SEA's History:

Founded 1992, SEA has provided professional Environmental, Health, Hygiene, and Safety services for General Industry, Construction, Government Agencies, and Commercial and Residential customers. Since the beginning our founders' statement of business has been **"Helping You Save Compliance Dollars."** This statement forms the mission and principals that drive our company, always finding the best solutions for your compliance investments.

SEA's Mission:

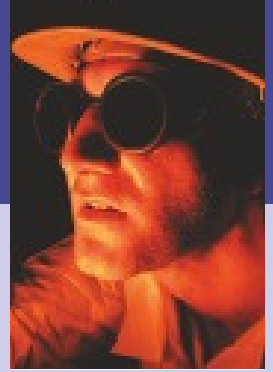

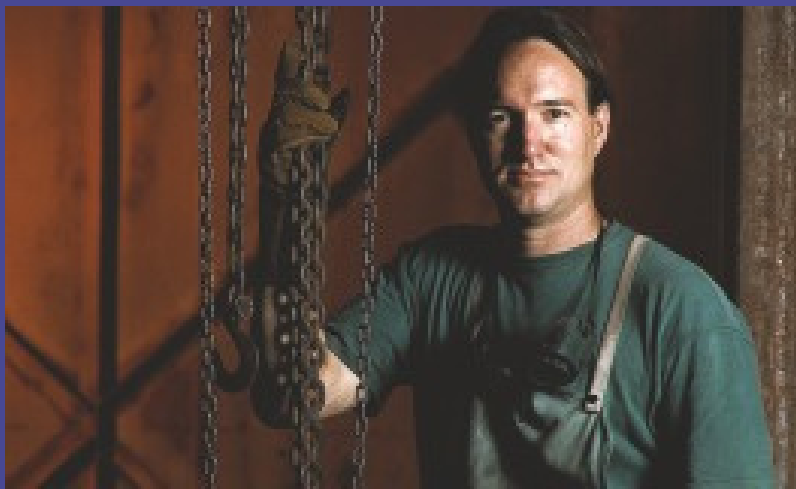

is to be highly responsible to you, our customer, by providing integrated, environmental, health and safety programs to help achieve overall safety, productivity, and savings of compliance dollars.

SEA's Focus:

is on helping you (our customer) make better use of essential resources - capital, people, and information - to serve your company's needs better, increasing your market share, maintaining your competitive edge, and improving your profitability.

SEA's Promise:

is to provide you with these capabilities at increasing levels of automation and integration as the needs emerge, and to do so in a cost efficient manner with minimum disruption to your business.

Safety & Health Programs

Site Specific, Defendable Written Programs SEA's health and safety compliance programs are designed to provide not only regulatory compliance, but also company liability management. New, innovative ideas are continually reviewed and programs updated to ensure that customers have the greatest advantage.

Compliance Audits

Understanding where you are is the first step in knowing where you need to go. This basic principle is the foundation of Environmental Health and Safety Auditing. Knowing your companies strength, weakness, opportunities and threats will help you make informed management decisions.

Industrial Hygiene

Many industries suffer vast penalties and enormous insurance and workman compensation claims due in part to the relationship between the work environment and the health of the workers while in that environment.

SEA can help reduce this risk by providing industrial hygiene services including indoor environmental surveys, contaminant monitoring, ventilation, noise, respiratory protection and more.

Environmental

Permit Preparation and Reporting

Environmental Preparation and Reporting can be very time-consuming, frustrating and confusing, especially with ever-changing regulations and agency requirements.

Applications, Reports and Calculations are provided to your company in an easy-to-use format complete with an executive summary and documentation. Regulatory agencies have complemented SEA's reports for completeness and clarity, key ingredients for an Environmental Permit that is usable and defensible year to year.

Program Development and Implementation

SEA's environmental compliance programs are designed to provide not only regulatory compliance, but also company liability management. New, innovative ideas are continually reviewed and programs updated to ensure that customers have the greatest advantage.

Sampling and Monitoring

The ability to properly identify hazards is crucial in the health and safety of workers and our environment. Improperly identified material or misinformation produce lethal corporate liabilities. SEA sampling and monitoring programs employ the best available technologies to ensure that representative data is collected and accurately communicated. SEA's soil, water, air, waste, IAQ, industrial hygiene, chemical and biological sampling programs can find the answers.

Environmental Site Assessments

Environmental remediation and long-term monitoring can be a costly endeavor. To protect your investment, SEA provides comprehensive environmental site assessment (ESA) programs. Our ASTM modeled Audit; also know as the All Appropriate Inquiries (AAI) provides the greatest depth of information helping our clients make informed decisions. Phase II Sampling and Monitoring, and Phase III - Full site characterization and cleanup provide our clients with a turnkey project and continuity of service.

Environmental Response

Narcotics Assessment and Remediation

The methamphetamine (Meth) lab epidemic continues to grow. SEA's Environmental Professionals have responded to over 3500 narcotic decontaminations and property assessments. Our extensive experience and expertise in handling hazardous Indoor Environments have made SEA one of the nations leading firms in Narcotics Assessment and Decontamination.

Indoor Air Quality

A healthy indoor environment is essential to everyone. Many schools, residential dwellings, commercial building, and industrial facilities are faced with the problem of indoor air contaminants. Building Related Symptoms are linked to complaints of headaches, nausea, and general respiratory tract irritation, causing decreased productivity in work environments.

SEA's staff of Certified Indoor Environmentalist (CIE), Microbial Remediators (MR), Chemist, and Industrial Hygienist can investigate and offer effective solutions to your indoor air quality problems.

Environmental Response Management

With the recurrence of accidental spills and releases into the environment the legal requirements for environment responses have become complex and regulations have become ever changing, in nature.

SEA offers a full range of environmental and emergency response management services to all types of release situations.

Lab Packing of Hazardous Materials

Warehouses, laboratories, hospitals, schools, medical facilities, factories, are all operations that use small containers of chemicals. Over time, you will find that bottles, jars, cans and various containers you have accumulated are out-of-date, contaminated, partially used, leaking, or simply no longer needed.

SEA's specialists know the regulations and the chemistry necessary to safely and efficiently decommission and dispose of these hazardous chemicals. SEA's lab packing services includes:

- Chemical Categorization.
- Packing under EPA, OSHA, and DOT regulatory guidelines.
- Proper handling of leaking or damaged containers.
- Complete paperwork, manifests, inventories, MSDS, Labels, and shipping papers.
- Transportation and Disposal Services.

Training

SEA's client specific courses are custom designed to meet or exceed the regulatory requirements and our professional training division includes OSHA, EPA, MSHA, and DOT certified instructors who have a good working knowledge of the regulations, field experience, and exceptional classroom delivery.

Since 1992, SEA has completed over 70,000 EHS training classes and has training over 1,000,000 students. SEA staff of instructors is available to meet your training needs with minimal interruption to your business. We train at your convenience any work shift day or night. For a list of our courses check out our website www.seainc.net

Special Programs

To meet our customers' comprehensive needs, SEA offers a variety of specialized programs that are available to support their environmental, health, and safety program needs. ISO 14001, ISO 45001, ANSI Z10, Arkansas Workers' Compensation Commission Rule 32, IATA (International Air Transportation Administration) Hazardous Materials, IMDS (International Materials Data System), and many more support programs for SEA customers.
