

## **Product Bulletin No: 31-03-26**

### **Part Number of affected products: All 12v equipment**

# **Discontinuation of C-Dax Britax plugs**

**Date:** 31-03-26

**Equipment Affected:** All C-Dax equipment which have 12V electrical connections.

#### **Background:**

Since C-Dax began manufacturing ATV equipment many years ago, we have utilized the triangle shaped 2 pin "Britax" plugs. We have recently been advised by the manufacturer (at short notice) that this product is being discontinued and therefore we have had to source an alternative. We understand that this is inconvenient for both our customers and dealers but unfortunately, we have had to transition to a new style plug.

#### **Action Taken:**

- We are transitioning to an XT60 type plug which features a cable-relief and solder connections.
- These plugs satisfy the electrical rating requirements for all of the C-Dax product range.
- As our stock of Britax plugs runs out, we will begin producing cable-assemblies with the new plugs.
- There is a small stock of cable-assemblies which will be supplied to dealers and customers until they are gone.
- The XT60 plugs are a soldered connection so we ask that dealers/customers consider this requirement when purchasing plugs/cable-assemblies – particularly if they do not have facility to solder these themselves.
- We will have some XT60 connectors available for purchase with screw-connections. These should be considered a less-preferable connection than the soldered plugs, due to the quality of the connection.
- The cable-assembly part numbers will remain the same as we move to the new plugs.

- The part numbers for the new plugs are as follows:

- XT60 Male Plug with Solder Connection – 6250-3061

- XT60 Female Plug with Solder Connection – 6250-3060

- XT60 Male Plug with Screw Connection – 6250-3063

- XT60 Female lug with Screw Connection – 6250-3062

**Effective From: April 2026**
