VILLAGE **KHALLA CAMP, KRISHNAPUR-04**

POPULATION: **128** COMPLETED: **11/24/2025**

DEPTH: **20 FT** MAINTAINED BY: **KASHI OD**

MEET THE USERS

The proposed hand pump will be installed in Khalla Shibir in Kanchanpur District, a settlement of 32 houses. The community includes Brahmin, Chhetri, Dalit, and very poor landless families, with most people depending on daily wage labor. Many Dalit households live in the area, including many elderly residents who are economically vulnerable.

Dalit families face discrimination and, in some cases, are not allowed to use water freely from existing sources. They are often forced to wait longer, face verbal harassment, and experience humiliation, making access especially difficult for the elderly. Currently, there are only three hand pumps in the camp, and they are far from many homes. People must walk long distances and wait in long lines, which is physically exhausting. Because of both distance and discrimination, Dalit families are the most affected and may avoid collecting enough water due to fear of conflict.

With the new hand pump, four houses will benefit directly and five to six nearby houses will benefit indirectly each day. Dalit households will be able to access safe drinking water near their homes without discrimination, reducing hardship and improving health, hygiene, and dignity.

**THANKS TO YOUR DONATION, THIS
WELL WAS DRILLED AND DEDICATED!**

WELL REPORT

MEET THE COORDINATOR

My name is Govind Thapa, and I serve as the coordinator for the hand pump installation in our community. Before the hand pump was installed, there was no reliable water source in this area. Since the installation, access to clean water has become possible and dependable.

The greatest change has been seen in the life of an elderly couple living in this household. Both have difficulty hearing, and speaking is also challenging for them. Their son and daughter-in-law passed away at a young age, leaving them in a very vulnerable situation with little support.

Because they belong to a Dalit family, they were previously not allowed to use water sources freely in the community. They often faced discrimination and humiliation and had to travel long distances to collect water. After the hand pump was installed near their home, everything changed. They no longer need to walk far or endure mistreatment just to access water.

Now, other community members also come here to fetch water, which has helped strengthen acceptance and relationships within the community. The installation of the hand pump has had a very positive impact, especially for a family that had long been overlooked. They have expressed deep gratitude to Quenched, and through this support and care, they have also received the Gospel.

THANK YOU FOR YOUR PARTNERSHIP!
