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Owens Corning; Foamular NGX 250 or comparable product by one of the following:
   a. Atlas Wall Insulation (Energy Shield XR)
   b. DuPont de Nemours, Inc. (Styrofoam Square Edge)
2. AT RATED ASSEMBLIES: Where indicated in the Contract Documents provide rigid insulation as specifically required by the UL Listed Assembly or Assemblies indicated regardless of whether or not product appears in the list above as the insulation indicated would be required in order to achieve the rating. When and wherever possible keep insulation in same manufacturer as rest of the Project.

2.3 POLYISOCYANURATE (POLYISO) BOARD

A. For use on exterior walls outside of sheathing line for continuous insulation as required by Energy Code behind metal panel locations

B. Polyisocyanurate Board Insulation, Foil Faced : ASTM C1289, foil faced, Type I, Class 1 or 2.

1. Basis-of-Design Product: Subject to compliance with requirements, provide DuPont de Nemours, Inc.; Thermax™ Basic NH or comparable product by one of the following:
   a. Atlas Polyiso Roof and Wall Insulation - Energy Shield Pro.
   b. Johns Manville; a Berkshire Hathaway company - AP Foil 25.
2. AT RATED ASSEMBLIES: Where indicated in the Contract Documents provide rigid insulation as specifically required by the UL Listed Assembly or Assemblies indicated regardless of whether or not product appears in the list above as the insulation indicated would be required in order to achieve the rating. When and wherever possible keep insulation in same manufacturer as rest of the Project.

2.4 GLASS-FIBER BLANKET INSULATION

A. Glass-Fiber Blanket Insulation, Unfaced : ASTM C665, Type I; passing ASTM E136 for combustion characteristics.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. CertainTeed; SAINT-GOBAIN.

b. Johns Manville; a Berkshire Hathaway company.
c. Knauf Insulation.
d. Owens Corning.

2.5 MINERAL FIBER BOARD INSULATION

A. ASTM C612, semi-rigid or rigid.

B. Basis-of-Design – Thermafiber FireSpan 90 or equal.

C. Applications – Curtain wall spandrels, backup walls, exterior sheathing.

2.6 BATT INSULATION

A. ASTM C665, unfaced or kraft-faced; flame-spread and smoke-developed per ASTM E84 limits.

B. Basis-of-Design –Basis-of-Design – CertainTeed, Johns Manville, or Owens Corning (glass-fiber batt).Interior framed partitions, floors, soffits; acoustic or fire-rated walls.

C. Applications – Interior framed partitions, floors, soffits; acoustic or fire-rated walls.

2.7 MINERAL WOOL BATT INSULATION

A. ASTM C1114, unfaced or kraft-faced; flame-spread ≤25, smoke-developed ≤50..

B. Basis-of-Design – Roxul ComfortBatt, Thermafiber SAFB, or equal..

C. Applications – Interior and exterior framed walls, spandrels, floors, soffits; acoustic, thermal, or fire-rated assemblies

2.8 INSULATION FOR MISCELLANEOUS VOIDS

A. Glass-fiber loose fill – ASTM C764 Type II, flame-spread 5 (ASTM E84).

B. Spray polyurethane foam – ASTM C1029 Type II, closed-cell; flame-spread ≤75, smoke ≤450.

C. Applications – Fill gaps, shim spaces, and irregular cavities around MEP penetrations.

D. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

2.9 ACCESSORIES

A. Mechanical fasteners, insulation washers, adhesive, support bars, wire mesh, and other components as required.

B. Vapor retarders/barriers where indicated on Drawings, compatible with insulation type.

C. Joint sealing tapes, sealants, and closure strips per manufacturer's instructions.

PART 3 – EXECUTION

3.1 PREPARATION

A. Clean substrates; remove sharp projections.

B. Verify substrates are dry and suitable for insulation adhesion or mechanical fastening.

3.2 INSTALLATION – GENERAL

A. Install per manufacturer instructions.

B. Fit insulation tightly; avoid voids or compression of blanket/batt insulation.

C. Coordinate with other trades for penetrations, flashing, and rated assemblies.

3.3 INSTALLATION BY APPLICATION

A. XPS Board – Continuous behind masonry, foundation walls, slab edges; adhere or mechanically fasten.

B. Polyiso Board – Continuous behind metal panels, sheathing, roofing systems.

C. Glass-Fiber Blanket – Above ceiling grids or within soffit framing; prevent sagging.

D. Mineral Fiber Board – Fit in curtain wall spandrels; use retainers or T-bars.

E. Mineral Wool Batt – Place in stud wall cavities or framed spandrels; support with wire, mesh, or friction fit; avoid compression to maintain R-value.

F. Batt Insulation – Place in stud wall cavities; support with wire or mesh if exposed.

G. Miscellaneous Voids – Fill with loose-fill glass-fiber or spray polyurethane foam.

3.4 INSTALLATION IN FRAMED CONSTRUCTION

A. Cut insulation to fit cavities; friction-fit or mechanically support as required.

B. Maintain clearances around non-rated recessed lighting.

C. For high metal-stud walls, support unfaced blankets mechanically; tape flanges for faced blankets.

3.5 INSTALLATION OF RIGID BOARD INSULATION

A. Install per manufacturer instructions and project drawings.

B. Abut joints tightly; do not tape or seal unless specified. C. Avoid small, irregular infill pieces.

3.6 PROTECTION

A. Protect installed insulation from moisture, weather, and physical damage.

B. Provide temporary coverings if permanent concealment is not immediate.

END OF SECTION 07 21 00

SECTION 072119 – FOAMED-IN-PLACE INSULATION

PART 1 – GENERAL

1.1 SUMMARY

A. Section Includes:

1. Closed-cell spray polyurethane foam (SPF) insulation.
2. Open-cell spray polyurethane foam (SPF) insulation.
3. Ignition barriers for spray foam insulation.

B. Related Requirements:

1. Section 075700 "Coated Foamed Roofing" for spray polyurethane foam insulation used in roofing applications.

1.2 ACTION SUBMITTALS

A. Product Data: For each insulation and ignition barrier product, include:

1. Manufacturer’s technical data sheets.
2. Installation instructions.
3. Surface preparation and curing requirements.

1.3 INFORMATIONAL SUBMITTALS

A. Product Test Reports: Indicate compliance with ASTM, ICC-ES, and NFPA standards.

B. Research Reports: Provide ICC-ES evaluation reports or equivalent.

PART 2 – PRODUCTS

2.1 CLOSED-CELL SPRAY POLYURETHANE FOAM

A. Closed-Cell SPF Insulation:

1. Type: ASTM C1029, Type II.
2. Minimum Density: 1.5 lb/cu. ft. (24 kg/cu. m).
3. Minimum Aged R-Value at 1 inch (25.4 mm): 6.2°F·h·ft^2/Btu at 75°F (43 K·m^2/W at 24°C).
4. Manufacturers:
   - Johns Manville, or approved equal.

B. Surface-Burning Characteristics (ASTM E84):

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

C. Fire Propagation Characteristics:

1. Complies with NFPA 285 as part of an approved wall assembly.

D. Standards Compliance:
- ASTM C1029
- ASTM E84
- NFPA 285
- ICC-ES AC377

2.2 IGNITION BARRIERS FOR SPRAY FOAM INSULATION

A. Products:

1. Ignition barrier materials compliant with building code for SPF applications in attics, crawl spaces, or concealed areas.
2. Must meet ICC-ES AC377, Appendix X or other applicable standards.

B. Fire Testing Standards:
1. ASTM E84
2. ASTM E119
3. NFPA 286
4. ICC-ES AC377, Appendix X

C. Submittals:

1. Product data sheets for ignition barriers.
2. Fire test reports from approved laboratories.
3. Manufacturer's installation guidelines.

D. Quality Assurance:

1. Installer Qualifications:
   - Manufacturer-trained and certified for SPF and coatings.
2. Mock-Up:
   - Provide a sample area for Owner/Architect review.

E. Delivery, Storage, and Handling:
- Deliver in original sealed containers with clear identification.
- Store in dry, covered conditions per manufacturer's instructions.

2.3 OPEN-CELL SPRAY POLYURETHANE FOAM

A. Open-Cell SPF Insulation:

1. Blowing Agent: Water-based.
2. Minimum Density: 0.4 lb/cu. ft. (6.4 kg/cu. m).
3. Minimum Aged R-Value at 1 inch (25.4 mm): 3.4°F·h·ft^2/Btu at 75°F (24 K·m^2/W at 24°C).

4. Manufacturers:
   - Johns Manville, or approved equal.

B. Surface-Burning Characteristics (ASTM E84):

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

C. Fire Propagation Characteristics:

1. Complies with NFPA 285 as part of an approved wall assembly.

D. Standards Compliance:
- ASTM E84
- NFPA 285
- ICC-ES AC377

PART 3 – EXECUTION

3.1 INSTALLATION

A. General:
- Install in accordance with manufacturer's written instructions.

B. Application:

1. Apply foam to completely envelop all insulated areas and fill voids.
2. Apply in multiple lifts, not exceeding manufacturer's recommended maximum thickness per pass.
3. Do not apply into rising foam; allow curing between passes as required.

C. Ignition Barrier Application:
- Install ignition barrier coating where required, in accordance with manufacturer's installation guidelines and code requirements.

END OF SECTION 072119

SECTION 072726 –

FLUID-APPLIED MEMBRANE AIR BARRIERS

FLUID- APPLIED MEMBRANE VAPOR BARRIERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections.

1.2 SUMMARY

A. Section Includes:

1. Fluid-applied, vapor-permeable air barrier system.
   Basis-of-Design: PROSOCO R-Guard Cat 5 or approved equal.
2. Fluid-applied, vapor-impermeable air and vapor barrier system.
   Basis-of-Design: PROSOCO R-Guard VB.or approved equal.

B. Related Requirements:

1. Section 061600 "Sheathing" for wall sheathings and wall sheathing joint-and-penetration treatments.
2. Division 07 sections for coordination with roofing, waterproofing, and below-grade vapor barriers.

1.3 DEFINITIONS

A. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

B. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

C. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

D. Vapor-Barrier. is a continuous barrier with very low water vapor permeance, intended to prevent or significantly limit water vapor transmission from one side of a wall, ceiling, or floor to the other.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site .

1. Review air and vapor barrier requirements and installation, special details, mockups, air-leakage and bond testing, barrier protection, and work scheduling that covers both barriers.
2. Coordination with other envelope trades to ensure continuity of air and vapor barrier assemblies.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; wet and dry film thickness; and tested physical and performance properties of products.
2. Include letter from manufacturer that indicates acceptable other flashing materials for adhered or other acceptable means of installation for flashing materials and their integration with the fluid applied system that does not negatively affect the system or warranty.
3. Include letters confirming compatibility with other air / vapor -barrier, vapor barrier or waterproofing systems.

B. Sustainable Design Submittals:

1. Product Data: For coatings, indicating VOC content.
2. Laboratory Test Reports: For coatings, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For air / vapor-barrier assemblies.

1. Show locations and extent of air / vapor barrier materials, vapor-barrier materials, accessories, and assemblies specific to Project conditions.
2. Include details for substrate joints and cracks, adhered flashings, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
3. Include details of interfaces with other materials that form part of air and vapor barrier.
4. Consult air barrier and vapor barrier manufacturer for additional installation guidelines illustrations to assist with meeting shop drawing requirements.
5. Provide detailing of transitions to roof, floor slabs, and other envelope components.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: From air-barrier and vapor barrier manufacturer, certifying compatibility of barriers and accessory materials with Project materials that connect to or that come in contact with the barrier.

.

C. Product Test Reports: For each barrier assembly, for tests performed by a qualified testing agency.

D. Field quality-control reports.

E. Include documentation of environmental limitations and substrate conditions at time of installation.

1.7 QUALITY ASSURANCE

A. Pre-Construction Meeting.

1. Contractor to provide written agenda and hold meeting prior to any work in order to review mock ups and project specifics, unique conditions and provide minutes of the meeting.

B. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1. A company experienced in applying air and vapor barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
2. Verification that Installer completed SWR Institute's Validated Air Barrier and Vapor Barrier Training Program and is approved to perform work as herein specified by air/vapor and water-resistive barrier system and manufacturer.
3. Verification of completion of ABAA or SWR Institute training program

C. Mockups: Build mockups to set quality standards for materials and execution.

1. Build integrated mockups of exterior wall assembly , 150 sq. ft. , incorporating backup wall construction, external cladding, window, storefront, door frame and sill, insulation, ties and other penetrations, and flashing to demonstrate surface preparation, crack and joint treatment, application of air barriers, vapor barriers and sealing of gaps, terminations, and penetrations of air-barrier and vapor barrier assembly. Include roof tie-ins and foundation intersections in mockup scope.
   a. Coordinate construction of mockups to permit inspection and testing of air and vapor barriers before external insulation and cladding are installed.
   b. Include junction with roofing membrane , building corner condition, and foundation wall intersection.
   c. If Architect determines mockups do not comply with requirements, reconstruct mockups and apply air and vapor barriers until mockups are approved.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

D. Manufacturer's Representative: Manufacture's authorized representative is required to visit the site and submit approval in writing that the installation has met the manufacturer's written installation instructions.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction testing on field mockups.

B. Mockup Testing: Air-barrier and Vapor Barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.

1. Air-Leakage-Location Testing: Mockups will be tested for evidence of air leakage according to ASTM E 1186, chamber pressurization or depressurization with smoke tracers .
2. Air-Leakage-Volume Testing: Mockups will be tested for air-leakage rate according to ASTM E 783 or ASTM E 2357.
3. Adhesion Testing: Mockups will be tested for required air-barrier and vapor barrier adhesion to substrate according to ASTM D 4541.
4. Alternative Adhesion Testing: Mock-ups will be tested for minimum air-barrier and vapor barrier adhesion using the ABAA 16psi air-barrier and vapor barrier membrane requirement as a minimum adhesion of all non-sealant materials using the PROSOCO Field Adhesion Tester or a unit described in ASTM D 4541. All non-sealant items shall be adhesion-tested in the same manner as the air-barrier and vapor barrier membrane. Sealant adhesion testing shall be performed in accordance with the Dow Corning Americas Technical Manual (page 74).
5. Compatibility Determinations: Mock-ups will be inspected for visual signs of decay, chemical attack, or degradation of any kind. Suspect instances shall be reported to the corresponding manufacturer who shall provide a letter that approves moving forward with the project or rejects the use of the product or rejects the method or circumstances of installation with an appropriate explanation of the position taken.
6. When the mock-up testing and compatibility determinations are complete, the Contractor shall submit documentation clarifying all conditions that were reviewed in the mock-up, stating all materials, details and assemblies that are: 1.) exhibited in the mock-up that are in compliance with the Contract Documents, 2.) exhibited in the mock-up that vary from the Contract Documents, and the reasons they vary, and 3.) exhibited in the mock-up that are not shown in the Contract Documents and why they need to be addressed and reviewed now as part of the mock-up process. Decisions made as a result of the mock-up reviews should be noted in this document and accepted via sign-off by all parties.
7. Submit full documentation clarifying all reviewed mockup conditions and deviations from contract documents.
8. Notify Architect seven days in advance of the dates and times when mockups will be tested.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Sequence deliveries to avoid delays, and to minimize on-site storage.

B. Remove and replace liquid materials that cannot be applied within their stated shelf life.

C. Deliver materials and products in labeled packages.

D. Store and handle in strict compliance with manufacturer's instructions and recommendations.

E. Protect from damage, weather, excessive temperatures, and construction operations.

F. Remove damaged material from site and dispose of in accordance with applicable regulations.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier and vapor barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier and vapor barrier manufacturer.

1. Protect substrates from environmental conditions that affect air-barrier and vapor barrier performance.
2. Do not apply air barrier or vapor barrier to a damp or wet substrate or during snow, rain, fog, or mist.
3. Verify moisture content on concrete via ASTM D 4263 plastic sheet test if applicable

PART 2 - PRODUCTS

2.1 MATERIALS

A. Source Limitations: Obtain primary air-/ vapor barrier materials and air/ vapor barrier accessories from single source from single manufacturer.

B. Low-Emitting Materials: Products shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 PERFORMANCE REQUIREMENTS

For PROSOCO R-Guard Cat 5 (vapor-permeable):

PRODUCT TEST RESULTS
R-Guard Cat 5™

PROSOCO

ICC-ES AC212[1] Acceptance Criteria for Water-Resistive Coatings Used as Water-Resistive Barriers Over Exterior Sheathing			
TEST	**METHOD**	**CRITERIA**	**RESULTS**
Tensile Bond	ASTM C 297	Minimum 15 psi (105 kPa)	Pass
Freeze-Thaw	ICC-ES AC212	No cracking, checking, crazing, erosion, delamination or other deleterious effects	Pass
Water Resistance	ASTM D 2247	No cracking, checking, crazing, erosion, delamination, or other deleterious effects	Pass
Water Vapor Transmission	ASTM E 96 Wet Cup	Report	14 perms
Water Penetration	ASTM E 331	No visible water penetration at the sheathing joints as viewed from the back of the panel	Pass
Structural, Racking, Restrained Environmental Conditioning & Water Penetration	ASTM E 1233 A ASTM E 72 ICC-ES AC212 ASTM E 331	No cracking of the coating	Pass
Weathering	ICC-ES AC212 AATCC[2] 127	No cracking of the coating; no water penetration	Pass
Air Permeance	ASTM E 2178	≤ 0.02 L / s·m² at 75 Pa (≤ 0.004 cfm / ft² at 1.57 psf)	Pass: 0.0007 L / s·m² at 75 Pa (0.000 cfm / ft² at 1.57 psf)
ABAA: Air Barrier Association of America Acceptance Criteria for Liquid Applied Membranes			
TEST	**METHOD**	**CRITERIA**	**RESULTS**
Air Permeance	ASTM E 2178	≤ 0.02 L / s·m² at 75 Pa (≤ 0.004 cfm / ft² at 1.57 psf)	Pass: 0.0007 L / s·m² at 75 Pa (0.000 cfm / ft² at 1.57 psf)
Air Leakage of Air Barrier Assemblies	ASTM E 2357	≤ 0.2 L / s·m² at 75 Pa (≤ 0.04 cfm / ft² at 1.57 psf)	Pass: 0.0009 L / s·m² at 75 Pa (0.0028 cfm / ft² at 1.57 psf)
Water Resistance	AATCC 127	No water infiltration after exposure to 55 cm head of water for 5 hours	Pass
Fastener Sealability	ASTM D 1970	No water infiltration	Pass
Pull Adhesion	ASTM D 4541	110 kPa (16 psi) or substrate failure	Pass
Crack Bridging	ASTM C 1305	Pass	Pass
Water Vapor Transmission	ASTM E 96 Wet Cup Dry Cup	Report	Wet Cup: 14 perms Dry Cup: 10 perms
Fire Testing			
TEST	**METHOD**	**CRITERIA**	**RESULTS**
Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies	NFPA[3] 285	Must resist flame propagation and flame spread	See Report 10261K Rev. 6 from Priest & Associates Consulting, LLS
Surface Burning Characteristics	ASTM E 84	Criteria for ICC and NFPA Class A Building Material: Flame Spread ≤ 25 Smoke Developed ≤450	Meets Class A Building Material Flame Spread: 25 Smoke Developed: 10

All testing conducted by independent, accredited laboratories.

NOTES:
1: International Code Council Evaluation Service Acceptance Criteria 212
2: American Association of Textile Chemists and Colorists
3: National Fire Protection Association

For PROSOCO R-Guard VB (vapor-impermeable):

PRODUCT TEST RESULTS
R-Guard VB

PROSOCO

TEST	METHOD	CRITERIA	RESULTS
Water Vapor Transmission	ASTM E 96 Dry Cup	Measure	0.063 perms
Water Resistance	ICC-ES AC212[1] AATCC[2] 127	No water infiltration after exposure to 55 cm head of water for 5 hours	Pass
Air Permeance	ASTM E 2178	≤ 0.02 L / s·m² at 75 Pa (≤ 0.004 cfm / ft² at 1.57 psf)	Pass
Air Leakage of Air Barrier Assemblies	ASTM E 2357	≤ 0.2 L / s·m² at 75 Pa (≤ 0.04 cfm / ft² at 1.57 psf)	Pass
Fastener Sealability	ASTM D 1970	No water infiltration	Pass
Pull Adhesion	ASTM D 4541	110 kPa (16 psi) or substrate failure	Pass
Surface Burning Characteristics	ASTM E 84	Criteria for ICC and NFPA Class A Building Material: Flame Spread ≤ 25 Smoke Developed ≤450	Meets Class A Building Material Pass
Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies	NFPA[3] 285	Must resist flame propagation and flame spread.	See Report 10261K Rev. 6 from Priest & Associates Consulting, LLS

All testing was completed by independent, accredited laboratories.

3: National Fire Protection Association

2.3 ACCESSORY MATERIALS

A. Requirement: Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier and vapor barrier manufacturer to produce a complete air-barrier and vapor barrier assembly and that are compatible with primary air-barrier and vapor barrier material and adjacent construction to which they may seal.

Accessories shall also be compatible with the vapor barrier properties of the primary material where vapor-retarding performance is required.

1. Liquid-type auxiliary materials shall comply with VOC requirements.
2. Wet-weather accessories compatible with the primary Wet-Weather Fluid Applied Vapor-Permeable Membrane System shall be comprised of Silyl-Terminated-Poly-Ether (STPe).

B. Primer: If and as required by manufacturer / system and applicable locations provide liquid waterborne primer recommended for field-cut edges of external gypsum board substrate by air-barrier/vapor barrier material manufacturer for the purpose of consolidating friable edges.

Primer shall not adversely affect vapor permeability or vapor-retarding properties of air / vapor barrier.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD GypPrime or comparable product by one of the following:
   a. Primers by barrier manufacturer or as recommened or approved for use with manufacturer's product provided on Project .

C. Joint Reinforcing: Sheathing and rough opening seams and joints Filler Material. Liquid Silyl-Terminated-Poly-Ether (STEp) as recommended for treatment of rough openings.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD Joint & Seam or comparable product by one of the following:
   a. WR Grace .
   b. Henry

D. Rough Opening Flashing Material: Liquid Silyl-Terminated-Poly-Ether (STPe) as recommended for treatment of rough openings.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD FastFlash or comparable product by one of the following:
   a. WR Grace .
   b. Henry

E. Substrate-Patching Material: Manufacturer's standard substrate filler as recommended for preparation of cracks and overdriven fasteners, as recommended by barrier manufacturer.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD Joint & Seam Filler per manufacturer’s recommendations or comparable product by one of the following:
   a. Carlisle
   b. GCP .
   c. Henry
   d. Prosoco
   e. Tremco

F. Stainless-Steel Sheet: ASTM A 240/A 240M, Type 304, 0.0187 inch thick, and Series 300 stainless-steel fasteners.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

G. Preformed Extrusion: If and as required by Manufacturer, provide manufacturer's standard system consisting of cured low-modulus silicone extrusion, sized to fit opening widths, with a single-component, neutral-curing, Class 100/50 (low-modulus) silicone sealant for bonding extrusions to substrates.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Carlisle
   b. GCP .
   c. Henry
   d. Prosoco
   e. Tremco

H. Interior Air or vapor Sealant: Single component, moisture curing, 98 percent solids Silyl-Terminated-Polyether (STPe) to produce a durable, high-performance, high-movement sealant for windows and doors.

Ensure compatibility with vapor-retarding or vapor-permeable requirements per manufacturer testing data. Provide manufacturer test results for permeability (perm rating) and adhesion for each product.

1. Basis-of-Design Product: Subject to compliance with requirements, provide PROSOCO, Inc.; R-GUARD Dam or comparable product by one of the following:
   a. WR Grace .
   b. Henry
2. Backer Rod: Compressible, closed cell rod stock as recommended by manufacturer for compatibility with sealant. Provide size and shape of rod to control joint depth.

PART 3 - EXECUTION

3.1 GENERAL

A. It is the intent that installation of Fluid Applied Membrane Air Barriers and Vapor Barriers will create a continuous, non interrupted barrier throughout the entire plane in which it is installed. Contractor is responsible to identify and address all penetrations, bridging conditions and tie ins with other materials as required to achieve a continuous barrier as noted herein.

B. Provide overlapping of membranes by a minimum of 12” with taped joints.

3.2 EXAMINATION

- Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that substrates have cured and aged for minimum time recommended in writing by barrier manufacturers.
3. Verify that substrates are visibly dry and free of moisture, unless approved by air / vapor barrier manufacturer. Test concrete substrates for capillary moisture by plastic sheet method according to ASTM D 4263.
4. Verify that masonry joints are flush and completely filled with mortar.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 SURFACE PREPARATION

A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate according to manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air/vapor barrier application.

1. Surfaces STPe accessory materials may be dry, damp, or wet to the touch. Brush away any standing water present before application. The products will tolerate rain immediately after application.
2. If installing directly over metal studs provide over only un-punched, solid, studs.

B. Mask off adjoining surfaces not covered by barriers to prevent spillage and overspray affecting other construction.

C. Remove film-forming coatings, curing compounds, and form-release agents from concrete, and grease, oil, bitumen, paints, and other contaminants from all substrates.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching material.

E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another. See STPe product manufacturer's installation guidelines illustrations.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for barriers.

H. Bridge isolation joints expansion joints and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air/ vapor barrier accessory material that accommodates joint movement according to manufacturer's written instructions and details.

I. Exterior Sheathing:

1. Ensure that sheathing is properly installed with ends, corners, and edges properly fastened. Remove and replace damaged sheathing.

2. Mechanical fasteners used to secure sheathing boards or penetrate sheathing boards shall be set flush with sheathing, fastened and spotted with substrate patching material, and fastened into solid backing.
3. Consolidate and seal the cut edges of gypsum wall boards exposed in rough openings for windows and doors at corners. The treated edge provides a suitable surface for application of joint reinforcing, fiber-reinforced coat and seam treatment.

J. Apply primer to substrates at required rate and allow it to dry, as recommended by barrier manufacturers.

3.4 JOINT TREATMENT

A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and barrier manufacturer's written instructions. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.

1. Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and barrier manufacturer's written instructions.
2. Remove dust and dirt from joints and cracks complying with ASTM D 4258 before coating surfaces.

B. Gypsum Sheathing: Fill joints greater than 1/2 inch with joint reinforcing according to barrier manufacturer's written instructions.

1. Fill surface defects and over driven fasteners.
2. Using a dry knife, trowel, or spatula, tool and spread the product. Spread 1 inch beyond seam at each side to manufacturer's recommended thickness. See manufacturer's product data sheet.
3. Allow to skin before installing other waterproofing or barrier components.
4. Apply in accordance with barrier manufacturer's written instructions.

3.5 ACCESSORIES INSTALLATION

A. Install accessory materials according to barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of barrier.

1. Coordinate the installation of barrier with installation of roofing membrane and base flashing to ensure continuity of barrier with roofing membrane. See manufacturer's installation guidelines illustrations.
2. Install transition strip or liquid-seal materials on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.

B. Connect and seal exterior wall barrier material continuously to roofing-membrane barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

C. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, penetrations, and doors to seal and waterproof rough openings, as recommended by barrier

manufacturer. Substrates for STPe products do not require primers other than field-cut edges of external gypsum board, such as around rough openings.

1. Apply a thick bead of Rough Opening Joint & Seam Filler over all joints and seams of the rough opening.
2. Apply Rough Opening Filler Material within temperature and weather limitations as required by manufacturer.
3. Apply Rough Opening Filler Material to perimeters, sills, and adjacent sheathing and building face, in accordance with manufacturer's product data sheet and manufacturer's Installation Guidelines illustrations.
4. Apply liquid STPe flashing product to interior surfaces of rough opening and out onto the sheathing or CMU per manufacturer’s instructions.
5. Preformed Silicone Extrusion: Install as recommended by air / vapor barrier manufacturer.

D. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air/ vapor barrier material as recommended by air / vapor barrier manufacturer.

E. Seal masonry reinforcing or ties and penetrations as recommended by air / vapor barrier manufacturer.

F. Seal top of through-wall flashings to air / vapor barrier as recommended by air / vapor barrier manufacturer.

G. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets as recommended by air / vapor barrier manufacturer.

H. Repair punctures, voids, and deficient lapped seams in strips and transition strips as recommended by air / vapor barrier manufacturer.

3.6 PRIMARY BARRIER MATERIAL INSTALLATION

A. Apply barrier material to form a seal with strips and transition strips and to achieve a continuous barrier per manufacturer's written instructions and details. Apply barrier material within manufacturer's recommended application temperature ranges. Air / vapor barrier to be installed so as to create a continuous barrier tying separate components of the building envelope together. This includes connection to the slab and roof systems as well as all other components of the building envelope. The barrier is to be continuous at all joints, terminations and penetrations even where not specifically detailed as such.

1. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
2. Where multiple prime coats are needed to achieve required bond, allow adequate drying time between coats.

B. Medium-Build Barriers: Apply continuous unbroken barrier material to substrates according to the thickness required by the barrier manufacturer for the Project conditions. Apply an increased thickness of air / vapor barrier material in full contact around protrusions such as masonry ties.

1. Barrier: Apply dry film thickness as recommended by barrier manufacturer's literature to comply with performance requirements. Apply additional material as needed to achieve void- and pinhole-free surface.

C. Low-Build Barriers: Apply continuous unbroken air / vapor barrier material to substrates according to the following thickness. Apply an increased thickness of air / vapor-barrier material in full contact around protrusions such as masonry ties if applicable.

1. Vapor-Permeable, Low-Build Barrier: Apply dry film thickness as recommended by air / vapor barrier manufacturer's literature to comply with performance requirements. Apply additional material as needed to achieve void- and pinhole-free surface, but do not exceed thickness on which required vapor permeability is based.

D. Do not cover air /vapor barrier until it has been tested and inspected by testing agency.

E. Correct deficiencies in air / vapor barrier that does not comply with requirements; repair substrates and reapply air / vapor-barrier components.

3.7 FIELD QUALITY CONTROL

A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Inspections: Manufacturer's authorized representative shall inspect the following and submit a report of his findings to the Architect. Air/ vapor barrier materials, accessories, and installation are subject to inspection for compliance with requirements.

1. Continuity of barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Wet mil thickness readings: Take during material application with photo documentation provided with daily field reports. Provide 1 gauge reading for every 500 SF of installed material and not less than a minimum of 1 per wall face.
3. Air / vapor barrier dry film thickness.
4. Continuous structural support of air/vapor-barrier system has been provided.
5. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
6. Site conditions for application temperature and dryness of substrates have been maintained.
7. Maximum exposure time of materials to UV deterioration has not been exceeded.
8. Surfaces have been primed, if applicable.
9. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
10. Termination mastic has been applied on cut edges.
11. Strips and transition strips have been firmly adhered to substrate.
12. Compatible materials have been used.
13. Transitions at changes in direction and structural support at gaps have been provided.

14. Connections between assemblies (air / vapor barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
15. Tie offs and connections to disparate systems such as the roof have been made in accordance with the manufacturer's requirements.
16. All penetrations have been sealed.

D. Tests: As determined by testing agency from among the following tests:

1. Air-Leakage-Location Testing: Air / vapor-barrier assemblies will be tested for evidence of air leakage according to ASTM E 1186, chamber pressurization or depressurization with smoke tracers .
2. Air-Leakage-Volume Testing: Air / vapor-barrier assemblies will be tested for air-leakage rate according to ASTM E 783 or ASTM E 2357.
3. Adhesion Testing: Air / vapor barrier assemblies will be tested for required adhesion to substrate according to ASTM D 4541 for each 600 sq. ft. of installed air vapor barrier or part thereof.

E. Barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air / vapor -barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air/ vapor barrier components for retesting as specified above.

F. Repair damage to barriers caused by testing; follow manufacturer's written instructions.

G. Prepare test and inspection reports.

3.8 CLEANING AND PROTECTION

A. Protect air/vapor-barrier system and vapor- barrier from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace barrier or install additional, full-thickness, barrier application after repairing and preparing the overexposed materials according to barrier manufacturer's written instructions.
2. Protect air / vapor barrier from contact with incompatible materials and sealants not approved by barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed work using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

C. Remove masking materials after installation.

END OF SECTION 072726

SECTION 07 4213.24 ALUMINUM METAL WALL

PART 1- GENERAL

1.01 SECTION INCLUDES

A. Aluminum metal plate wall panels

1.02 RELATED REQUIREMENTS

A. Section 05 40 00 – Cold-Formed Metal Framing: Wall panel substrates support framing.

B. Section 06 10 00 – Rough Carpentry: Plywood substrate wall sheathing.

C. Section 07 27 26 – Fluid Applied Membrane Barriers: Air and moisture barrier required as part of metal wall panel assembly.

D. Section 07 62 00 – Sheet Metal Flashing and Trim: Field formed flashings and other sheet metal work.

E. Section 07 92 00 – Joint Sealants: Perimeter sealant.

1.03 DEFINITION

A. Metal Plate Wall Panel and Soffit Assemblies: Metal plate wall panels, attachment system components, miscellaneous metal framing, and accessories necessary for a complete weather tight wall system based on AAMA CW-RS-1.

1.04 REFERENCE STANDARDS

A. AAMA - American Architectural Manufacturers Association (www.aamanet.org)
   1. AAMA CW-RS-1 – The Rain Screen Principle and Pressure Equalized Wall Design; 2012
   2. AAMA 501.1 – Standard Test Method for Water Penetration of Windows, Curtain Walls and Doors Using Dynamic Pressure; 2005
   3. AAMA 501.2 - Quality Assurance and Diagnostic Water Leakage Field Check of Installed Storefronts, Curtain Walls, and Sloped Glazing Systems; 2009
   4. AAMA 508 – Voluntary Test Method and Specification for Pressure Equalized Rain Screen Wall Cladding Systems; 2014 [Testing based on 2007 Edition]
   5. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2014
   6. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels; 2013 [Testing based on 2005 Edition]

B. ASTM International (American Society for Testing and Materials; www.astm.org)
   1. ASTM C754 - Standard Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products; 2015
   2. ASTM D523 - Standard Test Method for Specular Gloss; 2014
   3. ASTM D2244 – Standard Practice for Calculation of Color Tolerances and Color Differences from Instrumentally Measured Color Coordinates; 2015
   4. ASTM D2247 - Standard Practice for Testing Water Resistance of Coatings in 100% Relative Humidity; 2011
   5. ASTM D4214 - Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films; 07(2015)
   6. ASTM E8/E8M - Standard Test Methods for Tension Testing of Metallic Materials; 2013a
   7. ASTM E283 - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 04(2012)

8. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014
9. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference; 00(2009)
10. ASTM E1233/E1233M – Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights, and Curtain Walls by Cyclic Air Pressure Differential; 2014 [Testing based on 2006 Edition]

C. TAS - Testing Application Standards; Florida Building Code, 2010
1. TAS 202 – Criteria for Testing Impact and Non-Impact Resistant Building Envelope Components Using Uniform Static Air Pressure Loading; 1994
2. TAS 203 – Criteria for Testing Products Subject to Cyclic Wind Pressure Loading; 1994

D. NAAMM – National Association of Architectural Metal Manufacturers

E. SMACNA – Sheet Metal and Air Conditioning Contractor's National Association

F. PS - Voluntary Product Standard; National Institute of Standards and Technology (NIST)
1. PS-1 – Structural Plywood; 2009

1.05 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate panel assemblies with rain drainage, flashing, trim, stud back-up, soffits, and other adjoining work.

B. Preinstallation Meeting:
1. Attendees:
   a. Owner.
   b. Architect.
   c. Installer.
   d. Panel manufacturer's representative.
   e. Structural support installer's.
   f. Installer's whose work interfaces with or affects wall panels including installers of doors, windows, and louvers.
2. Review and finalize construction schedule.
3. Verify availability of materials, installer's personnel, equipment, and facilities needed to maintain schedule.
4. Review means and methods related to installation, including manufacturer's written instructions.
5. Examine support conditions for compliance with requirements, including alignment and attachment to structural members.
6. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affects this Work.
7. Review temporary protection requirements for during and after installation of this Work.

1.06 SUBMITTALS

A. See Section 01 3000 – Administrative Requirements, for submittal procedures.

B. Product Data: Submit for each type of product indicated, include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal plate wall panel and accessory.

C. Shop Drawings: Submit fabrication and installation layouts of metal plate wall panels; including details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
1. Provide distinction between factory-assembled, shop-assembled, and field-assembled work.
2. Provide details of following items at full scale.
   a. Manufacturer's standard sheet metal trims.
   b. Components of wall panel construction, anchorage methods, and hardware.

D. Coordination Drawings: Submit exterior elevations, drawn to scale, that have the following items shown and coordinated with each other, using input from installers of the following items:
   1. Metal plate wall panels and attachments.
   2. Girts.
   3. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
   4. Penetrations of wall by pipes and utilities.

E. Samples: Submit for each type of exposed finish required, and prepared on samples of size as follows:
   1. Aluminum Metal Plate Wall Panels: At least 2 inch by 3 inch.

F. Test and Inspection Reports: Submit test and inspection reports on each type of wall panel system provided for project based on evaluation of comprehensive tests performed by qualified testing agency.

G. Maintenance Data: Submit maintenance data for metal plate wall panels.

H. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing products specified in this section with at least five years of documented experience.

B. Installer: Company specializing in performing work of this section and approved by manufacturer.
   1. Install system in strict compliance with manufacturer’s installation instructions.

C. Anodized Finish Applicator: Provide either caustic (traditional) or eco-friendly (acid) etching technologies.
   1. Use fully automated, computer-controlled process lines for consistency of finish throughout project.
   2. Use documented production line quality control protocols in accordance with AAMA 611 test procedures.

D. Source Limitations: Obtain each type of metal plate wall panel from single source and from single manufacturer.

1.08 MOCKUPS

A. Mockups: Provide mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and to establish quality standards for fabrication and installation.
   1. Build mockup of typical wall panel assembly**,** including corners and corner soffits, supports, attachments, and accessories.
      a. Include at least four panels to represent a four-way panel joint and showing full thickness.
   2. Water Spray Test: Conduct water-spray test of mockup metal panel assembly, test water penetration in accordance with AAMA 501.2.
   3. Approval of mockups does not constitute approval of deviation from Contract Documents within mockups unless these deviations are approved by Architect in writing.
   4. Subject to compliance with requirements, approved mockups **[may]** or **[may not]** become part of completed Work if undisturbed upon Date of Substantial Completion.

1.09 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site in manufacturer’s original, unopened containers and packaging, with labels clearly identifying product name and manufacturer.

B. Storage and Handling: Store materials in clean, dry, interior area in accordance with manufacturer’s instructions.

C. Deliver panels, components, and other manufactured items without damage or deformation.

D. Protect panels during transportation, handling, and installation from weather, excessive temperatures and construction operations.

E. Handle panels in strict compliance with manufacturer's instructions and recommendations, and in a manner to prevent bending, warping, twisting, and surface damage.
   1. Store panels vertically with top of panel down, storage of panels horizontally is not permitted.

F. Store panels covered with suitable weather tight and ventilated covering.

G. Provide storage of panels to ensure dryness, with positive slope for drainage of moisture.

H. Do not store panels in contact with other materials that might cause staining, denting, or other surface damage.

I. Remove strippable protective covering from aluminum panel prior to installation.

1.10 SITE CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of this Work to be performed according to manufacturer's installation instructions and warranty requirements.

B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before panel fabrication and indicate measurements on Shop Drawings.
   1. Coordinate with construction schedule.

1.11 WARRANTY

A. See Section 01 7800 - Closeout Submittals, for additional warranty requirements.

B. Wall System Warranty: Provide wall panel manufacturer warranty, agreeing to correct defects in manufacturing of materials within a one year period after Date of Substantial Completion.
   1. Failures include, but are not limited to, the following:
      a. Structural failures, including rupturing, cracking, or puncturing.
      b. Deterioration: Beyond normal weathering of wall system metals and other materials.

C. Panel Material Warranty: Provide panel material manufacturer warranty, agreeing to repair finish of metal plate wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Finish Warranty Period: 30 years from Date of Substantial Completion. Warranties for all coating systems to be the same.
   2. Warranty Coverage: In accordance with AAMA 2605 for 70 percent PVDF resin on aluminum finish requirements.
      a. Fading, Loss of Color Retention: Loss of 5 Delta E units (Hunter) or less, in accordance with ASTM D2244.
      b. Chalking, Chalky White Powder on Panel Surface: Chalking at No. 8 or less for colors, or No. 6 for white, in accordance with ASTM D4214.
      c. Loss of Adhesion: Loss of 10 percent due to cracking, checking or peeling, or failure to adhere to bare metal.
      d. Gloss Retention: 50 percent or less in accordance with ASTM D523.
      e. Salt Spray, Accelerated: At least 4,000 hours in accordance with ASTM B117.
      f. Humidity Testing, Accelerated: At least 4,000 hours in accordance with ASTM D2247.
   3. Warranty Coverage: In accordance with AAMA 611 Class 1 anodized aluminum finish requirements.
      a. Loss of Adhesion: Resists cracking, crazing, flaking, and blistering when forming and welding completed prior to finishing; post forming or welding voids warranty.
      b. Fading - Loss of Color Retention: Loss of 5 Delta E units (Hunter) or less, in accordance with ASTM D2244.
      c. Chalking, Chalky White Powder on Panel Surface: Chalking at No. 8 or less in accordance with ASTM D4214.
      d. Test Chlorine resistance in accordance with ASTM rD543.
      e. Coating shall show no blistering, rusting, or degradation after 3,000 hours exposure in a modified ASTM B117 test using a 0.5% sodium hypochlorite solution."

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Dri-Design – Aluminum Wall Panel System or approved equal, Basis of Design.
   1. Address: 12480 Superior Ct., Holland, Michigan 49424.
   2. P.O. Box 1286 Holland, Michigan 49422-1286.
   3. Phone: (616) 355-2970; Fax: (616) 355-2972; Website: www.dri-design.com.

2.02 PERFORMANCE REQUIREMENTS

Delegated Design for Metal Wall: Basis of Design: Dri-Design

A. Metal panels and support framing, including panel attachment clips, sub girts, zee clips, sill angles, fasteners for miscellaneous metal framing, plates and bars, Tubes and pipes, joints, etc.

B. Metal Plate Wall Panel Assemblies: Comply with performance requirements without failure due to defective manufacturing, fabrication, installation, or other construction defects

C. Design, fabricate, and erect a dry joint, pressure equalized rainscreen aluminum wall panel system without use of sealants, gaskets, or butyl tape, tested as installed in compliance with AAMA 508, and as follows:
   1. Cyclic Static Air Pressure Differential: Pass cycled pressure loading at 25 psf in 100 three-second cycles in accordance with ASTM E1233/E1233M.
   2. Air Infiltration: Pass when tested at 1.57 psf (25 mph) in accordance with ASTM E283.
   3. Water Penetration:
      a. Static: Pass water penetration test under 25.0 psf positive static air pressure difference for at least 15 minutes with 5 gallons per sf per hour of water applied in accordance with ASTM E331.
      b. Dynamic: Pass water penetration test under 15.0 psf dynamic pressure difference for at least 15 minutes with 5 gallons per sf per hour of water applied in accordance with AAMA 501.1.
   4. Structural: Provide systems tested in accordance with ASTM E330/E330M and certified to be without permanent deformation or failure of structural members.

D. High Velocity Hurricane Zone (HVHZ): Comply with ASTM E8/E8M test methods and performance requirements of Florida Building Code and Miami-Dade County test protocols TAS-202 and TAS-203 for HVHZ with at least plus 61 psf to minus 80 psf design pressure rating.
   1. Application: For aluminum plate thickness of 0.080 inch only.

2.03 MATERIALS

A. Dri -Design - Aluminum Plate: Alloy and temper as recommended by manufacturer for application and in compliance with manufacturers design requirements. Refer to drawings for locations.
   1. Aluminum Material: Tension-leveled, [flouropolymer PVDF painted finish, 3003-H14 manganese alloy] or [anodized finish, 5005-AQ manganese alloy].
   2. Thickness: 0.080 inch.
   3. Weight: Less than 2 lbs per sf.
   4. Color: Refer to drawings for color selections.
   5. Panel Depth: 1-1/4 inch, nominal.
   6. Specifier Note: Maximum panel size for aluminum is 48w x 48h inch, square; 24w x 72h inch, rectangular; 60w x 30h inch, rectangular; 120w x 24h inch, long rectangular.
   7. Panel Size: As indicated on Drawings
   8. Specifier Note: Panel joints are typically 1/2 inch wide for horizontal joints and 5/8 inch wide for vertical joints; 1 inch maximum for each.
   9. Panel Joints: As indicated on Drawings.

2.04 FABRICATION

A. Fabricate and finish wall panels within manufacturer's facilities and fulfill indicated performance requirements demonstrated by laboratory testing.
   1. Comply with indicated profiles and with dimensional and structural requirements.

B. Provide post-finishing of panels, paint aluminum wall panels only after completion of panel fabrication and ensure exposed edges are coated.

C. Provide post anodizing of panels, anodize aluminum wall panels only after completion of panel fabrication and ensure exposed edges are anodic coated without crazing of surface at formed edges.

2.05 FINISHES

A. Comply with NAAMM's - Metal Finishes Manual for Architectural and Metal Products, for recommendations of designating finishes.

B. Superior Performance Organic Coating System: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride (PVDF) resin system.
   1. **All metal wall panels located within the natatorium** and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.
   2. **All metal wall panels located elsewhere in project shall receive Two-Coat Fluropolymer** AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.
   3. **No anodized Finish allowed within the natatorium** and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure. These areas shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

C. Color Anodized Finish: AAMA 611, Architectural Class I, color anodized coating of 0.0007 inch (0.7 mils) minimum thickness.
   1. Color: From Manufacture's full range. See drawings.

D. Clear Anodized Finish: AAMA 611, Architectural Class I, clear anodized coating of 0.0007 inch (0.7 mils) minimum thickness.

E. Field Touch-Up Materials: As recommended by coating manufacturer for field application.

2.06 ACCESSORIES

A. Metal Plate Wall Panel Accessories: Provide components required for a complete metal plate wall panel assembly including trim, copings, fascia, mullions, sills, corner units, flashings, and similar items. Match material and finish of panels unless otherwise indicated.

B. Provide integral drainage system and manufactures standard extrusions at termination of dissimilar materials.

C. Flashing and Trim: Match material, finish, and color of adjacent wall panels.
   1. Thickness: At least 0.040 inch.
   2. Refer to Section 07 62 00 Sheet Metal Flashing and Trim..

D. Panel Fasteners: Designed to withstand design loads, with at least 7/16 inch diameter head and neoprene washer.
   1. Aluminum Wall Panel Material: Provide stainless steel fasteners, or coated fastener approved by panel manufacturer or project wall consultant.

E. Sub-Girts: Galvanized, provide size and gage in accordance with project requirements.
   1. Furring Channel: Provide Hat, C, U or Z type as recommended by manufacturer.

2. Flat Strap: At least 14 gage, 0.0747 inch (1.90 mm) thick.
3. Refer to Section 05 40 00 Cold Formed Framing.

F. Substrate Wall Sheathing: Plywood, PS 1, Grade C-D, Exposure I, at least 5/8 inch thick.
1. Refer to Drawings and Section 06 1000 Rough Carpentry for requirements.

G. Weather Barriers: Provide climate specific weather barrier with performance characteristics for air penetration, water vapor transmission, and water penetration resistance. Refer to Section 07 27 26 Fluid Applied Membrane Air Barriers for requirements.

H. Sealants: As recommended by metal panel manufacturer for openings within wall panels and perimeter conditions.
1. Refer to Section 07 92 00 Joint Sealants for requirements.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, and Work areas and conditions with Installer present for compliance with requirements for installation tolerances, wall panel supports, and other conditions affecting performance of this Work.

B. Examine wall framing to verify that girts, angles, channels, studs, and other structural wall panel support members and anchorage have been installed within alignment tolerances required by wall panel manufacturer.

C. Verify that weather barrier has been installed over sheathing or substrate to prevent air infiltration or water penetration.

D. Examine rough-in for components and systems penetrating wall panels to coordinate actual penetration locations relative to wall panel joint locations prior to installation.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Miscellaneous Framing: Install sub girt, base angles, sills, furring, and other wall panel support members and provide anchorage in accordance with ASTM C754 for gypsum panel type substrates and panel manufacturer’s installation instructions.

3.03 INSTALLATION

A. Install wall and soffit panels in accordance with manufacturer's installation instructions, including pressure equalized rainscreen installation method and installation guidelines.
1. Metal panels consist of single sheets of metal formed with interlocking gutter and drainage system integral to the panel with single horizontal attachment for dry-joint rainscreen assembly.
2. Use of secondary drainage channels, brackets, support pins, joint sealants or gaskets to manage the drainage of wall panel system is not permitted.
3. Attach metal panels using progressive interlocking method, engaging bottom of panel in top of previous panel working bottom up, and left to right.
4. Install metal panels with single top attachment in pre-punched holes to allow individual panels to move due to thermal expansion.
5. Do not compromise internal gutter.

B. Install metal panels for orientation, sizes, and locations as indicated on Drawings.

C. Install metal panels with proper anchorage and other components for this Work securely in place.

D. Install metal panels with provisions for thermal and structural movement.

E. Install shims to plumb substrates as necessary for installation of wall panels.

F. Install weather tight seals at perimeter of wall panel openings.
   1. Test for proper adhesion on small unexposed area of solid surfacing prior to use.
   2. Refer to Section 07 9200.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA - Architectural Sheet Metal Manual.
   1. Provide concealed fasteners where possible, and set units true to line and level as indicated.
   2. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
   3. Install flashing and trim as wall panel Work proceeds.

H. Install weather tight escutcheons for pipe and conduit penetrating exterior walls.

I. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by wall panel manufacturer.

J. Install attachment system to support wall and soffit panels and with provisions to provide a complete weather tight wall system, including sub girts, extrusions, flashings and trim.
   1. Include attachment to supports and trims at locations using dissimilar materials.
   2. Do not apply sealants to joints, unless noted otherwise on Drawings or Shop Drawings.
   3. Install starter extrusion at base course and at cut panel locations.

K. Install accessories with positive anchorage to building and weather tight mounting and provisions for thermal expansion, and coordinate installation with flashings and other components.
   1. Install components required for a complete wall panel assembly including trim, copings, flashings and other accessory items.

L. Weather Barrier: Install weather barrier behind wall panels and over substrate in accordance with requirements of Section 07 2500.

3.04 TOLERANCES

A. Shim and align wall panel units with installed tolerances of 1/4 inch in 20 feet, non-cumulative, on level, plumb, and location lines as indicated.

3.05 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage qualified independent testing agency to perform field tests and inspections.

B. Water-Spray Test: After installation and in coordination with Mockup requirements, test area of assembly **as directed by Architect** for water penetration in accordance with AAMA 501.2.

C. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect completed metal wall panel installation, including accessories.

D. Remove and replace metal wall panels where tests and inspections indicate that they do not comply with specified requirements.

E. Perform additional tests and inspections, at Contractor's expense, to verify compliance of replaced wall panels or necessary additional work with specified requirements.

F. Prepare test and inspection reports.

3.06 CLEANING

A. Upon completion of wall panel installation, clean finished surfaces as recommended by panel manufacturer.

B. Upon completion of wall panel installation, clear weep holes and drainage channels of obstructions and dirt.

3.07 PROTECTION

A. Protect installed products from damage during subsequent construction.

B. Replace metal panels damaged or deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION

SECTION 07 42 64 METAL COMPOSITE MATERIAL WALL PANEL

PART 1 – GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and General Provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections apply to this Section.

1.02 SUMMARY

A. Definition:

1. Metal Composite Material (MCM) System includes MCM, joints, attachment system components and miscellaneous materials as appropriate for the design of the project to provide a weather-resistant exterior cladding system.

B. Section Includes: MCM system installations

1. Applications of MCM system installations include:

a. Exterior installation and performance of MCM and MCM system components.

b. Interior installation and performance of MCM and MCM system components (if applicable).

C. Delegated Design

1. Design of the Metal Composite Material (MCM) system, including engineering of all support, anchorage, and attachment systems, is delegated to the Contractor in accordance with the requirements of Division 01 Section "Delegated Design Requirements

2. The Contractor shall engage a qualified professional engineer, licensed in the project jurisdiction, to prepare all design documentation, including calculations and shop drawings, demonstrating compliance with performance requirements.

D. Related Sections: Section(s) related to this section include:

1. Cold-Formed Metal Framing: Division 05, 05 40 00 Cold Formed Framing
2. Weather Barrier in Cavity Behind MCM: Division 07, 07 27 27 Fluid Applied Membrane air Barrier
3. Sheet Metal Flashing and Trim: Division 07, 07 62 00 Flashing and Trim
4. Joint Sealants: Division 07, 07 90 00 Joint Sealers
5. Glazing: Division 08, 08 44 13 Glazed Aluminum Curtain Walls

1.03 REFERENCES

A. General: Standards listed by reference, including revisions by issuing authority, form a part of this specification section to the extent indicated. Standards listed have either been identified by the International Building Code (IBC), local building code, or specific requirement for this building construction type.

B. Aluminum Association (AA)

1. Aluminum Design Manual
2. AA-M12C22A41: Anodized - Clear Coating
3. AA-M12C22A44: Anodized - Color Coating

D. American Society for Testing and Materials (ASTM) International:
   1. ASTM D635 Standard Test Method for Rate of Burning and/or Extent and Time of Burning of Plastics in a Horizontal Position
   2. ASTM D1781 Standard Test Method for Climbing Drum Peel for Adhesives
   3. ASTM D1929 Standard Test Method for Determining Ignition Temperature of Plastics
   4. ASTM E84 Standard Test Method for Surface Burning Characteristics of Building Materials
   5. ASTM E283 Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen
   6. ASTM E330 Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors By Uniform Static Air Pressure Difference
   7. ASTM E331 Standard Test Method for Water Penetration of Exterior Windows, Curtain Wall, and Doors By Uniform Static Air Pressure Difference
   8. ASTM E1233 Standard test Method for Structural Performance of Exterior Windows, Doors, Skylights, and Curtain Walls by Cyclic Air Pressure Differential

E. American Architectural Manufacturers Association (AAMA):
   1. AAMA 2605 Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels
   2. AAMA 501 Methods of Test for Exterior Walls

F. National Fire Protection Association (NFPA):
   1. NFPA 285 Standard Fire Test Method for Evaluation of Fire Propagation Characteristics of Exterior Non-Load-Bearing Wall Assemblies Containing Combustible Components

1.04 SYSTEM DESCRIPTION

A. Performance Requirements:
   1. Delegated Design
   2. General Performance: Provide installed MCM system designed to withstand specified loadings while maintaining allowable deflection, thermal movement performance as defined by the Manufacturer, Fabricator, or Installer required by this section without defects, damage or failure

B. Deflection and Thermal Movement: Provide installed MCM systems that have been designed to resist to the wind loading, acting inward and outward, defined for this project:
   1. Perimeter Framing Deflection: Deflection of panel perimeter framing member shall not exceed L/175 normal to plane of the wall where L is the unsupported span of the perimeter framing member.
   2. Panel Deflection: Deflection of the panel face shall not exceed L/60 at design load where L is the unsupported span of the panel.
   3. Anchor Deflection: At connection points of framing members to anchors, anchor deflection in any direction shall not exceed 0.0625 inch (1.6 mm).
   4. At 150% pressure, no permanent deformation exceeding L/1000 or failure to structural members is permitted.

5. Thermal Movements: Allow for free and noiseless horizontal and vertical thermal movement due to expansion and contraction of component parts over a temperature range of -20°F (-29°C) to +180°F (82.2°C) at the material surface.
    a. Buckling, opening of joints, undue stress on fasteners, failure of sealants, or any other detrimental effects of thermal movement will not be permitted.
    b. Fabrication, assembly and erection procedures shall take into account the ambient temperature range at the time of the respective operation.

C. System Requirements:
    1. Wet System – (Tested to AAMA 501 Standard)
        a. ASTM E283 – Air Leakage – Not more than 0.06 cfm per ft^2 of wall area (0.3 L/s▪m^2) when tested at 6.24 psf (300 Pa).
            b. ASTM E331 – Static Water Penetration – When tested under static pressure at 12.0 psf (575 Pa) minimum, for a time period of 15 minutes. MCM systems must have:
            i. No uncontrolled water leakage to the room side of the assembly when tested as defined by the procedure.
        c. AAMA 501.1 – Dynamic Water Penetration – When tested with a wall pressure equivalent to 12.0 psf (575 Pa) for a time period of 15 minutes, the MCM system must have:
            i. No uncontrolled water leakage to the room side of the assembly when tested as defined by the procedure.
        d. ASTM E330 – Structural Performance – MCM system must be engineered to meet the project design loads, however the MCM system must meet or exceed the following criteria when tested to a minimum pressure of 30.0 psf (1436 Pa):
            i. Deflections do not exceed limitations defined within the section on Deflection and Thermal Movement.

D. Fire Performance: Where required by governing code, provide fire retardant MCM that has been evaluated and is in compliance with code requirements specified herein.
    1. Fire Performance: Wall assemblies containing MCM System shall meet the requirements of the Intermediate Scale Multi-story test, NFPA 285, where required by code based for the design of this project.

1.05 SUBMITTALS

A. General: Provide submittals in accordance with Conditions of the Contract and Division 01 Submittal Procedures Section.

B. Product Data: For each type of product indicated, include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of MCM System and accessory.

C. Shop Drawings: Submit shop drawings showing elevations and layouts, profiles, and product components, including anchorage, accessories, finish colors, and textures.
    1. Include details showing thickness and dimensions of the system parts, details of edge conditions, attachment system, corners, fastening and anchoring methods, locations of joints and gaskets, location and configuration of joints necessary to accommodate thermal movement, and all trim and flashings.
    2. Provide signed and sealed drawings by a qualified Design Professional licensed in the project jurisdiction, demonstrating conformance with the delegated design scope and the performance requirements identified for this project.

D. System Calculations: Submit MCM System Fabricator's complete system design and engineering

analysis/calculations including, but not limited to the following:

1. Show governing MCM types, mounting system including anchorages, connections, and fasteners. Indicate location, type magnitude, and direction of loads imposed on the building structural frame.
2. Analysis/Calculations shall be signed and sealed by a qualified Design Professional licensed in the project jurisdiction and shall demonstrate that the MCM system conforms to the delegated design scope and specified performance requirements.

E. Samples: Submit selection and verification samples for finishes, colors and textures

1. Selected Samples: Manufacturer's color charts or chips illustrating full range of colors, finishes and patterns available for MCM with factory applied finishes. Custom color selection requires color sample to be submitted for approval. Approval signatures are required by Architect.
    a) MCM System Fabricator shall not have filed for protection from creditors under state or federal insolvency or debtor relief statues or codes.
    b) MCM System Fabricator shall substantiate a track record of one of the Manufacturers listed in this specification working with the Fabricator/Installer for three (3) consecutive years and at a scale of operations cited above.
2. MCM System Installer Qualifications:
    a. The MCM System Installer shall have been in business under the present name for at least five (5) years prior to the start of this project and have experience with similar sized MCM system projects. The MCM System Installer must be capable of providing field service representation during construction.
    b. The MCM System Installer must be an approved installer by a MCA Certified Fabricator for the installation of their MCM System and have undergone proper training for the specified system thereof.

F. Regulatory Code Agencies Requirements: Provide MCM system which have been evaluated and are in compliance with the following, where required:

1. International Code Council (ICC)
2. Miami/Dade County Florida (Notice of Acceptance)
3. State of Florida (Florida Product Approval)

G. Mock-Ups: Install at project site a job mock-up using acceptable products and Fabricator approved details. Obtain Owner's and Architect's acceptance of finish color (draw down samples to be used for color approval of nonstandard coil coated colors), texture and pattern and workmanship standard. Comply with Division 01 Quality Control, 01 90 00, Mock-Up Requirements Section.

1. Mock-Up Size: To provide as detailed in the construction documents
2. Maintenance: Maintain mock-up during construction for workmanship comparison; remove and legally dispose of mock-up when no longer required.
3. Incorporation: Mock-up may be incorporated into final construction upon Architect's approval.
4. Provide Material required for custom color mock-ups at no cost to Owner. (consider special small quantity material runs may increase cost and require additional time to obtain material.

H. Pre-installation Meetings: Conduct pre-installation meeting to verify project requirements, substrate conditions, and system Fabricator's installation details.

1.06 PROJECT CONDITIONS

A. Substrate Tolerances: The General Contractor is responsible for providing a substrate with a tolerance of 1/4 inch in 20.0 feet (6mm in 6m), on level, plumb, and location control lines as

indicated and within 1/8 inch (3mm) offset of adjoining faces of alignment of matching profiles tolerances are noncumulative.

B. Field Measurements: Verify locations of wall framing members and wall opening dimensions by field measurements prior the fabrication of the MCM System. Indicate measurements on the “As Built Shop Drawings”. Field measurements to be taken once all substrate materials and adjacent materials are installed.

C. Project Schedule: Provisions in the project schedule must accommodate the time interval between field measurements and fabrication/installation.

1.07 WARRANTY

A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.

B. MCM Manufacturer’s Material Warranty: Submit, to the Owner, the manufacturer’s standard warranty.

1. Warranty Period:

a. MCM Material Integrity: Five (5) plus 1 years from date of Substantial Completion
b. MCM Painted Finish: Twenty (20) plus 1 years date of Substantial Completion.
c. MCM Natural Metal Surface: No finish warranty

C. MCM System and System Installation Warranty: Submit to the Owner, the MCM Fabricator system’s standard warranty document executed by authorized company official. The MCM system’s assembly warranty is in addition to and not a limitation of, other rights Owner may have under the Contract Documents.

1. Warranty Period

a. MCM System Workmanship: One (1) year warranty period commencing on Date of Substantial Completion.

b. Special Warranty: The MCM System Fabricator will repair or replace components of the MCM System that fails in materials or workmanship within the specified one (1) year warranty period above.

i. Failures include: deterioration of metals and other materials beyond normal weathering; structural failures including rupturing, cracking, puncturing, or loss of bond/adhesion characteristics.

PART 2 – PRODUCTS

2.01 METAL COMPOSITE MATERIAL (MCM) Manufacturers and Premium MCM System Fabricators

A. MCM Manufacturers:

1. Alpolic material manufactured by Mitsubishi Chemicals – www.alpolic-americas.com
2. Alucobond material manufactured by 3A Composites USA, Inc. – www.alucobondusa.com
3. larson material manufactured by Alucoil North America – www.alucoilnorthamerica.com
4. Reynobond material manufactured by Alcoa Architectural Products – www.reynobond.com

B. MCM System Fabricators:

1. Basis of Design: The Miller-Clapperton Partnership, Inc. – www.millerclapperton.com
2. Premium Certified MCM Fabricators recognized by the Metal Construction Association

2.02 METAL COMPOSITE MATERIAL (MCM

A. Material Description
   1. MCM Composition:
      a. Two sheets of aluminum sandwiching a solid core of extruded thermoplastic material formed in a continuous process with no glues or liquid adhesives between dissimilar materials. The core material shall be free of voids and/or air spaces and not contain foamed insulation material. Products that are laminated sheet by sheet in a batch process using glues or adhesives between materials shall not be acceptable.
   2. MCM Thickness: 4mm (0.157 inch)
   3. MCM Face Sheets:
      a. Thickness: 0.5mm (0.02 inch) (nominal)
   4. MCM Product:
      a. Standard core material product acceptable for use:
         i. Less than 40 feet (12.2m) above grade in general accordance with the provisions of IBC Section 1407, or
         ii. Up to 50 feet (15.2m) above grade when used in general accordance with the specific provisions of IBC Section 1407.11.2 and complying with the performance requirements of ASTM D1929, or
         iii. Up to 75 feet (22.9m) above grade when used in general accordance with the specific provisions of IBC Section 1407.11.3 and complying with the performance requirements of ASTM D1929, ASTM D635 or
         iv. Up to 75 feet (22.9) above grade when used in general accordance with the specific provisions of IBC Section 1407.11.4 and complying with the performance requirements of ASTM D1929, ASTM D635 or
      b. Fire Retardant core material product acceptable for use:
         i. On Construction Type I, see drawings.
   5. Fire Performance: (Class A Material)
      a. ASTM E84: MCM shall have a flame spread index of not more than 25 when tested in the maximum thickness intended for use.
      b. ASTM E84: MCM shall have a smoke developed index of not more than 450 when tested in the maximum thickness intended for use.
   6. Bond Integrity: Tested for resistance to delamination as follows:
      a. Peel Strength (ASTM D1781): 22.5 in-lb/in (100 N-m/m) minimum as manufactured.
      b. No degradation in bond performance after 8 hours of submersion in water at 212°F (100°C) or 21 days of immersion in water at 70°F (21°C).
      c. Thermally bonded to the core material in a continuous process under heat, pressure, and tension.

2.03 FINISH

A. Exterior Finish: Finish shall meet the performance criteria of AAMA 2605.

B. All metal wall panels located within the natatorium and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

C. All metal wall panels located elsewhere in project shall receive Two-Coat Fluropolymer AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

D. No anodized Finish allowed within the natatorium and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure. These areas shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

E. Standard 2-coat and 3 coat finish:

   a. See drawings for color selections.

2.04 ACCESSORIES

A. General: Provide Fabricator’s standard MCM system accessories, including fasteners, clips, anchorage devices, and attachments for specific applications indicated on contract documents.

2.05 RELATED MATERIALS

A. General: Refer to other related sections in Related Sections paragraph specified herein for related materials, including cold-form metal framing, flashing and trim, joint sealants, aluminum windows, glass and glazing and curtain walls.

2.06 FABRICATION

A. General: Shop-fabricate panels to sizes and joint configurations indicated on drawings.

   1. Fabricate panels to dimensions indicated on drawings based on an assumed design temperature of 70°F (21°C). Allow for ambient temperature range at time of fabrication.
   2. Formed MCM panel lines, breaks and angles to be sharp and true, with surfaces that are free from warp or buckle.
   3. Fabricate panels with sharply cut edges and no displacement of face sheet or protrusion of core.

B. Fabrication Tolerances: Shop-fabricate panels to sizes and joint configurations indicated on drawings.

   1. Width: +/- 0.079 inch (+/- 2mm) @ 70°F (21°C)
   2. Length: +/- 0.079 inch (+/- 2mm) @ 70°F (21°C)
   3. Squareness: +/- 0.079 inch (+/- 2mm) @ 70°F (21°C)

C. System Type

   1. Wet System
      a. The system must provide a wet seal (caulked) panel joint and must feature provisions to drain to the exterior face of the wall any leakage of water at joints and any condensation that may occur within the wall cavity as tested per AAMA 501. The sealant type shall be as specified in Section 07900 and with foamed type backer rod as indicated on architectural drawings.

D. Attachment System Components

   1. Formed from extruded aluminum as indicated on Contract Drawings to meet the specified design loads and system test performance according to each MCM System Fabricator’s design. Galvanized cold formed steel clips or staggered aluminum angles are not acceptable for panel to panel attachment.
   2. Panel stiffeners, as required, shall be positively engaged in the perimeter extrusion or mechanically fastened to the perimeter extrusion and *shall* be secured to the rear face of the

composite panel with silicone or high-strength double-sided bonding tape of sufficient size and strength to maintain panel's specified deflection under load. Structural calculations shall be provided to show the adequacy of this connection to resist the applied loads. Galvanized steel and MCM are not to be used as stiffener elements. Only panel stiffeners composed of extruded aluminum or 300 Series stainless steel shapes shall be adequate.

PART 3 – EXECUTION

3.01 MCM FABRICATOR/INSTALLER INSTRUCTIONS

Compliance: Comply with Manufacturer's product data, including product technical bulletins and product packaging instructions.

3.02 EXAMINATION

A. Site Verification of Conditions: Verify that conditions of substrates previously installed under other sections are acceptable for the MCM system installation. Documentation should be provided indicating any conditions detrimental to the performance of the MCM System.

3.03 PREPARATION

A. Miscellaneous Framing: Install miscellaneous MCM system support members and anchorage according to MCM System written instructions and drawings supplied by the MCM System Fabricator.

B. If required per project conditions, field measurements of the site condition are to be taken prior to beginning fabrication work and notification of any material modifications and resulting schedule adjustment shall be formally documented.

3.04 INSTALLATION

A. General:

1. Install the MCM system plumb, level and true in compliance with MCM System fabricator's recommendations.
2. Anchor the MCM system securely in place in accordance with Fabricator's approved shop drawings.
3. Comply with the MCM System Fabricator's instructions for installation of concealed fasteners and with provisions of Section 07 92 00 for installation of joint sealants.
4. Installation Tolerances: Maximum deviation from horizontal and vertical alignment of installed panels: 0.25 inch in 20 feet (6.4mm in 6.1m), noncumulative.
5. Do not cut, trim, weld, or braze component parts during erection in a manner which would damage the finish, decrease strength, or result in visual imperfection or a failure in performance. Return component parts which require alteration to shop for modification, if possible, or for replacement with new parts.
6. Separate contact of dissimilar metals with bituminous paint, approved plastic shims, or other approved methods as defined within the Aluminum Design Manual (ASD). Use gasketed or approved coated fasteners where needed to eliminate the possibility of corrosive or electrolytic action between metals.

B. Related Products Installation Requirements: Refer to other sections in Related Sections paragraph herein for installation of related products.

3.05 FIELD QUALITY REQUIREMENTS

A. Field Quality Control: When required by contract, mock up shall be constructed and tested at the expense of the General Contractor, conduct water-spray test on the mock-up of the MCM System, testing for water penetration according to AAMA 501.2.

B. Testing Agency: the Owner shall engage a qualified testing agency top perform tests and inspections.

3.06 ADJUSTING and Cleaning

A. Adjusting:

1. Remove and replace panels damaged beyond repair as a direct result of the panel installation. After installation, panel repair and replacement shall become the responsibility of the General Contractor.
2. Removal of panels damaged by other trades shall be the responsibility of the General Contractor.
3. Repair components of the MCM system with minor damage such that repairs are not discernible at a distance of 10 feet (3m) from the surface at a 90° angle per AAMA 2605.
4. Remove and replace components of the MCM system damaged beyond repair.
5. Remove protective film immediately after installation of MCM and immediately prior to completion of the MCM system work. Masking intentionally left in place after panel installation on an elevation at the direction of the General Contractor, shall become the responsibility of the General Contractor.
6. Any additional protection, after installation, shall be the responsibility of the General Contractor.
7. Make sure weep holes and drainage channels are unobstructed and free of dirt and sealants.
8. Remove from project site damaged MCM panels, protective film and other debris attributable to work of this section.

B. Cleaning:

1. Final cleaning shall not be part of the work of this section.

END OF SECTION

SECTION 074293 - SOFFIT PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes metal soffit panels.

B. Delegated Design: Design of metal soffit panel system, including support framing, anchorage, fasteners, and verification of structural performance requirements and venting requirements.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference TBD

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.

C. Samples: For each type of metal panel indicated.

D. Delegated-Design Submittal: For metal soffit panels indicated to comply with delegated design requirements, including:
   1. Design calculations signed and sealed by a qualified professional engineer licensed in the jurisdiction of the Project.
   2. Analysis data to demonstrate compliance with performance requirements, including wind loads, deflection limits, and thermal movement.
   3. Details of panel anchorage, furring/support system, and interface with adjacent construction.

1.4 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Warranties: Samples of special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Finish Warranty Period: 30 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592 and per drawings:

1. Serviceability Requirements: No oil canning, vibration, or fluttering under design wind pressure.

B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E283 at:

1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E331 at:

1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
1. Temperature Change (Range): 180 deg F (100 deg C) material surface variation.

E. Provide ventilation per SMACNA recommendations and guidelines for Soffit venting.

2.2 METAL SOFFIT PANELS

A. V-Groove-Profile Metal Soffit Panels.
1. Manufacturers and Products:
a. PAC-CLAD – Type H
i. V Groove

ii. 1” x 12”
iii. Flush wall panels
iv. Precision Series Box Rib with 1 Pencil Rib
v. Finish: From manufacturer’s full range of colors

B. Aluminum Plank Soffit Panels (Longboard):
1. Manufacturer: Longboard

2. Product Type:
a. Type F (Refer to Drawings)
b. V Groove Profile
c. Vented, Perforated Planks
d. Application: Exterior
e. Finish: From manufacturer’s full range of colors

3. Material: Extruded aluminum alloy 6063 T5 or T6.

4. Finish: AAMA 2605-compliant powder coating or anodized finish.

5. Panel Dimensions: As indicated on drawings or approved shop drawings.

6. Mounting: Use manufacturer’s proprietary concealed fastener system.

2.3 ACCESSORIES

A. Provide factory-formed flashings, trim, and accessories required for complete installation.

B. Fasteners: Corrosion-resistant, self-tapping stainless steel screws with EPDM washers, concealed where possible.

C. Sealants: As recommended by panel manufacturer, compatible with panel materials and adjacent substrates.

2.4 UNDERLAYMENT

A. Self-adhering, high-temperature modified bituminous membrane, minimum 40 mils thick and as required for this location.

B. Compliant with ASTM D1970.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions with Installer present for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Do not proceed with installation until unsatisfactory conditions are corrected.

3.2 METAL PANEL INSTALLATION

A. Metal Soffit Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.

1. Apply panels and associated items true to line for neat and weathertight enclosure.
2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.

B. Watertight Installation:

1. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels and elsewhere as needed to make panels watertight.
2. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
3. At panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with sealant and fastened together by interlocking clamping plates.

C. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

D. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.

E. Coordinate with adjacent materials i.e. curtain walls, soffit vents and seatlant joints.

3.3 CLEANING

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed unless otherwise indicated in manufacturer's written installation instructions. On

completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

END OF SECTION 074293

SECTION 075216 - STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS MEMBRANE ROOFING

GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Styrene-butadiene-styrene (SBS)-modified bituminous membrane roofing.
2. Roof insulation.
3. Cover board.
4. Walkways.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking, and for wood-based, structural-use roof deck panels.
2. Section 061600 "Sheathing" for wood-based, structural-use roof deck panels.
3. Section 076200 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
4. Section 079200 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.
5. Section 221423 "Storm Drainage Piping Specialties" for roof drains.

1.3 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D 1079 and glossary of NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to Work of this Section.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site .

1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.

3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. For insulation and roof system component fasteners, include copy of FM Approvals' RoofNav listing or other approved testing showing compliance with IBC Code.
2. Provide information indicating sole sourcing. If other manufacturer’s and products are acceptable to roofing manufacturer as part of their warranted system include such materials and data with product submittal along with manufacturer’s written acceptance letter stating material use is acceptable and does not affect performance and warranty.

B. Shop Drawings: Include plans, sections, details, and attachments to other work, including the following:

1. Layout and thickness of insulation.
2. Base flashings and membrane terminations.
3. Flashing details at penetrations.
4. Roof plan showing orientation of steel roof deck and orientation of roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
5. Crickets, saddles, and tapered edge strips, including slopes.
6. Insulation fastening patterns for corner, perimeter, and field-of-roof locations. Confirm patterns as listed in Part 3 and modify as required by manufacturer and installation method for project conditions and wind loads indicated for Project in coordination with applicable codes and design requirement indicated in structural drawings.
7. Tie-in with adjoining air barrier.
8. Provide “End of Day’s work” or “night” seal details to show how section of roof work are to be sealed from moisture infiltration to completed areas.

C. Wind Uplift Resistance Submittal: For roofing system indicating compliance with wind uplift performance requirements.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer manufacturer .

B. Product Test Reports: For roof membrane and insulation, tests performed by a qualified testing agency, indicating compliance with specified requirements.

C. Evaluation Reports: For components of membrane roofing system, from ICC-ES.

D. Sample Warranties: For manufacturer's special warranties.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is UL listed for roofing system identical to that used for this Project.

B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1. If a subcontractor is utilized for installation, the subcontracted installer must possess manufacturer's certification.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer.

1. Protect stored liquid material from direct sunlight.
2. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources.

1. Store in a dry location.
2. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.10 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.11 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.

1. Special warranty includes roof membrane, base flashings, roof insulation, fasteners, cover boards, and other components of roofing system.
   a. Warranty shall be considered "edge-to-edge" inclusive of all trim and accessories.
2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing system and flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings shall remain watertight.

1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G 152, ASTM G 154, or ASTM G 155.
2. Impact Resistance: Roof membrane shall resist impact damage when tested according to ASTM D 3746/D 3746M, ASTM D 4272/D 4272M, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.

C. Wind Uplift Resistance: Design roofing system to resist the following wind uplift pressures when tested according to FM Approvals 4474, UL 580, or UL 1897:

1. Zone 1 (Roof Area Field): Per Structural; or as engineered by roofing manufacturer for the project conditions .
2. Zone 2 (Roof Area Perimeter): Per Structural; or as engineered by roofing manufacturer for the project conditions .
   a. Location: From roof edge to Specified dimensions inside roof edge.
3. Zone 3 (Roof Area Corners): Per Structural; or as engineered by roofing manufacturer for the project conditions .
   a. Location: Specified dimensions in each direction from each building corner.

2.2 MANUFACTURERS

A. Source Limitations: Obtain components for roofing system from roof membrane manufacturer or manufacturer approved by roof membrane manufacturer.

B. Subject to compliance with the project requirements, provide products by one of the following:

1. Johns Manville

2. Soprema

2.3 BASE SHEET MATERIALS

A. SBS-Modified Bitumen Polyester Mat Base Sheet: ASTM D 6164/D 6164M, Type I, Grade S, SBS-modified asphalt sheet, reinforced with polyester fabric, smooth surfaced, suitable for cold adhesive application method.

2.4 STYRENE-BUTADIENE-STYRENE (SBS) MODIFIED BITUMINOUS CAP SHEET

A. Granule-Surfaced Roofing Cap Sheet: ASTM D 6164/D 6164M, Type I, Grade G, SBS-modified asphalt sheet, reinforced with polyester fabric, suitable for cold adhesive or hot asphalt application method.

1. Granule Color: White .

2.5 BASE FLASHING SHEET MATERIALS

A. Backer Sheet: ASTM D 4601/D 4601M, Type I , asphalt-impregnated and -coated, glass-fiber sheet, dusted with fine mineral surfacing on both sides.

B. Granule-Surfaced Flashing Sheet: ASTM D 6164/D 6164M, Type I or II, Grade G, SBS-modified asphalt sheet, reinforced with polyester fabric , granule surfaced, suitable for application method specified, and as follows:

1. Granule Color: White .

C. Liquid Flashing System: Roof membrane manufacturer's standard one- or two-part moisture curing resin with low solvent content, consisting of a primer, flashing cement, and scrim.

2.6 AUXILIARY ROOFING MATERIALS

A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.

1. Adhesives and Sealants: Comply with VOC limits of authorities having jurisdiction.

B. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.

C. Roof Vents: As recommended by roof membrane manufacturer.

1. Size: Not less than4-inch diameter.

D. Sheathing Paper (for wood decks): Red-rosin type, minimum 3 lb/100 sq. ft..

E. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.

F. Asphalt Roofing Cement: ASTM D 4586/D 4586M, asbestos free, of consistency required by roofing system manufacturer for application.

G. Mastic Sealant: Polyisobutylene, plain or modified bitumen; nonhardening, nonmigrating, nonskinning, and nondrying.

H. Fasteners: Factory-coated steel fasteners and metal insulation plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing components to substrate; tested by manufacturer for required pullout strength, and acceptable to roofing system manufacturer.

I. Roofing Granules: Ceramic-coated roofing granules, No. 11 screen size with 100 percent passing No. 8 sieve and 98 percent of mass retained on No. 40 sieve; color to match roof membrane.

J. Miscellaneous Accessories: Provide those recommended by roofing system manufacturer.

K. Roofing Membrane Adhesive: SBS modified bitumen membrane adhesive for use with sanded base ply and granule surfaced cap sheet membranes. Manufacturer's approved membrane adhesive meeting or exceeding ASTM D3019 Type III. VOC Content 250 g/L or less/.

L. Asphalt Primer: Manufacturer's approved asphalt primer meeting ASTM D41 Type I.

2.7 SUBSTRATE/COVER BOARDS

A. Cover Board: Mineral-fortified asphaltic core reinforced with asphalt-saturated glass mat.

1. Products: Subject to compliance with the project requirements, provide:
   a. Soprema: Sopraboard - 1/4"
   b. IKO
   c. Blue Ridge

2.8 ROOF INSULATION

A. General: Preformed roof insulation boards, manufactured or approved by roof membrane manufacturer,.

B. Polyisocyanurate Board Insulation: ASTM C 1289 Type II Class I, felt or glass-fiber mat facer on both major surfaces.

1. Thickness:
   a. 4-1/2 inches minimum unless otherwise indicated on drawings. Provide in multiple layers, staggered in largest size permissible. 2.5" Base Layer with 2" Top Layer.

C. Tapered Crickets: Provide factory-tapered insulation boards.

1. Material: Match roof insulation .
2. Minimum Thickness: 1/2 inch.
3. Slope:
   a. Saddles and Crickets: 1/2 inch per foot unless otherwise indicated on Drawings.

2.9 INSULATION ACCESSORIES

A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.

B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.

C. Wood Nailer Strips: Comply with requirements in Section 061000 "Rough Carpentry."

1. Note: The owner will not accept expanded "Perlite" insulation or similar eave or tapered insulation or cants. All cants shall be treated wood. All tapered board shall be polyiso.

2.10 WALKWAYS

A. Walkway Cap-Sheet Strips: ASTM D 6164/D 6164M, Type I or II, Grade G, SBS-modified asphalt sheet (reinforced with a combination of polyester fabric and glass fibers); granule surfaced; suitable for application method specified, and as follows:

1. Size: 36 by 60 inches .
2. Granule Color: White .

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
2. Verify that wood cants, blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Section 053100 "Steel Decking."
4. Verify that deck is securely fastened with no projecting fasteners and with no adjacent units in excess of 1/16 inch out of plane relative to adjoining deck.
5. Provide information in daily field reports that checks and documents moisture content of the roofing substrate. Preferable method is by RH probe. Plastic sheet method or electronic concrete meter may also be used for this Project.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions.

1. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction.

1. Remove roof-drain plugs when no work is taking place or when rain is forecast.

3.3 ROOFING INSTALLATION, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions, FM Approvals' RoofNav assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.

B. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast.

1. Remove and discard temporary seals before beginning work on adjoining roofing.

3.4 INSULATION AND COVER BOARD INSTALLATION

A. Coordinate installing roofing system components, so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. Comply with roofing system and insulation manufacturer's written instructions for installing roof insulation.

C. Insulation Cant Strips: Install and secure preformed 45-degree insulation cant strips at junctures of roofing system with vertical surfaces or angle changes greater than 45 deg F.

1. Note: The owner will not accept Perlite or similar expanded board/cellulose insulation cants. All cants shall be treated wood.

D. Installation Over Metal Decking:

1. Fasten base layer, top layer, Crickets and cover board to deck specified insulation fasteners and plates. Evenly distribute fasteners as required by the board manufacturer’s published requirements.
2. Fasten insulation to meet specified wind uplift pressure requirements and warranty requirements.
3. Minimum Fastening requirement: Coordinate fastening patterns with Part 1 and modify as needed.
    1. Field Zone 1 16 fasteners per 4x8 board
    2. Field Zone 1 16 fasteners per 4x8 board
    3. Perimeter Zone 2 24 fasteners per 4x8 board
    4. Corner Zone 3 32 fasteners per 4x8 board

4. For insulation/cover board located partially within the defined perimeter and or corners, nstall fastening for the entire board as specified herein.

3.5 INSULATION AND COVER BOARD SYSTEM APPLICATION

A. Follow insulation system component product data sheets, published general requirements and approvals.

B. Install all insulation system components on clean, dry, uniform, and properly prepared substrates.

C. All Insulation system boards shall be carefully installed and fitted against adjoining sheets to form tight joints.

D. Insulation system boards that must be cut to fit shall be saw cut or knife cut in a straight line, not broken. Chalk lines shall be used to cut insulation components. Uneven or broken edges shall not be accepted. Remove dust and debris that develops during cutting operations.

E. Stagger successive layers of insulation 12 in vertically and laterally to ensure board joints do not coincide with joints from the layers above and below.

F. Crickets, saddles, and tapered edge strips shall be installed before installing cover boards.

G. Install tapered insulation, saddles, and crickets as required to ensure positive slope for complete roof drainage.

H. Cover boards shall be installed to fit tight against adjacent boards. When required by the cover board manufacturer a uniform gap shall be provided between cover boards using a uniform guide placed between board joints to form a gap between all boards during installation.

I. The finished insulation system surface shall be tight to, and flush with, adjacent substrates to form a satisfactory substrate to install specified roof membrane and flashings.

J. Install specified cants where required for membrane flashing transitions.

3.6 ROOFING MEMBRANE INSTALLATION, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions and applicable recommendations in ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."

B. Start installation of roofing in presence of roofing system manufacturer's technical personnel and Owner's testing and inspection agency.

C. Where roof slope exceeds 1/2 inch per 12 inches , install roofing membrane sheets parallel with slope.

D. Coordinate installation of roofing system so insulation and other components of the roofing system not permanently exposed are not subjected to precipitation or left uncovered at the end of the workday or when rain is forecast.

1. Provide tie-offs at end of each day's work to cover exposed roofing sheets and insulation with a course of coated felt set in roofing cement or hot roofing asphalt, with joints and edges sealed.

2. Complete terminations and base flashings, and provide temporary seals to prevent water from entering completed sections of roofing system.
3. Remove and discard temporary seals before beginning work on adjoining roofing.

3.7 MEMBRANE ADHESIVE APPLICATION

A. The ambient temperature shall be above 50 degrees and the adhesive temperature shall be a minimum of 70 degrees at the point of membrane application.

B. To ensure the adhesive is applied at 70 degrees during cold weather drums and 5 gallon pails shall be stored in heated areas. Drums and 5 gallon pails exposed to cold temperature on the roof shall be provided with heaters when necessary to ensure the minimum application temperature is maintained.

C. Priming substrates is optional when solvent based membrane adhesives are used. Primer may be applied to reduce adhesive consumption rates for some absorptive surfaces.

D. Membrane adhesive shall be applied using 3/16 – 3/8 inch notched squeegee, brush, or spray equipment.

E. Apply adhesive to clean, dry, and prepared compatible substrates as required to ensure full adhesion.

F. Follow the adhesive product data sheet requirements for application rates.

G. Apply a uniform application of membrane adhesive at the application rate published by the product data sheet.

H. Apply 1-1/2 – 2-1/2 gallons per square between membrane plies. The application rate is 3 to 4 gallons per square over absorptive substrates and over granule surfaces. Refer to manufacturer's product data sheet and adjust application rate based upon surface conditions.

I. Install SBS membrane ply before the adhesive begins to skim over. Once adhesive skims over, the membrane ply will not adhere.

3.8 SBS-MODIFIED COLD ADHESIVE MEMBRANE INSTALLATION

A. Follow material product data sheets and published general requirements for installation instructions.

B. Ensure environmental conditions are satisfactory and will remain satisfactory during the application o the membrane adhesive and membrane plies.

C. Unroll membrane onto the roof surface and allow the membrane to relax prior to installing the membrane.

D. Re-roll the membrane in order for the plies to be rolled into the adhesive while ensuring the specified side and end laps are maintained.

E. Starting at the low point of the roof, lay out the membrane to ensure the plies are installed perpendicular to the roof slope, shingled to prevent back water laps.

F. Cut rolls to working lengths and widths to conform to roof conditions and lay out to always work to a selvage edge.

G. Ensure all roofing and flashing substrates are prepared as necessary, and all substrates are acceptable to receive the specified adhesive and membrane.

H. Install the specified membrane adhesive ahead of the membrane application. Do not allow the adhesive to skim over before the membrane is applied into the adhesive. The membrane will not adhere where the adhesive has skimmed over.

I. Where laps are adhered using membrane adhesive, apply sufficient adhesive coverage to ensure 1/8 to ¼ inch bleedout is present at all laps.

J. Once set in place, ensure specified side-laps and end-laps are maintained.

K. At the end laps cut a 45 degree dog ear away from the selvage edge for all T-joints.

L. For low slope areas ¼ inch per foot, or where otherwise specified/required leave all membrane side and end laps dry to hot air weld or torch all laps water-tight. Embed granules, where present, when heat welding sheets.

M. Use a follow tool, weighted roller or broom the leading edge of the membrane to the substrate, working forward and outward as necessary to remove wrinkles. Avoid walking over the membrane during application.

N. Each day, physically inspect all side and end laps and ensure the membrane is sealed water-tight. Where necessary use a torch or hot air welder and a clean trowel to ensure all laps are fully sealed.

O. Inspect the installation each day to ensure the plies are fully adhered. Repair all voids, wrinkles, open laps, and all other deficiencies.

P. Offset the cap sheet side and end laps away from the base ply laps so that cap sheet laps are not located within 18 inches of the base ply laps.

Q. Immediately broadcast matching granules into adhesive bleed-out at cap sheet laps or otherwise treat bitumen bleed-out once adhesive has dried and cured.

3.9 FLASHING APPLICATION HEAT WELDED

A. Refer to SBS manufacturer’s membrane application instructions, flashing detail drawings, and follow product data sheets and other published requirements for installation instructions. Refer to manufacturer’s membrane flashing detail drawings.

B. The contractor is responsible for project safety. Refer to NRCA CERTA recommendations and building owner requirements for hot work operations.

C. Where required to seal substrates for fire safety, install specified adhered, self-adhered or fastened backer ply to the substrate. Ensure backer-ply covers and seals all substrates requiring protection from exposure to torch operations.

D. Ensure all flashing substrates that require primer are primed, and the primer is fully dry.

E. Unroll the flashing base ply and flashing cap sheet onto the roof surface to their complete length. Once relaxed, cut the membrane to the required working lengths to accommodate the flashing height, cants, and the required over-lap onto the horizontal roof surface.

F. Cut the flashing membrane from the end of the roll to always install flashings to the side-lap line or selvage edge line.

G. Lay out the flashing base ply and flashing Cap Sheet to offset all side-laps a minimum of 12 inches so that side-laps are never aligned on top of the ply beneath. Shingle the flashing ply laps to prevent back-water laps.

H. Install non-combustible cant strips at transitions where required.

I. Ensure correct membrane and flashing sequencing to achieve redundant, multi-ply, watertight flashings.

J. ROOF MEMBRANE BASE PLY:

1. Before installing flashings, install the roof membrane base ply in the horizontal field of the roof, and extend the base ply up to the top of the cant, where present, at roof terminations, transitions, and penetrations.

K. FLASHING BASE PLY:

1. Install the flashing base ply starting at the top leading edge of the vertical flashing substrate, down over the cant and onto the horizontal surface of the roof a minimum of 3 inches beyond the of base of the cant onto the roof. Cut the base ply at corners to form 3-inch side-laps. Install gussets to seal corner transitions.
2. Install one or more flashing base ply(s) at all roof terminations, transitions, and penetrations.

L. ROOF MEMBRANE CAP SHEET:

1. Install the roof membrane Cap Sheet in the horizontal field of the roof over the flashing base ply up to the roof termination, transition, or penetration, and up to the top of cants where present.
2. Using a chalk line, mark a line on the membrane cap sheet a minimum of 4 inches from the base of the cant onto the roof. Where granules are present, embed the cap sheet granules using a torch and trowel or granule embedder to prepare the surface to receive the flashing cap sheet.

M. FLASHING CAP SHEET:

1. Install the flashing Cap Sheet starting at the top leading edge on the vertical substrate, over the cant and onto the roof surface 4 inches from the base of the cant onto the roof.

2. Install the flashing Cap Sheet to ensure a minimum two (2) ply flashing system is present at all roof terminations, transitions, and penetrations.

N. During the membrane and flashing installation, ensure all plies are completely adhered into place, with no bridging, voids, or openings. Ensure bitumen or flashing cement bleed-out is present at all flashing side and end-laps.

O. Use a damp sponge float or damp rag to press-in the heat-welded flashing plies during installation.

P. Where sufficient bitumen bleed-out is not present, and for all self-adhered plies, apply specified gun-grade sealant or mastic to seal the membrane termination along all roof terminations, transitions, and penetrations. These include gravel stop edge metal, pipe penetrations, along the top edge of curb and wall flashing, and all other flashing terminations where necessary to seal flashings watertight.

Q. Fasten the top leading edge of the flashing 8 in on-centers with appropriate 1 in metal cap nails or other specified fasteners and plates. Seal fastener penetrations watertight using specified sealant or mastic.

R. Manufacturer's liquid-applied, reinforced flashing systems shall be installed where conditions are not favorable to install SBS modified bitumen flashings. Such conditions include irregular shapes penetrating roof surfaces (I-beams), confined areas and low flashing heights. Manufacturer's liquid-applied, reinforced flashing systems are recommended in lieu of pitch pans and lead pipe flashings.

3.10 WALKWAY INSTALLATION

A. Walkway Cap Sheet Strips: Install walkway cap sheet strips over roofing membrane, using same application method as used for roofing cap sheet.

1. Install walkways strips at the following locations:
   a. Perimeter of each rooftop unit.
   b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
   c. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
   d. Top and bottom of each roof access ladder.
   e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
   f. Locations indicated on Drawings.
   g. As required by roof membrane manufacturer's warranty requirements.
2. Provide 3-inch clearance between adjoining strips.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to inspect substrate conditions, surface preparation, roof membrane application, flashings, protection, and drainage components, and to furnish reports to Architect.

B. Perform the following tests: REVISION 1 - ASI #4 - 09-25-2024 Perform one of the following tests noted in items 3 or 4 below to determine if there are any moisture issues or leaks. Before performing such testing provide costs associated with each test to the Owner and gain Owner direction in writing prior to engaging and performing such testing.

1. Visually inspect roofing system by walking roof after any rain events during construction and after completion of an individual roof area to verify that there is no ponding. Note any such areas by photograph and written notes and diagrams and repair to eliminate such ponding.
2. Infrared Thermography: Testing agency shall survey entire roof area using infrared color thermography according to ASTM C 1153.
    a. Perform tests before overlying construction is placed.
    b. After infrared scan, locate specific areas of leaks by electrical capacitance/impedance testing, or by nuclear hydrogen detection testing.
    c. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
        1) Cost of retesting is Contractor's responsibility.
    d. Testing agency shall prepare survey report of initial scan indicating locations of entrapped moisture if any.
3. Electrical Capacitance/Impedance Testing: Testing agency shall survey entire roof area for entrapped water within roof assembly according to ASTM D 7954/D 7954M.
    a. Perform tests before overlying construction is placed.
    b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
        1) Cost of retesting is Contractor's responsibility.
    c. Testing agency shall prepare survey report indicating locations of entrapped moisture, if any.
4. Testing agency shall prepare survey report indicating locations of initial discontinuities, if any.

C. Test Cuts: Remove test specimens to evaluate problems observed during quality-assurance inspections of roofing membrane as follows:

1. Determine approximate quantities of components within roofing membrane according to ASTM D 3617/D 3617M.
2. Examine test specimens for interply voids according to ASTM D 3617/D 3617M and to comply with criteria established in Appendix 3 of ARMA/NRCA's "Quality Control Guidelines for the Application of Polymer Modified Bitumen Roofing."
3. Repair areas where test cuts were made according to roofing system manufacturer's written instructions.

D. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.

1. Notify Architect and Owner 48 hours in advance of date and time of inspection.

E. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

F. Roofing system will be considered defective if it does not pass tests and inspections.

1. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.12 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period.

1. When remaining construction does not affect or endanger roofing, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 075216

SECTION 076200 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Formed roof-drainage sheet metal fabrications.
2. Formed low-slope roof sheet metal fabrications.
3. Formed steep-slope roof sheet metal fabrications.
4. Formed equipment support flashing.
5. Formed overhead-piping safety pans.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for wood nailers, curbs, and blocking.
2. Section 077200 "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
3. Section 079500 "Expansion Control" for manufactured sheet metal expansion-joint covers.

1.3 COORDINATION

A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each manufactured product and accessory.
2. Provide test data indicating compliance with SPRI ES-1, RE1, RE2, and RE3, as applicable to the Project, for uplift resistance criteria of edge metal(s) meeting conditions of the Project. May be indicated in separate product information submittal or indicated in Shop Drawings.

B. Shop Drawings: For sheet metal flashing and trim.

1. Include plans, elevations, sections, and attachment details.
2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled work.
3. Include identification of material, thickness, weight, and finish for each item and location in Project.
4. Include details for forming, including profiles, shapes, seams, and dimensions.
5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
6. Include details of termination points and assemblies.
7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.
8. Include details of roof-penetration flashing.
9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, and counterflashings as applicable.
10. Include details of special conditions.
11. Include details of connections to adjoining work.
12. Detail formed flashing and trim at scale of not less than 3 inches per 12 inches.
13. Include test data indicating compliance with SPRI ES-1, RE1, RE2, and RE3 as applicable to the Project, for uplift resistance crieterir of edge metal(s) meeting conditions of the Project.

C. Samples for Verification: For each type of exposed finish.

1. Sheet Metal Flashing: 12 incheslong by actual width of unit, including finished seam and in required profile. Include fasteners, cleats, clips, closures, and other attachments.
2. Trim, Metal Closures, Expansion Joints, Joint Intersections, and Miscellaneous Fabrications: 12 incheslong and in required profile. Include fasteners and other exposed accessories.
3. Unit-Type Accessories and Miscellaneous Materials: Full-size Sample.
4. Anodized Aluminum Samples: Samples to show full range to be expected for each color required.

1.5 QUALITY ASSURANCE

A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.

1. For copings and roof edge flashings that are SPRI ES-1 tested, shop shall be listed as able to fabricate required details as tested and approved.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.

B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. Sheet Metal Standard for Copper: Comply with CDA's "Copper in Architecture Handbook." Conform to dimensions and profiles shown unless more stringent requirements are indicated.

D. SPRI Wind Design Standard: Manufacture and install copings and roof edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressure:

1. Design Pressure: As indicated on Drawings.
2. SPRI ES-1 tests RE 2 and RE-3.

E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 SHEET METALS

A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.

B. Stainless-Steel Sheet: ASTM A 240/A 240M or ASTM A 666, Type 304, dead soft, fully annealed; with smooth, flat surface.

1. Finish: 2D (dull, cold rolled).

C. Metallic-Coated Steel Sheet: Provide zinc-coated (galvanized) steel sheet according to ASTM A 653/A 653M, G90coating designation or aluminum-zinc alloy-coated steel sheet according to ASTM A 792/A 792M, Class AZ50coating designation, Grade 40; prepainted by coil-coating process to comply with ASTM A 755/A 755M.

1. Surface: Smooth, flat.

2. Exposed Coil-Coated Finish:
   a. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
3. Color: As selected by Architect from manufacturer's full range.
4. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.

2.3 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, solder, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.

B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal or manufactured item.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
   a. Exposed Fasteners: Heads matching color of sheet metal using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of metal.
   b. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.
   c. Spikes and Ferrules: Same material as gutter; with spike with ferrule matching internal gutter width.
2. Fasteners for Stainless-Steel Sheet: Series 300 stainless steel.
3. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

C. Solder:

1. For Stainless Steel: ASTM B 32, Grade Sn60, with acid flux of type recommended by stainless-steel sheet manufacturer.

D. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inchwide and 1/8 inchthick.

E. Elastomeric Sealant: ASTM C 920, elastomeric polyurethane polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

F. Butyl Sealant: ASTM C 1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

G. High-Temperature Self-Adhered Membrane Flashings.

1. Where required in the drawings for use under metal copings, metal panels and other sheet metal flashings subject to direct sunlight and/or high temperatures provide 40 mil thick product capable of handling such high temperatures. With product provide data indicating product is acceptable for use for such areas and compatible with substrate it is being applied to.
   a. Atlas WeatherMaster Pro-Grade Ice and Water Underlayment.
   b. Grace Ice and Water Shield HT.
   c. Other approved equal.

2.4 FABRICATION, GENERAL

A. General: Custom fabricate sheet metal flashing and trim to comply with details shown and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required. Fabricate sheet metal flashing and trim in shop to greatest extent possible.

1. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
2. Obtain field measurements for accurate fit before shop fabrication.
3. Form sheet metal flashing and trim to fit substrates without excessive oil canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
4. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.

B. Fabrication Tolerances: Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feeton slope and location lines indicated on Drawings and within 1/8-inchoffset of adjoining faces and of alignment of matching profiles.

C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inchdeep, filled with butyl sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.

D. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.

E. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard for application, but not less than thickness of metal being secured.

F. Do not use graphite pencils to mark metal surfaces.

2.5 ROOF-DRAINAGE SHEET METAL FABRICATIONS

A. Hanging Gutters: Fabricate to cross section required, complete with end pieces, outlet tubes, and other accessories as required. Fabricate in minimum 96-inch-long sections. Furnish flat-stock

gutter brackets and flat-stock gutter spacers and straps fabricated from same metal as gutters, of size recommended by cited sheet metal standard but with thickness not less than twice the gutter thickness. Fabricate expansion joints, expansion-joint covers, gutter bead reinforcing bars, and gutter accessories from same metal as gutters. Shop fabricate interior and exterior corners.

1. Gutter Profile: Style A according to cited sheet metal standard.
2. Expansion Joints: Butt type with cover plate.
3. Accessories: Continuous, removable leaf screen with sheet metal frame and hardware cloth screen.
4. Gutters with Girth up to 15 Inches: Fabricate from the following materials:
    a. Galvanized Steel: 0.022 inch thick.

B. Downspouts: Fabricate rectangular downspouts to dimensions indicated, complete with mitered elbows. Furnish with metal hangers from same material as downspouts and anchors. Shop fabricate elbows.

1. Fabricated Hanger Style: Fig 1-35A according to SMACNA's "Architectural Sheet Metal Manual."
2. Fabricate from the following materials:
    a. Galvanized Steel: 0.022 inch thick.

C. Parapet Scuppers: Fabricate scuppers to dimensions required, with closure flange trim to exterior, 4-inch-wide wall flanges to interior, and base extending 4 inches beyond cant or tapered strip into field of roof. Fasten gravel guard angles to base of scupper. Fabricate from the following materials:

1. Stainless Steel: 0.019 inch thick.

D. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes, exterior flange trim, and built-in overflows. Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

E. Splash Pans: Fabricate to dimensions and shape required and from the following materials:

1. Stainless Steel: 0.019 inch thick.

2.6 LOW-SLOPE ROOF SHEET METAL FABRICATIONS

A. Roof Edge Flashing (Gravel Stop) and Fascia Cap: Fabricate in minimum 96-inch-long, but not exceeding 12-foot-long sections. Furnish with 6-inch- wide, joint cover plates. Shop fabricate interior and exterior corners.

1. Joint Style: Butted with expansion space and 6-inch-wide, concealed backup plate.
2. Fabricate from the Following Materials:
    a. Galvanized Steel: 0.028 inch thick.

B. Copings: Fabricate in minimum 96-inch-long, but not exceeding 12-foot-long, sections. Fabricate joint plates of same thickness as copings. Furnish with continuous cleats to support edge of

external leg and drill elongated holes for fasteners on interior leg. Miter corners (welded or continuous one piece fabrication), fasten and seal watertight. Shop fabricate interior and exterior corners.

1. Joint Style: Butted with expansion space and 6-inch-wide, concealed backup plate.
2. Fabricate from the Following Materials:
   a. Galvanized Steel: 0.040 inch thick.

C. Roof Expansion-Joint Cover: Fabricate from the following materials: Shop fabricate interior and exterior corners.

1. Galvanized Steel: 0.034 inch thick.

D. Base Flashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

E. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

F. Flashing Receivers: Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

G. Roof-Penetration Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

H. Roof-Drain Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.016 inch thick.

2.7 STEEP-SLOPE ROOF SHEET METAL FABRICATIONS

A. Apron, Step, Cricket, and Backer Flashing: Fabricate from the following materials:

1. Stainless Steel: 0.016 inch thick.

B. Valley Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

C. Drip Edges: Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

D. Eave, Rake, Ridge, and Hip Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

E. Counterflashing: Shop fabricate interior and exterior corners. Fabricate from the following materials:

1. Galvanized Steel: 0.022 inch thick.

F. Roof-Penetration Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

2.8 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Equipment Support Flashing: Fabricate from the following materials:

1. Galvanized Steel: 0.028 inch thick.

B. Overhead-Piping Safety Pans: Fabricate from the following materials:

1. Galvanized Steel: 0.040 inch thick.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.

1. Verify compliance with requirements for installation tolerances of substrates.
2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.

3. Space cleats not more than 12 inchesapart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
4. Install exposed sheet metal flashing and trim with limited oil canning, and free of buckling and tool marks.
5. Torch cutting of sheet metal flashing and trim is not permitted.
6. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.

1. Coat concealed side of stainless-steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of 10 feet with no joints within 24 inchesof corner or intersection.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inchdeep, filled with sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.

D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

F. Seal joints as required for watertight construction.

1. Use sealant-filled joints unless otherwise indicated. Embed hooked flanges of joint members not less than 1 inchinto sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is between 40 and 70 deg F, set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F.
2. Prepare joints and apply sealants to comply with requirements in Section 079200 "Joint Sealants."

G. Rivets: Rivet joints in zinc where necessary for strength.

3.3 ROOF-DRAINAGE SYSTEM INSTALLATION

A. General: Install sheet metal roof-drainage items to produce complete roof-drainage system according to cited sheet metal standard unless otherwise indicated. Coordinate installation of roof perimeter flashing with installation of roof-drainage system.

B. Hanging Gutters: Join sections with joints sealed with sealant. Provide for thermal expansion. Attach gutters at eave or fascia to firmly anchor them in position. Provide end closures and seal watertight with sealant. Slope to downspouts.

1. Fasten gutter spacers to front and back of gutter.
2. Anchor and loosely lock back edge of gutter to continuous cleat.
3. Anchor back of gutter that extends onto roof deck with cleats spaced not more than 24 inches apart.
4. Anchor gutter with gutter brackets spaced not more than 24 inches apart to roof deck, unless otherwise indicated, and loosely lock to front gutter bead.
5. Install gutter with expansion joints at locations indicated, but not exceeding, 50 feet apart. Install expansion-joint caps.
6. Install continuous gutter screens on gutters with noncorrosive fasteners, hinged to swing open for cleaning gutters.

C. Downspouts: Join sections with 1-1/2-inchtelescoping joints.

1. Provide hangers with fasteners designed to hold downspouts securely to walls. Locate hangers at top and bottom and at approximately 60 incheso.c.
2. Provide elbows at base of downspout to direct water away from building.
3. Connect downspouts to underground drainage system.

D. Splash Pans: Install where downspouts discharge on low-slope roofs. Set in asphalt roofing cement or elastomeric sealant compatible with the substrate.

E. Parapet Scuppers: Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.

1. Anchor scupper closure trim flange to exterior wall and solder or seal with elastomeric sealant to scupper.
2. Loosely lock front edge of scupper with conductor head.
3. Solder or seal with elastomeric sealant exterior wall scupper flanges into back of conductor head.

F. Conductor Heads: Anchor securely to wall, with elevation of conductor head rim at minimum of 1 inchbelow scupper discharge.

3.4 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

B. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with continuous cleat anchored to substrate at staggered 3-inch centers or as otherwise required to comply with ANSI/SPRI/ES-1 for the design conditions indicated.

C. Copings: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated.

1. Anchor interior leg of coping with washers and screw continuous cleat(s) anchored to substrate fasteners as required to comply with ANSI/SPRI/ES-1 for the design conditions indicated.

D. Pipe or Post Counterflashing: Install counterflashing umbrella with close-fitting collar with top edge flared for elastomeric sealant, extending minimum of 4 inchesover base flashing. Install stainless-steel draw band and tighten.

E. Counterflashing: Coordinate installation of counterflashing with installation of base flashing. Insert counterflashing in reglets or receivers and fit tightly to base flashing. Extend counterflashing 4 inchesover base flashing. Lap counterflashing joints minimum of 4 inches. Secure in waterproof manner by means of interlocking folded seam or blind rivets and sealant unless otherwise indicated.

F. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Seal with elastomeric sealant and clamp flashing to pipes that penetrate roof.

3.5 MISCELLANEOUS FLASHING INSTALLATION

A. Equipment Support Flashing: Coordinate installation of equipment support flashing with installation of roofing and equipment. Weld or seal flashing with elastomeric sealant to equipment support member.

B. Overhead-Piping Safety Pans: Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings. Pipe and install drain line to plumbing waste or drainage system.

3.6 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feeton slope and location lines indicated on Drawings and within 1/8-inchoffset of adjoining faces and of alignment of matching profiles.

B. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerances specified in MCA's "Guide Specification for Residential Metal Roofing."

3.7 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean off excess sealants.

C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended by sheet metal flashing and trim manufacturer. Maintain sheet metal flashing and trim in clean condition during construction.

D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 076200

SECTION 07 71 00 - ROOF SPECIALTIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Manufactured roof specialties, including copings, fascias, and penetration flashing.

1.2 RELATED REQUIREMENTS

A. Section 07 52 16 Styrene-Butadiene - Styrene (SBS Modified Bituminous Membrane Roofing

B. Section 07 62 00 - Sheet Metal Flashing and Trim

C. Section 07 72 00 - Roof Accessories: Manufactured curbs, roof hatches, and snow guards.

D. Section 07 90 00- Joint Sealers.

1.3 REFERENCE STANDARDS

A. ANSI/SPRI/FM 4435/ES-1 - Wind Design Standard for Edge Systems Used with Low Slope Roofing Systems; 2011.

B. NRCA (RM) - The NRCA Roofing Manual; 2017.

C. SPRI ES-1 - Wind Design Standard for Edge Systems Used with Low Slope Roofing Systems; 2011.

1.4 SUBMITTALS

A. See Section 01 33 00 for submittal procedures

B. Product Data: Provide data on shape of components, materials and finishes, anchor types and locations.

C. Manufacturer's Installation Instructions: Indicate special procedures, fasteners, supporting members, and perimeter conditions requiring special attention.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Specialty Penetration Flashings:
   1. York Manufacturing, Inc.: www.yorkmfg.com.
   2. Roof Products & Systems Corp.: www.rpscurbs.com.
   3. Portals Plus, Inc.: www.portalsplus.com.
   4. Pate Company: www.patecurbs.com.

2.2 COMPONENTS

A. Roof Edge Flashings: Factory fabricated to sizes required; mitered, welded corners; concealed fasteners.
   1. Configuration: Fascia, cant, and edge securement for roof membrane.
   2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 RE-1 and RE-2 to positive and negative design wind pressure as defined by applicable code.

B. Copings: Factory fabricated to sizes required; mitered, welded corners; concealed fasteners.

1. Configuration: Concealed continuous hold down cleat at both legs; internal splice piece at joints of same material, thickness and finish as cap; concealed stainless steel fasteners.
2. Pull-Off Resistance: Tested in accordance with ANSI/SPRI/FM 4435/ES-1 RE-3 to positive and negative design wind pressure as defined by applicable code.

C. Control and Expantion Joint Covers: Composite construction of flexible EPDM flashing of white color with closed cell urethane foam backing, each edge seamed to aluminum sheet metal flanges, designed for nominal joint width of 5 inches. Include special formed corners, tees, intersections, and wall flashings, each sealed watertight.

D. Specialty Penetration Flashings: Preformed EPDM pipe and penetration seals designed for waterproof seal of individual, and clustered, roof penetrations.
1. Provide size and configuration required by each specific condition to provide maximum height above roof surface to the stainless steel clamping ring.
2. Where a preformed flashing boot will not slide over a penetrating item, provide "Retrofit Flashing" by Portals Plus Inc. designed to wrap around the item and closed with a weatherproof seal.
3. Where a metal base is required by the roofing membrane manufacturer for tie-in to the roof membrane, provide one of the following:
   a. Alumi-Flash System manufactured by Portals Plus Inc.
   b. Alumi Flash manufactured by Roof Products & Systems Corp.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that deck, curbs, roof membrane, base flashing, and other items affecting work of this Section are in place and positioned correctly.

3.2 INSTALLATION

A. Install components in accordance with manufacturer's instructions and NRCA (RM) applicable requirements.

B. Coordinate installation of components of this section with installation of roofing membrane and base flashings.

C. Coordinate installation of sealants and roofing cement with work of this section to ensure water tightness.

D. Provide weathertight installation.

END OF SECTION

SECTION 07 71 23 - MANUFACTURED GUTTERS AND DOWNSPOUTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Pre-finished aluminum gutters and downspouts.

B. Precast concrete splash pads.

1.2 REFERENCE STANDARDS

A. AAMA 2604 - Voluntary Specification, Performance Requirements and Test Procedures for High Performance Organic Coatings on Aluminum Extrusions and Panels; 2013.

B. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2014.

C. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric]; 2014.

D. SMACNA (ASMM) - Architectural Sheet Metal Manual; 2012.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Conform to SMACNA (ASMM) for sizing components for rainfall intensity determined by a storm occurrence of 1 in 5 years.

B. Conform to applicable code for size and method of rain water discharge.

1.4 SUBMITTALS

A. See Section 01 33 00 for submittal procedures

B. Product Data: Provide data on prefabricated components.

C. Shop Drawings: Indicate locations, configurations, jointing methods, fastening methods, locations, and installation details.

D. Samples: Submit two samples, 12 inch long illustrating component design, finish, color, and configuration.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Stack material to prevent twisting, bending, or abrasion, and to provide ventilation. Slope to drain.

B. Prevent contact with materials that could cause discoloration, staining, or damage.

PART 2 PRODUCTS

2.1 MATERIALS

A. Pre-Finished Aluminum Sheet: ASTM B209 (ASTM B209M); 0.032 inch thick.

1. Finish: Plain, shop pre-coated with modified silicone coating.
2. Color: To match Architect's sample.

2.2 COMPONENTS

A. Gutters: SMACNA rectangular style profile.

B. Downspouts: SMACNA Rectangular profile.

C. Anchors and Supports: Profiled to suit gutters and downspouts.
   1. Anchoring Devices: In accordance with SMACNA requirements.
   2. Gutter Supports: Brackets.
   3. Downspout Supports: Brackets.

D. Fasteners: Galvanized steel, with soft neoprene washers.

2.3 ACCESSORIES

A. Splash Pads: Precast concrete type, size and profiles indicated; minimum 3000 psi at 28 days, with minimum 5 percent air entrainment.

2.4 FABRICATION

A. Form gutters and downspouts of profiles and size indicated.

B. Fabricate with required connection pieces.

C. Form sections square, true, and accurate in size, in maximum possible lengths, free of distortion or defects detrimental to appearance or performance. Allow for expansion at joints.

D. Hem exposed edges of metal.

E. Fabricate gutter and downspout accessories; seal watertight.

2.5 FINISHES

A. Fluoropolymer Coating: High Performance Organic Finish, AAMA 2604; multiple coat, thermally cured fluoropolymer finish system; custom color to match approved sample.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify existing conditions before starting work.

B. Verify that surfaces are ready to receive work.

3.2 PREPARATION

A. Paint concealed metal surfaces and surfaces in contact with dissimilar metals with protective backing paint to a minimum dry film thickness of 15 mil.

3.3 INSTALLATION

A. Install gutters, downspouts, and accessories in accordance with manufacturer's instructions.

B. Sheet Metal: Join lengths with formed seams sealed watertight. Flash and seal gutters to downspouts and accessories.

C. Slope gutters 1 unit in 96 units along entire length.

D. Set splash pans under downspouts.

END OF SECTION

SECTION 07 72 00 - ROOF ACCESSORIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Roof hatches, manual and automatic operation, including smoke vents.

1.2 RELATED REQUIREMENTS

A. Section 07 52 00 - Modified Bituminous Membrane Roofing.

B. Section 07 62 00 - Sheet Metal Flashing and Trim: Counterflashing.

C. Section 09 96 00 High Performance Coatings

D. Division 26 - Electrical: Fire alarm interconnection.

1.3 REFERENCE STANDARDS

A. 29 CFR 1910.23 - Guarding floor and wall openings and holes; current edition.

B. ASTM A123/A123M - Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products; 2015.

C. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength; 2014.

D. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2013.

E. ASTM A572/A572M - Standard Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel; 2015.

F. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2015.

G. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

H. NRCA ML104 - The NRCA Roofing and Waterproofing Manual; Fifth Edition, with interim updates.

1.4 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used.
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.
   4. Maintenance requirements.

B. Lifeline Design Data: Two copies of comprehensive design calculations for lifeline, connection and anchorage devices. Review of design calculations shall not alter manufacturer's design responsibility for system and connectors.

C. Manufacturer's Certification: Certify that walkway and railings have been designed to meet the design criteria of the specified code; include all conditions or limitations of the design necessary to achieve the necessary strength for the loading specified.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Store products under cover and elevated above grade.

PART 2 PRODUCTS

2.1 DESIGN REQUIREMENTS - LIFELINE

A. Design, engineer, construct and load-test system.

B. Provide supports, and anchors designed and constructed to suit building configuration and in accordance with the contract documents and applicable regulations and codes.

C. Design all anchor components to provide adequate attachment to building and to suit current maintenance practices; ensure compatibility with industry standard equipment.

D. Design calculations performed and certified by a professional engineer licensed in the State where the project is located for structural adequacy of system. Coordinate structural calculations with submittals.

2.2 PERFORMANCE REQUIREMENTS - LIFELINE

A. Safety Factor: Design primary support equipment to sustain without failure at least four times the maximum static working load applied or transmitted to the components. In no case shall the combined live and dead loads be calculated at less than 1000 pounds.

B. Base plates and sockets: Total safety factor of 4 to 1 against the overturning moment through 360-degree rotation.

C. Wire rope rated capacity: To resist the combined live and dead load with a factor of safety of 6 to 1 against yield.

D. Fall Arrest Safety Anchors: Designed to a maximum fall arresting force of typically 1800 lbs. when wearing a body harness with a safety factor of 2 without any permanent deformation and to 5000 lbs. against fracture or detachment.

2.3 ROOF HATCHES

A. Manufacturers - Roof Hatches:
   1. Bilco Company; Type F (equipment access, 4 ft square): www.bilco.com.
   2. Milcor by Commercial Products Group of Hart & Cooley, Inc; Model RD-4x4 EE: www.milcorinc.com.
   3. Substitutions: See Section 01 60 00 - Product Requirements.

B. Roof Hatches and Smoke Vents, General: Factory-assembled steel frame and cover, complete with operating and release hardware.
   1. Style: Provide flat metal covers unless otherwise indicated.
   2. Mounting: Provide frames and curbs suitable for mounting on flat roof deck.
   3. For Ships Ladder Access: Single leaf; 48 by 48 inches.

C. Frames/Curbs: One-piece curb and frame with integral cap flashing to receive roof flashings; extended bottom flange to suit mounting.
   1. Material: Mill finished aluminum, 11 gage, 0.0907 inch thick.
   2. Insulation: Manufacturer's standard; 1 inch rigid glass fiber, located on outside face of curb.
   3. Curb Height: 12 inches from finished surface of roof, minimum.

D. Metal Covers: Flush, insulated, hollow metal construction.
   1. Capable of supporting 40 psf live load.
   2. Material: Mill finished aluminum; outer cover 11 gage, 0.0907 inch thick, liner 0.04 inch thick.

3. Insulation: Manufacturer's standard 1 inch rigid glass fiber.
4. Gasket: Neoprene, continuous around cover perimeter.

E. Ladder Safety Post: Tubular steel telescopic post that automatically locks when fully extended through hatchway. Stainless steel spring balancing mechanism to provide controlled upward and downward operation. Release lever to disengage the post to allow return to lowered position. Adjustable mounting brackets to fit ladder rung spacing up to 14-inches on center; clamp brackets to accommodate ladder rungs up to 1-3/4-inch in diameter.

F. Safety Railing System: Manufacturer's standard accessory safety rail system mounted directly to curb.
1. Comply with 29 CFR 1910.23, with a safety factor of two.
2. Posts and Rails: Aluminum tube.
3. Finish: Manufacturer's standard, factory applied finish.
4. Manufacturers:
a. Bilco Company: www.bilco.com/sle.

G. Hardware: Steel, zinc coated and chromate sealed, unless otherwise indicated or required by manufacturer.
1. Lifting Mechanisms: Compression or torsion spring operator with shock absorbers that automatically opens upon release of latch; capable of lifting covers despite 10 psf load.
2. Hinges: Manufacturer’s recommended type.
3. Hold open arm with vinyl-coated handle for manual release.
4. Latch: Upon closing, engage latch automatically and reset manual release.
5. Manual Release: Pull handle on interior.
6. Locking: Padlock hasp on interior.
7. All hardware to be stainless steel

2.4 HORIZONTAL CABLE LIFELINES

A. Manufacturers:
1. Pro-Bel Group: www.pro-bel.ca.
2. Guardian Fall Protection: www.guardianfall.com.
3. Capital Safety: www.capitalsafety.com.
4. XS Platforms: www.xsplatforms.com.
5. 01 25 00 Substitution Procedures and Substituion Request Form

B. Horizontal Lifeline System: Hands-free cable type.
1. Cable: 5/16 inch or 1/2 inch diameter Type 316 stainless steel with minimum breaking strength of 19,125 pounds, complete with permanently swedged cable ends.
2. Data Plate: At cable system entry points, provide prominently displayed non-corrodible data plate clearly stating Maximum Service Capacity and Number of Users.
3. Intermediate Support Brackets: Multi-position Type 316 stainless steel secured using 1/2 inch diameter fasteners.
4. Entry/Exit Brackets: Type 316 stainless steel.
5. Connector: Type 316 stainless steel, with automatic connector bypass feature for continuous hands-free operation, and detachability feature for window cleaning operations.
6. Tensioner Units: Type 316 stainless steel with polished finish.
7. Harness: Manufacturer's standard hands-free full body harness and lanyard complete with shock absorber.
8. Accessories: Manufacturers standard corner units as required.
9. Product: Hands-Free Horizontal Lifeline System manufactured by Pro-Bel Group: www.pro-bel.ca

C. Roof Anchors:
1. Safety and Tie-Back Anchors: U-bar type; ASTM A666 Type 304 stainless steel with yield strength of 36 Ksi, of not less than 3/4 inch diameter material with 1-1/2 inch eye opening.

2. Piers: ASTM A500/A500M seamless round steel tubing with yield strength of 50 Ksi, hot dipped galvanized to ASTM A123/A123M, with wall thickness to suit application.
3. Base Plates and Other Sections: ASTM A572/A572M galvanized mild steel as above with yield strength of 44 Ksi. Thickness and securement to suit application.
4. Miscellaneous Bolts, Nuts and Washers: ASTM A307 with yield strength of 44 Ksi, hot dipped galvanized to ASTM A123/A123M or Type 304 stainless steel with yield strength of 35 Ksi.
5. Flashing for Roof Mounted Supports and Anchors in Bituminous Roofing: Seamless spun aluminum flashing, ASTM B221, Type 6061-T6 alloy with deck flange flashed in to NRCA ML104 recommendations.
6. Product: Roof Anchors manufactured by Pro-Bel Group: www.pro-bel.ca

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

C. Supply items required to be cast into concrete with setting templates, to appropriate Sections.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions, in manner that maintains roofing weather integrity.

B. Coordinate with installation of roofing system and related flashings.

C. Apply bituminous paint on metal surfaces of roof hatches to be in contact with cementitious materials and dissimilar metals.

3.4 CLEANING

A. Clean installed work to like-new condition.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Date of Substantial Completion.

END OF SECTION

SECTION 07 76 13 - ROOF PAVERS AND BALLAST MATERIALS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Pavers for roofing ballast.

1.2 RELATED REQUIREMENTS

A. Section 07 52 00 - Modified Bituminous Membrane Roofing.

1.3 REFERENCE STANDARDS

A. ASTM C140/C140M - Standard Test Methods of Sampling and Testing Concrete Masonry Units and Related Units; 2014.

B. ASTM C293/C293M - Standard Test Method for Flexural Strength of Concrete (Using Simple Beam With Center-Point Loading); 2016.

1.4 SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

B. Selection Samples: Two complete sets of color chips representing manufacturer's full range of colors and patterns available from regional plant.

C. Verification Samples: Two samples, minimum size 12 inches square, representing actual product to be supplied from regional plant, color, and patterns.

D. Specimen warranty.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer's unopened packaging, with labels intact, until ready for installation.

B. Store products off the ground; if stored on the roof, do not exceed structural capacity of deck.

1.6 WARRANTY

A. See Section 01 77 00 - Closeout Proceduresfor additional warranty requirements.

B. Ballast Pavers: Provide manufacturer's 20-year limited material warranty.

C. Ballast Pavers: Provide manufacturer's limited wind uplift warranty for 3 years after Substantial Completion.

1.7 MAINTENANCE TOOLS

A. Paver Lifter: Provide one Probst Slab Grabber; deliver to Owner at location directed; provide 3-year warranty.

PART 2 PRODUCTS

2.1 ROOF DECK APPLICATIONS (OCCASIONAL FOOT TRAFFIC ONLY)

A. Ballast Pavers: Precast concrete units with integral color and tooled joint pattern.
   1. Basis of Design: Tectura Lok Down pedestal system manufactured by Wausau Tile, Inc.
   2. Products:
      a. Pavers on Pedestals manufactured by Hanover Architectural Products: www.hanoverpavers.com.
      b. Roofblok Ballast Systems manufactured by Roofscape Architectural Pavers: www.roofblok.com.
   3. Size:
      a. 24 by 48 inches
      b. 30 by 30 inches
   4. Thickness: 2-3/4 inches.
   5. Compressive Strength: 7000 psi, minimum, air entrained mix, after 28 days cure, when tested in accordance with ASTM C140/C140M.
   6. Flexural Strength: 400 psi, when tested in accordance with ASTM C293/C293M.
   7. Density: 145 pcf, maximum.
   8. Water Absorption: 5 percent (nominal), when tested in accordance with ASTM C140/C140M.
   9. Color: As selected.

B. Protection Mat: Nonwoven polyester.

C. Mechanical Clips: Galvanized sheet metal.

D. Adjustable Height Paver Pedestals: High impact styrene adjustable paver pedestals telescope from 2 inch to 5-1/2 inch, tilt to accommodate sub-surface slope and create a smooth, uniform, paver surface.
   1. Provide sizes and height required to make top surface of pavers a single plane without abrupt changes in surface plane.
   2. Product: Terra-Tab manufactured by Tectura Designs0

E. Perimeter Attachments: Products made by one of the following:
   1. Metal Era: www.metalera.com.
   2. W.P. Hickman: www.wphickman.com.

PART 3 EXECUTION

3.1 EXAMINATION

A. Do not begin installation until all roofing or waterproofing work is completed, including work penetrating waterproof plane.

3.2 PREPARATION

A. Clean roof surfaces thoroughly prior to installation.

B. Plan sequence of transporting and placing pavers to avoid damage to waterproof membrane and already installed pavers; place 3/4 inch thick plywood in traffic paths or use carts with pneumatic tires.

3.3 ROOF BALLAST

A. Install pavers on paver pedestals in accordance with manufacturer's instructions. Provide approximately 1/4 inch space between pavers to permit surface water drainage.

B. Install pavers in locations and pattern indicated on drawings.

C. Install protection mat wherever required by roof membrane manufacturer.

D. Install perimeter retainer around entire perimeter.

3.4 PROTECTION

A. Protect installed products until completion of project. Prohibit construction traffic unless adequate precautions are taken.

B. Repair or replace products damaged due to inadequate protection.

END OF SECTION

SECTION 07 81 00 - APPLIED FIREPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Concealed SFRM.
   2. Exposed SFRM.
   3. Exposed intumescent mastic fire-resistive coatings.

B. Related Sections include the following:
   1. Division 05 Section "Structural Steel Framing" for surface conditions required for structural steel receiving SFRM.
   2. Division 07 Section "Thermal Insulation" for fire-safing insulation.
   3. Division 07 Section "Penetration Firestopping" for fire-resistance-rated firestopping systems.
   4. Division 07 Section "Fire-Resistive Joint Systems" for fire-resistance-rated joint systems.

1.3 DEFINITIONS

A. SFRM: Sprayed fire-resistive material.

B. Concealed: Fire-resistive materials applied to surfaces that are concealed from view behind other construction when the Work is completed and have not been defined as exposed.

C. Exposed: Fire-resistive materials applied to surfaces that are exposed to view when the Work is completed, and that are identified as exposed on Drawings.

1.4 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design SFRM thickness and application according to the hour ratings listed in Schedule, performance requirements and design criteria indicated, including comprehensive engineering analysis by a qualified professional engineer.

1.5 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Structural framing plans indicating the following:
   1. Locations and types of surface preparations required before applying SFRM. Include locations for Architect’s review and approval of all locations receiving Level 3 finish as described below, 2.3 1, a.
   2. Extent of SFRM for each construction and fire-resistance rating, including the following:

      a. Applicable fire-resistance design designations of a qualified testing and inspecting agency acceptable to authorities having jurisdiction.

For steel joist assemblies, include applicable fire-resistance design designations, with each steel joist tested with the same maximum tensile stress as each steel joist indicated. Design designations with steel joists tested at lower maximum tensile stress than those indicated are not permitted.

b. Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies.

3. Treatment of SFRM after application.

C. Samples for Initial Selection: For each type of colored, exposed SFRM indicated.

D. Delegated Design Submittal: For installed SFRM indicated to comply with performance requirements, and design criteria including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

E. SFRM Schedule: Tabulated schedule of SFRM with information including, but not limited to, application areas, surface finish for exposed, and color.

F. Samples for Verification: For each type of colored, exposed SFRM, two Samples, each 4 inches square, of each color, texture, and material formulation to be applied. Where finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.

G. Product Certificates: For each type of SFRM, signed by product manufacturer.

H. Qualification Data: For Installer, manufacturer, professional engineer, and testing agency.

I. Compatibility and Adhesion Test Reports: From SFRM manufacturer indicating the following:
1. Materials have been tested for bond with substrates.
2. Materials have been verified by SFRM manufacturer to be compatible with substrate primers and coatings.
3. Interpretation of test results and written recommendations for primers and substrate preparation needed for adhesion.

J. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for proposed SFRM.

K. Research/Evaluation Reports: For SFRM.

L. Warranties: Special warranties specified in this Section.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A firm or individual certified, licensed, or otherwise qualified by SFRM manufacturer as experienced and with sufficient trained staff to install manufacturer's products according to specified requirements. A manufacturer's willingness to sell its SFRM to Contractor or to an installer engaged by Contractor does not in itself confer qualification on the buyer.

B. Source Limitations: Obtain SFRM through one source from a single manufacturer.

C. SFRM Testing: By a qualified testing and inspecting agency engaged by Contractor or manufacturer to test for compliance with specified requirements for performance and test methods.
1. SFRMs are randomly selected for testing from bags bearing the applicable classification marking of UL or another testing and inspecting agency acceptable to authorities having jurisdiction.
2. Testing is performed on specimens of SFRMs that comply with laboratory testing requirements specified in Part 2 and are otherwise identical to installed fire-resistive materials, including application of accelerant, sealers, topcoats, tamping, troweling, rolling, and water overspray, if any of these are used in final application.

3. Testing is performed on specimens whose application the independent testing and inspecting agency witnessed during preparation and conditioning. Include in test reports a full description of preparation and conditioning of laboratory test specimens.

D. Compatibility and Adhesion Testing: Engage a qualified testing and inspecting agency to test for compliance with requirements for specified performance and test methods.
1. Test for bond per ASTM E 736 and requirements in UL's "Fire Resistance Directory" for coating materials. Provide bond strength indicated in referenced fire-resistance design, but not less than minimum specified in Part 2.
2. Verify that manufacturer, through its own laboratory testing or field experience, has not found primers or coatings to be incompatible with SFRM.

E. Fire-Test-Response Characteristics: Provide SFRM with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify bags containing SFRM with appropriate markings of applicable testing and inspecting agency.
1. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" acceptable to authorities having jurisdiction, for SFRM serving as direct-applied protection tested per ASTM E 119.
2. Surface-Burning Characteristics: ASTM E 84.

F. Provide products containing no detectable asbestos as determined according to the method specified in 40 CFR 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."

G. Mockups: Apply mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
1. Extent of Mockups: Approximately 100 sq. ft. of surface for each product indicated.
2. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer, date of manufacture, shelf life if applicable, and fire-resistance ratings applicable to Project.

B. Use materials with limited shelf life within period indicated. Remove from Project site and discard materials whose shelf life has expired.

C. Store materials inside, under cover, and aboveground; keep dry until ready for use. Remove from Project site and discard wet or deteriorated materials.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not apply SFRM when ambient or substrate temperature is **40 deg F** or lower unless temporary protection and heat are provided to maintain temperature at or above this level for 24 hours before, during, and for 24 hours after product application.

B. Ventilation: Ventilate building spaces during and after application of SFRM. Use natural means or, if they are inadequate, forced-air circulation until fire-resistive material dries thoroughly.

1.9 COORDINATION

A. Sequence and coordinate application of SFRM with other related work specified in other Sections to comply with the following requirements:

1. Provide temporary enclosure as required to confine spraying operations and protect the environment.
2. Provide temporary enclosures for applications to prevent deterioration of fire-resistive material due to exposure to weather and to unfavorable ambient conditions for humidity, temperature, and ventilation.
3. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.
4. Do not apply fire-resistive material to metal roof deck substrates until concrete topping, if any, has been completed. For metal roof decks without concrete topping, do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material.
5. Do not apply fire-resistive material to metal floor deck substrates until concrete topping has been completed.
6. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.
7. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.
8. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, and tested and corrections have been made to defective applications.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form, signed by Contractor and by Installer, in which manufacturer agrees to repair or replace SFRMs that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Cracking, flaking, spalling, or eroding in excess of specified requirements; peeling; or delaminating of SFRM from substrates.
      b. Not covered under the warranty are failures due to damage by occupants and Owner's maintenance personnel, exposure to environmental conditions other than those investigated and approved during fire-response testing, and other causes not reasonably foreseeable under conditions of normal use.
   2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CONCEALED SFRM

A. Products: Subject to compliance with requirements, provide one of the following:
   1. Concealed Cementitious SFRM:
      a. Carboline Co., Fireproofing Products Div.; AD Southwest Type 5GP.
      b. Carboline Co., Fireproofing Products Div.; A-20 Accelerator.
      c. Grace, W. R. & Co. - Conn., Construction Products Div.; Monokote Type MK-6, MK-6/HY, and MK-6s.
      d. Grace, W. R. & Co. - Conn., Construction Products Div.; Retro-Gard.
      e. Isolatek International Corp.; Cafco 300.
      f. Isolatek International Corp.; Cafco 300 SB.

B. Material Composition: Manufacturer's standard product, as follows:
   1. Concealed Cementitious SFRM: Factory-mixed, dry formulation of gypsum or portland cement binders, additives, and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.

C. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
1. Dry Density: 15 lb/cu. ft. for average and individual densities, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
2. Thickness: Minimum average thickness required for fire-resistance design indicated according to the following criteria, but not less than 0.375 inch, per ASTM E 605:

    a. Where the referenced fire-resistance design lists a thickness of 1 inch or more, the minimum allowable individual thickness of SFRM is the design thickness minus 0.25 inch.
    b. Where the referenced fire-resistance design lists a thickness of less than 1 inch but more than 0.375 inch, the minimum allowable individual thickness of SFRM is the greater of 0.375 inch or 75 percent of the design thickness.
    c. No reduction in average thickness is permitted for those fire-resistance designs whose fire-resistance ratings were established at densities of less than 15 lb/cu. ft..
3. Bond Strength: 150 lbf/sq. ft. minimum per ASTM E 736 based on laboratory testing of 0.75-inch minimum thickness of SFRM.
4. Compressive Strength: 5.21 lbf/sq. in. minimum per ASTM E 761. Minimum thickness of SFRM tested shall be 0.75 inch and minimum dry density shall be as specified but not less than 15 lb/cu. ft..
5. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
6. Deflection: No cracking, spalling, or delamination per ASTM E 759.
7. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
8. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of SFRM is 0.75 inch, maximum dry density is 15 lb/cu. ft., test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.
9. Fire-Test-Response Characteristics: Provide SFRM with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

    a. Flame-Spread Index: 10 or less.
    b. Smoke-Developed Index: 0.
10. Fungal Resistance: No observed growth on specimens per ASTM G 21.

2.2 EXPOSED SFRM

A. Products: Subject to compliance with requirements, provide one of the following:
1. Exposed Cementitious SFRM:

    a. Carboline Co., Fireproofing Products Div.; AD Southwest Type 5MD.
    b. Carboline Co., Fireproofing Products Div.; A-20 Accelator.
    c. Carboline Co., Fireproofing Products Div.; Pyrocrete 40.
    d. Carboline Co., Fireproofing Products Div.; Pyrocrete 240 High Yield.
    e. Carboline Co., Fireproofing Products Div.; Pyrocrete 241.
    f. Grace, W.R. & Co. - Conn., Construction Products Div.; Monokote Type Z106G.
    g. Grace, W.R. & Co. - Conn., Construction Products Div.; Monokote Type Z106.
    h. Grace, W.R. & Co. - Conn., Construction Products Div.; Monokote Type Z106/HY.
    i. Grace, W.R. & Co. - Conn., Construction Products Div.; Monokote Type Z146.
    j. Isolatek International Corp.; Cafco 400.
    k. Isolatek International Corp.; Fendolite M-II.

B. Material Composition: Manufacturer's standard product, as follows:
1. Exposed Cementitious SFRM: Factory-mixed, dry, cement aggregate formulation; or chloride-free formulation of gypsum or portland cement binders, additives, and inorganic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.

C. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property as follows:
1. Dry Density: Values for average and individual densities as required for fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method," but with an average density of not less than 22 lb/cu. ft..
2. Bond Strength: 434 lbf/sq. ft. minimum per ASTM E 736.
3. Compressive Strength: 51 lbf/sq. in. minimum per ASTM E 761.
4. Dry Density: Values for average and individual densities as required for fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method," but with an average density of not less than 39 lb/cu. ft..
5. Bond Strength: 1000 lbf/sq. ft. minimum per ASTM E 736.
6. Compressive Strength: 300 lbf/sq. in. minimum per ASTM E 761.
7. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
8. Deflection: No cracking, spalling, or delamination per ASTM E 759.
9. Effect of Impact on Bonding: No cracking, spalling, or delamination per ASTM E 760.
10. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. per ASTM E 859.
11. Combustion Characteristics: Passes ASTM E 136.
12. Fire-Test-Response Characteristics: Provide SFRM with the following surface-burning characteristics as determined by testing identical products per ASTM E 84 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

    a. Flame-Spread Index: 10 or less.
    b. Smoke-Developed Index: 0.
13. Fungal Resistance: No observed growth on specimens per ASTM G 21.
14. For exterior applications of SFRM, provide formulation listed and labeled by testing and inspecting agency acceptable to authorities having jurisdiction for surfaces exposed to exterior.

2.3 INTUMESCENT MASTIC FIRE-RESISTIVE COATINGS

A. Products: Subject to compliance with requirements, provide one of the following:
1. Fire-Resistive, Water-Based, Intumescent Mastic Coating Material:

    a. Carboline Company, Fireproofing Products Div.; Firefilm III Topcoat is required for those areas receiving color only.

        Level 3 Finish: for all or portions of exposed steel receiving intumescent coatings, provide Level 3 finish, back rolled and sanded to a smooth finish before top coated for color. Provide locations to Architect for review and approvals.

    b. Level 1 or Level 2 is sufficient for all concealed steel receiving intumescent coatings.

    c. Carboline Solvent based Intumescent ThermoSorb VOC Topcoat is optional for color only
    d. Isolatek International Corp.; Cafco SprayFilm-WB 2 Basecoat and Topseal.
    e. Isolatek International Corp.; Cafco SprayFilm-WB 3 Basecoat and topcoat recommended by manufacturer of basecoat.

B. Fire-Resistive, Intumescent Mastic Coating: Factory-mixed formulation.
1. Water-Based Formulation: Approved by manufacturer and authorities having jurisdiction and investigated for Interior General Purpose by UL.
2. Multicomponent system consisting of intumescent base coat and topcoat.

C. Color and Gloss: As selected by Architect from manufacturer's full range.

2.4 AUXILIARY FIRE-RESISTIVE MATERIALS

A. General: Provide auxiliary fire-resistive materials that are compatible with SFRM and substrates and are approved by UL or another testing and inspecting agency acceptable to authorities having jurisdiction for use in fire-resistance designs indicated.

B. Substrate Primers: For use on each substrate and with each sprayed fire-resistive product, provide primer that complies with one or more of the following requirements:
   1. Primer's bond strength complies with requirements specified in UL's "Fire Resistance Directory" for coating materials based on a series of bond tests per ASTM E 736.
   2. Primer is identical to those used in assemblies tested for fire-test-response characteristics of SFRM per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

C. Adhesive for Bonding Fire-Resistive Material: Product approved by manufacturer of SFRM.

D. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required to comply with fire-resistance designs indicated and fire-resistive material manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive SFRM.

E. Reinforcing Fabric: Glass- or carbon-fiber fabric of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by manufacturer of SFRM.

F. Reinforcing Mesh: Metallic mesh reinforcement of type, weight, and form required to comply with fire-resistance designs indicated; approved and provided by manufacturer of intumescent mastic coating fire-resistive material. Include pins and attachment.

G. Sealer for Sprayed-Fiber Fire-Resistive Material: Transparent-drying, water-dispersible, tinted protective coating recommended in writing by manufacturer of sprayed-fiber fire-resistive material.
   1. Product: Subject to compliance with requirements, provide Carboline TC-55 Bond sealer
   2. "Cafco Bond-Seal" by Isolatek International Corp.

H. Topcoat: Type recommended in writing by manufacturer of each SFRM for application over exposed SFRM

2.5 NATATORIUM – CONCEALED AND EXPOSED INTUMESCENT MASTIC FIRE-RESISTIVE AND HIGH-PERFORMANCE COATING SYSTEM.

A. Description:

Provide a complete, high-performance, corrosion-resistant intumescent fireproofing system suitable for use in interior humid and chlorinated natatorium environments.

System shall be by Carboline Company and shall consist of compatible primer, intumescent fireproofing, and topcoat products applied in strict accordance with manufacturer’s written instructions.

B. System Components (in order of application):
   1. Primer
      a. Product: Carboline Carbomastic 94
      b. Type: High solids, aluminum-pigmented epoxy mastic coating.
      c. Purpose: Provides corrosion-resistant base and enhances adhesion of intumescent coating to structural steel in high humidity and chlorinated atmospheres.
      d. Application: Apply to clean, prepared steel surfaces prior to application of intumescent coating.
      e. Dry Film Thickness (DFT): 4–6 mils per manufacturer’s recommendation.
      f. VOC: <340 g/L.
      g. Color: Aluminum gray.
      h. Reference Standard: SSPC-PA 1; compatible with Thermolag E100S.

2. Intumescent Fireproofing
   a. Product: Carboline *Thermolag E100S*
   b. Type: Two-component, epoxy-based, intumescent fire-resistive material (IFRM).
   c. Purpose: Provides fire-resistance rating of 1- to 3-hours (UL design dependent) for structural steel members.
   d. Application: Spray-applied or trowel-applied to achieve required thickness in accordance with UL design assemblies.
   e. Typical DFT Range: 150–700 mils, depending on required fire rating.
   f. Performance Requirements:
      - Tested in accordance with ASTM E119 / UL 263.
      - UL Listed and approved for both interior and exterior exposures.
      - Bond Strength: Minimum 150 psi (ASTM E736).
      - Hardness: >65 Shore D.
      - Thermal Expansion: Intumescent expansion factor 5–10x original thickness when exposed to fire.
   g. **Environmental Suitability:**
      - Suitable for chlorine/chloramine-rich atmospheres typical of natatorium environments.
      - High humidity and chemical exposure resistant.
      - **Color:** Off-white (field topcoated as specified).

3. TopCoat Intumescent Fireproofing
   a. Product: Carboline Carbomastic 94 (same as primer) or other Carboline-approved compatible topcoat.
   b. Purpose: Protects intumescent coating from moisture, chemicals, and abrasion while providing uniform architectural appearance.
   c. Application: Apply only after Thermolag E100S has fully cured.
   d. DFT: 4–6 mils per coat; minimum 8 mils total for humid pool environments.
   e. Color and Finish: As selected by Architect from manufacturer's full range.
   f. Optional Alternate Topcoat: Carboline ThermoSorb VOC (for aesthetic topcoat only).

C. System Performance:
   1. Fire Rating: UL Listed 1- to 3-hour protection for steel beams, columns, and joists per UL designs (e.g., UL Design No. WJ110, Y737, X777 or equivalent).
   2. Humidity/Corrosion Resistance: Complies with ASTM B117 and ISO 12944 for immersion-grade epoxy coatings; resistant to chloramine exposure.
   3. Adhesion Compatibility: Primer and topcoat fully compatible with Thermolag E100S system as tested and warranted by Carboline.
   4. Temperature Range: Continuous service –20°F to 200°F; intermittent up to 300°F.
   5. VOC Compliance: Complies with SCAQMD Rule 1113 and national VOC regulations.

D. Submittals:

   Provide the following in addition to Section 1.5 requirements:
   1. Manufacturer's system data sheet listing all components, application sequence, cure times, and UL design references.
   2. Compatibility documentation confirming primer, intumescent, and topcoat are part of a tested and approved system.
   3. Project-specific written warranty covering adhesion, corrosion, and fire-resistance performance for minimum 5 years.
   4. Certificates of Compliance verifying product suitability for humid, chlorinated environments.

E. Application Notes:
   1. All steel surfaces shall be cleaned to SSPC-SP6 (Commercial Blast) minimum prior to primer application.
   2. Primer shall be fully cured prior to application of Thermolag E100S.
   3. Intumescent coating shall be applied in multiple passes as required to achieve total DFT.

4. Final topcoat shall be applied only after full cure of Thermolag E100S, typically 7–14 days depending on temperature and humidity
5. All application work shall be performed by a Carboline-certified applicator experienced with Thermolag systems.

F. Warranty:

Provide Carboline 5-Year System Warranty covering adhesion, corrosion, and fire performance for the full coating assembly (primer, intumescent, topcoat).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for substrates and other conditions affecting performance of work. A substrate is in satisfactory condition if it complies with the following:
1. Substrates comply with requirements in the Section where the substrate and related materials and construction are specified.
2. Substrates are free of dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, incompatible primers, incompatible paints, incompatible encapsulants, or other foreign substances capable of impairing bond of fire-resistive materials with substrates under conditions of normal use or fire exposure.
3. Objects penetrating fire-resistive material, including clips, hangers, support sleeves, and similar items, are securely attached to substrates.
4. Substrates are not obstructed by ducts, piping, equipment, and other suspended construction that will interfere with applying fire-resistive material.

B. Verify that concrete work on steel deck has been completed.

C. Verify that roof construction, installation of roof-top HVAC equipment, and other related work are completed.

D. Conduct tests according to fire-resistive material manufacturer's written recommendations to verify that substrates are free of substances capable of interfering with bond.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application.

B. Clean substrates of substances that could impair bond of fire-resistive material, including dirt, oil, grease, release agents, rolling compounds, mill scale, loose scale, and incompatible primers, paints, and encapsulants.

C. Prime substrates where recommended in writing by SFRM manufacturer unless compatible shop primer has been applied and is in satisfactory condition to receive SFRM.

D. For exposed applications, repair substrates to remove surface imperfections that could affect uniformity of texture and thickness in finished surface of SFRM. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.

3.3 APPLICATION, GENERAL

A. Comply with fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to mix, convey, and spray on fire-resistive material, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.

B. Apply SFRM that is identical to products tested as specified in Part 1 "Quality Assurance" Article and substantiated by test reports, with respect to rate of application, accelerator use, sealers, topcoats, tamping, troweling, water overspray, or other materials and procedures affecting test results.

C. Install metal lath and reinforcing fabric as required to comply with fire-resistance ratings and fire-resistive material manufacturer's written recommendations for conditions of exposure and intended use, whether explicitly indicated or not. Securely attach lath and fabric to substrate in position required for support and reinforcement of fire-resistive material. Use anchorage devices of type recommended in writing by SFRM manufacturer. Attach accessories where indicated or required for secure attachment of lath and fabric to substrate.

D. Coat substrates with bonding adhesive before applying fire-resistive material where required to achieve fire-resistance rating or as recommended in writing by SFRM manufacturer for material and application indicated.

E. Extend fire-resistive material in full thickness over entire area of each substrate to be protected. Unless otherwise recommended in writing by SFRM manufacturer, install body of fire-resistive covering in a single course.

F. Spray apply fire-resistive materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by trowel application or other placement method recommended in writing by SFRM manufacturer.

G. For applications over encapsulant materials, including lockdown (post-removal) encapsulants, apply SFRM that differs in color from that of encapsulant over which it is applied.

H. Where sealers are used, apply products that are tinted to differentiate them from SFRM over which they are applied.

3.4 APPLICATION, CONCEALED SFRM

A. Apply concealed SFRM in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition, but apply in greater thicknesses and densities if specified in Part 2 "Concealed SFRM" Article.

B. Cure concealed SFRM according to product manufacturer's written recommendations.

3.5 APPLICATION, EXPOSED SFRM

A. Apply exposed SFRM in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition, but apply in greater thicknesses and densities if indicated.
   1. For steel beams and bracing, provide a thickness of not less than 1 inch.
   2. For metal floor or roof decks, provide a thickness of not less than 1/2 inch.

B. Provide a uniform finish complying with description indicated for each type of material and matching Architect's sample or, if none, finish approved for field-erected mockup.

C. Apply exposed cementitious SFRM to produce one of the following finishes, as directed by Architect:
   1. Skip-troweled finish with leveled surface, smoothed-out texture, and neat edges.
   2. Smooth, troweled finish with surface markings eliminated and edges squared.

D. Apply exposed sprayed-fiber fire-resistive material to produce the following finish:
   1. Spray-textured finish.
   2. Sealer.
   3. Topcoat.

E. Cure exposed SFRM according to product manufacturer's written recommendations.

3.6 APPLICATION, INTUMESCENT MASTIC FIRE-RESISTIVE COATINGS

A. Apply intumescent mastic fire-resistive coatings in thicknesses and densities not less than those required to achieve fire-resistance ratings designated for each condition. Apply where indicated, and wherever application of SFRM would produce dimensional conflicts and where intumescent coating would not produce similar conflicts.

B. Apply intumescent mastic fire-resistive coating as follows:
   1. Install reinforcing fabric as required to obtain designated fire-resistance rating and where indicated.
   2. Finish: Even, spray-textured finish produced by lightly rolling flat surfaces of fire-protected members before fire-resistive material dries, to smooth out surface irregularities and to seal in surface fibers.

3.7 FIELD QUALITY CONTROL

A. Special Inspections: Engage a qualified special inspector to perform the following special inspection and prepare reports:
   1. SFRM.
   2. Intumescent mastic coasting.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections and prepare test reports.
   1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.

C. Tests and Inspections: Testing and inspecting of completed applications of SFRM shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with application of SFRM for the next area until test results for previously completed applications of SFRM show compliance with requirements. Tested values must equal or exceed values indicated and required for approved fire-resistance design.
   1. Thickness for Floor, Roof, and Wall Assemblies: For each 1000-sq. ft. area, or partial area, on each floor, from the average of 4 measurements from a 144-sq. in. sample area, with sample width of not less than 6 inches per ASTM E 605.
   2. Thickness for Structural Frame Members: From a sample of 25 percent of structural members per floor, taking 9 measurements at a single cross section for structural frame beams or girders, 7 measurements of a single cross section for joists and trusses, and 12 measurements of a single cross section for columns per ASTM E 605.
   3. Density for Floors, Roofs, Walls, and Structural Frame Members: At frequency and from sample size indicated for determining thickness of each type of construction and structural framing member, per ASTM E 605 or AWCI Technical Manual 12-A, Section 5.4.5, "Displacement Method."
   4. Bond Strength for Floors, Roofs, Walls, and Structural Framing Members: For each 10,000-sq. ft. area, or partial area, on each floor, cohesion and adhesion from one sample of size indicated for determining thickness of each type of construction and structural framing member, per ASTM E 736.

      a. Field test SFRM that is applied to flanges of wide-flange, structural-steel members on surfaces matching those that will exist for remainder of steel receiving fire-resistive material.
      b. If surfaces of structural steel receiving SFRM are primed or otherwise painted for coating materials, perform series of bond tests specified in UL's "Fire Resistance Directory." Provide bond strength indicated in referenced UL fire-resistance criteria, but not less than 150 lbf/sq. ft. minimum per ASTM E 736.

5. If testing finds applications of SFRM are not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.

D. Remove and replace applications of SFRM that do not pass tests and inspections for cohesion and adhesion, for density, or for both and retest as specified above.

E. Apply additional SFRM, per manufacturer's written instructions, where test results indicate that thickness does not comply with specified requirements, and retest as specified above.

3.8 CLEANING, PROTECTING, AND REPAIR

A. Cleaning: Immediately after completing spraying operations in each containable area of Project, remove material overspray and fallout from surfaces of other construction and clean exposed surfaces to remove evidence of soiling.

B. Protect SFRM, according to advice of product manufacturer and Installer, from damage resulting from construction operations or other causes so fire protection will be without damage or deterioration at time of Substantial Completion.

C. Coordinate application of SFRM with other construction to minimize need to cut or remove fire protection. As installation of other construction proceeds, inspect SFRM and patch any damaged or removed areas.

D. Repair or replace work that has not successfully protected steel.

END OF SECTION 07 81 00

SECTION **07 84 13** - **PENETRATION FIRESTOPPING**

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Penetrations in fire-resistance-rated walls.
   2. Penetrations in horizontal assemblies.
   3. Penetrations in smoke barriers.

B. Related Sections:
   1. Division 07 Section 07 84 46 "Fire-Resistive Joint Systems" for joints in or between fire-resistance-rated construction, at exterior curtain-wall/floor intersections, and in smoke barriers.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Not used.

C. Product Schedule: For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency.

D. Qualification Data: For qualified Installer.

E. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written recommendations.

F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for penetration firestopping.

1.4 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Penetration firestopping shall comply with the following requirements:
   1. Penetration firestopping tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.

2. Penetration firestopping is identical to those tested per testing standard referenced in "Penetration Firestopping" Article. Provide rated systems complying with the following requirements:
   a. Penetration firestopping products bear classification marking of qualified testing and inspecting agency.
   b. Classification markings on penetration firestopping correspond to designations listed by the following:
      1) UL in its "Fire Resistance Directory."

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not install penetration firestopping when ambient or substrate temperatures are outside limits permitted by penetration firestopping manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.

B. Install and cure penetration firestopping per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.6 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping is installed according to specified requirements.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. A/D Fire Protection Systems Inc.
   2. Grace Construction Products.
   3. Hilti, Inc.
   4. Johns Manville.
   5. Nelson Firestop Products.
   6. NUCO Inc.
   7. Passive Fire Protection Partners.
   8. RectorSeal Corporation.
   9. Specified Technologies Inc.
   10. 3M Fire Protection Products.
   11. Tremco, Inc.; Tremco Fire Protection Systems Group.
   12. USG Corporation.

2.2 PENETRATION FIRESTOPPING

A. Provide penetration firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance

rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

B. Penetrations in Fire-Resistance-Rated Walls: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
   1. Fire-resistance-rated walls include fire walls fire-barrier walls smoke-barrier walls and fire partitions.
   2. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

C. Penetrations in Horizontal Assemblies: Provide penetration firestopping with ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg.
   1. Horizontal assemblies include floors and floor/ceiling assemblies.
   2. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
   3. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.

D. Penetrations in Smoke Barriers: Provide penetration firestopping with ratings determined per UL 1479.
   1. L-Rating: Not exceeding 5.0 cfm/sq. ft. of penetration opening at 0.30-inch wg at both ambient and elevated temperatures.

E. W-Rating: Provide penetration firestopping showing no evidence of water leakage when tested according to UL 1479.

F. Exposed Penetration Firestopping: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

G. Omit

H. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping manufacturer and approved by qualified testing and inspecting agency for firestopping indicated.
   1. Permanent forming/damming/backing materials, including the following:
      a. Slag-wool-fiber or rock-wool-fiber insulation.
      b. Sealants used in combination with other forming/damming/backing materials to prevent leakage of fill materials in liquid state.
      c. Fire-rated form board.
      d. Fillers for sealants.
   2. Temporary forming materials.
   3. Substrate primers.
   4. Collars.
   5. Steel sleeves.

2.3 FILL MATERIALS

A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer metallic sleeve lined with an intumescent strip, a radial extended flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

B. Latex Sealants: Single-component latex formulations that do not re-emulsify after cure during exposure to moisture.

C. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

D. Intumescent Composite Sheets: Rigid panels consisting of aluminum-foil-faced elastomeric sheet bonded to galvanized-steel sheet.

E. Intumescent Putties: Nonhardening dielectric, water-resistant putties containing no solvents, inorganic fibers, or silicone compounds.

F. Intumescent Wrap Strips: Single-component intumescent elastomeric sheets with aluminum foil on one side.

G. Mortars: Prepackaged dry mixes consisting of a blend of inorganic binders, hydraulic cement, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a nonshrinking, homogeneous mortar.

H. Pillows/Bags: Reusable heat-expanding pillows/bags consisting of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents, and fire-retardant additives. Where exposed, cover openings with steel-reinforcing wire mesh to protect pillows/bags from being easily removed.

I. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

J. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants of grade indicated below:
   1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces, and nonsag formulation for openings in vertical and sloped surfaces, unless indicated firestopping limits use of nonsag grade for both opening conditions.

2.4 MIXING

A. For those products requiring mixing before application, comply with penetration firestopping manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean out openings immediately before installing penetration firestopping to comply with manufacturer's written instructions and with the following requirements:
   1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping.
   2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping. Remove loose particles remaining from cleaning operation.
   3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent penetration firestopping from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing firestopping's seal with substrates.

3.3 INSTALLATION

A. General: Install penetration firestopping to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
   1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestopping.

C. Install fill materials for firestopping by proven techniques to produce the following results:
   1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
   2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
   3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Identify penetration firestopping with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of firestopping edge so labels will be visible to anyone seeking to remove penetrating items or firestopping. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
   1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
   2. Contractor's name, address, and phone number.
   3. Designation of applicable testing and inspecting agency.
   4. Date of installation.

5. Manufacturer's name.
6. Installer's name.

3.5 CLEANING AND PROTECTION

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping is without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping and install new materials to produce systems complying with specified requirements.

3.6 PENETRATION FIRESTOPPING SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHEZ.

B. Firestopping with No Penetrating Items:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 0001-0999.
   2. Type of Fill Materials: As required to achieve rating.

C. Firestopping for Metallic Pipes, Conduit, or Tubing:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 1001-1999.
   2. Type of Fill Materials: As required to achieve rating.

D. Firestopping for Electrical Cables:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 3001-3999.
   2. Type of Fill Materials: As required to achieve rating.

E. Firestopping for Insulated Pipes:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 5001-5999.
   2. Type of Fill Materials: As required to achieve rating.

F. Firestopping for Miscellaneous Electrical Penetrants:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 6001-6999.
   2. Type of Fill Materials: As required to achieve rating.

G. Firestopping for Miscellaneous Mechanical Penetrants:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 7001-7999.
   2. Type of Fill Materials: As required to achieve rating.

H. Firestopping for Groupings of Penetrants:
   1. UL-Classified Systems: C-AJ-, W-L-, F-D, 8001-8999.
   2. Type of Fill Materials: As required to achieve rating.

END OF SECTION 07 84 13

SECTION 07 84 46 - FIRE-RESISTIVE JOINT SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Joints in or between fire-resistance-rated constructions.
   2. Joints at exterior curtain-wall/floor intersections including Perimeter fire containment at slab edges, including fire safing between floor slabs and curtain walls
   3. Joints in smoke barriers.

B. Related Sections:
   1. Division 07 Section 07 84 13 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Product Schedule: For each fire-resistive joint system. Include location and design designation of qualified testing agency.
   1. Where Project conditions require modification to a qualified testing agency's illustration for a particular fire-resistive joint system condition, submit illustration, with modifications marked, approved by fire-resistive joint system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

C. Qualification Data: For qualified Installer.

D. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for fire-resistive joint systems.

1.4 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: Fire-resistive joint systems shall comply with the following requirements:
   1. Fire-resistive joint system tests are performed by a qualified testing agency acceptable to authorities having jurisdiction.
   2. Fire-resistive joint systems are identical to those tested per testing standard referenced in "Fire-Resistive Joint Systems" Article. Provide rated systems complying with the following requirements:
      a. Fire-resistive joint system products bear classification marking of qualified testing agency.
      b. Fire-resistive joint systems correspond to those indicated by reference to designations listed by the following:
         1) UL in its "Fire Resistance Directory."

B. Preinstallation Conference: Conduct conference at Project site.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not install fire-resistive joint systems when ambient or substrate temperatures are outside limits permitted by fire-resistive joint system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.

B. Install and cure fire-resistive joint systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.6 COORDINATION

A. Coordinate construction of joints to ensure that fire-resistive joint systems are installed according to specified requirements.

B. Coordinate sizing of joints to accommodate fire-resistive joint systems.

C. Notify Owner's testing agency at least seven days in advance of fire-resistive joint system installations; confirm dates and times on day preceding each series of installations.

PART 2 - PRODUCTS

2.1 FIRE-RESISTIVE JOINT SYSTEMS

A. Where required, provide fire-resistive joint systems that are produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which fire-resistive joint systems are installed. Fire-resistive joint systems shall accommodate building movements without impairing their ability to resist the passage of fire and hot gases.

B. Joints in or between Fire-Resistance-Rated Construction: Provide fire-resistive joint systems with ratings determined per ASTM E 1966 or UL 2079:
   1. Joints include those installed in or between fire-resistance-rated walls floor or floor/ceiling assemblies and roofs or roof/ceiling assemblies.
   2. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of construction they will join.
   3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. A/D Fire Protection Systems Inc.
      b. CEMCO.
      c. Fire Trak Corp.
      d. Grace Construction Products.
      e. Hilti, Inc.
      f. Johns Manville.
      g. Nelson Firestop Products.
      h. NUCO Inc.
      i. Passive Fire Protection Partners.
      j. RectorSeal Corporation.
      k. Specified Technologies Inc.
      l. 3M Fire Protection Products.
      m. Tremco, Inc.; Tremco Fire Protection Systems Group.
      n. USG Corporation.

C. Joints in Smoke Barriers: Provide fire-resistive joint systems with ratings determined per UL 2079.

1. L-Rating: Not exceeding 5.0 cfm/ft of joint at 0.30 inch wg at both ambient and elevated temperatures.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    a. A/D Fire Protection Systems Inc.
    b. Grace Construction Products.
    c. Hilti, Inc.
    d. Johns Manville.
    e. Nelson Firestop Products.
    f. NUCO Inc.
    g. Passive Fire Protection Partners.
    h. RectorSeal Corporation.
    i. Specified Technologies Inc.
    j. 3M Fire Protection Products.
    k. Tremco, Inc.; Tremco Fire Protection Systems Group.
    l. USG Corporation.

3. **Perimeter Fire Containment**: At intersections between horizontal floor assemblies and nonrated exterior curtain walls, provide fire-resistive joint systems (fire safing insulation and sealant) tested in accordance with ASTM E2307.

D. Exposed Fire-Resistive Joint Systems: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

E. VOC Content: Provide fire-resistive joint systems that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Architectural Sealants: 250 g/L.
2. Sealant Primers for Nonporous Substrates: 250 g/L.
3. Sealant Primers for Porous Substrates: 775 g/L.

F. Accessories: Provide components of fire-resistive joint systems, including primers and forming materials that are needed to install fill materials and to maintain ratings required. Use only components specified by fire-resistive joint system manufacturer and approved by the qualified testing agency for systems indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning: Clean joints immediately before installing fire-resistive joint systems to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of fill materials.
2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with fill materials. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form-release agents from concrete.

B. Priming: Prime substrates where recommended in writing by fire-resistive joint system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Masking Tape: Use masking tape to prevent fill materials of fire-resistive joint system from contacting adjoining surfaces that will remain exposed on completion of the Work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove stains. Remove tape as soon as possible without disturbing fire-resistive joint system's seal with substrates.

3.3 INSTALLATION

A. General: Install fire-resistive joint systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.

C. Install fill materials for fire-resistive joint systems by proven techniques to produce the following results:
1. Fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
2. Apply fill materials so they contact and adhere to substrates formed by joints.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 IDENTIFICATION

A. Identify fire-resistive joint systems with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches of joint edge so labels will be visible to anyone seeking to remove or penetrate joint system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
1. The words "Warning - Fire-Resistive Joint System - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.5 FIELD QUALITY CONTROL

A. Inspecting Agency: Owner will engage a qualified testing agency to perform tests and inspections.

B. Where deficiencies are found or fire-resistive joint systems are damaged or removed due to testing, repair or replace fire-resistive joint systems so they comply with requirements.

C. Proceed with enclosing fire-resistive joint systems with other construction only after inspection reports are issued and installations comply with requirements.

3.6 CLEANING AND PROTECTING

A. Clean off excess fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by fire-resistive joint system manufacturers and that do not damage materials in which joints occur.

B. Provide final protection and maintain conditions during and after installation that ensure fire-resistive joint systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated fire-resistive joint systems immediately and install new materials to produce fire-resistive joint systems complying with specified requirements.

3.7 FIRE-RESISTIVE JOINT SYSTEM SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's "Fire Resistance Directory" under product Category XHBN or Category XHDG.

B. Floor-to-Floor, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.
   3. W-Rating: No leakage of water at completion of water leakage testing.

C. Wall-to-Wall, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

D. Floor-to-Wall, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

E. Head-of-Wall, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

F. Bottom-of-Wall, Fire-Resistive Joint Systems:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

G. Wall-to-Wall, Fire-Resistive Joint Systems Intended for Use as Corner Guards:
   1. Assembly Rating: 2 hours, but not less than the system being sealed.
   2. Nominal Joint Width: As indicated.

H. Perimeter Fire-Resistive Joint Systems:
   1. Integrity Rating: 2 hours.
   2. Insulation Rating: 1 hour.
   3. Linear Opening Width: As indicated, maximum

I: Perimeter Fire-Resistive Joint Systems – Fire Safing at Slab Edge and Curtain Wall

1. Location: Between horizontal concrete slabs and nonrated exterior curtain walls

2. Test Standard: ASTM E2307

3. Assembly Rating (Integrity): 2 hours

4. Insulation Rating: 1 hour

5. Linear Opening Width: As indicated on Drawings, maximum

6. Movement Capability: As tested; accommodate expected building movement

7. System Type: UL-classified perimeter fire containment system

8. Typical System Numbers (select based on tested configurations and manufacturer):
   - Hilti CW-D-1014
   - STI ASJ120-07
   - 3M CW-S-1016
   - Tremco FAS 0099

END OF SECTION 07 84 46

SECTION 079200 - JOINT SEALANTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Urethane joint sealants.
2. Mildew-resistant joint sealants.
3. Butyl joint sealants.
4. Latex joint sealants.
5. Compressible foam sealants

B. Related Requirements:

1. Section 03 30 00 Cast -In-Place Concrete for Concrete Sealants
2. Section 04 20 00 Unit Masonry
3. Section 05 40 00 Cold Formed Metal Framing for Compressible Joint Sealants
4. Section 07 84 46 fire-Resistive Joint Systems
5. Section 32, Exterior Improvements, Concrete Paving Joint Sealant for sealing joints in paved roads, parking lots, walkways, and curbing.

1.3 ACTION SUBMITTALS

A. Product Data: For each joint-sealant product.

B. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.

1.4 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each kind of joint sealant, for tests performed by a qualified testing agency.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Product Testing: Test joint sealants using a qualified testing agency.

1. Testing Agency Qualifications: Qualified according to ASTM C 1021 to conduct the testing indicated.

1.6 PRECONSTRUCTION TESTING

A. Provide sealant adhesion pull testing in accordance with ASTM C1521 for mock up(s).

1.7 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.8 WARRANTY

A. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

2.2 URETHANE JOINT SEALANTS

A. Urethane, S, NS, 100/50, T, NT: Single-component, nonsag, plus 100 percent and minus 50 percent movement capability, traffic- and nontraffic-use, urethane joint sealant; ASTM C 920, Type S, Grade NS, Class 100/50, Uses T and NT.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Bostik, Arkema
   b. Master Builders Solutions, brand of MBCC Group, a Sika Company
   c. PPG Paints: PPG Industries, Inc.
   d. Pecora Corporation
   e. Sika Corporation – Building Componants
   f. Tremco Incorporated

2.3 MILDEW-RESISTANT JOINT SEALANTS

A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.

B. Silicone, Mildew Resistant, Acid Curing, S, NS, 25, NT: Mildew-resistant, single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, acid-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 25, Use NT.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. PPG Paints; PPG Industries, Inc.
   b. Sika Corporation - Building Components.
   c. The Dow Chemical Company.
   d. Tremco Incorporated.

2.4 BUTYL JOINT SEALANTS

A. Butyl-Rubber-Based Joint Sealants: ASTM C 1311.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Bostik, Inc.
   b. Pecora Corporation.

2.5 LATEX JOINT SEALANTS

A. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C 834, Type OP, Grade NF.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Pecora Corporation.
   b. Sherwin-Williams Company (The).
   c. Tremco Incorporated.

2.6 SILICONE JOINT SEALANTS

A. Silicone Joint Sealants

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. GE Construction Sealants: Momentive Performance Materials, Inc.
   b. Pecora Corporation
   c. Sika Corporation – Building Componants
   d. The Dow Chemical Company
   e. Tremco Incorporated

2. Silicone Joint Sealants in Natatorium and adjacent areas:
   a. To be chlorine Resistant. Provide all product documentation and warranties.

2.7 JOINT-SEALANT BACKING

A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Cylindrical Sealant Backings: ASTM C 1330, Type C (closed-cell material with a surface skin) or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

2.1 COMPRESSIBLE FOAM SEALANTS

A. A. Material: Pre-compressed, impregnated open-cell polyurethane or acrylic foam sealant, factory pre-coated with an adhesive or mastic facing and packaged in a pre-compressed state for field expansion after installation.

B. Performance Requirements:

1. Movement Capability: Minimum ±25 percent of nominal joint width.
2. Air Infiltration: ≤ 0.01 cfm/ft² at 1.57 psf (per ASTM E283).
3. Water Penetration: No leakage at 6.24 psf (per ASTM E331).
4. Temperature Range: Serviceable from -40°F to +185°F (-40°C to +85°C).
5. UV and Ozone Resistance: No deterioration per ASTM G155.

C. Compatibility: Confirm compatibility with adjacent sealants, coatings, and substrates.

D. Basis-of-Design Product:

1. EMSEAL – Emseal Emseal IB or AST Sealant (Watertight Impregnated Foam Seal).
2. Sika – Sika Emprise or Emseal WFR2.
3. BASF – MasterSeal NP 1 Pre-Compressed Foam Seal (or equal).

E. Color: As selected by Architect from manufacturer’s full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:
    a. Concrete.
    b. Masonry.
    c. Unglazed surfaces of ceramic tile.
    d. Cast Stone
3. Remove laitance and form-release agents from concrete.
4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
    a. Metal.
    b. Glass.
    c. Porcelain enamel.
    d. Glazed surfaces of ceramic tile.

B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of kind indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of sealant backings.
2. Do not stretch, twist, puncture, or tear sealant backings.
3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint profile per Figure 8A in ASTM C 1193 unless otherwise indicated.
4. Provide flush joint profile at locations indicated on Drawings according to Figure 8B in ASTM C 1193.
5. Provide recessed joint configuration of recess depth and at locations indicated on Drawings according to Figure 8C in ASTM C 1193.
    a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.4 FIELD QUALITY CONTROL

A. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:

1. Extent of Testing: Test completed and cured sealant joints as follows:
    a. Perform 5 tests for the first 500 feet of joint length for each kind of sealant and joint substrate.

b. Perform one test for each 500 feet of joint length thereafter or one test per each floor per elevation.

2. Test Method: Test joint sealants according to Method A, Field-Applied Sealant Joint Hand Pull Tab, in Appendix X1 in ASTM C 1193 or Method A, Tail Procedure, in ASTM C 1521.
   a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
3. Inspect tested joints and report on the following:
   a. Whether sealants filled joint cavities and are free of voids.
   b. Whether sealant dimensions and configurations comply with specified requirements.
   c. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.
4. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
5. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 JOINT-SEALANT SCHEDULE

A. Joint-Sealant Application: Exterior joints in vertical surfaces and horizontal nontraffic surfaces.

1. Joint Locations:
   a. Control and expansion joints in unit masonry.

b. Joints in dimension stone cladding.
c. Joints between metal panels.
d. Joints between different materials listed above.
e. Perimeter joints between materials listed above and frames of doors windows and louvers.
f. .
g. Other joints as indicated on Drawings.

2. Joint Sealant: Silicone, nonstaining, S, NS, 50, NT .
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors .

B. Joint-Sealant Application: Interior joints in vertical surfaces and horizontal nontraffic surfaces not subject to significant movement.

1. Joint Locations:
   a. Control joints on exposed interior surfaces of exterior walls.
   b. Perimeter joints between interior wall surfaces and frames of interior doorsandwindows .
   c. .
   d. Other joints as indicated on Drawings.
2. Joint Sealant: Acrylic latex .
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors .

C. Joint-Sealant Application: Mildew-resistant interior joints in vertical surfaces and horizontal nontraffic surfaces.

1. Joint Locations:
   a. Joints between plumbing fixtures and adjoining walls, floors, and counters.
   b. Tile control and expansion joints where indicated.
   c. .
   d. Other joints as indicated on Drawings.
2. Joint Sealant: Silicone, mildew resistant, acid curing, S, NS, 25, NT .
3. Joint-Sealant Color: As selected by Architect from manufacturer's full range of colors .

END OF SECTION 079200

SECTION 07 95 13 - EXPANSION JOINT COVER ASSEMBLIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Expansion joint cover assemblies for floor, wall, and ceiling surfaces.

1.2 RELATED REQUIREMENTS

A. Section 07 71 00 - Roof Specialties: Roof expansion joints.

B. Section 07 90 05 - Joint Sealers: Expansion and control joint finishing utilizing a sealant and bond breaker.

C. Section 09 21 16 - Gypsum Board Assemblies: Placement of expansion joint assemblies in gypsum board walls and ceilings.

1.3 REFERENCE STANDARDS

A. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

B. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric]; 2013.

C. ASTM B308/B308M - Standard Specification for Aluminum-Alloy 6061-T6 Standard Structural Profiles; 2010.

D. ASTM E119 - Standard Test Methods for Fire Tests of Building Construction and Materials; 2015.

E. ASTM E1399/E1399M - Standard Test Method for Cyclic Movement and Measuring the Minimum and Maximum Joint Widths of Architectural Joint Systems; 1997 (2013).

F. ASTM E1612/E1612M - Standard Specification for Preformed Architectural Compression Seals for Buildings and Parking Structures; 1994 (Change 1, 2013).

G. ASTM E814 - Standard Test Method for Fire Tests of Through-Penetration Fire Stops; 2013a.

1.4 SUBMITTALS

A. See Section 01 33 00 for submittal procedures.

B. See Section 01 33 00 - Submittal Procedures, for submittal procedures.

C. Product Data: Provide joint assembly profiles, profile dimensions, anchorage devices and available colors and finish.

D. Shop Drawings: Indicate joint and splice locations, miters, layout of the work, affected adjacent construction and anchorage locations.

E. Samples: Submit two samples 12 inch long, illustrating profile, dimension, color, and finish selected.

F. Test Reports.

G. Manufacturer's Installation Instructions: Indicate rough-in sizes and required tolerances for item placement.

1.5 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Provide five year manufacturer warranty for expansion joint covers.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Expansion Joint Cover Assemblies:
   1. Construction Specialties, Inc: www.c-sgroup.com. BASIS-OF-DESIGN (see drawings)
   2. Inpro: www.inprocorp.com.
   3. MM Systems Corp: www.mmsystemscorp.com.
   4. Watson Bowman Acme Corp.: www.wbacorp.com.
   5. Balco Inc.: www.balcousa.com.

B. Preformed Compressible Expansion Joint Seal:
   1. Emseal Joint Systems: www.emseal.com.
   2. Watson Bowman Acme Corp.: www.wbacorp.com.
   3. Substitutions: See Section 01 60 00 - Product Requirements.

2.2 EXPANSION JOINT COVER ASSEMBLIES

A. Expansion Joint Cover Assemblies - General: Factory-fabricated and assembled; designed to completely fill joint openings, sealed to prevent passage of air, dust, water, smoke; suitable for traffic expected.
   1. Joint Dimensions and Configurations: As indicated on drawings.
   2. Joint Cover Sizes: Selected to suit joint width and configuration, based on manufacturer's published recommendations and limitations.
   3. Joint Cover Styles: As scheduled.
   4. Joint Movement Capability: If not indicated, provide minimum plus/minus 25 percent joint movement capability.
   5. Lengths: Provide covers in full lengths required; avoid splicing wherever possible.
   6. Anchors, Fasteners, and Fittings: Provided by cover manufacturer.
   7. Provide inside and outside corner joint cover for wall-to-wall junction to complement wall-to-wall joint cover.

B. Floor Joint Covers: Coordinate with indicated floor coverings.
   1. If floor covering is not indicated, obtain instructions from Architect before proceeding.
   2. If style is not indicated, provide extruded aluminum frame both sides, resilient seals, and minimize exposed metal.
   3. Joint Cover Styles: No Bump.
   4. Centering Bar: Provide to maintain position of center cover plate between side frames.
   5. Provide joint cover for floor-wall junction to complement floor-to-floor joint cover.

C. Recessed Cover Plate: Recessed to accept field-applied finish materials.
   1. Recess Depth: As required to accommodate adjacent flooring.

D. Sliding Cover Plate Type Covers: Provide plate with beveled edges and neat fit that does not collect dirt.

E. Covers In Gypsum Board Assemblies: Provide style with surface mounted snap-on receivers with sliding center plate.

F. Covers In Fire Rated Assemblies: Provide cover assembly having fire rating equivalent to that of assembly into which it is installed.

2.3 PREFORMED COMPRESSIBLE EXPANSION JOINT SEAL

A. Flexible profile manufactured from open-cell polyether urethane foam with a factory applied elastomeric silicone membrane coating designed to provide protection against moisture and water intrusion on vertical surfaces.
   1. Profile capable of providing a minimum of plus or minus 25 percent building movement and accommodate moderate variations in width of opening, complex directional change transitions and resist ultraviolet degradation.
   2. Coated on one side with pressure-sensitive adhesive and covered with protective wrapping
   3. Profile installed without use of field applied adhesives or invasive anchor systems.
   4. 100 percent free of wax or asphalt compounds.

2.4 PERFORMANCE REQUIREMENTS

A. Materials and systems tested to provide fire rating equal to that of the adjacent construction.
   1. Tested under positive pressure according to ASTM E119 or ASTM E814.

B. Floor covers shall resist a maximum point load of 2000 pounds without damage or permanent deflection.

C. Movement capacity of joint covers in compliance with test results of ASTM E1399/E1399M.

2.5 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M), 6063 alloy, T6 temper; or ASTM B308/B308M, 6061 alloy, T6 temper.
   1. Exposed Finish at Floors: Mill finish or natural anodized.
   2. Exposed Finish at Walls: Natural anodized.
   3. Exposed Finish at Ceilings: Painted white finish.

B. Resilient Seals:
   1. For Ceilings: Neoprene or Santoprene resilient material, flush, pleated, or hollow gasket; Shore A hardness of 40 to 75 Durometer.
   2. For Pedestrian Traffic Applications: EPDM rubber, Neoprene, or Santoprene; no PVC; Shore A hardness of 40 to 50 Durometer.

C. Silicone Facing: Custom color as selected.

D. Anchors and Fasteners: As recommended by cover manufacturer.

E. Compression Seals: ASTM E1612/E1612M preformed elastomeric extrusions.

F. Resilient Filler Exposed to View: Gray.

G. Threaded Fasteners: Stainless steel.

H. Backing Paint for Aluminum Components in Contact with Cementitious Materials: Asphaltic type.

I. Fire Barriers: Any material or material combination, when fire tested after cycling, designated to resist the passage of flame and hot gases through a movement joint and to meet performance criteria for required rating period.

J. Moisture Barrier: 7-ply laminate reinforced polyethylene.

2.6 ACCESSORIES

A. Manufacturer's standard anchors, clips, fasteners, set screws, spacers, and other accessories compatible with material in contact, as indicated or required for complete installations.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that joint preparation and dimensions are acceptable and in accordance with manufacturer's requirements.

B. Furnish frame depth for floor joints to accommodate floor finish thickness.

3.2 PREPARATION

A. Provide anchoring devices for installation and embedding under Section 03 30 00.
   1. Provide templates and rough-in measurements.

3.3 INSTALLATION

A. Install components and accessories in accordance with manufacturer's instructions.

B. Fire-Resistance-Rated Assemblies: Coordinate installation of architectural joint assembly materials and associated work so complete assemblies comply with assembly performance requirements.
   1. Fire Barriers: Install fire barriers to provide continuous, uninterrupted fire resistance throughout length of joint, including transitions and field splices.

C. Align work plumb and level, flush with adjacent surfaces.

D. Rigidly anchor to substrate to prevent misalignment.

E. Precompressed Expansion Joint Seal: Do not stretch; avoid joints except at corners, ends, and intersections; install with face 1/8 to 1/4 inch below adjoining surface.

3.4 PROTECTION

A. Do not permit traffic over unprotected floor joint surfaces.

B. Provide strippable coating to protect finish surface.

3.5 SCHEDULE

		Model #	Comments
1ST FLOOR	**2" Expansion Joint**		
	Floor	NONE	
	Wall	FWF 200M FB	FIRE BARRIER
		FWF 200	
	Ceiling	PCW 200

3.6 SCHEDULE (EXTERIOR)

A. Wall to Wall Joint, Recess Mounted: Preformed compressible expansion joint seal.
   1. Basis of Design: Emseal, Colorseal
   2. Type: Compression Seal.
   3. Face color: Silicone facing in selected color to match adjacent wall color.
   4. Size as required to provide weathertight seal when installed.

END OF SECTION

DIVISION

08

OPENINGS

SECTION 08 11 13 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Standard and custom hollow metal doors and frames.
2. Steel sidelight, borrowed lite and transom frames.
3. Louvers installed in hollow metal doors.
4. Light frames and glazing installed in hollow metal doors.

B. Related Sections:

1. Division 04 Section 04 20 00 "Unit Masonry" for embedding anchors for hollow metal work into masonry construction.
2. Division 08 Section "Glazing" for glass view panels in hollow metal doors.
3. Division 08 Section 08 71 00 "Door Hardware".
4. Division 09 Sections 09 91 23 "Interior Painting", 09 97 13 Steel Coatings for field painting hollow metal doors and frames.
5. Division 28 Section "Access Control Hardware".

C. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI/SDI A250.8 - Recommended Specifications for Standard Steel Doors and Frames.
2. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames, Frames Anchors and Hardware Reinforcing.
3. ANSI/SDI A250.6 - Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames.
4. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.
5. ANSI/SDI A250.11 - Recommended Erection Instructions for Steel Frames.
6. ASTM A1008 - Standard Specification for Steel Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
7. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
8. ASTM A924 - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
9. ASTM C 1363 - Standard Test Method for Thermal Performance of Building Assemblies by Means of a Hot Box Apparatus.
10. ANSI/BHMA A156.115 - Hardware Preparation in Steel Doors and Frames.
11. ANSI/SDI 122 - Installation and Troubleshooting Guide for Standard Steel Doors and Frames.
12. ANSI/NFPA 80 - Standard for Fire Doors and Fire Windows; National Fire Protection Association.

13. ANSI/NFPA 105: Standard for the Installation of Smoke Door Assemblies.
14. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; National Fire Protection Association.
15. UL 10C - Positive Pressure Fire Tests of Door Assemblies.
16. UL 1784 - Standard for Air Leakage Tests of Door Assemblies.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, core descriptions, hardware reinforcements, profiles, anchors, fire-resistance rating, and finishes.

B. Door hardware supplier is to furnish templates, template reference number and/or physical hardware to the steel door and frame supplier in order to prepare the doors and frames to receive the finish hardware items.

C. Shop Drawings: Include the following:

1. Elevations of each door design.
2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of anchorages, joints, field splices, and connections.
6. Details of accessories.
7. Details of moldings, removable stops, and glazing.
8. Details of conduit and preparations for power, signal, and control systems.

D. Samples for Verification:

1. Samples are only required by request of the architect and for manufacturers that are not current members of the Steel Door Institute.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain hollow metal doors and frames through one source from a single manufacturer wherever possible.

B. Quality Standard: In addition to requirements specified, furnish SDI-Certified manufacturer products that comply with ANSI/SDI A250.8, latest edition, "Recommended Specifications for Standard Steel Doors and Frames".

C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to UL10C (neutral pressure at 40” above sill) or UL 10C.

1. Oversize Fire-Rated Door Assemblies Construction: For units exceeding sizes of tested assemblies, attach construction label certifying doors are built to standard construction requirements for tested and labeled fire rated door assemblies except for size.
2. Temperature-Rise Limit: Where indicated and at vertical exit enclosures (stairwell openings) and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
3. Smoke Control Door Assemblies: Comply with NFPA 105.

a. Smoke "S" Label: Doors to bear “S” label, and include smoke and draft control gasketing applied to frame and on meeting stiles of pair doors and 1/8” or less gap.

D. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257. Provide labeled glazing material.

E. Energy Efficient Exterior Openings: Comply with minimum thermal ratings, based on ASTM C1363. Openings to be fabricated and tested as fully operable, thermal insulating door and frame assemblies.

1. Thermal Performance (Exterior Openings): Independent testing laboratory certification for exterior door assemblies being tested in accordance with ASTM C1363 and meet or exceed the following requirements:

a. Door Assembly Operable U-Factor and R-Value Ratings: U-Factor 0.37, R-Value 2.7, including insulated door, thermal-break frame and threshold.

2. Air Infiltration (Exterior Openings): Independent testing laboratory certification for exterior door assemblies being tested in accordance with ASTM E283 to meet or exceed the following requirements:

a. Rate of leakage of the door assembly shall not exceed 0.25 cfm per square foot of static differential air pressure of 1.567 psf (equivalent to 25 mph wind velocity).

F. Pre-Submittal Conference: Conduct conference in compliance with requirements in Division 01 Section 01 31 19 "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for installing hollow metal doors and frames and to verify installation of electrical knockout boxes and conduit at frames with electrified or access control hardware.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow metal work palletized, wrapped, or crated to provide protection during transit and Project site storage. Do not use non-vented plastic.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store hollow metal work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum 4-inch high wood blocking. Do not store in a manner that traps excess humidity.

1. Provide minimum 1/4-inch space between each stacked door to permit air circulation. Door and frames to be stacked in a vertical upright position.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.7 COORDINATION

A. Coordinate installation of anchorages for hollow metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

B. Building Information Modeling (BIM) Support: Utilize designated BIM software tools and obtain training needed to successfully participate in the Project BIM processes. All technical disciplines are responsible for the product data integration and data reliability of their Work into the coordinated BIM applications.

1.8 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

B. Warranty includes installation and finishing that may be required due to repair or replacement of defective doors.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide steel doors and frames from a SDI Certified manufacturer:

1. CECO Door Products (C).
2. Curries Company (CU).
3. Pioneer Industries (PI).

2.2 MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.

B. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

C. Frame Anchors: ASTM A 653/A 653M, Commercial Steel (CS), Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

2.3 HOLLOW METAL DOORS

A. General: Provide 1-3/4 inch doors of design indicated, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces unless otherwise indicated. Comply with ANSI/SDI A250.8 and ANSI/NAAMM HMMA 867.

B. Exterior Doors (Energy Efficient): Face sheets fabricated of commercial quality hot-dipped zinc coated steel that complies with ASTM A924 A60. Provide doors complying with requirements indicated below by

referencing ANSI/SDI A250.8 for level and model, ANSI/SDI A250.4 for physical performance level, and HMMA 867 for door construction.

1. Design: Flush panel.
2. Core Construction: Foamed in place polyurethane and steel stiffened laminated core with no stiffener face welds, in compliance with HMMA 867 “Laminated Core”.

    a. Provide 22 gauge steel stiffeners at 6 inches on-center internally welded at 5" on- center to integral core assembly, foamed in place polyurethane core chemically bonded to all interior surfaces. No stiffener face welding is permitted.
    b. Thermal properties to rate at a fully operable minimum U-Factor 0.37 and R-Value 2.7, including insulated door, thermal-break frame and threshold.
    c. Kerf Type Frames: Thermal properties to rate at a fully operable minimum U-Factor 0.38 and R-Value 2.6, including insulated door, kerf type frame, and threshold.

3. Level/Model: Level 3 and Physical Performance Level A (Extra Heavy Duty), Minimum 16 gauge (0.053 inch - 1.3-mm) thick steel, Model 2.
4. Vertical Edges: Vertical edges to be mechanically interlocked with hairline seam. Beveled Lock Edge, 1/8 inch in 2 inches (3 mm in 50 mm).
5. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet. Doors with an inverted top channel to include a steel closure channel, screw attached, with the web of the channel flush with the face sheets of the door. Plastic or composite channel fillers are not acceptable.
6. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9".
7. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.

C. Interior Doors: Face sheets fabricated of commercial quality cold rolled steel that complies with ASTM A 1008/A 1008M. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:

1. Design: Flush panel.

    a. Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated.

2. Level/Model: Level 3 and Physical Performance Level A (Extra Heavy Duty), minimum 16 gauge (0.053-inch - 1.3-mm) thick steel, Model 2.
3. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet.
4. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9" or minimum 14 gauge continuous channel with pierced holes, drilled and tapped.
5. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.

D. Manufacturers Basis of Design:

1. CECO Door Products (C) Honeycomb Core - Regent Series.
2. CECO Door Products (C) Energy Efficient - Trio-E Series.

2.4 HOLLOW METAL FRAMES

A. General: Comply with ANSI/SDI A250.8 and with details indicated for type and profile.

B. Thermal Break Frames: Subject to the same compliance standards and requirements as standard hollow metal frames. Tested for thermal performance in accordance with NFRC 102, and resistance to air infiltration in accordance with NFRC 400. Where indicated provide thermally broken frame profiles available for use in both masonry and drywall construction. Fabricate with 1/16" positive thermal break and integral vinyl weatherstripping.

C. Exterior Frames: Fabricated of hot-dipped zinc coated steel that complies with ASTM A 653/A 653M, Coating Designation A60.

1. Fabricate frames with mitered or coped corners. Profile as indicated on drawings.
2. Frames: Minimum 14 gauge (0.067-inch -1.7-mm) thick steel sheet.
3. Manufacturers Basis of Design:

    a. CECO Door Products (C) – SU SR Series.
    b. CECO Door Products (C) – Thermal Break TQB Series.

D. Interior Frames: Fabricated from cold-rolled steel sheet that complies with ASTM A 1008/A 1008M.

1. Fabricate frames with mitered or coped corners. Profile as indicated on drawings.
2. Frames: Minimum 16 gauge (0.053-inch -1.3-mm) thick steel sheet.
3. Manufacturers Basis of Design:

    a. CECO Door Products (C) - SU Series.

E. Fire rated frames: Fabricate frames in accordance with NFPA 80, listed and labeled by a qualified testing agency, for fire-protection ratings indicated.

F. Hardware Reinforcement: Fabricate according to ANSI/SDI A250.6 Table 4 with reinforcement plates from same material as frames.

2.5 FRAME ANCHORS

A. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, formed from A60 metallic coated material, not less than 0.042 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.
2. Stud Wall Type: Designed to engage stud and not less than 0.042 inch thick.

B. Floor Anchors: Floor anchors to be provided at each jamb, formed from A60 metallic coated material, not less than 0.042 inches thick.

C. Mortar Guards: Formed from same material as frames, not less than 0.016 inches thick.

2.6 LOUVERS

A. Metal Louvers: Unless otherwise indicated provide louvers to meet the following requirements.

1. Blade Type: Vision proof inverted V or inverted Y.
2. Metal and Finish: Galvanized steel, 0.040 inch thick, factory primed for paint finish with baked enamel or powder coated finish. Match pre-finished door paint color where applicable.

B. Louvers for Fire Rated Doors: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire protection rating of 1-1/2 hours and less.

1. Manufacturers: Subject to compliance with requirements, provide louvers to meet rating indicated.
2. Metal and Finish: Galvanized steel, 0.040 inch thick, factory primed for paint finish with baked enamel or powder coated finish. Match pre-finished door paint color where applicable.

2.7 LIGHT OPENINGS AND GLAZING

A. Stops and Moldings: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints at fabricator's shop. Fixed and removable stops to allow multiple glazed lites each to be removed independently. Coordinate frame rabbet widths between fixed and removable stops with the type of glazing and installation indicated.

B. Moldings for Glazed Lites in Doors and Loose Stops for Glazed Lites in Frames: Minimum 20 gauge thick, fabricated from same material as door face sheet in which they are installed.

C. Fixed Frame Moldings: Formed integral with hollow metal frames, a minimum of 5/8 inch (16 mm) high unless otherwise indicated. Provide fixed frame moldings and stops on outside of exterior and on secure side of interior doors and frames.

D. Preformed Metal Frames for Light Openings: Manufacturer's standard frame formed of 0.048-inch-thick, cold rolled steel sheet; with baked enamel or powder coated finish; and approved for use in doors of fire protection rating indicated. Match pre-finished door paint color where applicable.

2.8 ACCESSORIES

A. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.

B. Grout Guards: Formed from same material as frames, not less than 0.016 inches thick.

2.9 FABRICATION

A. Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. When shipping limitations so dictate, frames for large openings are to be fabricated in sections for splicing or splining in the field by others.

B. Tolerances: Fabricate hollow metal work to tolerances indicated in ANSI/SDI A250.8.

C. Hollow Metal Doors:

1. Exterior Doors: Provide optional weep-hole openings in bottom of exterior doors to permit moisture to escape where specified.
2. Glazed Lites: Factory cut openings in doors with applied trim or kits to fit. Factory install glazing where indicated.

3. Astragals: Provide overlapping astragals as noted in door hardware sets in Division 08 Section "Door Hardware" on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted.
4. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge strap for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".

D. Hollow Metal Frames:

1. Shipping Limitations: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
2. Welded Frames: Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible.

    a. Welded frames are to be provided with two steel spreaders temporarily attached to the bottom of both jambs to serve as a brace during shipping and handling. Spreader bars are for bracing only and are not to be used to size the frame opening.

3. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
4. High Frequency Hinge Reinforcement: Provide high frequency hinge reinforcements at door openings 48-inches and wider with mortise butt type hinges at top hinge locations.
5. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge straps for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".
6. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated for removable stops, provide security screws at exterior locations.
7. Mortar Guards: Provide guard boxes at back of hardware mortises in frames at all hinges and strike preps regardless of grouting requirements.
8. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
9. Jamb Anchors: Provide number and spacing of anchors as follows:

    a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

        1) Two anchors per jamb up to 60 inches high.
        2) Three anchors per jamb from 60 to 90 inches high.
        3) Four anchors per jamb from 90 to 120 inches high.
        4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.

    b. Stud Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

        1) Three anchors per jamb up to 60 inches high.
        2) Four anchors per jamb from 60 to 90 inches high.
        3) Five anchors per jamb from 90 to 96 inches high.
        4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
        5) Two anchors per head for frames above 42 inches wide and mounted in metal stud partitions.

10. Door Silencers: Except on weatherstripped or gasketed doors, drill stops to receive door silencers. Silencers to be supplied by frame manufacturer regardless if specified in Division 08 Section "Door Hardware"08 71 00.
11. Bituminous Coating: Where frames are fully grouted with an approved Portland Cement based grout or mortar, coat inside of frame throat with a water based bituminous or asphaltic emulsion coating to a minimum thickness of 3 mils DFT, tested in accordance with UL 10C and applied to the frame under a 3rd party independent follow-up service procedure.

E. Hardware Preparation: Factory prepare hollow metal work to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section "Door Hardware" 08 71 00.

1. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8.
2. Reinforce doors and frames to receive non-template, mortised and surface mounted door hardware.
3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 Sections.

2.10 STEEL FINISHES

A. Prime Finishes: Doors and frames to be cleaned, and chemically treated to insure maximum finish paint adhesion. Surfaces of the door and frame exposed to view to receive a factory applied coat of rust inhibiting shop primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead and chromate free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; and compatible with substrate and field-applied coatings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. General Contractor to verify the accuracy of dimensions given to the steel door and frame manufacturer for existing openings or existing frames (strike height, hinge spacing, hinge back set, etc.).

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation, adjust and securely brace welded hollow metal frames for square, level, twist, and plumb condition.

C. Tolerances shall comply with SDI-117 "Manufacturing Tolerances Standard Steel Doors and Frames."

D. Drill and tap doors and frames to receive non-template, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11 and NFPA 80 at fire rated openings.

1. Set frames accurately in position, plumbed, leveled, aligned, and braced securely until permanent anchors are set. After wall construction is complete and frames properly set and secured, remove temporary braces, leaving surfaces smooth and undamaged. Shim as necessary to comply with installation tolerances.
2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.
3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar.
4. Grout Requirements: Do not grout head of frames unless reinforcing has been installed in head of frame. Do not grout vertical or horizontal closed mullion members.

C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Standard Steel Doors:

a. Jambs and Head: 1/8 inch plus or minus 1/16 inch.
b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.
c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.

2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

D. Field Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with hollow metal manufacturer's written instructions.

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow metal work immediately after installation.

C. Prime-Coat and Painted Finish Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat, or painted finishes, and apply touchup of compatible air drying, rust-inhibitive primer, zinc rich primer (exterior and galvanized openings) or finish paint.

3.5 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections 01 77 00 “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

END OF SECTION 08 11 13

SECTION 08 14 23 - IMPACT RESISTANT DOORS (FLUSH)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Related Sections:
   1. Section 08 11 13: Hollow Metal Doors and Frames
   2. Section 08 71 00: Door Hardware

1.3 SUBMITTALS

A. Product Data: For each type of door indicated. Include details of core and edge construction**,** louvers, and trim for openings. Include factory-finishing specifications.

B. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; location and extent of hardware blocking; and other pertinent data.
   1. Indicate dimensions and locations of mortises and holes for hardware.
   2. Indicate dimensions and locations of cutouts.
   3. Indicate requirements for veneer matching.
   4. Indicate doors to be factory finished and finish requirements.
   5. Indicate fire-protection ratings for fire-rated doors.

C. Warranty: Sample of special warranty.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain doors with from single manufacturer.

B. Quality Standard: In addition to requirements specified, comply with WDMA I.S.1-A, "Architectural Wood Flush Doors."

C. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

D. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful inservice performance.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of referenced standard and manufacturer's written instructions.

B. Mark each door on edge of top and bottom rail with opening number used on Shop Drawings.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
      b. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.
   2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
   3. Warranty Period for Solid-Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Construction Specialties, Inc. Acrovyn Door Systems (800) 972-7214
   2. Or approved equal

2.2 DOOR CONSTRUCTION, GENERAL

A. 20-minute interior flush wood doors conforming to WDMA I.S.1A-04 and the following:
   1. Thickness: 1-3/4” (+/- 1/16”)
   2. Grade: Premium
   3. Construction: 7 ply
   4. Core: Agrifiber Particleboard Grade LD-1, 26-28 lb/ft3 (11.79 – 12.70kg/m³) density – rapidly renewable and no added urea formaldehyde content, CARB Phase I compliant
   5. Crossbanding: FSC certified .125” tempered hardboard
   6. Replaceable Door Stiles: ¾” replaceable stiles shall be field replaceable if ever damaged by impact
   7. Replaceable Edges: Fully wrapped and rounded Acrovyn door edge shall be replaceable, exclusive of fasteners to improve appearance.
   8. WDMA I.S.1A-04 Performances Duty Level: Extra Heavy Duty
   9. Durability Performance: Cycle Slam WDMA TM-7, 1990 Extra Heavy Duty – 2,000,000 cycles to insure durability of entire door construction.

B. Door Faces
   1. Door faces to be high impact resistant Acrovyn finish: (TGMC Maple)
   2. Acrovyn base color must be integral throughout to eliminate discoloration caused by scratching.
   3. Wood grain pattern to give appearance of one entire wood veneer to avoid inconsistencies in appearance – book matching or slip matching appearance not acceptable.
   4. Face Veneer Wear Index – Abrasion Resistance Testing – ASTM D4060-90: 28,000 cycles to prove out resistant to scuffing and scratching.
   5. Face Veneer Impact Resistance – ASTM D-4226: 86 in/lb. to confirm impact resistance of face finish.

C. Door stiles to meet or exceed the following performance testing to ensure hardware fastener holding strength:
   1. WDMA TM-8 “Hinge Loading resistance” Extra Heavy Duty
   2. WDMA TM-10 “Screw Holding Capacity: Extra Heavy Duty

D. Door Edges:
   1. Finish
      a. Edges of door to be PVC-free impact resistant Acrovyn: “TGMC Maple”
   2. Edges are covered by our “Edge of a Lifetime” Lifetime Limited Warranty from Construction Specialties Acrovyn Door Systems against damage, and begins 1 month after installation. Refer to warranty for full details.
   3. Edges are to fully wrap the door vertical stiles to eliminate banded edges thus improving durability and impact resistance.
   4. Replaceable edges to be ¾” (19.05MM) thick for proper edge and face protection.
   5. Door edges shall be exclusive of fasteners to improve appearance.
   6. Edges must be flush with face of door thus eliminating raised edges that could be torn off.
   7. Edges to include ¼” (6.35mm) radius edges to improve impact deflection. Square or banded edges should not be permitted.
   8. Edges are to be extruded (not formed) to ensure correct appearance and proper door fit.

E. Adhesives
   1. Crossbanding to core adhesives shall be urea formaldehyde free Type II to improve structural integrity of door.
   2. Door faces are to be applied to the crossbanded core using Type I urea formaldehyde free adhesives to eliminate delamination.

F. Cores
   1. 20-minute doors
      a. FSC Certified Particleboard grade LD-2, 32 lb/ft3 density – no added urea formaldehyde content, CARB Phase I compliant

2.3 FABRICATION

A. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
   1. Comply with requirements in NFPA 80 for fire-rated doors.

B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.
   1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.

C. Openings: Cut and trim openings through doors in factory.
   1. Light Openings: Trim openings with moldings of material and profile indicated.

D. Blocking: provide blocking approved for use in doors of fire ratings indicated as needed to eliminate through-bolting for surface applied hardware.

2.4 FACTORY FINISHING

A. Finish doors at factory.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and installed door frames before hanging doors.
   1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
   2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Hardware: For installation, see Division 08 Section "Door Hardware."

B. Installation Instructions: Install doors to comply with manufacturer's written instructions and the referenced quality standard, and as indicated.
   1. Install fire-rated doors in corresponding fire-rated frames according to NFPA 80.

C. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.
   1. Clearances: Provide 1/8 inch at heads, jambs, and between pairs of doors. Provide 1/8 inch from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide 1/4 inch from bottom of door to top of threshold unless otherwise indicated.
      a. Comply with NFPA 80 for fire-rated doors.
   2. Bevel non-fire-rated doors 1/8 inch in 2 inches at lock and hinge edges.
   3. Bevel fire-rated doors 1/8 inch in 2 inches at lock edge; trim stiles and rails only to extent permitted by labeling agency.

D. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely.

B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION

SECTION 08 31 13 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Access doors and frames for walls and ceilings.
   2. Floor access doors and frames.
   3. For chlorine resistance access panels suitable for use in pool area where corrosion and humidity are significant concerns.

B. Related Sections include the following:
   1. Division 23 Section "Air Duct Accessories" for heating and air-conditioning duct access doors.

1.3 SUBMITTALS

A. Product Data: For each type of product
   1. Include construction details, fire ratings, if applicable, materials, individual components and profiles and finishes.

B. Product Schedule: Provide complete access door and frame schedule, including types, locations, sizes, latching provisions, functions and installation procedures

C. Shop Drawings, indicate panel locations, sizes and special conditions.

D. Samples: Submit finish samples as requested

E. Warranty: Manufacturer's standard warranty.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. A. Fire-Rated Access Doors and Frames for Rated Walls and Ceilings:
   1. Units shall comply with **NFPA 80** and shall be identical to access door and frame assemblies tested for fire-test-response characteristics according to the following methods:
      a. **NFPA 252** or **UL 10B** for vertically installed fire-rated access doors.
      b. **NFPA 288** for horizontally installed fire-rated access doors.
   2. Units shall be **listed and labeled** by **UL** or another testing and inspecting agency acceptable to authorities having jurisdiction.

B. Corrosion Resistance for Chlorinated Environments (Natatoriums):
   1. Access doors and frames exposed to pool environments shall be fabricated from **Type 316 stainless steel** or materials demonstrating equivalent corrosion resistance.
   2. Finish and assembly shall resist **chlorinated water, chloramines, high humidity, and cleaning chemicals** typical of indoor pool environments.
   3. **Fasteners, hinges, and latches** shall be corrosion-resistant and compatible with the primary metal to prevent galvanic corrosion.
   4. Manufacturer's recommended **protective finishes, passivation, and sealing methods** shall be applied to all surfaces exposed to the pool atmosphere.
   5. Units shall comply with applicable **ASTM and NFPA standards for corrosion resistance** in chlorine environments.
   6. **Chlorine Resistance Testing:**
      a. Materials and finishes shall withstand **ASTM G85 (Prohesion test modified for chlorinated atmospheres)**.
      b. Materials and finishes shall resist **continuous immersion or cyclic exposure to chlorinated water** per **ASTM G31**.
      c. Surfaces shall show **no pitting, blistering, or corrosion staining** after accelerated exposure simulating

C. General Performance Requirements:
   1. Units shall function properly under **normal operational conditions**, including repeated opening and closing without binding, warping, or deterioration of finishes.
   2. Doors shall provide **tight-fitting closure**, alignment, and smooth operation as intended by the manufacturer.
   3. Assembly components shall be **compatible and durable**, preventing premature failure due to mechanical stress or environmental exposure.

2.2 ACCESS DOORS AND FRAMES FOR WALLS AND CEILINGS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Acudor Products, Inc.
   2. Access Panel Solutions
   3. Alfab, Inc
   4. Babcock-Davis
   5. Cendrex Inc.
   6. Elmdor/Stoneman; Div. of Acorn Engineering Co.
   7. Jensen Industries.
   8. J. L. Industries, Inc.
   9. Karp Associates, Inc.
   10. Larsen's Manufacturing Company.
   11. MIFAB, Inc.
   12. Milcor Inc.
   13. Nystrom, Inc.
   14. Williams Bros. Corporation of America (The).
   15. Or approved equal

C. Flush Access Doors and Frames with Exposed Flanges:
   1. Assembly Description: Fabricate door to fit flush to frame. Provide manufacturere's standard-width exposed flange, proportional to door size
   2. Locations: Wall and ceiling
   3. Door size: To accommodate easy access to devices without over-sizing

2.3 FABRICATION

A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

C. Flush Access Doors and Frames: Fabricated from steel and stainless-steel sheet.
   1. Locations: Stainless steel at ceramic-tile, pools and other wet areas; steel at gypsum board and similar wall and ceiling surfaces in back of house areas.
   2. Door: Minimum 0.060-inch- thick sheet metal, set flush with surrounding finish surfaces or with exposed face flange of frame.
   3. Frame: Minimum 0.060-inch- thick sheet metal with exposed flanges.
   4. Hinges: Manufacturer’s standard.
   5. Latch: Screwdriver-operated cam latch.

2.4 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Steel and Metallic-Coated-Steel Finishes:
   1. Factory prime: Apply manufacturer's standard, fast-curing, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.

E. Stainless-Steel Finishes:
   1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
   2. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.Run grain of directional finishes with long dimension of each piece. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
   3. Directional Satin Finish: No. 4.
   4. Concealed hinge and flush screwdriver latch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Advise installers of other work about specific requirements relating to access door and floor door installation, including sizes of openings to receive access door and frame, as well as locations of supports, inserts, and anchoring devices.

3.3 INSTALLATION

A. Provide access doors and frames for all equipment which may require constant or periodic operation or adjustment such as but not limited to valves, cleanouts, automatic smoke and fire dampers, damper operators, variable volume equipment, located in or above inaccessible ceilings, walls, or chases.

B. Provide fire-rated access doors and frames at rated walls, partitions and ceilings.

C. Comply with manufacturer's written instructions for installing access doors and frames.

D. Set frames accurately in position and attach securely to supports with plane of face panels aligned with adjacent finish surfaces.

E. Install doors flush with adjacent finish surfaces or recessed to receive finish material.

3.4 ADJUSTING AND CLEANING

A. Adjust doors and hardware after installation for proper operation.

B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION

SECTION 08 33 23 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Service doors.
2. Counter doors.
3. Fire-rated counter doors.

B. Related Sections:

1. Division 05 Section "Metal Fabrications" for miscellaneous steel supports.
2. Division 09 Sections "Exterior Painting" and "Interior Painting" for finish painting of factory-primed doors.
3. Division 26 Sections for electrical service and connections for powered operators and accessories.

1.3 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design overhead coiling doors, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance, Exterior Doors: Exterior overhead coiling doors shall withstand the wind loads, the effects of gravity loads, and loads and stresses within limits and under conditions indicated according to SEI/ASCE 7.

1. Wind Loads:

a. Basic Wind Speed: 135 mph.
b. Exposure Category: B.

2. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.

C. Operability under Wind Load: Design overhead coiling doors to remain operable under uniform pressure (velocity pressure) of 40 lbf/sq. ft. wind load, acting inward and outward.

D. Windborne-Debris-Impact-Resistance Performance: Provide impact-protective overhead coiling doors that pass missile-impact and cyclic-pressure tests when tested according to ASTM E 1886 and ASTM E 1996.

1. Large Missile Test: For overhead coiling doors located within 30 feet of grade.
2. Small Missile Test: For overhead coiling doors located more than 30 feet above grade.

E. Operation Cycles: Provide overhead coiling door components and operators capable of operating for not less than number of cycles indicated for each door. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.

1.4 SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory. Include the following:

1. Construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
2. Rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data. Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Show locations of replaceable fusible links.
3. Wiring Diagrams: For power, signal, and control wiring.

C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.

1. Include similar Samples of accessories involving color selection.

D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Curtain Slats: 12 inches long.
2. Hood: 6 inches square.

E. Qualification Data: For qualified Installer.

F. Maintenance Data: For overhead coiling doors to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for both installation and maintenance of units required for this Project.

B. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.

1. Obtain operators and controls from overhead coiling door manufacturer.

C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at as close to neutral pressure as possible according to NFPA 252 or UL 10B.

1. Smoke Control: In corridors and smoke barriers, provide doors that are listed and labeled with the letter "S" on the fire-rating label by a qualified testing agency for smoke- and draft-control based on testing according to UL 1784; with maximum air-leakage rate of 3.0 cfm/sq. ft. of door opening at 0.10 inch wg for both ambient and elevated temperature tests.

D. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

E. Regulatory Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines and ICC/ANSI A117.1.

PART 2 - PRODUCTS

2.1 DOOR CURTAIN MATERIALS AND CONSTRUCTION

A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:

1. Stainless-Steel Door Curtain Slats: ASTM A 666, Type 304; sheet thickness of 0.025 inch and as required to meet requirements.
2. Aluminum Door Curtain Slats: ASTM B 209 sheet or ASTM B 221 extrusions, alloy and temper standard with manufacturer for type of use and finish indicated; thickness of 0.050 inch and as required to meet requirements.
3. Steel Door Curtain Slats: Zinc-coated (galvanized), cold-rolled structural steel sheet; complying with ASTM A 653/A 653M, with G90 zinc coating; nominal sheet thickness (coated) of 0.028 inch and as required to meet requirements.
4. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face.
5. Removable Posts and Jamb Guides for Counter Doors: Manufacturer's standard.
6. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E 84. Enclose insulation completely within slat faces.
7. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face.
8. Gasket Seal: Provide insulated slats with manufacturer's standard interior-to-exterior thermal break or with continuous gaskets between slats.

B. Endlocks for Counter Doors: Manufacturer's standard locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.

C. Bottom Bar for Counter Doors: Manufacturer's standard continuous channel or tubular shape, fabricated from manufacturer's standard hot-dip galvanized steel, stainless steel, or aluminum extrusions to match curtain slats and finish.

D. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, and a continuous bar for holding windlocks.

E. Endlocks and Windlocks for Service Doors: Malleable-iron casings galvanized after fabrication, secured to curtain slats with galvanized rivets or high-strength nylon. Provide locks on not less than alternate curtain slats for curtain alignment and resistance against lateral movement.

F. Bottom Bar for Service Doors: Consisting of two angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch thick; fabricated from manufacturer's standard hot-dip galvanized steel, stainless steel, or aluminum extrusions to match curtain slats and finish.

G. Astragal for Interior Doors: Equip each door bottom bar with a replaceable, adjustable, continuous, compressible gasket of flexible vinyl, rubber, or neoprene as a cushion bumper.

H. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, and a continuous bar for holding windlocks.

1. Removable Posts and Jamb Guides for Counter Doors: Manufacturer's standard.

2.2 HOOD

A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.

1. Aluminum: 0.040-inch- thick aluminum sheet complying with ASTM B 209, of alloy and temper recommended by manufacturer and finisher for type of use and finish indicated.
2. Stainless Steel: 0.025-inch- thick stainless-steel sheet, Type 304, complying with ASTM A 666.

2.3 COUNTER DOORS

A. Integral Frame, Hood, and Fascia for Counter Door: Welded sheet metal assembly of the following sheet metal:

1. Stainless Steel: 0.062-inch- thick stainless-steel sheet, Type 304, complying with ASTM A 666.

2.4 LOCKING DEVICES

A. Locking Device Assembly: Fabricate with cylinder lock, spring-loaded dead bolt, operating handle, cam plate, and adjustable locking bars to engage through slots in tracks.

1. Lock Cylinders: Provide cylinders specified in Division 08 Section "Door Hardware.".
2. Keys: Provide Three for each cylinder.

B. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.5 CURTAIN ACCESSORIES

A. Push/Pull Handles: Equip each push-up-operated or emergency-operated door with lifting handles on each side of door, finished to match door.

1. Provide pull-down straps or pole hooks for doors more than 84 inches high.

2.6 COUNTERBALANCING MECHANISM

A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, welded or seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. of span under full load.

C. Spring Balance: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.

D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.

E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.7 MANUAL DOOR OPERATORS

A. Equip door with manufacturer's recommended manual door operator unless another type of door operator is indicated.

B. Push-up Door Operation: Design counterbalance mechanism so required lift or pull for door operation does not exceed 25 lbf.

C. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum 30 lbf force for door operation. Provide alloy-steel hand chain with chain holder secured to operator guide.

2.8 ELECTRIC DOOR OPERATORS

A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, remote-control stations, control devices, integral gearing for locking door, and accessories required for proper operation.

1. Comply with NFPA 70.
2. Provide control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24 V, ac or dc.

B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.

C. Door Operator Location(s): Operator location indicated for each door.

1. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.

D. Electric Motors: Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements specified in Division 11 Section "Common Motor Requirements for Equipment" unless otherwise indicated.

1. Electrical Characteristics:

   a. Phase: Polyphase.
   b. Volts: 208 V.
   c. Hertz: 60.

2. Motor Type and Controller: Reversible motor and controller (disconnect switch) for motor exposure indicated.
3. Motor Size: Minimum size as indicated. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.
4. Operating Controls, Controllers (Disconnect Switches), Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
5. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.

E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

F. Obstruction Detection Device: Equip motorized door with indicated external automatic safety sensor capable of protecting full width of door opening. Activation of device immediately stops and reverses downward door travel.

1. Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.

a. Self-Monitoring Type: Four-wire configured device designed to interface with door operator control circuit to detect damage to or disconnection of sensor edge.

G. Remote-Control Station: Momentary-contact, three-button control station with push-button controls labeled "Open," "Close," and "Stop."

1. Interior units, full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
2. Exterior units, full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.

H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf.

I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

K. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with regulatory requirements for accessibility.

L. Radio-Control System: Consisting of the following:

1. Three-channel universal coaxial receiver to open, close, and stop door; one per operator. Mount to wall near door.
2. Multifunction remote control.
3. Remote-antenna mounting kit.

2.9 DOOR ASSEMBLY – INTERIOR COUNTER

A. Counter Door: Overhead coiling door formed with curtain of interlocking metal slats.

1. Basis-of-Design: Subject to compliance with requirements, provide products by Cookson company, or comparable products by one of the following:

a. Cornell Iron Works, Inc.
b. Overhead Door Corporation.

B. Operation Cycles: Not less than 100,000.

1. Include tamperproof cycle counter.

C. STC Rating: 26.

D. Door Curtain Material: Stainless steel.

E. Door Curtain Slats: Flat profile slats of 1-1/2-inch center-to-center height.

F. Curtain Jamb Guides: Stainless steel with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise.

G. Integral Frame, Hood, and Fascia for Counter Door: Stainless steel.

1. Mounting: Face of wall.

H. Sill Configuration for Counter Door: No sill.

I. Locking Devices: Equip door with locking device assembly.

1. Locking Device Assembly: Single-jamb side locking bars, operable from inside with thumb turn.

J. Manual Door Operator: Manufacturer's standard crank operator.

1. Provide operator with through-wall shaft operation.
2. Provide operator with manufacturer's standard removable operating arm.

K. Door Finish:
1. Stainless-Steel Finish: No. 4 (polished directional satin).
2. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

2.10 EXTERIOR DOOR ASSEMBLY

A. Insulated Service Door: Overhead coiling door formed with curtain of interlocking metal slats.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Cookson Company; or comparable product by one of the following:

a. Cornell Iron Works, Inc.
b. Overhead Door Corporation.

B. Operation Cycles: Not less than 100,000.

1. Include tamperproof cycle counter.

C. Curtain R-Value: 6.0 deg F x h x sq. ft./Btu.

D. Door Curtain Material: Aluminum.

E. Door Curtain Slats: Flat profile slats of 3-1/4-inch center-to-center height.

1. Insulated-Slat Interior Facing: Metal.

F. Curtain Jamb Guides: Galvanized steel with exposed finish matching curtain slats. Provide continuous integral wear strips to prevent metal-to-metal contact and to minimize operational noise.

G. Hood: Match curtain material and finish.

1. Shape: Square.
2. Mounting: Between jambs.

H. Locking Devices: Equip door with locking device assembly.

1. Locking Device Assembly: Cremone type, both jamb sides locking bars, operable from inside with thumb turn and outside with cylinder.

I. Electric Door Operator:

1. Usage Classification: Medium duty, up to 15 cycles per hour.
2. Operator Location: Top of hood.
3. Motor Exposure: Interior.
4. Emergency Manual Operation: Chain type.
5. Obstruction-Detection Device: Automatic electric sensor edge on bottom bar ; self-monitoring type.

a. Sensor Edge Bulb Color: Black.

6. Remote-Control Station: Interior.
7. Other Equipment: Radio-control system.

J. Door Finish:

1. Baked-Enamel or Powder-Coated Finish: Color as selected by Architect from manufacturer's full range.
2. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

2.11 FIRE-RATED COUNTER DOOR ASSEMBLY FOR CONCESSIONS

A. Fire-Rated Counter Door: Overhead fire-rated coiling door formed with curtain of interlocking metal slats.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Cookson Company; or comparable product by one of the following:

a. Cornell Iron Works, Inc.
b. Overhead Door Corporation.

B. Operation Cycles: Not less than 20,000.

1. Include tamperproof cycle counter.

C. Fire Rating: 3/4 hour with smoke control.

D. STC Rating: 27.

E. Door Curtain Material: Stainless steel.

F. Door Curtain Slats: Curved profile slats of 1-1/4-inch center-to-center height.

G. Integral Frame, Hood, and Fascia for Counter Door: Stainless steel.

1. Mounting: Between jambs.

H. Sill Configuration for Fire-Rated Counter Door: Integral metal sill.

I. Locking Devices: Equip door with locking device assembly.

1. Locking Device Assembly: Single-jamb side locking bars, operable from inside with thumbturn.

J. Manual Door Operator: Chain-hoist operator.

K. Door Finish:

1. Stainless-Steel Finish: No. 4 (polished directional satin).
2. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

2.12 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.13 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3. Directional Satin Finish: No. 4.

2.14 ALUMINUM FINISHES

A. Color Anodic Finish: AAMA 611, AA-M12C22A42/A44, Class I, 0.018 mm or thicker.

1. Color: As selected by Architect from manufacturer’s full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.

B. Examine locations of electrical connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.

B. Install overhead coiling doors, hoods, and operators at the mounting locations indicated for each door.

C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with regulatory requirements for accessibility.

3.3 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Perform installation and startup checks according to manufacturer's written instructions.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Test door closing when activated by detector or alarm-connected fire-release system. Reset door-closing mechanism after successful test.

3.4 ADJUSTING

A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.

B. Lubricate bearings and sliding parts as recommended by manufacturer.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION 08 33 23

SECTION 083449 - RADIATION SHIELDING DOOR AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, core descriptions, hardware reinforcements, profiles, anchors, fire-resistance rating, and finishes.

B. Door hardware supplier is to furnish templates, template reference number and/or physical hardware to the steel door and frame supplier in order to prepare the doors and frames to receive the finish hardware items.

C. Shop Drawings: Include the following:

1. Elevations of each door design.
2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.
6. Details of anchorages, joints, field splices, and connections.
7. Details of accessories.
8. Details of moldings, removable stops, and glazing.
9. Details of preparations for power, signal, and control systems.

D. Samples for Verification:

1. Samples are only required by request of the architect and for manufactures that are not current members of the Steel Door Institute.

E. Informational Submittals:

1. Certificates of Compliance: Submit any information necessary to indicate compliance with this specification section.

1.3 DELIVERY, STORAGE, AND HANDLING

A. Deliver radiation shielding work palletized, wrapped, or crated to provide protection during transit and Project-site storage. Do not use non-vented plastic.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store radiation shielding work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum 4-inch- (102-mm-) high wood blocking. Do not store in a manner that traps excess humidity.

1. Provide minimum 1/4-inch (6-mm) space between each stacked door to permit air circulation. Door and frames to be stacked in a vertical upright position.

1.4 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.5 COORDINATION

A. Coordinate installation of anchorages for radiation shielding frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.6 WARRANTY

A. Provide manufacturer's written 5 year warranty against defects in materials and workmanship upon final completion and acceptance of Work in this section.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. CECO Door Products (C).
2. Curries Company (CU).
3. Security Metal Products (SMP).

B. Substitutions: Material from alternate radiation shielding door and frame fabricators will not be accepted on jobsite without prior written and sample approval in accordance with requirements specified in Division 01.

2.2 MATERIALS

A. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

B. Frame Anchors: ASTM A 653/A 653M, Commercial Steel (CS), Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

C. Lead Glazing: Comply with requirements in Division 08 Section, "Glazing."

2.3 RADIATION SHIELDING DOORS

A. General: Provide 1-3/4 inch doors of type and design indicated, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces unless otherwise indicated. Comply with ANSI/SDI A250.8.

1. Design: Flush panel.
2. Core Construction: Manufacturer's standard vertical steel-stiffener core.

a. Standard Vertical Steel-Stiffener Core: Minimum 22 gage steel-stiffeners at 6 inches on-center construction attached by spot welds spaced not more than 5" on centers.
b. Lead Core: Rolled pure sheet lead conforming to ASTM B749.

1) Provide cores with minimum thickness sheet lead as specified:

a) 1/16-inch.

c. Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated.

3. Level/Model: Level 3 and Physical Performance Level A (Extra Heavy Duty), Minimum 16 gage (0.053-inch - 1.3-mm) thick steel, Model 2 (Fully welded, seamless face and edges).
4. Vertical Edges: Vertical edges to have the face sheets joined by a continuous weld extending the full height of the door. Welds are to be ground, filled and dressed smooth. Beveled Edge, 1/8 inch in 2 inches (3 mm in 50 mm).
5. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gage (0.053-inch - 1.3-mm), extending the full width of the door and welded to the face sheet. Finish top and bottom to provide a smooth flush condition.
6. Surface Applied Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.

2.4 RADIATION SHIELDING FRAMES

A. General: Provide frames of the type and profile indicated, not less than thickness indicated; to comply with ANSI/SDI A250.8.

1. Fabricate frames with mitered corners.
2. Fabricate frames with "closed and tight" mitered, full depth continuously welded seams, finished smooth with no visible seam unless otherwise indicated. Knock down type frames are not permitted.
3. Minimum 16 gage (0.053-inch -1.3-mm) thick steel sheet
4. Lead-lining: Rolled pure sheet lead conforming to ASTM B749, matching sheet thickness specified for lead door cores.

B. Fire rated frames: Fabricate frames in accordance with NFPA 80, listed and labeled by a qualified testing agency, for fire-protection ratings indicated.

C. Surface Applied Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 Table 4 with reinforcement plates from same material as frames.

2.5 FRAME ANCHORS

A. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup anchors to suit frame size, not less than 16 (0.8 mm) gage thickness, with corrugated or perforated straps not less than 2 inches (50 mm) wide by 10 inches (250 mm) long; or wire anchors not less than 0.177 inch (4.5 mm) thick.
2. Stud Wall Type: Designed to engage stud and not less than 16 gage (0.8 mm) thickness.

B. Floor Anchors: Floor anchors to be provided at each jamb. Formed from same material as frames, not less than 14 gage (0.067-inch -1.7-mm) thick.

C. Mortar Guards: Provide minimum 26 gage mortar guards welded to the back of each hardware cutout.

2.6 STOPS AND GLAZED LITES

A. Moldings for Glazed Lites in Doors and Loose Stops for Glazed Lites in Frames: Factory installed, minimum 16 gauge (0.8 mm) thick, fabricated from same material as door face sheet in which they are installed.

2.7 FABRICATION

A. Fabricate radiation shielding work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. When shipping limitations so dictate, frames for large openings are to be fabricated in sections for splicing or splining in the field by others.

B. Tolerances: Fabricate radiation shielding work to tolerances indicated in ANSI/SDI A250.8.

C. Radiation Shielding Doors:

1. Glazed Lites: Factory cut openings in doors with applied flush trim kit to fit.
2. Astragals: Provide lead-lined overlapping astragals on one leaf of pairs of doors where indicated. Extend minimum 3/4 inch (19 mm) beyond edge of door on which astragal is mounted.
3. Continuous Hinge Reinforcement: Provide welded continuous 12 gage strap for continuous hinges specified in hardware sets in Division 08 Section, "Door Hardware".

D. Radiation Shielding Frames: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.

1. Welded Frames: Full depth continuously weld frame seams; grind, fill, dress, and make smooth and flush.

a. Welded frames are to be provided with two steel spreaders temporarily attached to the bottom of both jambs to serve as a brace during shipping and handling. Spreader bars are for bracing only and are not to be used to size the frame opening.

2. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.

3. High Frequency Hinge Reinforcement: Provide 12 gage angle reinforcements for butt type hinges on every door and frame assembly.
4. Continuous Hinge Reinforcement: Provide welded continuous 12 gage straps for continuous hinges
5. Electrical Knock Out Boxes: Factory weld 18 gage electrical knock out boxes to frame for electrical hardware preps; this includes but not limited to electric through wire transfer hardware, electrical raceways and wiring harnesses, door position switches, electric strikes, magnetic locks, and jamb mounted card readers as noted in door hardware sets in Division 08 Section, "Door Hardware".

    a. Provide electrical knock out boxes as required for Project.
    b. Conduit to be coordinated and installed in the field (Division 26) from middle hinge box and strike box to door position box.
    c. Electrical knock out boxes to comply with NFPA requirements and fit electrical door hardware as specified in hardware sets in Division 08 Section, "Door Hardware".
    d. Electrical knock out boxes for continuous hinges should be located in the center of the vertical dimension on the hinge jamb.

6. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
7. Jamb Anchors: Provide number and spacing of anchors as follows:

    a. Masonry and Stud Wall Types: Locate anchors not more than 18 inches (457 mm) from top and bottom of frame. Space anchors not more than 32 inches (813 mm) o.c. and as follows:

        1) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches (610 mm) or fraction thereof above 84 inches (2137 mm) high.

E. Surface Hardware Preparation: Factory prepare radiation shielding work to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section, "Door Hardware."

1. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8.
2. Reinforce doors and frames to receive non-template, mortised and surface-mounted door hardware.
3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of radiation shielding work for hardware.
4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 Sections.

F. Stops and Moldings: Provide factory installed stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints at fabricators shop.

1. Single Glazed Lites: Provide fixed stops and moldings welded on secure side of radiation shielding work.
2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so glazed lites are capable of being removed independently.
3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames.

2.8 STEEL FINISHES

A. Prime Finish: Doors and frames to be cleaned, and chemically treated to insure maximum finish paint adhesion. Surfaces of the door and frame exposed to view to receive a factory applied coat of rust inhibiting shop primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead and chromate free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. General Contractor to verify the accuracy of dimensions given to door and frame manufacturer for existing openings or existing frames (strike height, hinge spacing, hinge back set, etc.).

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation, adjust and securely brace welded radiation shielding frames for squareness, alignment, twist, and plumbness.

C. Tolerances shall comply with SDI-117 "Manufacturing Tolerances Standard Steel Doors and Frames."

D. Drill and tap doors and frames to receive non-template, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install radiation shielding work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

B. Radiation Shielding Frames: Install radiation shielding frames of size and profile indicated. Comply with ANSI/SDI A250.11.

1. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged. Shim as necessary to comply with installation tolerances.

a. At fire-protection-rated openings, install frames according to NFPA 80.
b. Where frames are fabricated in sections because of shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.

c. Install frames with removable glazing stops located on secure side of opening.
d. Install door silencers in frames before grouting.

2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.
3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with appropriate mortar.
4. Grout Requirements: Do not grout head of frames unless reinforcing has been installed in head of frame. Do not grout vertical or horizontal closed mullion members.

C. Radiation Shielding Doors: Fit radiation shielding doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Standard Steel Doors:

a. Jambs and Head: 1/8 inch (3 mm) plus or minus 1/16 inch (1.6 mm).
b. Between Edges of Pairs of Doors: 1/8 inch (3 mm) plus or minus 1/16 inch (1.6 mm).
c. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch (19 mm).

2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

D. Glazing: Comply with installation requirements and with door manufacturer's written instructions.

3.4 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including radiation shielding work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from radiation shielding work immediately after installation.

C. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.

3.5 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Section 01 77 00 “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

END OF SECTION 083449

SECTION 08 35 13.23 – WON-DOOR FIREGUARD ACCORDION-FOLDING FIRE DOORS (ACCESS CONTROL)

PART 1 – GENERAL

1.01 SUMMARY OF WORK

A. Division 0 and 1, as indexed, apply to this section.

B. Furnish and install all horizontal-sliding accordion-folding fire doors shown on the drawings and specified herein.

1.02 RELATED SECTIONS

A. All headers, support structures, fire protection of support structures, surrounding insulation, jambs, storage pockets, blocking and trim shall be furnished and installed by other sections.

B. All electrical wire, wiring, conduit and electrical boxes shall be furnished and installed by electrical section including connections to smoke detectors and building fire and access control alarm panels.

C. Drilling/placement of anchorage points into pre or post tensioned decks, welding/ punching/drilling steel members and all drywall work by other sections.

D. All track, soffit, chain guide and striker shall be painted by Section 09 90 00. Color shall be selected by the architect.

E. Interface to the doors is to be accomplished by use of a LOK Module and a remote line interface. A twisted pair of stranded 18-gauge copper conductors is to be provided between the LOK Module at the door location and the remote line interface (5,000' max. wire length). Wiring from the remote line interface (RLI) to the control device shall be stranded 18-gauge copper conductors (20' max. distance from control device).

1.03 QUALITY ASSURANCE

A. Installation shall be performed by factory trained and certified installers with experience installing electrically operated accordion folding fire doors.

B. Fire doors shall be listed by Underwriters Laboratories for ratings as indicated, when tested in accordance with the requirements of UL 10B and NFPA 252.

C. Automatic closing system shall be listed by Underwriters Laboratories in accordance with the requirements of UL 864 and UL 294, and in compliance with NFPA 80.

D. Fire doors used for smoke and draft control shall bear the "S" mark on the fire door UL label and shall have an air leakage of less than 3 CFM/ft^2 at 0.1 inch of water column pressure when tested in accordance with UL 1784 with an artificial bottom seal.

E. Fire Doors shall be capable of resisting an air pressure differential up to 0.05 inches of water column. Optional air pressure resistance up to 0.15 inches of water column available. (See 2.05 H)

1.04 SUBMITTALS

A. See Section 01 30 00 – Administrative Requirements, for submittal procedures.

B. Product Data: Provide manufacturer's technical literature, include UL listing data.

C. Shop Drawings: Indicate construction and installation details and dimensions, including layout, electrical requirements, required stack depth, height of header above finished floor, and requirements for anchorage and support of each door.

D. Operation and Maintenance Data: Operating procedures, troubleshooting and repair methods, and wiring diagrams.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Manufacturer's agent will deliver original, unopened packages to a location designated by the General Contractor. All packages must be stored indoors, protected from moisture damage and secure from theft or other damage. General Contractor to note any damage or shortages at time of delivery.

1.06 COORDINATION BY GENERAL CONTRACTOR

A. Coordinate with the following:

1. Fire Alarm system.
2. Electrical.
3. Pocket cover doors (if required).
4. Floor and ceiling finish.

B. Assure accurate installation of header, jamb, and trim. Provide "As-Built" dimensions for opening and storage pocket. Supervise unloading and handling of materials.

C. Store boxes flat (not more than three high) in a protected dry area.

D. Permanent power shall be in-place and ready for final connection when fire and access control doors are installed. Assure access to and proper clearance for motor operators.

E. After testing the fire alarm system, automatic-closing fire doors shall be re-set to the original position.

1.07 WARRANTY

A. Materials and installation shall be warranted against defects in workmanship for a period of two (2) years from the date of substantial completion.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. Horizontal-sliding, accordion-folding, fire doors as manufactured by Won-Door Corporation shall be specified as the following:

Won-Door FireGuard *CS 60 – S-FLP,* or approved equal.

2.02 ACCORDION FIRE DOORS – GENERAL

A. Provide electrically powered self-closing fire doors of configurations indicated on the drawings.

1. Fire rating as required.

B. **Fire Rating** – Fire doors shall be listed by Underwriters Laboratory as special purpose fire doors fire protection rating in accordance with the requirements of UL 10B and NFPA 252.

C. **Single Parting**: Door opening can be configured in a single parting (pocket at one end condition.

D. **Closing and Opening Operation**: Automatic Closing System, listed to UL864 including motor operator and releasing devices shall be a Microprocessor-based system and shall commence closing upon activation by fire signal, access control signal, low battery voltage or optional low AC voltage.

1. Obstruction Detection: Contact with an obstruction shall cause the door to stop, reverse enough to remove pressure on the leading edge, pause, and then re-close when in an alarm condition.
2. Constant pressure to the leading edge while not under motor power shall prevent motor operation and allow the door to be opened manually.

E. **Exit Device Operation**: Provide an exit device on one or both sides of door.

1. In emergency mode, a slight pressure on the exit device will cause the door to open a minimum of 32 inches, pause for 3 seconds, and then automatically close.
2. The open distance shall be field programmable, up to the entire opening width.
3. The pause before re-close shall be field programmable up to 30 seconds.
4. The exit device shall have the ability when not in the emergency (fire) mode to be used to open the door and move it back into the storage pocket.

2.03 ACCORDION FOLDING FIRE DOORS + ACCESS CONTROL – GENERAL

A. **FireGuard + Access control doors** restrict access and protect occupants against forced entry in designated areas of the building. They are equipped with the following features:

1. **Two parallel accordion type walls** independently suspended for advanced security protection (Single wall systems not permitted).
2. **Anti-Sway brackets** (resists 50 lbs. of lateral force with less than 6” of lateral movement with no floor track or other devices securing the door to the floor).
3. **Lock** (motor brake secures the door in position with up to 600 lbs. resistance).
4. **Heavy duty track support system** (counters excessive use and abuse conditions).
5. **Security jamb stops** (secures the jamb end of the door in the pocket).
6. **Reset device:** A reset device is required to clear the door from alarm and fault mode (See 2.05 G for reset device options).

B. **Door Operation**: Automatic Closing System, listed to UL864 and UL294 including motor operator and releasing devices shall be a Microprocessor-based system and shall commence closing upon activation by access control signal from security controller.

1. Obstruction Detection: Contact with an obstruction shall cause the door to stop, reverse enough to remove pressure on the leading edge, pause, and then re-close when in an alarm condition.

C. **Exit Device Operation**: Provide an exit device on one or both sides of door.

1. In security mode, a slight pressure on the exit device on the egress side of the door will cause the door to open to a designated pre-set distance, pause for 3 seconds, and then automatically close. The exit device on the ingress side (secured side) of the door may be excluded. If it is included, it will be disabled to prevent unauthorized access. An owner selected control device will allow credentialed individuals access through the secured side.
2. The open distance shall be field programmable, up to the entire opening width.
3. The pause before re-close shall be field programmable up to 30 seconds.
4. The exit device shall have the ability when not in security mode to be used to open the door and move it back into the storage pocket. When fire mode occurs, the exit device(s) will be fully activated.

2.04 COMPONENTS

A. Door Construction: Two parallel, accordion-type walls independently suspended with no floor tracks or pantographs.

1. Panels: 24-gauge steel, V-grooved; modular in design; capable of in-place repair.
2. Perimeter Seals**:** shall consist of continuous extruded sweeps attached to the top and bottom of the fire door to form a smoke and draft seal.
3. Hanging Weight: 5.5 pounds per sq. ft when extended across opening.
4. Finish: All steel panels shall have factory-applied protective coatings.
5. Color: Manufacturer's standard platinum.

B. Suspension System: Two tracks, on 8- or 10-inch centers, attached to overhead structural support.

1. Track: 14-gauge cold rolled steel or 1/8" Aluminum extrusion.
2. Panel Hangers: Panels shall be suspended by a steel hanger pin and ball bearing roller system.
3. Narrow Lead Post Hangers: 8-wheel ball bearing trolley.
4. Flat Lead Post Hangers: Double ball bearing rollers at each side with an 8-wheel ball bearing trolley.

C. Power source shall be: 120-volt AC input. System operation voltage shall be dual sourced from DC power supply and backup battery.

D. Automatic Closing System shall be listed to UL864 including capability to send and receive signals from the Fire Control Panel and shall consist of the following:

1. Microprocessor based Electronic Control box with the ability to:
    a. Monitor dual power sources continually for peak performance including:
        1) Detect a missing battery, bad battery, or low battery condition.
        2) Detect if the charging circuit is bad.
        3) Detect fuse failures.
        4) Detect high or low AC conditions.

b. Monitor the health of the drive train.

c. Monitor inputs including faults associated with door block, exit device, patron hardware, and key switches.

d. Run a “watch dog” monitoring circuit which will force a software restart in the event the software hangs, including tracking the number of resets that occur for diagnostic purposes.

e. Withstand aberrant voltages up to 120 volts AC on the fire alarm input circuit without damage including the ability to indicate that the alarm circuit has not been wired as a dry contact, “no voltage” circuit when errant voltages are applied to the circuit.

f. Communicate with other microprocessors on the system via an internal bus system.

g. Indicate faults or supervised information both locally and at a remote location.

2. Motor Operator Assembly including a DC gear-motor, drive sprocket, clutch, and position sensors. The motor shall drive the door by means of a chain. Standard motor drive speeds range from 6”-10” per second.

a. High speed motor operation up to 18” per second is available for conditions requiring high occupant load egress and limited access control.

b. Leading Edge shall be pressure sensitive such that contact with an obstruction shall cause the door to stop, pause for a minimum of 3 seconds, then re-close when in alarm mode.

3. Exit Device will be located on each side of the door. (Standard operation when access control is not included).

4. An optional key switch by others may be provided for operating the door opened and closed when not in fire mode. Location of the key switch to be provided by the architect.

E. The header shall be provided as an integrated part of the door assembly and shall Include track, threaded rods and mechanical attachment hardware.

2.05 OPTIONS

A. Vision Panel consisting of a frame and clear glass assembly listed by Underwriters Laboratory

B. Reset Devices (required to clear the door from fault and alarm mode.) Options include:

a. Key Switch by others (Requires a 2 position, spring activation to neutral, normally open switch).

b. Key switch by Won-Door.

c. Wireless Reset Device by Won-Door using energy harvesting technology (no batteries required) for same room installation consisting of a wall mounted device that accepts any key card to activate a wireless transmitter that can be mounted directly to the wall. Requires Wireless Access Module to operate.

C. Air Pressure Resistance. When an air pressure differential is present at the door location, the standard door shall be capable of resisting an air pressure differential of 0.05" of water column. For air pressure differentials of 0.05" to 0.1" w.c., anti-sway brackets shall be placed interior to the door approximately every five (5) feet or less and lead post outriggers shall be provided. For air pressure differentials of 0.1" to 0.15" w.c., a reinforced vertical bar shall be provided at the lead post and a self-leveling lead post assembly shall provide motorized tracking of the leading edge of the door to assure proper closure at the striker.

J. Infrared Obstruction Detector is an infrared light beam provided to monitor the opening path. If an object is placed in the path of the door for more than 3 minutes, the beam shall cause the door to sound an alarm indicating a path obstruction.

2.06 RELATED CONSTRUCTION

A. Track Support Construction: Provide supports attached to structure and mounting surface for track including drilling/placement of anchorage points into decks, welding/punching/drilling steel members, and all drywall work; comply with door manufacturer's instructions and recommendations.

B. Pocket Construction: Provide rated pocket as specified for storage of accordion door when open; comply with door manufacturer's instructions and recommendations.

C. Protection: Protect installed work from damage.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Verify that adjacent construction is suitable for installation of door.

B. Verify that electrical utilities have been installed and are accessible.

C. Verify clear opening dimensions and that door opening is plumb.

D. Notify Architect of any unacceptable conditions or varying dimensions.

3.02 INSTALLATION

A. Install in accordance with manufacturer's instructions, shop drawings and NFPA 80.

B. Install fire doors plumb and parallel with the finished floor.

C. Installation shall be performed by factory trained and certified installers with experience installing electrically operated accordion folding fire doors.

3.03 ADJUSTING

A. Adjust door installation to provide uniform clearances and smooth, quiet, non-binding operation.

B. Test that all operations are functional and meet the requirements of local codes.

3.04 CLEANING

A. Clean surfaces using manufacturer's recommended means and methods.

3.05 STORAGE OF WASTE AND RECYCLING

A. Store and recycle waste in accordance with Section 01 74 19 Construction Waste Management and Disposal.

SECTION 08 42 10 - ALL GLASS ENTRANCES

PART 1 - GENERAL

1.01 SUMMARY

A. This section includes:
   1. Interior Slender Profile Door Rails for all-glass entrance doors.

B. Related work in other sections:
   1. Section 08 71 00 - Door Hardware: Hardware items other than specified in this section.
   2. Section 08 80 00 - Glazing: Glass and Glazing accessories.

1.02 SUBMITTALS

A. Product Data: Submit Manufacturer's product data for all glass entrance systems including:
   1. Manufacturer's standard details and fabrication method.
   2. Data on finishing, hardware and accessories.
   3. Recommendations for maintenance and cleaning of exterior finish surfaces.
   4. Test data on fabricated door.

B. Shop drawings for each interior all glass entrance system are required, including:
   1. Layout and installation details.
   2. Elevations at 1/4-inch scale.
   3. Detail sections of fittings.
   4. Hardware mounting heights.
   5. Anchorage and reinforcement.
   6. Glazing details.

C. Samples for approval:
   1. Submit pairs of samples of each specified metal color and finish on 9-inch long sections of extrusions or formed shapes.
   2. Submit samples of glass approximately 6 inches square showing the edge conditions.

1.03 QUALITY ASSURANCE

A. Installer qualifications: Engage an experienced installer who has completed installations of all glass entrances similar in design and extent to those required for the project and whose work has resulted in construction with a record of successful in service performance.

B. Manufacturer's qualifications: Provide all glass entrances produced by a firm experienced in manufacturing entrance systems that are similar to those indicated for this project and that have a record of successful in service performance. All door rail systems must be tested.

C. Single source responsibility: Obtain all glass entrance systems from a single manufacturer, to ensure full compatibility and warranty of parts.

D. Design criteria: The drawings indicate the size, profile and dimensional requirements of the all glass entrance system required and are based on the specific types and models indicated. All glass entrances by other manufacturers may be considered, provided deviations in dimensions and profiles are minor and do not change the design concept as judged by the Architect. The burden of proof of equality is on the proposer.

E. Safety glass standard: Provide tempered glass components that comply with ANSI Z97.1 and testing requirements of CPSC 16 CFR 1201 Category II.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver all glass entrances and related components in the manufacturer's original protective packaging. Do not deliver entrance units until the work is ready for their installation.

1. Inspect components for damage upon delivery. Unless minor defects in metal components can be made to meet the Architect's specifications and satisfaction, damaged parts should be removed and replaced.

1.05 PROJECT CONDITIONS

A. Field Measurements: Check opening by accurate field measurement before fabrication. Show recorder measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delay of the work and possible damage to the finished product.

1. Where necessary, proceed with fabrication without measurement and coordinate fabrication tolerances to insure proper fit.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURER'S

A. Basis of design: Dry Glaze Slender Profile Door Rail System for heavy tempered glass manufactured by:

C.R. Laurence Co., Inc. (CRL)
Tel: (800) 421-6144 Fax: (800) 587-7501
Email: architectural@crlaurence.com
Web Site: www.crl-arch.com

Or approved equal

2.02 MATERIALS

A. Glass: Provide flat, fully tempered glass in thickness indicated for doors and sidelites. Comply with requirements of ASTM C 1048 for FT (fully tempered), Condition A (uncoated surfaces), Type 1 (transparent) Class 1 (clear) glass. Provide products of thickness indicated that have been tested for surface and edge compression according to ASTM C 1048 and for impact strength according to 16 CFR Part 1201 for Category II materials.

1. Thickness: 1/2 inch (12 mm)

2. Edge treatment: Provide machine ground and polished edges for exposed glass edges of doors and sidelites and flat ground edges for butting glass edges.
3. Glass Manufacturers: Refer to Glazing Specification.

C. Fittings, General: Provide CRL Slender Profile Door Rails in required height as selected by the Architect. Comply with requirements indicated for kind and form of metal finish.

1. Aluminum: Provide fittings fabricated from aluminum extrusions of alloy and temper recommended by manufacturer for use intended and required for application of finish indicated, but not less than strength and durability properties specified in ASTM B 221 for 6063-T5.

D. Door Rail Systems: Provide slender profile door rail systems matching metal and finish of door fittings. Comply with GANA guidelines, and hardware manufacturer requirements for size restrictions. Door rails shall allow for jamb adjustment in or out with standard hardware. System shall include, but not limited to, end caps, and preparation (7150 Series Cam Lock, and Pivot hardware is separate).

1. Slender Profile: 2 inch top (51 mm), 4 inch bottom (102 mm)

E. Accessory Fittings: Provide manufacturer's standard accessory fittings of the type indicated. Comply with requirements indicated for kind and form of metal and finish of door fittings.

1. Slender Profile Door Rail Pivot Inserts:
   a. Cat. No. 1NT801 for flat tapered floor closer spindle or free-swing floor spindle
   b. Cat. No. 1NT803 overhead free-swing pivot
   c. Cat. No. 1NT804 for overhead closer with 9/16 inch (14 mm) square spindle

2. Overhead Door Stop: Provide overhead door stop systems.

F. Anchors and Fasteners: Manufacturer's standard concealed anchors and fastenings. Do not use exposed fasteners.

2.03 HARDWARE

A. General: Provide heavy-duty hardware units as indicated, scheduled or required for operation of each type of door, including the following items of sizes, numbers and type recommended by the manufacturer for the type of service required. Provide metal and finish for exposed parts to match the finish of the door rails.

B. C.R. Laurence Co., 8300 Series Shallow Depth Floor Mounted Closers are double acting and supplied with a shallow 1-9/16 inch (40 mm) cement box and Brushed S/S cover plate. Cover plates in other finishes are available. Comply with manufacturer's recommendations for closer size, depending upon door size, and anticipated frequency of use.
Include the following:
1. Non-hold-open closers must comply with ADA Handicap requirements.
2. Consult manufacturer for closer recommendations on doors over 264 lbs.

C. C.R. Laurence Co., 9100 Series Extended Spindle Overhead Concealed Door Closers are double acting and supplied with a 3/4 inch (19 mm) extended spindle for use with slender profile door rails. Comply with manufacturer's recommendations for closer size, depending upon door size, and anticipated frequency of use.
Include the following:

1. Non-hold-open closers must comply with ADA Handicap requirements.
2. Consult manufacturer for closer recommendations on doors over 200 lbs.

D. Push-Pull Set: Provide handles selected by the Architect and supplied by C.R. Laurence.

E. C.R. Laurence Co., CRL9040 Series Center-Hung Top Pivot is used at the top of the door when insert 1NT803 Top Pivot is used.

2.04 FABRICATION

A. General: Fabricate all glass entrance components to designs and sizes indicated. Size of door and profile requirements of fittings and hardware are indicated on the drawings.
1. Locate and provide holes and cutouts in glass to receive hardware before tempering glass. Do not permit cutting, drilling or other alterations to glass after tempering.
2. Fabricate work to accommodate required fittings, hardware, anchors, reinforcement, and accessory items.

B. Prefabrication: Complete fabrication, assembly, finishing, hardware application and other work to the greatest extent possible before shipment to the project site. Disassemble components only as necessary for shipment and installation.

C. Continuity: Maintain accurate relation of planes and angles with hairline fit of contracting members.

2.05 METAL FINISHES: (List one or more finishes)

A. US-32 Polished Stainless Steel Clad
US-32D Brushed Stainless Steel Clad
Other Custom Metal and Painted finishes available

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and supports with the installer, present for compliance with requirements indicated, installation tolerances and other conditions that affect the installation of interior slender profile ‘all-glass’ entrances. Correct unsatisfactory conditions before proceeding with the installation.

1. Do not proceed with installation until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. Install slender profile all glass entrance door and associated components in accordance with manufacturer’s printed instructions and recommendations.

1. Verify units level, plumb and true line.
2. Lubricate hardware and other moving parts.

3.03 ADJUSTING

A. Adjust doors and hardware to provide a tight fit at meeting points and at weather-stripping for smooth operation and weather tight closure.

B. Hardware: Adjust operating hardware to ensure proper operation. Set, seal, and grout floor closer cases. Coordinate cylinder installation.

3.04 CLEANING

A. Clean door and frame surfaces after installation, exercising care to avoid damage to the finish.

B. Clean glass surfaces after installation, complying with requirements contained in the “Glass and Glazing” section for cleaning and maintenance. Remove excess glazing sealant compounds, dirt or other substances.

3.05 PROTECTION

A. Institute protective measures required throughout the remainder of the construction period to ensure that the all glass entrances do not incur any damage or deterioration, other than normal wear and tear, at the time of acceptance.

END OF SECTION 08 42 10

SECTION 08 42 29.43 - SLIDING AUTOMATIC ENTRANCES

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Exterior, biparting, impact rated sliding automatic entrances.
   1. Entrances shall include automatic locking.

B. Interior, biparting, sliding automatic entrances.

C. Interior, single slide, sliding automatic entrances
   1. Access control locking shall be on entrances.

1.2 RELATED REQUIRMENTS

A. Section 01 60 00 – Product Requirements: Fundamental product requirements, substitutions and product options, delivery, storage, and handling.

B. Section 07 90 00 - Joint Protection: Caulking to the extent not specified in this section.

C. Section 08 40 00 - Entrances, Storefronts and Curtain Walls: Entrances furnished and installed separately.

D. Section 08 71 00 - Door Hardware: Hardware to the extent not specified in this Section.

E. Section 09 21 16 – Gypsum Board Assemblies: Materials and installation requirements for gypsum board assemblies.

F. Division 26 00 00 – Electrical: Electrical connections provided separately, including conduit, and wiring for power to, monitoring of, and control of sliding automatic entrances.

G. Division 28 00 00 - Electronic Safety and Security: Systems not specified in this section.

1.3 DEFINITIONS

A. Activation Device: Device that, when actuated, sends an electrical signal to the door operator to open the door.

B. Knowing act: Consciously initiating the opening of a power operated door using acceptable methods including wall mounted switches such as push plates and controlled access devices such as keypads, card readers and key switches.

C. Safety Device: Device that prevents a door from opening or closing, as appropriate.

1.4 REFERENCE STANDARDS

A. General: Standards listed by reference, including revisions by issuing authority, form part of this specification section to extent indicated. Standards listed are identified by issuing authority, authority abbreviation, designation number, title or other designation established by issuing authority. Standards subsequently referenced herein are referred to by issuing authority abbreviation and standard designation.

B. American Architectural Manufacturers Association (AAMA):
   1. AAMA 607.1 - Clear Anodic Finishes for Architectural Aluminum.
   2. AAMA 611 Voluntary Specification for Anodized Architectural Aluminum.

3. AAMA 701 Voluntary Specification for Pile Weatherstripping and Replaceable Fenestration Weatherseals.

C. American Association of Automatic Door Manufacturers (AAADM).

D. American National Standards Institute (ANSI) / Builders' Hardware Manufacturers Association (BHMA):
1. ANSI/BHMA A156.10: Standard for Power Operated Pedestrian Doors.
2. ANSI/BHMA A156.5: Standard for Auxiliary Locks and Associated Products
3. ANSI Z97.1: Standard for Safety Glazing Materials Used In Buildings - Safety Performance Specifications And Methods Of Test.

E. American Society for Testing and Materials (ASTM):
1. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
2. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate
3. ASTM E283 - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen.

F. American Welding Society (AWS):
1. AWS A5.10/A5.10M - Specification For Bare Aluminum And Aluminum-Alloy Welding Electrodes And Rods.

G. Consumer Product Safety Commission (CPSC):
1. CPSC 16 CFR 1201: Safety Standard for Architectural Glazing Materials.

H. International Code Council (ICC):
1. IBC: International Building

I. International Organization for Standardization (ISO):
1. ISO 9001 - Quality Management Systems

J. National Association of Architectural Metal Manufacturers (NAAMM):
1. Metal Finishes Manual for Architectural and Metal Products.

K. National Fire Protection Association (NFPA):
1. NFPA 101 – Life Safety Code.
2. NFPA 70 – National Electric Code.

L. Underwriters Laboratories (UL):
1. UL 325 – Standard for Door, Drapery, Gate, Louver, and Window Operators and Systems.

1.5 COORDINATION

A. Templates: Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing automatic entrances to comply with indicated requirements.

B. Electrical System Roughing-in: Coordinate layout and installation of automatic entrance assemblies with connections to power supplies, remote activation devices, and security access control system. Refer to Division 28 00 00 - Electronic Safety and Security" for systems not provided under this section.

C. System Integration: Integrate sliding automatic entrances with other systems as required for complete working installation.

1. Provide electrical interface control capability for activation of sliding automatic entrances by security access system on doors with electric locking.

1.6 SUBMITTALS

A. General: Submit the following in accordance with Conditions of the Contract and Section 01 30 00 – Administrative Requirements, submittal procedures.

B. Action Submittals:
1. Shop Drawings: Include plans, elevations, sections, details, hardware mounting heights, and attachments to other work.
2. Color Samples for selection of factory-applied color finishes.

C. Closeout Submittals:
1. Owner’s Manual.
2. Warranties.

1.7 QUALITY ASSURANCE

A. Source Limitations: Obtain automatic entrance door assemblies through one source from a single manufacturer.

B. Qualifications:
1. Installer Qualifications: Manufacturer's authorized representative, with certificate issued by AAADM, who is trained for installation and maintenance of units required for this Project.
2. Manufacturer Qualifications: A qualified manufacturer with a manufacturing facility compliant with ISO 9001.
   a. Manufacturer shall have in place a national service dispatch center providing 24 hours per day, 7 days per week, emergency call back service.

C. Certifications: Automatic sliding door systems shall be certified by the manufacturer to meet performance design criteria in accordance with the following standards:
1. ANSI/BHMA A156.10.
2. IBC
3. NFPA 101.
4. UL 325 listed.

1.8 FIELD CONDITIONS

A. Field Measurements: General Contractor shall verify openings to receive automatic entrance assemblies by field measurements before fabrication and indicate measurements on Shop Drawings.

B. Mounting Surfaces: General Contractor shall verify all surfaces to be plumb, straight and secure; substrates to be of proper dimension and material.

C. Other trades: General Contract shall advise of any inadequate conditions or equipment.

1.9 WARRANTY

A. Automatic Entrances shall be free of defects in material and workmanship for a period of one (1) year from the date of substantial completion.

B. During warranty period Owner shall engage factory-trained technician to perform service and affect repairs. safety inspection shall be performed after each adjustment or repair and

completed inspection form shall be submitted to Owner.

C. During warranty period all warranty work, including but not limited to emergency service, shall be performed during normal working hours.

PART 2 - PRODUCTS

2.1 AUTOMATIC ENTRANCES

A. Manufacturer: Stanley Access Technologies (www.stanleyaccess.com) (or approved equal):
1. Dura-Storm™ 3000 Series impact rated sliding automatic entrances.
2. Dura-Glide™ 3000 Series sliding automatic entrances.
3. Dura-Glide™ 2000 Series sliding automatic entrances.
4. Contact: Stanley Access Technologies, Russell Elkins; Phone: 985-624-5278, Fax: 985-626-9515, Email: Russell.Elkins@allegion.com**.**

B. Substitutions: See Specification Section 01 25 00 for Substitution procedures.

C. Product Options: Drawings indicate sizes, profiles, and dimensional requirements of automatic entrance door assemblies and are based on specific system indicated. Refer to Section 01 60 00 – Product Requirements: Product Options.

2.2 IMPACT RATED AUTOMATIC ENTRANCE ASSEMBLIES

A. General: Provide manufacturer's standard automatic entrance assemblies including doors, sidelights, framing, headers, carrier assemblies, roller tracks, door operators, activation and safety devices, and accessories required for a complete installation.

B. Impact Rated Sliding Automatic Entrances:
1. Configuration: Two sliding leaves and two full sidelights; bi-parting.
2. Traffic Pattern: Two-way.
3. Emergency Breakaway Capability: Sliding leaves and sidelights
4. Mounting: Between jambs.
5. Maximum Dimensions: Not to exceed dimensions specified in product approvals; see 1.7 Quality Assurance.
6. Entrances 1000 and 1305A.

2.3 AUTOMATIC ENTRANCE DOOR ASSEMBLIES

A. General: Provide manufacturer's standard automatic entrance door assemblies including doors, sidelights, framing, headers, carrier assemblies, roller tracks, door operators, activation and safety devices, and accessories required for complete installation.
1. Bi-Parting Entrances:
   a. Configuration: Two sliding leaves and two full sidelights; bi-parting.
   b. Traffic Pattern: Two-way.
   c. Emergency Breakaway Capability: Sliding leaves only. Sliding leaves and sidelights.
   d. Mounting: Between jambs.
   e. Entrance 1001
2. Single Slide Entrances:
   a. Configuration: One sliding leaf and one full sidelight single slide.
   b. Traffic Pattern: Two-way.
   c. Emergency Breakaway Capability: Sliding leaf only.
   d. Mounting: Between jambs.
   e. Entrances 1201, 1610 1630 and 2100B

2.4 DESIGN / PERFORMANCE CRITERIA

A. General: Provide automatic entrance assemblies capable of withstanding structural loads and thermal movements based on testing manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Operating Range: Minus 30 deg F (Minus 34 deg C) to 130 deg F (54 deg C).

C. Opening-Force Requirements for Egress Doors: Not more than 50 lbf (222 N) required to manually set door in motion if power fails, and not more than 15 lbf (67 N) required to open door to minimum required width.

D. Closing-Force Requirements: Not more than 30 lbf (133 N) required to prevent door from closing.

E. Air Infiltration: Impacted rated sliding automatic entrance shall be designed maximum air leakage through fixed glazing and framing areas of 1.25 cfm/sf. (6.4 L/s-m^2) of fixed entrance system area when tested according to ASTM E 283 at minimum static-air-pressure difference of 6.24 lbf/sf (299 Pa).

F. Design Pressures: Impact rated sliding automatic entrance systems shall be designed to withstand up to 80 psf (3830 Pa), wind force in both the positive and negative direction, and be large and small missile impact rated.

G. Impact rated sliding automatic entrances specified with automatic locking shall be designed to function as follows:
   1. Entrances shall be normally closed and locked by automatic locking system with exterior motion activation system disabled. Interior motion activation system to remain enabled; free egress.
   2. Upon signal from exterior secure activation device, sliding automatic entrances will unlock and open enabling motion activation system. Entrance will be held open as long as an object or pedestrian remains in the activation or safety zones.
   3. Once all activation and safety zones have cleared the entrance will close and re-lock, returning to normal state.
   4. At any time during the cycle emergency egress can be achieved by utilizing the emergency breakaway feature.

H. Sliding automatic entrances specified with access control locking shall be designed to function as follows when set for secure operation:
   1. Entrances shall be normally closed and locked by access control locking system with exterior motion activation system disabled. Interior motion activation system to remain enabled, free egress.
   2. Upon signal from exterior secure activation device, sliding automatic entrances will unlock and open enabling motion activation system. Entrance will be held open as long as object or pedestrian remains in activation or safety zones.
   3. Once all activation and safety zones have cleared the entrance will close and re-lock, returning to normal state.
   4. At any time during cycle emergency egress can be achieved by utilizing emergency breakaway feature.

2.5 REGULATORY REQUIRMENTS

A. Emergency-Exit Door Requirements: Comply with requirements of authorities having jurisdiction for automatic entrances serving as required means of egress.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction, and marked for intended use.

2.6 MATERIALS

A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
   1. Headers, stiles, rails, and frames 6063-T6
   2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
   3. Sheet and Plate: ASTM B 209.

B. Steel Bars and Shapes – Impacted Rated Automatic entrances: Manufacturer's standard steel bars and shapes for reinforcing as required to support imposed loads.

C. Welding Rods and Bare Electrodes: AWS A5.10/A5.10M.

D. Sealants and Joint Fillers: Performed under Section 07 90 00 - Joint Protection.

2.7 COMPONENTS

A. Framing Members: Manufacturer's standard extruded aluminum reinforced as required to support imposed loads.
   1. Nominal Size: 1 3/4 inch by 4 1/2 inch (45 by 115 mm).
   2. Concealed Fastening: Framing shall incorporate a concealed fastening pocket, and continuous flush insert cover, extending full length of each framing member.

B. Stile and Rail Doors and Sidelights for Impact Rated Sliding Entrances: Manufacturer's standard 1 ¾ inch (45 mm) thick glazed doors with extruded-aluminum tubular stile and rail members. Incorporate concealed tie-rods that span full length of top and bottom rails. All corners, including intersections of stiles and rails, or stiles and muntin bars, shall be welded secure.
   1. Glazing Stops and Gaskets: Snap-on, extruded-security aluminum inboard stops with preformed glazing gaskets. Mechanically fastened outboard gutter stop with approved structural glazing tape.
   2. Stile Design: Narrow stile; 2 inches (51 mm) nominal width.
   3. Bottom Rail Design: Minimum 4 inches (102 mm)] nominal height.
   4. Muntin Bars: Horizontal tubular rail member for each door; 2 inches (51 mm) nominal width.
   5. Steel Reinforcing: Manufacturer’s standard steel bars and shapes securely mounted within entrance components as required under product certifications.

C. Stile and Rail Doors and Sidelights for Automatic Sliding Entrances: Manufacturer's standard 1 ¾ inches (45 mm) thick glazed doors with extruded-aluminum tubular stile and rail members. Incorporate concealed tie-rods that span full length of top and bottom rails**.**
   1. Glazing Stops and Gaskets: Snap-on, extruded-security aluminum stops and preformed gaskets.
   2. Stile Design: Narrow stile; 2 inches (51 mm) nominal width.
   3. Bottom Rail Design: Minimum 4 inches (102 mm) nominal height.
   4. Muntin Bars: Horizontal tubular rail member for each door; 4 1/4 inches (108 mm) nominal height.

D. Glazing – Impacted Automatic Sliding Entrances: Glaze impact rated sliding automatic entrances in accordance with product approvals and the following:
   1. Provide safety glass complying with ANSI Z97.1 and CPSC 16 CFR 1201 for Category II materials.
   2. Glass: 1 1/8 inches (29 mm) insulated glazing units, with fully tempered panes in all panels. Insulated glass panes shall incorporate a 1/2 inch (13 mm) dehydrated air space.

a. Inboard lites shall be 3/16 inch (5 mm) clear tempered.
b. Outboard lites shall be 7/16 inch (11 mm) laminated impact rated glass as specified in product approvals.
c. Units shall be hermetically sealed with a dual seal.

3. Glazing: Outboard stop with approved structural tape.

E. Glazing – Automatic Sliding Entrances: Provide glazing for sliding automatic entrances as follows:
1. Provide safety glass complying with:
a. ANSI Z97.1
b. CPSC 16 CFR 1201 for Category II materials.
2. 1/4 inch (6 mm) clear, fully tempered, in all panels.

F. Headers: Fabricated from extruded aluminum and extending full width of automatic entrance door units to conceal door operators, carrier assemblies, and roller tracks. Provide hinged or removable access panels for service and adjustment of door operators and controls. Secure panels to prevent unauthorized access.
1. Mounting: Concealed, with one side of header flush with framing.
2. Capacity: Capable of supporting up to 220 lb (100 kg) per panel, up to four panels, over spans up to 14 feet (4.3 m) without intermediate supports.

G. Carrier Assemblies and Overhead Roller Tracks: Manufacturer's standard carrier assembly that allows vertical adjustment of at least 1/8 inch (3 mm); consisting of urethane with precision steel lubricated ball-bearing wheels, operating on a continuous roller track. Support panels from carrier assembly by load wheels and anti-riser wheels with factory adjusted cantilever and pivot assembly. Minimum two ball-bearing load wheels and two anti-rise rollers for each active leaf. Minimum load wheel diameter shall be 2 1/2 inches (64 mm); minimum anti-rise roller diameter shall be 2 inches (51 mm).

H. Thresholds: Manufacturer's standard saddle type thresholds as indicated below:
1. Entrances 1000, 101 and 1305A: Continuous standard tapered extrusion double bevel.
2. Entrances 1201 1610, 1630 and 2100B: None
3. All thresholds to conform to details and requirements for code compliance.

I. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.

J. Signage: Provide signage in accordance with ANSI/BHMA A156.10.

2.8 DOOR OPERATORS

A. General: Provide door operators of size recommended by manufacturer for door size, weight, and movement; for condition of exposure; and for long-term, operation under normal traffic load for type of occupancy indicated.

B. Electromechanical Operators: Self-contained overhead unit powered by a minimum of 1/4 horsepower, permanent-magnet DC motor with gear reduction drive, microprocessor controller; and encoder.
1. Operation: Power opening and power closing.
2. Features:
a. Adjustable opening and closing speeds.
b. Adjustable open check and close check speeds.
c. Adjustable hold-open time between 0 and 30 seconds.
d. Obstruction recycle.
e. On/Off switch to control electric power to operator.
f. Energy conservation switch that reduces door-opening width.

g. Closed loop speed control with active braking and acceleration.
h. Adjustable obstruction recycle time delay.
i. Self-adjusting stop position.
j. Self-adjusting closing compression force.
k. Onboard sensor power supply.
l. Onboard sensor monitoring.
m. Optional Switch to open/Switch to close operation.
n. Fire alarm interface, configurable to safely open or close the entrance on signal from fire alarm system.

3. Mounting: Concealed.
4. Drive System: Synchronous belt type.

C. Electrical service to door operators shall be provided under Division 26 00 00 - Electrical. Minimum service to be 120 VAC, 5 amps.

2.9 ELECTRICAL CONTROLS

A. Electrical Control System: Electrical control system shall include a microprocessor controller and high-resolution position encoder. Encoder shall monitor revolutions of operator shaft and send signals to microprocessor controller to define door position and speed.
1. High-resolution encoder shall have resolution of not less than 1024 counts per revolution. Systems utilizing external magnets and magnetic switches are not acceptable.
2. Electrical control system shall include a 24 VDC auxiliary output rated at 1 amp.
3. A single controller shall be capable of controlling up to 2 operators per entrance system.

B. Performance Data: Microprocessor shall collect, and store performance data as follows:
1. Counter: Non-resettable counter to track operating cycles.
2. Event Reporting: Unit shall include non-volatile event and error recording including number of occurrences of events and errors, and cycle count of most recent events and errors.
3. LED Display: Display presenting the current operating state of the controller.

C. Controller Protection: Microprocessor controller shall incorporate following features to ensure trouble free operation:
1. Automatic Reset Upon Power Up.
2. Main Fuse Protection.
3. Electronic Surge Protection.
4. Internal Power Supply Protection.
5. Resetable sensor supply fuse protection.
6. Motor Protection, over-current protection.

D. Soft Start/Stop: “Soft-start” “soft-stop” motor driving circuit shall be provided for smooth normal opening and recycling.

E. Obstruction Recycle: Provide system to recycle sliding panels when obstruction is encountered during closing cycle. If obstruction is detected, system shall search for that object on next closing cycle by reducing door closing speed prior to previously encountered obstruction location and will continue to close in check speed until doors are fully closed, at which time doors will reset to normal speed. If obstruction is encountered again, door will come to full stop. Doors shall remain stopped until obstruction is removed and operate signal is given, resetting door to normal operation.

F. Programmable Controller: Microprocessor controller shall be field programmable.
1. Following parameters may be adjusted:
a. Operating speeds and forces as required to meet specified ANSI/BHMA standard.
b. Adjustable and variable features specified.

c. Reduced opening position.
d. Fail-secure control.

2. Manual programming shall be available through local interface which has two-digit display with selection control including three push buttons.

2.10 ACTIVATION AND SAFETY DEVICES

A. Primary Activation: Secure activation device provided by others as specified in Division 28 00 00 - Electronic Safety and Security.

B. Combined Activation and Safety Sensors: Combined activation and safety sensors shall, in single housing, detect motion and presence in accordance with ANSI/BHMA A156.10. Motion shall be detected using K-band microwave technology, presence by active infrared reflection technology.
1. Mounting Height: Up to 11.5 feet (3.5 m) above finish floor
2. Temperature Range: Between -31°F and 131°F (-35°C to 55°C) in all environmental conditions
3. Relays: Form C, 50V at 0.3A for both activation and safety. Hold time of less than 0.5 seconds.
4. Detection Pattern: When detection is made in the activation zone, and entrance opens, safety zone shall extend through threshold on each side; creating an X-pattern. When activation and safety zones are cleared, and entrance closes sensor will ignore X-pattern safety zones.
5. Motion activation is secondary to knowing act activation where scheduled.
6. Combined motion and presence sensors shall be equal to or better than X-Zone Sensor by Optex.

C. Photoelectric Beams: In addition to threshold sensor include minimum of two (2) doorway holding beams. Photoelectric beams shall be pulsed infrared type, including sender receiver assemblies for recessed mounting. Beams shall be monitored by electrical controls for faults and shall fail safe.

D. Presence Sensor Monitoring: Sliding automatic entrances control system shall include means to verify functionality of all active presence sensors in accordance with ANSI/BHMA A156.10. A detected fault shall cause automatic operation to cease until fault is corrected.

2.11 HARDWARE

A. General: Provide units in sizes and types recommended by automatic entrance and hardware manufacturers for entrances and uses indicated.

B. Emergency Breakaway Feature: Provide release hardware that allows panel(s) to swing out in direction of egress to full 90 degrees from any position in sliding mode. Maximum force to open panel shall be 50 lbf (222 N) according to ANSI/BHMA A156.10. Interrupt powered operation of panel operator while in breakaway mode.
1. Emergency breakaway feature shall include at least two adjustable detent devices mounted in each breakaway panel: one top mounted and one bottom mounted, to control panel breakaway force.
2. Wind Resistant Damper: Impact rate entrance provide factory installed concealed gas dampers in each breakaway panel to protect door panels from wind damage. Dampers shall be designed to slow panel movement after breakout.
3. Limit Arms: Automatic sliding entrances provide limit arms to control swing of sliding or non-sliding panels on break-out; swing shall not exceed 90 degrees. Limit arms shall be spring loaded to prevent shock and include adjustable friction damping.

C. Deadlocks: None.

1. Provide no deadlocks on Entrances 1001, 1201, 1610, 1630 and 2100B.

D. Panic Release Locking: Manufacturer's approved multi-point locking system with panic release hardware as follows:
   1. Four-Point Locking: Provide locking components within sliding panels, including panic release hardware, that extend flush bolts into overhead carrier assemblies and threshold of both sliding leaves. Flush bolts shall be manually dogged, or disengaged, for normal operation. Lock cylinders shall be provided to allow for disengagement of flush bolts from the exterior.
   2. Cylinders: As specified in Section 08 71 00 - Door Hardware.
   3. Panic release hardware shall be similar to or better than, Adams Rite G86-11-36.
   4. Provide panic release locking system on Entrances 1000 and 1305A.

E. Automatic Locking System: Provide automatic locking hardware on sliding automatic entrances as follows:
   1. System shall include a fail-secure electric solenoid locking device with a self-contained solid-state electronic control factory mounted inside the header.
   2. When set for secure operation, the automatic sliding entrance(s) shall electrically latch in the closed position preventing door panels from sliding manually, returning the system to its locked status.
   3. During a power interruption:
      a. The solenoid lock shall be engaged, preventing the doors from sliding manually.
      b. Means of egress shall be accomplished by standard emergency breakaway feature.
   4. Provide access control locking system on Entrances 1000 and 1305A.

F. Control Switch: Provide manufacturer’s standard header mounted rocker switches to allow for full control of the automatic entrance door. Rotary switches shall be keyed on entrances with automatic locking. Controls to include, but are not limited to:
   1. Open.
   2. Closed/Locked.
   3. Automatic
   4. One way.
   5. Reduced.
   6. Reduced one way.

G. Power Switch: Sliding automatic entrances shall be equipped with two positions On/Off rocker switch to control power to the door.

H. Sliding Weather Stripping: Manufacturer's standard replaceable components complying with AAMA 701.
   1. Impact Rated Entrance: Made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.
      a. Provide double pile weather stripping on lead stiles of sliding panels.
      b. Provide single pile weather stripping between carrier and header, lead stiles of sidelights, and on pivot stiles of sliding panels.
   2. Automatic Sliding Entrance: Manufacturer's standard replaceable components complying with AAMA 701; made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

I. Weather Sweeps: Adjustable, dual brush, nylon brush sweep mounted to underside of door bottom.

2.12 FABRICATION

A. General: Factory fabricates automatic entrance assembly components to designs, sizes, and thickness indicated and to comply with indicated standards.
   1. Form aluminum shapes before finishing.
   2. Use concealed fasteners to greatest extent possible.
      a. Where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration, use self-locking devices.
      b. Reinforce members as required to receive fastener threads.

B. Framing: Provide automatic entrances as prefabricated assemblies.
   1. Fabricate tubular and channel frame assemblies with manufacturer's standard mechanical or welded joints. Provide sub-frames and reinforcement as required for complete system to support required loads.
   2. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
   3. Perform fabrication operations in manner that prevents damage to exposed finish surfaces.
   4. Form profiles that are sharp, straight, and free of defects or deformations.
   5. Prepare components to receive concealed fasteners and anchor and connection devices.
   6. Fabricate components with accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion.

C. Doors: Factory fabricated and assembled in profiles indicated. Reinforce as required to support imposed loads and for installing hardware.

D. Door Operators: Factory fabricated and installed in headers, including adjusting and testing.

E. Glazing: Fabricate framing with minimum glazing edge clearances for thickness and type of glazing indicated.

F. Hardware: Factory install hardware to greatest extent possible; remove only as required for final finishing operation and for delivery to and installation at Project site.

2.13 ALUMINUM FINISHES

A. General: Comply with NAAMM Metal Finishes Manual for Architectural and Metal Products for recommendations for applying and designing finishes. Finish designations prefixed by AA comply with system established by Aluminum Association for designing finishes.

B. Class II, Clear Anodic Finish: AA-M12C22A31 Mechanical Finish: as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.40 mils minimum complying with AAMA 611-98, and the following:
   1. AAMA 607.1
   2. Applicator must be fully compliant with all applicable environmental regulations and permits, including wastewater and heavy metal discharge.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine conditions for compliance with requirements for installation tolerances, header support, and other conditions affecting performance of automatic entrances. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Do not install damaged components. Fit frame joints to produce joints free of burrs and distortion. Rigidly secure non-movement joints.

B. Entrances: Install automatic entrances plumb and true in alignment with established lines and grades without warp or rack of framing members and doors. Anchor securely in place.
   1. Install surface-mounted hardware using concealed fasteners to greatest extent possible.
   2. Set headers, carrier assemblies, tracks, operating brackets, and guides level and true to location with anchorage for permanent support.

A. Door Operators: Connect door operators to electrical power distribution system as specified in Division 26 00 00 – Electrical.

B. Glaze sliding automatic entrance door panels in accordance with, the Glass Association of North America (GANA) Glazing Manual, published recommendations of glass product manufacturer, and sliding automatic entrance manufacturer's instructions.

C. Sealants: Comply with requirements specified in Section 07 90 00 - Joint Protection.

1.2 FIELD QUALITY CONTROL

A. Testing Services: Factory Trained Installer shall test and inspect each automatic entrance to determine compliance of installed systems with applicable ANSI standards.

1.3 REPAIR

A. Repair damaged finish to match original finish.

1.4 ADJUSTING

A. Adjust door operators, controls, and hardware for smooth and safe operation, for tight closure, and complying with requirements in ANSI/BHMA A156.10.

1.5 CLEANING

A. Clean glass and aluminum surfaces promptly after installation. Remove excess glazing and sealant compounds, dirt, and other substances. Comply with requirements in Section 08 80 00 - Glazing, for cleaning and maintaining glass.

END OF SECTION 08 42 29.43

SECTION 08 43 13 - ALUMINUM-FRAMED STOREFRONTS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Aluminum-framed storefront.

B. Aluminum doors and frames.

1.2 RELATED REQUIREMENTS

A. Section 08 71 00 - Door Hardware: Hardware items other than specified in this section.

B. Section 08 80 00 - Glazing: Glass and glazing accessories.

C. Section 08 44 13 – Glazed Aluminum Curtain Walls

D. Section 08 42 29 - Automatic Entrances

1.3 REFERENCE STANDARDS

A. AAMA CW-10 - Care and Handling of Architectural Aluminum From Shop to Site; 2015.

B. AAMA 501.2 - Field Check of Metal Storefronts, Curtain Walls, and Sloped Glazing Systems for Water Leakage; 2009.

C. AAMA 611 - Voluntary Specification for Anodized Architectural Aluminum; 2012.

D. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2014.

E. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric]; 2014.

F. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

G. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric]; 2013.

H. ASTM D2244 - Standard Practice for Calculation of Color Differences from Instrumentally Measured Color Coordinates; 2011.

I. ASTM D4214 - Standard Test Methods for Evaluating the Degree of Chalking of Exterior Paint Films; 2007.

J. ASTM D523 - Standard Test Method for Specular Gloss; 2014.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with installation of other components that comprise the exterior enclosure.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this section; require attendance by all affected installers.

1.5 SUBMITTALS

A. See Section 01 33 00 for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, glass and infill.

C. Shop Drawings: Indicate system dimensions, framed opening requirements and tolerances, affected related Work, expansion and contraction joint location and details, and field welding required.

D. Design Data: Provide framing member structural and physical characteristics, engineering calculations, and dimensional limitations.

E. Hardware Schedule: Complete itemization of each item of hardware to be provided for each door, cross-referenced to door identification numbers in Contract Documents.

F. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Designer Qualifications: Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed in the State in which the Project is located.

B. Manufacturer Qualifications: Company specializing in performing work of type specified and with at least ten years of documented experience. It is the intent of this specification for the same manufacturer to act as a single source supplier for both Aluminum-Framed Storefront (08 43 13) and Glazed Aluminum Curtain Walls (08 44 13).

C. Installer Qualifications: Company specializing in performing the work of this section with minimum ten years of experience.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with AAMA CW-10.

B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

1.8 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.9 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. Correct defective Work within a two year period after Date of Substantial Completion.

C. Manufacturer’s Finish Warranty: Provide manufacturer's written warranty stating that the finish will perform as follows for minimum of 20 years (Painted) and 10 Years (Anodized):
   1. Chalking: No more than that represented by a No.8 rating based on ASTM D4214.
   2. Color Retention: No fading or color change in excess of 5 Hunter color difference units, calculated in accordance with ASTM D2244.
   3. Gloss Retention: Minimum of 30 percent gloss retention, when tested in accordance with ASTM D523.

1.10 PERFORMANCE REQUIREMENTS

A. General Performance:
   1. Product to comply with the specified performance requirements without failure due to defective manufacture, fabrication, installation, or other defects in construction, as determined by testing of aluminum storefront systems representing those indicated for this project.
   2. Aluminum storefront systems shall withstand movements of supporting structure including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
   3. Failure includes any of these events:
      a. Thermal stresses transferring to building structure
      b. Glass breakage
      c. Loosening or weakening of fasteners, attachments, and other components
      d. Failure of operating units

B. Delegated Design:

1. Design aluminum storefront systems, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

C. Wind Loads: Per IBC 2021 As Indicated in Structural Drawings

D. Air Leakage:
   1. The test specimen shall be tested in accordance with ASTM E 283.
   2. Air infiltration rate shall not exceed 0.06 cfm/ft^2 (0.3 l/s · m^2) at a static air pressure differential of 6.2 psf (300 Pa).

E. Water Resistance:
   1. The test specimen shall be tested in accordance with ASTM E 331.
   2. There shall be no leakage at a minimum static air pressure differential of 8 psf (383 Pa) as defined in AAMA 501.

F. Uniform Load:
   1. A static air design load of 20 psf (958 Pa) shall be applied in the positive and negative direction in accordance with ASTM E 330.
   2. There shall be no deflection in excess of L/175 of the span of any framing member.
   3. At a structural test load equal to 1.5 times the specified design load, no glass breakage or permanent set in the framing members in excess of 0.2% of their clear spans shall occur.

G. Hurricane Impact Resistance at Exterior Storefront Doors:
   1. Comply with IBC 2021 Code.
   2. Test tested in accordance with ASTM E1886 and information in ASTM E1996, and in TAS-201/203:

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design: Kawneer (Norcross, GA):

B. Subject to equivalent product design and performance attributes to Basis of Design above as evaluated by the Architect, other potential accepted Aluminum-Framed Storefront and Door manufacturers are as follows:
   1. Wausau Window and Wall Systems (Wausau, WI)
   2. Southern Walls and Windows (New Orleans, LA)
   3. Substitutions: See Section 01 60 00 - Product Requirements. Note: Pre-bid prior approval requests for alternative manufacturers is necessary and requests must include project specific design details (Standard Catalog Details Will Not Be Accepted) indicating compliance with drawings and all associated performance data.

2.2 STOREFRONT FRAMING

A. Aluminum-Framed Storefront: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices. Kawneer VersaGlaze 450 Framing System.
   1. Glazing Position: Glass located at Front Plane of System per Details. Both captured details are required as well as Structural Silicone Glazed (SSG) details as indicated on Drawings.

2. Profile Dimensions: 2 inches wide by 4-1/2 inches deep.
3. Finish as Identified on Drawings: Either Architectural Class I complying with AAMA 611, AA-M10C21A41 / AA-M45C22A41 natural anodized or 70% PVDF Fluoropolymer 3-Coat Painted Finish complying with AAMA 2605. Color and Finish to Match Architect Sample or selection.
   a. Factory finish all surfaces that will be exposed in completed assemblies.
4. Fabrication: Joints and corners flush, hairline, and weatherproof, accurately fitted and secured; prepared to receive anchors and hardware; fasteners and attachments concealed from view; reinforced as required for imposed loads.
5. Movement: Allow for movement between storefront and adjacent construction, without damage to components or deterioration of seals.
6. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.

2.3 COMPONENTS

A. Aluminum Framing Members: Extruded aluminum sections.

1. Application: Interior Storefront.
2. Frame Size, nominal:
   a. Face Width: 2 inch.
   b. Head, Jamb, Vertical Mullion Depth: 4-1/2 inch.
   c. Glazing Pocket: 5/8 inch
3. Member Wall Thickness, nominal: 0.125 inch.
4. Product: Kawneer VersaGlaze 450 (Front Set).

B. Glazing: As specified in Section 08 80 00 and as identified on Drawings.

C. Interior Doors: Glazed aluminum, Basis of Design Kawneer 190 Narrow Stile.
1. Thickness: 1-3/4 inches.
2. Member Wall Thickness, minimum: 0.125 inch.
3. Top Rail: 3-1/2 inches wide.
4. Vertical Stiles: 3-1/2 inches wide.
5. Bottom Rail: 10 inches wide.
6. Glazing Stops: Square.
7. Finish: Clear Anodized Aluminum and/or Painted as Identified on Drawings.

D. Interior trim, mullion covers, stool extensions: Formed or extruded aluminum, minimum 0.125 inch thickness for framing members, 0.050 inch thickness for glazing stops and similar components.

E. Exterior (Impact Resistant) Doors: Glazed aluminum, Basis of Design Kawneer 350 IR Medium Stile.
1. Thickness: 1-3/4 inches.
2. Member Wall Thickness, minimum: 0.125 inch.
3. Top Rail: 3-1/2 inches wide.
4. Vertical Stiles: 3-1/2 inches wide.
5. Bottom Rail: 10 inches wide.
6. Glazing Stops: Square.
7. Finish: Clear Anodized Aluminum and/or Painted as Identified on Drawings.

E. Transition Assembly: Wherever identified on Drawings or dictated by excessive sealed joint sizes (1-1/4” or greater), Pre-engineered, finished aluminum and silicone materials forming an air and vapor barrier transition assembly for bridging continuously between the window assembly and adjacent air and vapor barrier materials.
1. Product: Proglaze ETA System 1 manufactured by Tremco.

2.4 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209 (ASTM B209M).

C. Fasteners: Stainless steel.

D. Glazing Gaskets: Type to suit application to achieve weather, moisture, and air infiltration requirements.

E. Glazing Accessories: As specified in Section 08 80 00.

2.5 FINISHES

A. Class I Natural Anodized Finish: AAMA 611 AA-M12C22A41 Clear anodic coating not less than 0.7 mils thick.

B. All Aluminum Storefronts located within the natatorium and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure shall receive a Three-Coat Fluoropolymer: AAMA 2605, fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' installation instructions.

Painted Finish: 70% PVDF Fluoropolymer 3-Coat Painted Finish complying with AAMA 2605. Color and Finish to Match Architect Sample or selection. See drawings for color selections

C. **No Anodized Finish allowed within the natatorium and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure**

2.6 HARDWARE

A. Door Hardware: For interior storefront doors, as specified in Section 08 71 00 and supplied/delivered by the finish hardware supplier to the storefront door manufacturer's production facility. For exterior storefront doors the hardware will be that which has been tested for hurricane impact and supplied by the door manufacturer and the glazing subcontractor. Continuous hinges, LCN 4040 Surface Closers, Aluminum Thresholds, Manufacturer's Standard Door Bottom Weathering. Regarding locking, the function of door for egress, and/or electronic security locking will be as indicated on drawings and manufacturer will supply suitable impact tested assemblies (ex: impact tested panic devices, MS locking, electronic latch retraction) as may be applicable. Keypad or card access controls will be by the finish hardware supplier or the Owner.

B. Provide 316 stainless steel door hardware for all Storefronts located within the natatorium and in adjacent areas subject to high humidity, elevated temperatures or chlorine/chloramine exposure.

2.7 FABRICATION

A. Fabricate components with minimum clearances and shim spacing around perimeter of assembly, yet enabling installation and dynamic movement of perimeter seal.

B. Accurately fit and secure joints and corners. Make joints flush, hairline.

C. Prepare components to receive anchor devices. Fabricate anchors.

D. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.

E. Arrange fasteners and attachments to conceal from view.

F. Reinforce framing members for imposed loads.

G. Finishing: Apply factory finish to all surfaces that will be exposed in completed assemblies.

1. Touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other work.

B. Verify that wall openings and adjoining air and vapor seal materials are ready to receive work of this section.

3.2 INSTALLATION

A. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

B. Provide alignment attachments and shims to permanently fasten system to building structure.

C. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

D. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired.

3.3 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inches every 3 ft non-cumulative or 1/16 inches per 10 ft, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

3.4 FIELD QUALITY CONTROL

A. See Section 01 40 00 - Quality Requirements, for independent testing and inspection requirements. Inspection will monitor quality of installation and glazing.

B. Test installed storefront for water leakage in accordance with AAMA 501.2 hose test.

C. At Owner's discretion, static water testing of installed assemblies per AAMA 503.3 and ASTM E 1105 can be conducted at 35%, and 50% completion of work. Costs of testing to be borne by the General Contractor and testing conducted by a certified 3rd party testing agency experienced in testing installed glazing system assemblies per test methods identified.

3.5 ADJUSTING

A. Adjust operating hardware and sash for smooth operation.

3.6 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

3.7 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 08 44 13 - GLAZED ALUMINUM CURTAIN WALLS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Aluminum-framed curtain wall, with vision glazing and glass infill panels.

B. Aluminum Sun-Shading Elements Fixed to Glazed Curtain Wall Systems.

C. Perimeter sealant.

D. Extruded Aluminum Screen Assembly at Main Entrance (See Drawings)

E. Aluminum-framed curtain wall doors

1.2 RELATED REQUIREMENTS

A. Section 05 12 00 - Structural Steel Framing: Steel attachment members.

B. Section 07 81 00 - Firestopping: Firestop at system junction with structure.

C. Section 07 90 00 - Joint Sealers: Perimeter sealant and back-up materials.

D. Section 08 43 13 – Aluminum-Framed Storefronts

E. Section 08 80 00 - Glazing.

F. Section 08 42 29 Automatic Entrances.

1.3 REFERENCE STANDARDS

A. AAMA CW-10 - Care and Handling of Architectural Aluminum From Shop to Site; 2015.

B. AAMA 501.1 - Standard Test Method for Exterior Windows, Curtain Walls and Doors for Water Penetration Using Dynamic Pressure; 2005.

C. AAMA 502 - Voluntary Specification for Field Testing of Newly Installed Fenestration Products; 2012.

D. AAMA 1503 - Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections; 2009.

E. AAMA 2603 - Voluntary Specification, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels (with Coil Coating Appendix); 2015.

F. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels; 2013.

G. ASCE 7 - Minimum Design Loads for Buildings and Other Structures; 2010, with 2013 Supplements and Errata.

H. ASTM A36/A36M - Standard Specification for Carbon Structural Steel; 2014.

I. ASTM A500/A500M - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes; 2013.

J. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2014.

K. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric]; 2014.

L. ASTM B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes; 2014.

M. ASTM B221M - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes [Metric]; 2013.

N. ASTM C1401 - Standard Guide for Structural Sealant Glazing; 2014.

O. ASTM C661 - Standard Test Method for Indentation Hardness of Elastomeric-Type Sealants by Means of a Durometer; 2006 (Reapproved 2011).

P. ASTM C793 - Standard Test Method for Effects of Laboratory Accelerated Weathering on Elastomeric Joint Sealants; 2005 (Reapproved 2010).

Q. ASTM C794 - Standard Test Method for Adhesion-In-Peel of Elastomeric Joint Sealants; 2015.

R. ASTM C920 - Standard Specification for Elastomeric Joint Sealants; 2014.

S. ASTM C1087 - Standard Test Method for Determining Compatibility of Liquid-Applied Sealants with Accessories Used in Structural Glazing Systems; 2000 (Reapproved 2011).

T. ASTM C1115 - Standard Specification for Dense Elastomeric Silicone Rubber Gaskets and Accessories; 2006 (Reapproved 2011).

U. ASTM C1184 - Standard Specification for Structural Silicone Sealants; 2014.

V. ASTM D523 - Standard Test Method for Specular Gloss; 2014.

W. ASTM D4145 - Standard Test Method for Coating Flexibility of Prepainted Sheet; 2010.

X. ASTM E90 - Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements; 2009.

Y. ASTM E283 - Standard Test Method for Determining the Rate of Air Leakage Through Exterior Windows, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen; 2004 (Reapproved 2012).

Z. ASTM E330/E330M - Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference; 2014.

AA. ASTM E331 - Standard Test Method for Water Penetration of Exterior Windows, Skylights, Doors, and Curtain Walls by Uniform Static Air Pressure Difference; 2000 (Reapproved 2009).

AB. ASTM E413 - Classification for Rating Sound Insulation; 2010.

AC. NFRC 400 - Procedure for Determining Fenestration Product Air Leakage; 2014.

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordinate with installation of other components that comprise the exterior enclosure.

B. Preinstallation Meeting: Conduct a preinstallation meeting one week before starting work of this section; require attendance by all affected installers. Review methods and procedures related to glazed aluminum curtain wall systems including, but not limited to the following:
   1. Quality control procedures.
   2. Interface with adjacent work.
   3. Dimensions and tolerances.
   4. Sealant work and testing.
   5. In-place testing.

1.5 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. Product Data: Provide component dimensions, describe components within assembly, anchorage and fasteners, internal drainage details, glazing, and infill.

C. Shop Drawings: Prepared by system manufacturer. Indicate system dimensions, framed opening requirements and tolerances, affected related Work, expansion and contraction joint location and details, and field welding required.
   1. Drawings sealed and signed by Professional Engineer licensed at the State in which the Project is located.

D. Shop Drawings: Provide details of proposed structural sealant glazing (SSG) and weather sealant joints indicating dimensions, materials, bite, thicknesses, profile, and support framing.

E. Delegated-Design Submittal: For glazed aluminum curtain walls, including analysis data signed and sealed by the qualified and licensed Louisiana engineer responsible for their preparation.

F. Samples: Submit two samples 3 x 5 inches in size illustrating finished aluminum surface, glazing, infill panels, and glazing materials.

G. Specimen Warranty.

H. Structural Sealant Glazing (SSG): Submit product data and calculations or lab/field tests by manufacturer showing compliance with performance requirements.

I. Test Reports: Submit results of full-size mock-up testing. Reports of tests previously performed on the same design are potentially acceptable subject to Architect review and approval.
   1. Refer to paragraph 1.7 for further laboratory test report requirements.

J. Design Data: Provide complete calculations on structural aspects of window design and application including framing deflections and stresses, anchor stresses, effects of sunshades, sunshade components and the localized effects as prepared, sealed and signed by a structural engineer licensed at the State in which the Project is located.

K. Field Quality Control Submittals: Report of field testing for water leakage.

L. Field Quality Control Plan: Submit at least two weeks prior to start of installation.

M. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Designer Qualifications: Design structural support framing components under direct supervision of a Professional Structural Engineer experienced in design of this Work and licensed at the State in which the Project is located.
   1. Prepare, certify, and submit in 8½" x 11" format a fully coordinated set of calculations that substantiate and justify the compliance of the complete application of the Work with this section including; embeds and inserts, anchors and fasteners, deflections and stresses of framing members and ancillary supports, structural sealant stresses, and consideration of movement and tolerance.

B. Laboratory Mock-Up Testing: Have a specimen representative of project conditions tested by an independent testing agency for compliance with specified performance criteria.

C. Verify that each component is appropriate for use in structural sealant glazing (SSG) application in regards to at least the following properties; size, shape, dimensions, material, shelf-life, storage conditions, and color.

D. See Section 01 90 00 Mock-Up Assemblies, for general requirements of on-site visual mock-ups.

E. Installer: Company specializing in performing the work of this section trained in system installation and acceptable to manufacturer.

1.7 LABORATORY MOCK-UP

A. See Section 01 40 00 Quality Requirements, for general requirements for mock-ups.

B. Laboratory Test Reports: The following requirements for laboratory mock-up testing will be waived if manufacturer submits laboratory test reports, on mock-up of a system which, in Architect's opinion, is similar in scope and configuration to specified construction and certifies compliance with Performance Requirements.

C. System supplier shall build and test a laboratory mock-up conforming to actual system configuration (or prior tested assembly if deemed acceptable to Architect), including structural components. Assemble to illustrate component assembly including glazing materials, weep drainage system, attachments, anchors, and perimeter sealant.

1. An independent testing laboratory, paid by Contractor shall perform tests.
2. Same supervisor who install system in the Project shall install mock-up.

D. Provide mock-up including all components occurring on project at least one full bay wide by one full floor level high. Assemble to illustrate component assembly including glazing materials, weep drainage system, attachments, anchors, and perimeter sealant.

E. Assemble and test mock-up at independent testing laboratory facilities.

F. Notify Owner and Architect seven days in advance of the dates and times when assemblies will be tested.
1. Contractor shall pay travel and per diem costs for Owner, Architect and Consultants to observe laboratory testing when testing is located outside county of project location.

G. Testing Scope: Perform the following mock-up tests in accordance with performance requirements of this Section in the following sequence.
1. Preliminary loading (positive) 50 percent of design load; ASTM E330/E330M, Procedure B.
2. Air Infiltration; ASTM E283.
3. Static Pressure Water Penetration; ASTM E331.
4. Dynamic Pressure Water Penetration; AAMA 501.1.
5. Structural Performance: 50 percent and 100 percent positive, 50 percent and 100 percent negative design load; ASTM E330/E330M, Procedure B.
6. Retest Air Infiltration; ASTM E283.
7. Retest Static Water Penetration; ASTM E331.
8. Structural Overload: 75 percent and 150 percent positive, and 75 percent and 150 percent negative design load; ASTM E330/E330M, Procedure B.
9. Concentrated load testing on facade access equipment stabilization system (If Required) attached to exterior wall framing. Apply outward, inward, and side-loading of magnitude and duration as required by Section 11 24 23.

H. Laboratory Testing Submittals:
1. Before Laboratory Fabrication
   a. Shop Drawings of mock-up.
   b. Test Procedures
2. After Laboratory Testing
   a. Laboratory Test Reports
   b. Record Drawings indicating revisions or corrective measures taken during testing.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Handle products of this section in accordance with AAMA CW-10.

B. Protect finished aluminum surfaces with wrapping. Do not use adhesive papers or sprayed coatings that bond to aluminum when exposed to sunlight or weather.

C. Repair or replace damaged materials as determined by Architect.

1.9 FIELD CONDITIONS

A. Do not install sealants when ambient temperature is less than 40 degrees F. Maintain this minimum temperature during and 48 hours after installation.

1.10 WARRANTY

A. See Section 01 78 00 - Closeout Submittals, for additional warranty requirements.

B. See Section 07 90 05 - Joint Sealers and 08 80 00 - Glazing for additional warranty requirements.

C. Correct defective Work within a two year period after Date of Substantial Completion. Warranty work to include materials, labor, equipment and temporary facilities. Failures include, but are not limited to, the following:
   1. Structural failures including, but not limited to, excessive deflection.
   2. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
   3. Excessive air infiltration through fixed glazing and framed areas.
   4. Water penetration through fixed glazing and framing areas.

D. Manufacturer's Finish Warranty: Provide manufacturer's written warranty stating that the factory-applied finish will perform as follows for minimum of 20 years (Painted) and/or 10 Years (Anodized):
   1. Chalking: No more than that represented by a No.8 rating based on ASTM D4214.
   2. Color Retention: No fading or color change in excess of 5 Hunter color difference units, calculated in accordance with ASTM D2244.
   3. Gloss Retention: Minimum of 30 percent gloss retention, when tested in accordance with ASTM D523.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Kawneer (Norcross, GA); Kawneer 1600 Wall System 1 (Captured) and 1600 Wall System 2 Structural Silicone Glazed 2-Sides (SSG):

B. Subject to equivalent product design and performance attributes as evaluated by the Architect to Basis of Design above, other potential accepted Glazed Aluminum Curtain Wall manufacturers are as follows:
   1. Wausau Window and Wall Systems (Wausau, WI)
   2. Oldcastle Building Envelope
   3. Substitutions: See Section 01 25 00 - Product Requirements. Note: Pre-bid prior approval requests for alternative manufacturers is necessary and requests must include project specific design details (Standard Catalog Details Will Not Be Accepted) indicating compliance with drawings and all associated performance data.

2.1A DELEGATED DESIGN PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, licensed in the State of Louisiana, to design the glazed aluminum curtain wall system, including structural support framing, anchorage, and connections to the building structure, calculations for wind loading in compliance with the performance criteria below.

B. General Performance: Glazed aluminum curtain walls shall be capable of withstanding building movements and weather exposures, including:

   1. Story drift, twist, column shortening, creep, and deflection.
   2. Thermal expansion and contraction.
   3. Dynamic loading, including windborne debris per hurricane requirements.
   4. Structural loading without glass breakage, seal failure, vibration, or component loosening.

C. Deflection of Framing Members:

   1. Normal to wall plane: Limit to L/175 for spans ≤13'-6", and L/240 + 1/4" for spans >13'-6", but no more than 3/4".
   2. Parallel to glazing: Limit to L/360, or maximum reduction of glass bite to 75% and edge clearance not less than 1/8".

3. Cantilever Deflection: Limit to L/175 or L/240 + 1/4" based on span length.

D. Thermal Movement: Accommodate thermal movement resulting from ambient and surface temperature changes:

1. Ambient: 120°F differential.
2. Surface: 180°F differential.

E. Structural Testing: In accordance with ASTM E330/E330M:

1. No deflection exceeding limits at design pressure.
2. No failure or permanent deformation at 150% of design pressure.
3. Test duration: Minimum 10 seconds.

F. Air Infiltration: ASTM E283

1. Maximum 0.06 cfm/sf at 6.24 psf pressure differential.

G. Water Penetration: ASTM E331:

1. No leakage at 15 psf or 20% of design pressure, whichever is greater

H. Energy Performance:

1. NFRC Certified Ratings required for entire system including framing, glazing, and spacers.
2. U-factor: Maximum 0.39 Btu/sf·hr·°F (in accordance with NFRC 100 or AAMA 507).
3. Condensation Resistance: Minimum CRF Frame 66, CRF Glass 60 per AAMA 1503.

I. Impact Resistance (Windborne Debris):

1. Conform to ASTM E1886 and E1996 for Wind Zone 2 (Houma, LA), including:

a. Large missile impact below 30' above grade.

b. Small missile impact between 30'-60'.

J. Acoustic Performance:

1. Minimum STC rating of 37 when tested to ASTM E90.

K. Mock-Up Testing Requirements:

1. Provide full-scale mock-up tested per Section 1.7 and ASTM/AAMA protocols.

2.2 CURTAIN WALL - GENERAL

A. Aluminum-Framed Curtain Wall: Factory fabricated, factory finished aluminum framing members with infill, and related flashings, anchorage and attachment devices.
1. Fabrication Method: Shop fabricated field installed stick system.
2. System Internal Drainage: Drain to the exterior by means of a weep drainage network any water entering joints, condensation occurring in glazing channel, and migrating moisture occurring within system.
3. Thermal Isolation: Provide thermal isolation within assembly to separate exterior covers from interior verticals and horizontals to create a thermally improved system.

4. Air and Vapor Seal: Maintain continuous air barrier and vapor retarder throughout assembly, primarily in line with inside pane of glazing and inner sheet of infill panel and heel bead of glazing compound.
5. Perimeter Clearance: Minimize space between framing members and adjacent construction while allowing expected movement.

B. Structural Performance Requirements: Design and size components per IBC 2021 As Indicated in Structural Drawings and to withstand the following load requirements without damage or permanent set.
   1. Design Wind Loads: Comply with the requirements of ASCE 7.
      a. Member Deflection: Comply with requirements of AAMA TIR-A11:
         1) Limit member deflection to l/175 for spans up to 13'-6" and l/240 + ¼ inch for spans over 13'-6" and maximum of 3/4 inch whichever is less.
         2) For cantilevers, l = 2 times the unsupported span.
         3) In-plane deflection of framing members shall not exceed 1/8 inch or decrease glass bite or clearance by more than 25 percent.
         4) Limit anchor deflection under design load to 1/8 inch maximum.
   2. Measure performance by testing in accordance with ASTM E330/E330M, using test loads equal to 1.5 times the design wind loads and 10 second duration of maximum pressure.
      a. For calculating member stress and similar, adhere to P.E. and Industry Standards for Aluminum, Steel and Fastener components.
      b. Permanent set of framing members shall not exceed l/1000 of clear span when subjected to 1.5 times the maximum design load.
      c. Permanent set of anchors shall not exceed 1/16 inch when subjected to 1.5 times the maximum design load.
   3. Movement: Accommodate the following movement without damage to components or deterioration of seals:
      a. Expansion and contraction caused by 180 degrees F surface temperature.
      b. Expansion and contraction caused by cycling temperature range of 170 degrees F over a 12 hour period.
      c. Limit deflection of curtain wall perimeter framing to 50 percent of the design dimension.
      d. Deflection of structural support framing, under permanent and dynamic loads.
      e. Curtain wall shall accommodate a total of plus or minus 3/8 inch for both permanent and dynamic movement of the supporting structure including:
         1) Shortening of structural concrete columns.
         2) Creep of structural concrete members.
         3) If expansion or deflection horizontals are required to accommodate deflections, then this responsibility is a design issue (possible increased sight lines to be assessed and decided by the architect) for approval and a cost item to be borne by the bidder.
   4. Structural Sealant Glazing (SSG) System: For individual glass lites, design framing members to not exceed a deflection normal to the wall of L/175 between supports with 3/4 inch maximum, and a deflection parallel to the wall of L/360 with 1/8 inch maximum, whichever is less.

C. Water Penetration Resistance: No uncontrolled water on indoor face when tested as follows:
   1. Test Pressure Differential: 15 lbf/sq ft.
   2. Test Method: ASTM E331.

D. Air Leakage: Maximum of 0.06 cu ft/min sq ft of wall area, when tested in accordance with ASTM E283 at 6.2 psf pressure differential across assembly.

E. Thermal Performance U-factor and CRF: The U-factor calculation in accordance with NFRC 100 or AAMA 507, specific for manufacturer's framing. U-factor Maximum .39. CRF when

using AAMA 1503 with standard clear insulated glass the CRF (Frame) and CRF (Glass) shall not be less than 66 and 60 respectfully.

F. Hurricane Impact Resistance
   1. Comply with IBC 2021 Code.
   2. Test tested in accordance with ASTM E1886 and information in ASTM E1996

G. Acoustical Performance Requirements:
   1. Sound Attenuation: Sound Transmission Loss (STC) not to be less than 37 (exterior glass and aluminum assembly), minimum, from exterior to interior.
   2. Test Method: ASTM E90, and ASTM E1425

.

2.3 COMPONENTS

A. Basis of Design:
   1. Curtain Wall Type 1:
      a. Basis of Design: 1600 Wall System 1 manufactured by Kawneer.
      b. Sight Line: 2-1/2 inch. Larger Sightlines will not be accepted.
         1) Size as needed at sunscreens..
      c. Depth: (length of sunshade) as indicated on drawings.
      d. Glazing: Outside glazed, Pressure plate and mullion covers 4-sides.
      e. Finish: Superior performance organic coating. Factory finish all surfaces.
   2. Curtain Wall Type 2:
      a. Basis of Design: 1600 Wall System 2 manufactured by Kawneer.
      b. Sight Line: 2-1/2 inch. Larger Sightlines will not be accepted.
      c. Depth: (length of sunshade) as indicated on drawings.
      d. Glazing: Outside glazed, Pressure plate and mullion covers 2 and 4-sides.
      e. Finish: Superior performance organic coating. Factory finish all surfaces.
   3, Curtain Wall Type 3: Natatorium
      a. Basis of Design: 1600 Wall System 1 or 2 manufactured by Kawneer.
      b. Sight Line: 2-1/2 inch. Larger Sightlines will not be accepted.
         1) Size as needed at sunscreens..
      c. Depth: (length of sunshade) as indicated on drawings.
      d. Glazing: Outside glazed, Pressure plate and mullion covers 2 and/or 4-sides.
      e. Finish:
         1. Exterior side of curtain wall: Finish shall meet AAMA 2605 performance requirements. Color/Type: Class 1 anodized, either Clear or Dark Bronze, AAMA 611 Color and finish to match Architect's sample or Selection.
         2. Interior side of curtain wall surfaces exposed to natatorium, lap pool, hydrotherapy, and/or adjacent areas subject to elevated temperatures or chlorine/chloramine exposure: Apply a three-coat fluoropolymer finish complying with AAMA 2605. Finish shall contain not less than 70% PVDF resin by weight in both the color coat and clear topcoat. Prepare, pre-treat, and apply coatings per manufacturer's instructions.

            i. Color and finish selection shall be by the architect from the full range offered by the manufacturer.

         3. Restrictions: No anodized finishes are permitted on interior surfaces within the natatorium or adjacent areas subject to high humidity, elevated temperatures, or chlorine/chloramine exposure.
         4. Factory finish all surfaces that will be exposed in completed assemblies as much as possible.

5. Touch-Up Materials: As recommended by coating manufacturer for field application.

B. Aluminum Framing Members: Tubular aluminum sections, thermally broken with interior section insulated from exterior, drainage holes and internal weep drainage system.
   1. Cross-Section Depth: Overall depth as specified to meet performance requirements.
   2. Structurally Reinforced Members: As may be required, supply extruded aluminum with internal reinforcement of structural steel member.

C. Glazing: As specified in Section 08 80 00.

D. Interior trim, mullion covers, stool extensions: Formed or extruded aluminum, minimum 0.125 inch thickness for framing members, 0.050 inch thickness for glazing stops and similar components.

E. Coping: Formed aluminum, 0.125 inch thick, finish to match curtain wall framing members.

F. Transition Assembly Wherever Identified on Drawings or dictated by excessive joint seal dimensions: Pre-engineered, finished aluminum and silicone materials forming an air and vapor barrier transition assembly for bridging continuously between the window assembly and adjacent air and vapor barrier materials.
   1. Product: Proglaze ETA System 1 manufactured by Tremco: www.tremcosealants.com.

2.4 MATERIALS

A. Extruded Aluminum: ASTM B221 (ASTM B221M).

B. Sheet Aluminum: ASTM B209 (ASTM B209M).

C. Steel Tubing: ASTM A500/A500M, Grade B cold-formed structural tubing.

D. Structural Steel Sections: ASTM A36/A36M; shop primed.

E. Structural Supporting Anchors: See Section 05 12 00.

F. Structural Supporting Anchors Attached to Structural Steel: Design for bolted attachment.

G. Structural Supporting Anchors Attached to Reinforced Concrete Members: Design for welded attachment to weld plates embedded in concrete.

H. Fasteners: Stainless steel; type as required or recommended by curtain wall manufacturer.

I. Exposed Flashings: 0.060 inch thick aluminum sheet; finish to match framing members.

J. Concealed Flashings: 0.018 inch thick stainless steel.

K. Firestopping: As specified in Section 07 84 00.

L. Structural Sealant Glazing (SSG) Adhesive: Neutral curing, silicone sealant formulated for SSG applications in compliance with ASTM C1184 and structural glazing industry guidelines, ASTM C1401.
   1. SSG adhesive in compliance with ASTM C920; Type M - Multicomponent, Grade NS, Class 50, Use NT, G, and A.
   2. Ultimate Tensile Strength: Minimum of 50 psi as determined by test method ASTM C1135 under the following conditions.
      a. Exposure to air temperatures of 190 degrees F and minus 20 degrees F.
      b. Water immersion for seven (7) days, minimum.
      c. Exposure to weathering for 5,000 hours, minimum.
   3. Sealant Design Tensile Strength: 20 psi, maximum.
   4. Hardness: 20 to 60 with Type A-2 durometer in compliance with test method ASTM C661.

5. Color: Black.
6. SSG sealant tested for compatibility with glazing accessories in compliance with ASTM C1087, tested for accelerated weathering in compliance with ASTM C793, and in compliance with insulating glass secondary sealant design standards of ASTM C1249.
7. Manufacturers:
   a. Dow Corning Corporation; Structural Glazing Sealants: www.dowcorning.com/construction/sle.
   b. Momentive Performance Materials, Inc, exclusive licensee of General Electric:
   c. Tremco Inc;
   d. Substitutions: See Section 01 60 00 - Product Requirements.

M. Weatherseal Sealant: Silicone, with adhesion in compliance with ASTM C794; type recommended by structural sealant glazing (SSG) adhesive manufacturer.

N. Perimeter Sealant: Type silicone specified in Section 07 90 05.

O. Glazing: As specified in Section 08 80 00.

P. Glazing Gaskets: Per curtain wall manufacturer standard material; silicone, EPDM, or SCR.

Q. Glazing Accessories: As specified in Section 08 80 00 and consistent with curtain wall manufacturer standard material.

R. Shop and Touch-Up Primer for Steel Components: SSPC-Paint 25, zinc oxide, alkyd, linseed oil primer.

2.5 CURTAIN WALL DOORS

A. Manufacturers:

1. Basis of Design: Door shall be Kawneer 350 Medium Stile Door or approved equal.
2. Acceptable Manufacturers:
   a. Southern Walls and Windows (New Orleans, LA)
   b. YKK AP America
   c. Oldcastle Building Envelope

B. Door Construction:

1. Type: Medium- or wide-stile glazed aluminum entrance door.
2. Configuration: [Single leaf] or [pair], as indicated on Drawings.
3. Frame Compatibility: Fully compatible with curtain wall framing system.
4. Stile Dimensions:
   a. Medium Stile: Approximately 3-1/2 inches
   b. Wide Stile: Approximately 5 inches
5. Rail Dimensions:
   a. Top Rail: Minimum 3-1/2 inches
   b. Bottom Rail: Minimum 10 inches, ADA-compliant
6. Glazing: Match curtain wall system glazing, wet or dry glazed.
7. Corner Construction: Mortise and tenon with mechanical fasteners and reinforcing brackets.

C. Materials and Finish:

1. Aluminum: 6063-T6 extruded aluminum alloy.
2. Finish:
   a. To meet AAMA 2605 performance requirements.Color/Type: Class 1 anodized, either clear or Dark Bronze, per AAMA 611.

b. All door surfaces exposed to natatorium, lap pool, hydrotherapy, and/or adjacent areas subject to elevated temperatures or chlorine/chloramine exposure: Apply a three-coat fluoropolymer finish complying with AAMA 2605. Finish shall contain not less than 70% PVDF resin by weight in both the color coat and clear topcoat. Prepare, pre-treat, and apply coatings per manufacturer's instructions.

i. Color and finish selection shall be by the architect from manufacturer's full range.

c. Restrictions: No anodized finishes are permitted within the natatorium or adjacent areas subject to high humidity, elevated temperatures, or chlorine/chloramine exposure.

D. Hardware:

1. Door hardware shall be fully compatible with curtain wall framing and coordinated with Division 08 Section "Door Hardware."

2. Standard hardware includes:

a. Continuous geared hinge

b. Concealed or surface closer (low-profile)

c. Pulls or push/pull hardware sets

d. Lockset: Mortise lock with minimum 1" throw deadbolt

e. Threshold: ADA-compliant, thermally broken where required

f. Weatherstripping: Perimeter compression-type

g. Hardware exposed to natatorium, lap pool, hydrotherapy, and/or adjacent areas subject to elevated temperatures or chlorine/chloramine exposure to be 316 Stainless steel.

E. Performance:

1. Air Infiltration: Not more than 0.50 cfm/sq. ft. at 6.24 psf per ASTM E283.

2. Water Penetration Resistance: No leakage at 10 psf per ASTM E331.

3. Structural: Minimum 30 psf positive and negative wind load per ASTM E330.

4. Thermal Break: Thermally improved framing, when used in thermally broken curtain wall assemblies.

5. ADA Compliance: Door system, hardware, and threshold to comply with ICC A117.1 and ADA Standards.

F. Accessories:

1. Panic hardware (where required by code).

2. Electrified hardware provisions (coordinate with Division 28).

3. Closers and pivots for integration with curtain wall transom frames.

4. Kick plates and push plates (as required).

a. Factory finish all surfaces that will be exposed in completed assemblies.

B. Touch-Up Materials: As recommended by coating manufacturer for field application.

2.6 FABRICATION

A. Fabricate components with minimum clearances and shim spacing around perimeter of assembly, yet enabling installation and dynamic movement of perimeter seal.

B. Accurately fit and secure joints and corners. Make joints flush, hairline, and waterproof.

C. Prepare components to receive anchor devices. Fabricate anchors.

D. Coat concealed metal surfaces that will be in contact with cementitious materials or dissimilar metals with bituminous paint.

E. Arrange fasteners and attachments to conceal from view to greatest extent possible.

F. Reinforce interior horizontal head rail to receive blind brackets and attachments.

G. Reinforce framing members for imposed loads.

H. Finishing: Apply factory finish to all surfaces that will be exposed in completed assemblies.
   1. To greatest extent possible, touch-up surfaces cut during fabrication so that no natural aluminum is visible in completed assemblies, including joint edges.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify dimensions, tolerances, and method of attachment with other related work.

B. Verify that curtain wall openings and adjoining air and vapor seal materials are ready to receive work of this section.

C. Verify that anchorage devices have been properly installed and located.

3.2 INSTALLATION

A. Install curtain wall system in accordance with manufacturer's instructions.

B. Attach to structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Provide alignment attachments and shims to permanently fasten system to building structure.

D. Separate dissimilar metals. Use gasketed fasteners where required to eliminate possibility of corrosive or electrolytic action between metals.

E. Align assembly plumb and level, free of warp or twist. Maintain assembly dimensional tolerances, aligning with adjacent work.

F. Provide thermal isolation where components penetrate or disrupt building insulation.

G. Install sill flashings. Turn up ends and edges; seal to adjacent work to form water tight dam.

H. Install transition assembly. Coordinate attachment and seal of perimeter air and vapor barrier materials.

I. Coordinate the work with installation of perimeter fire-containment systems (firestopping components) in Section 07 81 00 and sheet metal closure plate as indicated on the drawings.

J. If required by work of this Section, Pack fibrous insulation in shim spaces at perimeter of assembly to maintain continuity of thermal barrier.

K. Pressure Plate Framing: Install glazing and infill panels in accordance with Section 08 80 00, using exterior dry glazing method.

L. Structural Sealant Glazing (SSG) Adhesive: Install structural sealant glazing adhesive and weatherseal sealant in accordance with manufacturer's instructions.

M. Install perimeter sealant in accordance with Section 07 90 05 Joint Sealers.

N. Touch-up minor damage to factory applied finish; replace components that cannot be satisfactorily repaired as determined by Architect.

3.3 TOLERANCES

A. Maximum Variation from Plumb: 0.06 inches every 3 ft non-cumulative or 0.5 inches per 100 ft, whichever is less.

B. Maximum Misalignment of Two Adjoining Members Abutting in Plane: 1/32 inch.

C. Sealant Space Between Curtain Wall Mullions and Adjacent Construction: Maximum of 1 inch and minimum of 1/2 inch. Exception based on construction tolerances and based on building movement and thermal expansion (to be reviewed by Architect).

3.4 FIELD QUALITY CONTROL

A. Provide the services of the installer's field representative to observe installation and make report. Conduct observations at 25, 50 and 100 percent of installation.

B. See Section 01 40 00 - Quality Requirements, for independent testing and inspection requirements. Inspection will monitor quality of installation and glazing.

C. General Contractor shall employ and pay for services of an independent testing agency to perform specified testing.

D. Make available to testing laboratory for conducting testing, scaffolding, rigging and incidental equipment as required to access the test specimens.

E. Test installed curtain wall for water leakage in accordance with AAMA 503.3 and ASTM E 1105 at uniform test pressure difference of 12 lbf/sq ft (no field/site pressure reduction allowed).
   1. In accordance with AAMA 502 testing to be performed by an AAMA accredited independent testing agency.

F. Test Specimens: Minimum of three panels (4 mullions) wide by one floor high (top of floor to top of floor).
   1. Conduct 4 series of tests; separate test units per phase.
      a. 1 test to be conducted after plus/minus 5 percent of glazing has been installed. Do not proceed with installation if test fails.
      b. 1 test unit at plus/minus 25 percent of installation
      c. 1 test unit at plus/minus 50 percent of installation
      d. 1 test unit at plus/minus 100 percent of installation

G. Test Specimen Failure:
   1. Water penetration and test procedures shall be as defined in AAMA 503.3 and ASTM E 1105 procedures
   2. Replace curtain wall components that have failed field testing and retest until performance is satisfactory.
      a. In addition to retesting failed specimen, perform additional new test at location designated by Architect.
   3. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
      a. Retesting costs to include fees and expenses incurred by Owner, Architect and Consultants.
   4. Once deficiencies are corrected in the tested work, make corrections to the balance of the work to ensure that all work complies with the performance criteria.

H. Test Report: Prepare written test report and promptly to Contractor and Architect.

3.5 CLEANING

A. Remove protective material from pre-finished aluminum surfaces.

B. Wash down surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean.

C. Remove excess sealant by method acceptable to sealant manufacturer.

D. Replace any portion of glazed curtain wall system that cannot be cleaned and repaired to the Architect's satisfaction.

3.6 PROTECTION

A. Protect installed products from damage until Date of Substantial Completion.

END OF SECTION

SECTION 087100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Sliding doors.
3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:
1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Hollow Metal Doors and Frames”.
2. Division 08 Section “Stainless Steel Doors and Frames”.
3. Division 08 Section “Flush Wood Doors”.
4. Division 08 Section “Radiation Shielding Doors and Frames”.
5. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.
6. Division 28 Section “Access Control Hardware Devices”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ANSI/SDI A250.13 - Testing and Rating of Severe Windstorm Resistant Components for Swing Door Assemblies.
3. ASTM E1886 - Test Method for Performance of Exterior Windows, Curtain Walls, Doors and Shutters Impacted by Missiles and Exposed to Cyclic Pressure Differentials.
4. ASTM E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors by Uniform Static Air Pressure difference.
5. ASTM E1996 - Standard specification for performance of exterior windows, curtain walls, doors and storm shutters impacted by Windborne Debris in Hurricanes.
6. ICC/IBC - International Building Code.
7. NFPA 70 - National Electrical Code.
8. NFPA 80 - Fire Doors and Windows.
9. NFPA 101 - Life Safety Code.
10. NFPA 105 - Installation of Smoke Door Assemblies.
11. TAS-201-94 - Impact Test Procedures.

12. TAS-202-94 - Criteria for Testing Impact and Non-Impact Resistant Building Envelope Components using Uniform Static Air Pressure.
13. TAS-203-94 - Criteria for Testing Products Subject to Cyclic Wind Pressure Loading.
14. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:

1. ANSI/BHMA Certified Product Standards - A156 Series.
2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
3. ANSI/UL 294 - Access Control System Units.
4. UL 305 - Panic Hardware.
5. ANSI/UL 437- Key Locks.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing, fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.
3. Content: Include the following information:
    a. Type, style, function, size, label, hand, and finish of each door hardware item.
    b. Manufacturer of each item.
    c. Fastenings and other pertinent information.
    d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
    e. Explanation of abbreviations, symbols, and codes contained in schedule.
    f. Mounting locations for door hardware.
    g. Door and frame sizes and materials.
    h. Warranty information for each product.
4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:
1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access

control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
b. Complete (risers, point-to-point) access control system block wiring diagrams.
c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Informational Submittals:

1. Hurricane Resistant Openings: Exterior hurricane opening assemblies to be tested according to ASTM E330, ASTM E1886, ASTM E1996, TAS 201, TAS 202, TAS 203 standards, and certified by a qualified independent third party agency acceptable to authority having jurisdiction, with labeling indicating compliance with the design pressure and debris impact resistance level requirements specified for the Project.
2. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

1.4 CLOSEOUT SUBMITTALS

A. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

B. Project Record Documents: Provide record documentation of as-built door hardware sets in digital format (.pdf, .docx, .xlsx, .csv) and as required in Division 01, Project Record Documents.

1.5 QUALITY ASSURANCE

A. Please be advised that Hardware Supplier and Hardware Installer must obtain a license with the Louisiana Office of State Fire Marshall in accordance to RS 40:1464 and RS 40:1664.

B. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

C. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

D. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

E. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

F. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

G. Hurricane Resistant Exterior Openings: Provide exterior door hardware as complete and tested assemblies, or component assemblies, including approved doors and frames specified under Section 081113 "Hollow Metal Doors and Frames", to meet the design pressures, debris impact resistance, and glass and glazing requirements applicable to the Project.
1. Test units according to ASTM E330, ASTM E1886, ASTM E1996, TAS 201, TAS 202, and TAS 203 standards, certified by a qualified independent third party listing agency acceptable to authority having jurisdiction, and bearing a third party certification agency permanent label indicting windstorm approved product.

H. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.

I. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:
1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

J. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.
1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.

5. Review the required inspecting, testing, commissioning, and demonstration procedures

K. At completion of installation, provide written documentation that components were applied according to manufacturer's instructions and recommendations and according to approved schedule.

1.6 DELIVERY, STORAGE AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.7 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.8 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:
1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

4. Electrical component defects and failures within the systems operation.

C. Warranty Period: Unless otherwise indicated, warranty shall be one year from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MATERIALS

2.2 BUTT HINGES

A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.
   1. Quantity: Provide the following hinge quantity:
      a. Two Hinges: For doors with heights up to 60 inches.
      b. Three Hinges: For doors with heights 61 to 90 inches.
      c. Four Hinges: For doors with heights 91 to 120 inches.
      d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
   2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
      a. Widths up to 3’0”: 4-1/2” standard or heavy weight as specified.
      b. Sizes from 3’1” to 4’0”: 5” standard or heavy weight as specified.
   3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
      a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
      b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.
   4. Hinge Options: Comply with the following:
      a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for all out-swinging lockable doors.
   5. Manufacturers:
      a. Hager Companies (HA) - BB Series, 5-knuckle.
      b. Ives (IV) - 5BB Series, 5-knuckle.
      c. McKinney (MK) - TA/T4A Series, 5-knuckle.

2.3 CONTINUOUS HINGES

A. Continuous Geared Hinges: ANSI/BHMA A156.26 Grade 1-600 continuous geared hinge. with minimum 0.120-inch thick extruded 6063-T6 aluminum alloy hinge leaves and a minimum overall width of 4 inches. Hinges are non-handed, reversible and fabricated to template screw locations. Factory trim hinges to suit door height and prepare for electrical cut-outs.
   1. Manufacturers:.
      a. Hager Companies (HA).
      b. Ives (IV).
      c. Pemko (PE).

2.4 FLOOR CLOSERS AND PIVOTS

A. Pivots: ANSI/BHMA A156.4, Grade 1; space intermediate pivots equally not less than 25 inches on center apart or not more than 35 inches on center for doors over 121 inches high. Pivot hinges to have oil impregnated bronze bearing in the top pivot and a radial roller and thrust bearing in the bottom pivot with the bottom pivot designed to carry the full weight of the door. Pivots to be UL listed for windstorm where applicable.
   1. Manufacturers:
      a. Ives (IV).
      b. Norton Rixson (RF).

2.5 POWER TRANSFER DEVICES

A. Electrified Quick Connect Continuous Geared Transfer Hinges: Provide electrified transfer continuous geared hinges with a removable service panel cutout accessible without de-mounting door from the frame. Furnish with Molex™ standardized plug connectors with sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.
   1. Manufacturers:
      a. Ives (IV) - Connect.
      b. Pemko (PE) - SER-QC (# wires) Option.

B. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.
   1. Provide one each of the following tools as part of the base bid contract:
      a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
      b. McKinney (MK) - Connector Hand Tool: QC-R003.
   2. Manufacturers:
      a. Hager Companies (HA) - Quick Connect.
      b. McKinney (MK) - QC-C Series.
      c. Schlage (SC) - Connect.

2.6 DOOR OPERATING TRIM

A. Flush Bolts and Surface Bolts: Provide products conforming to ANSI/BHMA A156.3 and A156.16, Grade 1.
   1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
   2. Furnish dust proof strikes for bottom bolts.
   3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.

4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.
5. Manufacturers:
   a. Burns Manufacturing (BU).
   b. Ives (IV).
   c. Rockwood (RO).

B. Coordinators: ANSI/BHMA A156.3 door coordinators consisting of active-leaf, hold-open lever and inactive-leaf release trigger. Model as indicated in hardware sets.
1. Manufacturers:
   a. Burns Manufacturing (BU).
   b. Ives (IV).
   c. Rockwood (RO).

C. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.
1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Pulls, where applicable, shall be provided with a 10” clearance from the finished floor on the push side to accommodate wheelchair accessibility.
5. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets. When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.
6. Manufacturers:
   a. Burns Manufacturing (BU).
   b. Ives (IV).
   c. Rockwood (RO).

2.7 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

1. Manufacturers:
   a. Match Existing, Field Verify.

B. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:

1. Threaded mortise cylinders with rings and cams to suit hardware application.
2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.

4. Tubular deadlocks and other auxiliary locks.
5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
6. Keyway: Manufacturer’s Standard.

C. Small Format Interchangeable Cores: Provide small format interchangeable cores (SFIC) as specified, core insert, removable by use of a special key; usable with other manufacturers' cylinders.

D. Keying System: Each type of lock and cylinders to be factory keyed.

1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
3. Existing System: Field verify and key cylinders to match Owner's existing system.

E. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Two (2)
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Keys (where required): Ten (10).

F. Construction Keying: Provide construction master keyed cylinders.

G. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.8 KEY CONTROL

A. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.
1. Manufacturers:
   a. Lund Equipment (LU).
   b. MMF Industries (MM).
   c. Telkee (TK).

2.9 MORTISE LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): Provide ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed mortise locksets. Listed manufacturers shall meet all functions and features as specified herein.
1. Manufacturers:
   a. Corbin Russwin Hardware (RU) - ML2000 Series.
   b. Sargent Manufacturing (SA) - 8200 Series.
   c. Schlage (SC) - L9000 Series.

2.1 INTEGRATED WIRED OUTPUT LOCKING DEVICES - MULTI-CLASS READER

A. Integrated Wired Output Multi-Class Mortise Locks: Wiegand or Open Supervised Device Protocol (OSDP) output ANSI A156.13, Grade 1, mortise lockset with integrated card reader with or without keypad option, request-to-exit signaling, door position status switch, and latchbolt monitoring in one complete unit. Hard wired, solenoid driven locking/unlocking control of the lever handle trim, 3/4" deadlocking anti-friction latch, and 1" case-hardened steel deadbolt. Lock is U.L listed and labeled for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override.

1. Open architecture, hard wired platform supports centralized control of locking units with new or existing Wiegand or OSDP compatible access control systems. Latchbolt monitoring and door position switch act in conjunction to report door-in-frame (DPS) and door latched (door closed and latched) conditions.
2. Integrated reader supports the following credentials:
    a. 125kHz proximity credentials: HID, AWID, Indala, and EM4102.
    b. 13.56 MHz proximity credentials: HID Secure Identity Object™ (SIO) on iCLASS Seos, HID iCLASS, HID iCLASS SE/SR, MIFARE Classic, DESFire EV1 and EV2.
    c. 2.4 GHz credentials: Secure Identity Object™ (SIO) on Mobile IDs (Bluetooth Smart)
    d. ISO14443A/B (PIV-compatible Transparent FASC-N read) available with pivCLASS variant
    e. NFC-enabled mobile phones
    f. PIN code only or PIN + credential with keypad option.
3. 12VDC external power supply required for reader and lock, with optional 24VDC lock solenoid. Fail safe or fail secure options.
4. Energy Efficient Design: Provide lock bodies which have a holding current draw of 500mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.
5. Support end-of-line resistors contained within the lock case.
6. Installation requires only one cable run from the lock to the access control panel without requirements for additional proprietary lock panel interface boards or modules.
7. Installation to include manufacturer's access control panel interface board or module where required for Wiegand or OSDP output protocol.
8. Manufacturers:
    a. Sargent Manufacturing (SA) - SN200/SN210 8200 Series.
    b. No Substitution.

2.2 DEADLOCKS AND LATCHES

A. Narrow Case Deadlocks and Deadlatches: ANSI/BHMA 156.13 Series 1000 Grade 1 narrow case deadlocks and deadlatches for swinging or sliding door applications. All functions shall be manufactured in a single sized case formed from 12 gauge minimum, corrosion resistant steel (option for fully stainless steel case and components). Provide minimum 2 7/8" throw laminated stainless steel bolt. Bottom rail deadlocks to have 3/8” diameter bolts.

1. Manufacturers:
    a. Adams Rite Manufacturing (AD) - MS1850S / MS1950 Series.
    b. Adams Rite Manufacturing (AD) - 4900 Series.

2.3 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
   1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
   2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
   3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.
   4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:
   1. Strikes for Mortise Locks and Latches: BHMA A156.13.
   2. Strikes for Bored Locks and Latches: BHMA A156.2.
   3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
   4. Dustproof Strikes: BHMA A156.16.

2.4 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:
   1. Exit devices shall have a five-year warranty.
   2. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.
   3. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer’s catalog and template book for specific requirements.
   4. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.
   5. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.
   6. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.
      a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
      b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.
   7. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.
   8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2” wide stiles.
   9. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.
   10. Rail Sizing: Provide exit device rails factory sized for proper door width application.
   11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed exit devices. Listed manufacturers shall meet all functions and features as specified herein.
   1. Manufacturers:
      a. Corbin Russwin Hardware (RU) - ED4000 / ED5000 Series.
      b. Sargent Manufacturing (SA) - 80 Series.
      c. Von Duprin (VD) - 35A/98 XP Series.

2.5 INTEGRATED WIRED OUTPUT EXIT DEVICES - MULTI-CLASS READER

A. Integrated Wired Output Multi-Class Exit Hardware: Wiegand output ANSI 156.3 Grade 1 rim, mortise, and vertical rod exit device hardware with integrated card reader with or without keypad option, latchbolt and touchbar monitoring, and request-to-exit signaling, in one complete unit. Hard wired, solenoid driven locking/unlocking control of the lever handle exit trim with 3/4" throw latch bolt. U.L listed and labeled for either panic or "fire exit hardware" for use on up to 3 hour fire rated openings. Available with or without keyed high security cylinder override.
   1. Open architecture, hard wired platform supports centralized control of locking units with new or existing Wiegand or OSDP compatible access control systems. Inside push bar (request-to-exit) signaling and door position (open/closed status) monitoring (via separately connected DPS).
   2. Integrated reader supports the following credentials:
      a. 125kHz proximity credentials: HID, AWID, Indala, and EM4102.
      b. 13.56 MHz proximity credentials: HID Secure Identity Object™ (SIO) on iCLASS Seos, HID iCLASS, HID iCLASS SE/SR, MIFARE Classic, DESFire EV1 and EV2.
      c. 2.4 GHz credentials: Secure Identity Object™ (SIO) on Mobile IDs (Bluetooth Smart)
      d. ISO14443A/B (PIV-compatible Transparent FASC-N read) available with pivCLASS variant
      e. NFC-enabled mobile phones
      f. PIN code only or PIN + credential with keypad option
   3. 12VDC external power supply required for reader. 24VDC required for solenoid operated exit trim. Fail safe or fail secure options.
   4. Installation requires only one cable run from the exit hardware to the access control panel without requirements for additional proprietary lock panel interface boards or modules.
   5. Competitor Alternates Allowed Option: Installation to include manufacturer's access control panel interface board or module where required for Wiegand or OSDP output protocol.
   6. Manufacturers:
      a. Sargent Manufacturing (SA) - SN200/SN210 80 Series.
      b. No Substitution.

2.6 SURFACE DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.
2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.
3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.
4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.
6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.
1. Heavy duty surface mounted door closers shall have a 30-year warranty.

2. Manufacturers:

a. Corbin Russwin Hardware (RU) - DC6000 Series.
b. LCN Closers (LC) - 4040 Series.
c. Sargent Manufacturing (SA) - 351 Series.

C. Door Closers, Surface Mounted (Cam Action): ANSI/BHMA 156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, high efficiency door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be of the cam and roller design, one piece cast aluminum silicon alloy body with adjustable backcheck and independently controlled valves for closing sweep and latch speed.
1. Manufacturers:
a. Corbin Russwin (RU) - DC5000 Series.
b. Norton Rixson (NO) - 2800ST Series.
c. Sargent Manufacturing (SA) - 422 Series.

2.7 SURFACE MOUNTED CLOSER HOLDERS

A. Electromagnetic Door Holders: ANSI A156.15, Grade 1 electromagnetic door holder/releases with a minimum 25 to 40 pounds holding power and fail-safe operation; power failure releases door to close.
1. Manufacturers:
a. Norton Rixson (RF) - 900 Series.
b. Sargent Manufacturing (SA) - 1560 Series.

2.8 ARCHITECTURAL TRIM

A. Door Protective Trim
   1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.
   2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1” LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.
   3. Where plates are applied to fire rated doors with the top of the plate more than 16” above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer’s catalog and template book for specific requirements for size and applications.
   4. Protection Plates: ANSI/BHMA A156.6 protection plates (kick, armor, or mop), fabricated from the following:
      a. Stainless Steel: 300 grade, 050-inch thick.
   5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.
   6. Manufacturers:
      a. Ives (IV).
      b. Rockwood (RO).
      c. Trimco (TC).

2.9 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.
   1. Manufacturers:
      a. Ives (IV).
      b. Rockwood (RO).
      c. Trimco (TC).

C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.
   1. Manufacturers:
      a. Norton Rixson (RF).
      b. Rockwood (RO).
      c. Sargent Manufacturing (SA).

2.10 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.
   1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.
   1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NFPA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

   1. National Guard Products (NG).
   2. Pemko (PE).
   3. Reese Enterprises, Inc. (RE).

2.11 ELECTRONIC ACCESSORIES

A. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.
   1. Manufacturers:
      a. Security Door Controls (SD) - DPS Series.
      b. Securitron (SU) - DPS Series.

B. Switching Power Supplies: Provide the least number of power supplies at the appropriate amperage level sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.
   1. Power supplies shall meet all functions and features as specified herein.
      a. UL listed dual voltage 12 or 24 VDC field selectable continuous output.
      b. Tolerates brownout or overvoltage input ± 15% of nominal voltage.
      c. Thermal shutdown protection with auto restart.
      d. Circuit breaker protection against overcurrent and reverse battery faults.
      e. Integrated battery charging circuit to prevent overvoltage on locking devices.
      f. Available with a single relay fire trigger or individually triggered relayed outputs.

g. Monitoring options as specified.

2. Manufacturers:
   a. Securitron (SU) - AQD Series.

2.12 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.13 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
   1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
   2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
   3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
   4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Push Plates and Door Pulls: When through-bolt fasteners are in the same location as a push plate, countersink the fasteners flush with the door face allowing the push plate to sit flat against the door.

E. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

F. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

   1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.
   1. Quantities listed are for each pair of doors, or for each single door.
   2. The supplier is responsible for handing and sizing all products.
   3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.
   4. At existing openings with new hardware the supplier shall field inspect existing conditions prior to the submittal stage to verify the specified hardware will work as required. Provide alternate solutions and proposals as needed.

B. Manufacturer’s Abbreviations:

1. MK - McKinney
2. PE - Pemko
3. RF - Rixson
4. RO - Rockwood
5. SA - SARGENT
6. AD - Adams Rite
7. SU - Securitron
8. BE - BEST Locks & Closers
9. KA - Kaba Ilco
10. OT - Other

Hardware Sets based on undated plans plotted 9/24/2025

Set: 1.0
Doors: 1401, S031
Description: Ext - Alum Pair - Rim/NL - KRM - Card Reader - Closer/stop

2	Continuous Hinge	_FM__SLF-HD1 SERxx		PE	⚡
1	Removable Mullion	L980A	US28	SA	
1	Rim Exit, Nightlatch	72 53 55 56 AD8504 Less Pull	US32D	SA	⚡
1	Rim Exit, Exit Only	53 55 AD8510 EO	US32D	SA	⚡
1	Cylinder	72-as req	626	BE	
2	Perm Core	as req	626	BE	
2	Offset Door Pull	RM7220-36 Mtg-Type 12HD	US32D	RO	
2	Surface Closer	351 CPS	EN	SA	
1	Mullion Gasketing	5110BL		PE	
2	Sweep	315CN		PE	
1	Threshold	2005AT		PE	
2	ElectroLynx Harness	QC-Cxxx sized for door width		MK	⚡
2	ElectroLynx Harness	QC-C1500P		MK	⚡
1	Card Reader	By security provider		OT	
2	Position Switch	DPS-M-BK		SU	⚡
1	Power Supply	AQD series		SU	⚡

Notes: Weatherstripping by Door manufacturer.

Coordinate voltage, operation and electrical characteristics with all related trades.
Hardware products meet Windstorm design intent. Confirm hardware meets Windstorm assembly requirements per aluminum door manufacturer which may differ from what was used for specification. Confirm all hardware compatibility with aluminum storefront manufacturer.

Set: 2.0
Doors: 1520, S011A
Description: Ext - Alum Sgl - Rim/NL - Card Reader - Closer/stop

1	Power Supply	AQD series		SU

Notes: Operation. Non-Secure egress door normally closed and locked by delay egress electromagnetic lock. Authorized egress by valid card at the reader bypasses the delayed egress electromagnetic lock for egress. Unauthorized egress by depressing the exit device and pushing on the door initiates an irreversible alarm and 15 second delay. After 15 seconds the electromagnetic lock releases for egress. Free egress from the secure side by depressing the exit device rail. Must be tied to an approved fire alarm system. Activation of the fire alarm or signal from fire command shunts power to the delayed egress electromagnetic lock for immediate egress. Door status monitored.

END OF SECTION 087100

SECTION 08 71 13 AUTOMATIC DOOR OPERATORS

PART 1 - GENERAL

1.1 SECTION INCLUDES:

A. Exterior and interior, automatic door operators, low energy, with visible header mounting

B. Automatic door operators shall be configured for doors as follows:
   1. Simultaneous pairs, same swing
   2. Single doors.

1.2 RELATED REQUIREMENTS

A. Section 01 30 00 – Administrative Requirements: Requirements for submittal procedures, project meetings, progress schedules, and documentation, reports, and coordination.

B. Section 01 60 00 – Product Requirements: Fundamental product requirements, substitutions and product options, delivery, storage, and handling.

C. Section 08 10 00 - Doors and Frames: Entrances furnished and installed separately.

D. Section 08 40 00 - Entrances, Storefronts and Curtain Walls: Entrances furnished and installed separately.

E. Section 08 71 00 - Door Hardware: Hardware to the extent not specified in this Section.

F. Division 26 00 00 – Electrical: Electrical connections provided separately including conduit and wiring for power to, and control of, automatic door operators.

G. Division 28 00 00 - Electronic Safety and Security: Systems not specified in this section.

1.3 DEFINITIONS

A. Activation Device: Device that, when actuated, sends an electrical signal to the door operator to open the door.
