

# ***Air Intake & Valve Cleaner***

**PN 260**

Sticky, heavy deposits build rapidly on the backs of valves and in air intake systems of gasoline direct injection engines (GDI). Cleaning GDI intake valves requires a potent formula applied with proper equipment, due to both the placement of the injector inside the combustion chamber and the complexity of the intake design.

BG Air Intake & Valve Cleaner removes sticky, heavy deposits from the backs of valves and in air intake systems of gasoline direct injection (GDI) and port fuel injection (PFI) engines. Sprayed directly into the intake, BG Air Intake & Valve Cleaner restores fuel efficiency and engine performance, and reduces harmful exhaust emissions.

- ***Restores fuel economy***
- ***Restores engine performance***
- ***Restores power***
- ***Reduces harmful emissions***
- ***Effective in all gasoline engines***
