

Mailsafe

Information

Kaizen Mailsafe blocks over 99.9% of spam, viruses, malware and other email threats whatever your preferred email platform. It provides advanced email security for your business without making it complicated. Unsolicited emails, phishing attempts, ransomware, spoofing and illicit content are just some of the categories of unwanted email that Mailsafe blocks.

Hundreds of advanced tests scan your email separating unwanted email and security threats from the email that you need to run your business. Mailsafe keeps learning too, becoming more resilient over time, continuously improving your protection.

Double Antivirus Protection

Dual anti-virus protection makes sure that you are doubly protected against the threat of viruses that are circulated via email. Mailsafe has two on-board virus detection engines that constantly scan in bound mail for malware and viruses.

Protection

Robust protection for your email infrastructure that is always up to date and evolving to protect your business. You are guaranteed to see spam decreasing overnight.

Network defence

Mailsafe helps you reduce risk, free up network bandwidth and ease mail server load by blocking practically all spam and email threats before they reach your network.

- Synchronisation of user passwords from Active Directory, Kerio and any system which supports the IMAP protocol
- Dynamic user verification so no need for long user lists - can be setup and working in 10 minutes
- Supports the latest security features including Greylisting, SPF record checking, TLS encryption and outbound DKIM records
- Uses advanced analytical techniques such as botnet detection, penpal whitelisting and host OS checks to better catch unwanted mail
- Provides customisable digest reports so the users know what is being caught and allows whitelisting addresses straight from the report
- Allows both user level and domain level rules to be configured for full customisation
