

TotalPackage

PART OF
DOOZY
TOTAL WORKS

PACKAGE SMARTER. SHIP FASTER.

OVERVIEW

Warehouse teams know the best way to build pallets is to create them in real time. It's an intuitive process born from years of experience in the industry — so why does most software handle it so counterintuitively?

TotalPackage brings this natural, human-informed workflow into NetSuite, enabling your staff to create pallets within the system as they are physically created. TotalPackage extends NetSuite with smart palletization and load management tools, providing businesses with a faster and easier way to build pallets, manage packaging formats, and optimize shipping loads.

Core NetSuite has no concept of pallets or license plates, meaning you can't track a collection of items, quantities and lot numbers as a single inventory unit. TotalPackage fills this critical gap by creating pallets in real time that instantly become part of inventory — ready to sell, transfer or ship. With support for packaging formats, expiration date tracking and optimized truck loading, TotalPackage helps businesses streamline fulfillment, minimize shipping costs, maximize warehouse and truck space, improve traceability, track inventory in real time, and drive revenue growth.

LOGISTICS MADE SIMPLE

Who:

Any manufacturer or other type of business that creates, manages and ships inventory on pallets

What:

A NetSuite SuiteApp purpose-built to deliver modern logistics workflows that eliminate the gap between warehouse operations and system capabilities

Why:

Transform packaging from a time-consuming manual process into a strategic advantage through smarter workflows, better visibility and optimized shipping operations

KEY BENEFITS

- **Match your natural workflow** by creating pallets first and filling them as you pick, dramatically reducing rework and complexity while eliminating the mismatch between how warehouses operate and how software traditionally tracks inventory.
- **Trust your data completely** with granular lot traceability that automatically captures lot numbers, expiry dates and product details as items are added, ensuring total accuracy without extra data entry.
- **Ship faster** with pallets that become available for sale or shipment the instant they're completed, removing delays and reducing the time from pick to truck.
- **Build smarter loads** using tools designed for real-world constraints like weight limits, expiration priorities and customer requirements while maximizing trailer utilization.
- **Optimize operations intelligently** with system guidance on mixed pallet structure, automatically placing heavy items on bottom and organizing loads for maximum stability and safety.
- **Grow without growing pains** through flexible packaging definitions and multi-site capabilities that scale with your business volume and complexity.
- **Boost both employee and customer satisfaction** through operator-friendly interfaces and professional documentation that reduce frustration, build trust and minimize disputes.

KEY FEATURES

- **Operator-Friendly Design:** Build pallets the way your team wants to work, with real-time system updates that eliminate the need for waiting until packaging runs are complete, reducing delays and improving accuracy.
- **Package Format Management:** Define reusable formats like cases, cartons, bundles or multi-packs with clear, system-wide unit-of-measure integration that eliminates confusion between packaging formats and speeds up fulfillment.
- **Expiration Intelligence:** TotalPackage accurately displays expiration dates, ensuring compliance with industry regulations while providing the precise lot traceability essential for packaging operations.
- **Load Planning Tools:** Organize truckloads by weight, delivery order, expiration, customer priority or any other business rule with barcode scanning for speed and accuracy and intelligent guidance on mixed pallet optimization, including proper weight distribution and load structuring.
- **Enhanced Shipping Documentation:** Generate improved Bills of Lading with detailed pallet and load information that reduces disputes and supports compliance requirements.
- **Native Integration:** Work within your NetSuite environment without disrupting current processes or requiring expensive customizations.
- **Mixed Pallets:** Handle complex mixed pallets with full traceability across different products, lots and expiration dates on single pallets.
- **Cross-Facility Visibility:** Monitor pallet status and inventory levels across multiple locations with unified reporting and management tools.
- **High-Volume Ready:** Engineered to handle busy distribution operations without performance degradation or system slowdowns.

“OUR WAREHOUSE TEAM CAN TAKE A PALLET THAT ROLLED OFF THE LINE WITH A BARCODE, PULL UP THEIR TRUCKS FOR THE DAY, AND SCAN EACH PALLET TO IDENTIFY WHICH TRUCK IT GOES ON. WHEN THEY'RE DONE LOADING, THEY CAN INSTANTLY VERIFY IF EVERYTHING THAT WAS SUPPOSED TO GO ON THAT TRUCK IS LOADED. PLUS, ALL OF THE FULFILLMENT RECORDS ARE AUTOMATICALLY CREATED WITHIN NETSUITE.”
