

Fuel Injection & Combustion Chamber Cleaner

PN 201

High pressure, high heat, gasoline direct injection engines demand spotlessly clean combustion chambers and fuel injectors to function efficiently. Just a small amount of carbon deposit buildup in the fuel injection system can have a substantial effect on drivability. Most fuel injection system cleaners are not designed for hard-to-remove combustion chamber deposits.

The BG VIA® installs BG Fuel Injection & Combustion Chamber Cleaner through the fuel rail where it can perform the quickest, most thorough cleanup of fuel injectors and combustion chambers.

- ***Restores power and efficiency***
- ***Reduces emissions***
- ***Smooths idle***
