

TotalBatch

PART OF
DOOZY
TOTAL WORKS

EVERY BATCH, EVERY INDUSTRY, EVERY TIME

OVERVIEW

TotalBatch is a NetSuite SuiteApp that streamlines batch manufacturing with advanced lot tracking and traceability, flexible production processes and precise cost monitoring. Built with an unmatched focus on tracking the step-by-step creation of intermediate and finished batches, TotalBatch delivers true flexibility and granular visibility throughout your manufacturing operations.

TotalBatch empowers you to manage all batch manufacturing processes in a single, intuitive platform within NetSuite, the world's leading cloud ERP solution. With specialized tools for liquid manufacturing and fermentation, including tank viewing and management modules, TotalBatch gives manufacturers the control needed to optimize batch production, maintain quality standards, document complete batch lineage, and make data-driven decisions with confidence. TotalBatch is the key to increased competitive advantage and market share.

ABOUT

Who:

Batch manufacturers operating in industries including food, nutraceuticals, pharmaceuticals, chemicals and more.

What:

TotalBatch is a powerful NetSuite SuiteApp designed to support batch manufacturing across all industries and verticals, with seamless integration to core NetSuite modules including inventory and demand planning.

Why:

Businesses need powerful solutions that go beyond rigid recipe execution to provide flexible batch creation, refined component traceability, and fine-grained costing of finished goods. Complete batch lineage — from raw materials through intermediates to finished products — is required to meet quality assurance standards and optimize operational efficiency.

KEY BENEFITS

- **Reduce production errors and waste** by allowing real-time adjustments based on in-process testing while maintaining complete documentation and compliance.
- **Accelerate recalls and quality audits** with instant access to complete batch genealogy, reducing response time from days to minutes.
- **Improve margins through precise cost visibility** by understanding the true cost of every intermediate and finished batch, enabling better pricing and spending decisions.
- **Eliminate data silos and duplicate data entry** via seamless integration with your NetSuite workflows, reducing manual processes and improving forecast accuracy.
- **Maximize production efficiency** with real-time tank visualization and capacity planning that prevents bottlenecks and optimizes resources.
- **Scale confidently with a trusted partner** leveraging a comprehensive ecosystem of manufacturing solutions that grow with your business needs.

THE SECRET BLEND OF BATCH MANUFACTURING EXCELLENCE

“AT ANY GIVEN TIME, I CAN SEE WHAT’S IN TRANSIT, WHAT’S ON HAND, AND WHAT’S SHIPPED. MOST IMPORTANTLY, I CAN SEE IT BY LOT. ONE OF THE BIG ASPECTS OF MANUFACTURING TODAY IS TRACEABILITY, AND TOTALBATCH OFFERS THE ABILITY TO TRACK — FROM START TO FINISH — RAW MATERIALS TO FINISHED GOODS SEAMLESSLY ACROSS MULTIPLE LOCATIONS AND MULTIPLE PRODUCTS.”

– Craig Cordes
Co-founder and CFO
Big Easy Blends

KEY FEATURES

- **Advanced Lot Tracking & Batch Lineage:**
Maintains complete genealogy of all materials, intermediates and finished products throughout the manufacturing process with full audit trails.
- **Flexible Production Process Management:**
Tracks step-by-step creation of intermediate and finished batches, supporting in-process modifications based on quality testing.
- **Real-Time Transaction Recording:**
Captures every material movement, production step, transfer and adjustment with timestamp and user documentation.
- **Granular Cost Accumulation:**
Tracks costs at each production stage, including materials, labor and overhead for both intermediate and finished batches.
- **Native NetSuite Integration:**
Utilizes existing NetSuite BOMs and work orders to synchronize directly with the inventory and demand planning modules.
- **Tank Visualization & Management Modules:**
Purpose-built interface for planning liquid production schedules and monitoring tank capacity, contents and batch status.
- **Fermentation Process Support:**
Specialized tools for monitoring fermentation stages and documenting biochemical production processes.
- **In-Process Quality Adjustments:**
Allows formula modifications during production while maintaining complete traceability and compliance documentation.
- **Multi-Location Batch Tracking:**
Manages batches across multiple facilities and co-manufacturing customers and partners with consolidated visibility.

READY TO TRANSFORM YOUR BATCH MANUFACTURING?

Complete the Suite with TotalBatch — the comprehensive batch manufacturing solution that seamlessly adds specialized batch manufacturing capabilities to your NetSuite platform. Experience how TotalBatch completes your NetSuite investment, transforming it into a full-featured batch manufacturing platform.
