

# DOOZY TOTALWORKS

*Complete the Suite*

## A UNIFIED PORTFOLIO OF NETSUITE SUITEAPPS BUILT FOR MANUFACTURERS

### OVERVIEW

Manufacturers know that NetSuite is the best ERP for the now — and the next. Doozy TotalWorks fills the gaps in NetSuite manufacturing and agricultural functionality with a set of cost-effective SuiteApps that work alone and in tandem. Quickly transform NetSuite into a comprehensive operational platform without replacing the system your team already knows and trusts.

TotalWorks unites three complementary solutions — TotalBatch, TotalLot, and TotalPackage — engineered to address a specific layer of the manufacturing and fulfillment process. Together, they deliver end-to-end lot traceability, production visibility, and packaging efficiency, all natively within NetSuite.

If you're a manufacturer who depends on precise lot control and efficient fulfillment operations, TotalWorks completes your NetSuite investment with the specialized tools your business requires.

### READY TO COMPLETE THE SUITE?

Contact Doozy Solutions to see TotalWorks in action — and discover how our SuiteApps can transform your NetSuite investment into a complete manufacturing platform.

### WHY TOTALWORKS?

- Native NetSuite integration — no third-party middleware, no data silos, no duplicate entry
- One trusted partner across your entire manufacturing and fulfillment stack
- Pick the solutions you need now; add more as your operations grow
- Deep manufacturing industry expertise built into every feature
- Seamlessly share data across TotalBatch, TotalLot, and TotalPackage for true end-to-end traceability

# THE TOTALWORKS SUITE

## TotalBatch

*Flexible Batch Manufacturing Built for How You Work*

TotalBatch provides specialized batch manufacturing capabilities for batch manufacturers and process-based producers. It goes beyond rigid recipe management to support how real production operations work – with process flexibility, real-time tracking, and granular cost visibility from raw materials through finished goods.

- **Full batch lineage and genealogy:** Track every raw material, intermediate, and finished product with complete, auditable traceability
- **Flexible production process management:** Adjust formulas and processes during production while maintaining full documentation
- **Granular cost accumulation:** Understand true batch costs at every stage to sharpen pricing and protect margins
- **Native NetSuite integration:** Integrate directly with bills of materials, work orders, inventory, and demand planning
- **Support for complex batch manufacturing workflows:** Handle fermentation, in-process quality testing adjustments, and other sophisticated production requirements

## TotalLot

*FEFO Lot Selection to Reduce Waste and Lower Costs*

TotalLot automates the most manual, time-consuming task in lot-tracked operations – selecting the right inventory. With a single click, TotalLot automatically identifies and assigns the lot and serial numbers closest to expiration, following the first expired, first out (FEFO) methodology. It ensures customers receive the freshest product and that no inventory expires unnecessarily.

- **One-click FEFO lot selection:** Automatically assign hundreds of lot or serial numbers in seconds, with manual override available as needed
- **Work order support:** Select and issue the correct raw material lots before production begins; generate lot-specific pick lists
- **Sales order support:** Automatically move the oldest inventory first, with lot-specific warehouse pick lists to ensure physical shelf compliance
- **Transfer order support:** Maintain FEFO discipline across locations
- **Regulatory compliance:** Meet all requirements for lot traceability without additional administrative burden

## TotalPackage

*Smart Pallets – Every Load, Every Time*

TotalPackage revolutionizes palletization and load management with an intuitive pallet-first workflow, smart packaging formats, and optimized shipping tools. Built to mirror the way warehouse teams actually work – creating pallets up front and filling them as inventory is picked – TotalPackage eliminates the mismatch between physical operations and how software traditionally tracks fulfillment.

- **Pallet-first workflow:** Create pallets before picking and fill them as you go, with real-time inventory updates that eliminate double-handling
- **Smart package standards:** Define reusable package formats (cases, cartons, bundles, multipacks) with automatic unit conversions
- **Expiration intelligence:** Every pallet automatically inherits lot numbers and expiration dates from its contents, enabling FEFO fulfillment without manual tracking
- **Optimized load building:** Maximize trailer utilization and minimize shipping costs with tools built for real-world constraints
- **Multisite scalability:** Flexible packaging definitions and configurations that grow with your business
