## TRAINING COURSE

### **Receive the most advanced skin care in the industry!**

This is an intense hands-on training course with a focus on high-end skin care treatments, including the latest and most advanced protocols necessary for performing skin care at the clinical level. If you are considering a career in medical esthetics or are planning to do esthetics in a medical spa or doctor's office, this course is for you!

### **Our educational classes have been given the highest reviews from past participants**

With our expertise in esthetics and clinical skin care, you will learn how to combine treatments, treat specific skin conditions, and focus on advanced treatment modalities that will prepare you to offer you the best results-oriented treatments available in the industry. See our web site for further description of the course materials as well as testimonial videos.

**The entire Medical Esthetics training course covers clinic applications, the most relevant medical data as well as hands-on training on live models.** To make it more convenient for your schedule the training times are made according to your availability matched up with ours. We offer dates on weekdays as well as weekends and we are typically booked about a month in advance. You can save some on your tuition if you schedule your training with a colleague. We typically don't book more than three students at time in order to maximize the learning process for you. The training classes are held in Summerville SC (located just 25 minutes from Charleston SC).

**You will receive a certificate of training for each aspect of the curriculum.** You will receive a Medical Esthetics Training certificate as well as certificates for each section of the training.

### **TRAINING TUITION**

#### **\$1,500 for one on one training.**

Requires a deposit of \$500 to secure the training dates that work best for our calendar and yours. The balance is due on or before the first day of the training class dates.

\$1,200 each for more than one person. You can save on tuition by training with only one more of your colleagues.

Both participants required to pay deposits in order to secure training dates.

## COURSE CURRICULUM

## Hands-on Training Course

### Medical Microdermabrasion & Dermaplaning

This course will teach you how to take microdermabrasion to the next level with the addition of layering different exfoliation therapies. Hands on training of dermaplaning, high-pressure saline exfoliation, all levels of microdermabrasion, enzyme therapies, acne and scar revision are all covered in this portion of the course.

### Advanced Chemical Peels

Hands-on training and scientific/clinical application of all levels of chemical exfoliation are covered. Learn the latest techniques of chemical peels with the most recent active ingredients and how to get the most out of the newest technologies and formulations in chemical exfoliation.

### MicroNeedling

The treatment of microneedling has grown dramatically over the last several years. FDA approved in July of 2018, the treatment has been called many different things, including Collagen Induction Therapy, Percutaneous Collagen Induction and the ever popular social media inspired Vampire facial. You will learn how to use different types of devices at different depths of penetration in combination with a variety of treatment serums and chemical peels to use in combination with the procedure.

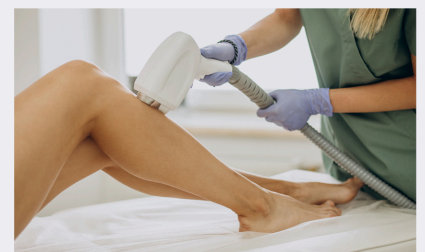

### Cosmetic Face and Body Contouring

There are many different modalities to treat face and body for skin tightening and circumference reduction. While the course content cover many of these modes, the most popular ones with the least amount of downtime include Radio Frequency, LLLT, cryolipolysis and low frequency ultrasound. Methods of operation, treatment results vs expectations, cost benefit analysis and hands-on experience is covered during this section of the curriculum.

### Laser/IPL/LED

Light-tissue interaction is a complicated application titled "selective photothermolysis". This intensive curriculum covers skin typing, laser physics, broad spectrum light, LED technology and the latest technologies in laser treatments, including fractional photothermolysis (fraxel). Hands-on training prepares participants for the immediate application of this very popular service
