

DIVERSE MARINE AMBITIOUS CLASS CTV

Offshore Wind Crew Transfer Vessel

01-2026

The Diverse Marine Ambitious Class CTV is a pioneering crew transfer vessel design that refines the formula for offshore wind support and demonstrates that the UK can produce and high quality, low maintenance CTV's and still compete with Far East costs but with the added benefit of the no deposit Finance & Lease Programme.

Developed off the back of thirteen years of data and experience in offshore wind vessel design, alongside extensive dialogue and collaboration with CTV operators, wind farm owners and turbine manufacturers, the Diverse Marine Ambitious responds directly to the needs of the end user.

The vessel is sized to be capable and effective in the challenging conditions in the ever-growing offshore wind market. Surpassing the capability that has been achieved by the previous generation of vessels operating offshore. It builds on lessons learnt supporting European projects throughout construction and operation/maintenance.

Available as Twin FPP, Twin CPP, Twin CPP Hybrid and in the future alternative fuels leading to full electric to cater for different end user requirements and budgets.

Validated Performance

The Ambitious Class hull design has been independently validated using the latest computational fluid dynamics (CFD) modelling methods, coupled with thorough 1:12 scale free running model tank testing. Combined, these processes constitute the most rigorous and scientific testing approach for any offshore wind CTV design to date.

The Ambitious Class is configured with maximised internal use of space, a large superstructure accommodates a dedicated technician entrance into a wet room with storage racking, heads compartments and passenger saloon. The crew also has a private galley and mess area.

The main deck is 'step free' for the technicians with a large forward deck capable of accommodating 10ft and 20ft containers, main deck crane and Buoyant Works bow fender system.
