ELECTRIC FLEET SOLUTIONS

driven by edenseven

Integrated

Design and delivery of integrated fleet solutions

Expert

Experts experienced in the delivery of electric fleets

Independent

Independent from all manufacturers and operators

By 2030 **6.7 million pure electric cars** will be sold, that's more per year than the total number of EVs on the road today. Additionally a further **900,000 electric vans** will be sold, a 1,700% increase compared to today. As **64% of new vehicles sales in the UK are sold to businesses**, fleet operators must be prepared to switch their vehicles to electric.

However, the transition to electric is complicated and because every business is different there simply isn't a 'One Stop Shop' solution.

edenseven are **experts in the transition to electric vehicles**.

We support our customers with data analysis, vehicle selection, infrastructure design, business cases and driver training to enable the **effective electrification of fleets**. Independent from all manufacturers and operators we **develop bespoke solutions** to suit each customer.

End-to-End Electric Fleet Solutions

Support from edenseven covers the entire fleet transition process:

Evaluation Providing analysis and insight needed to inform business cases, vehicle selection, infrastructure design and driver awareness.

Definition Implementing plans, engaging with all levels of stakeholders, updating policies and identifying opportunities to optimise the fleet.

Execution Delivering the transition including infrastructure, reimbursement solutions, vehicles, training and communication, with continual monitoring and progress reporting.
