

ENGINE - IOUS MODELS

7mm or 4mm Scale Large Hinges – Assembly Instructions

These hinges are perfect for large doors on buildings such as engine sheds and goods sheds. They can also be used for agricultural gates etc.

To construct, insert the small, 'wall' section of the hinge into the middle of the barrel, lining up the holes. Insert the provided 0.4mm wire through the barrel of the hinge. Secure at least one end of the wire to the top section of the barrel either with super glue or solder. Take care not to get glue/solder on the middle section of the barrel, or the hinge will lock solid and not articulate. Trim the wire flush with the top & bottom of the barrel. Attach the hinge to the wall & door/gate with small dabs of super glue or epoxy.
