

Mandatory Emissions Reporting

Are your buildings climate compliant?

As of January 2025, large organisations are required to report on climate-related risks, including greenhouse gas emissions across Scope 1, 2 and 3.

This new legislation being phased in has started with companies meeting two of the following criteria:

- 500+ employees
- \$500M+ revenue
- \$1B+ assets

Commercial property owners and REITs are required to demonstrate governance, risk strategy, climate scenario planning and emissions reduction targets—reporting obligations increase each year, from voluntary disclosure to full assurance.

How can Prolux and Energy Monitoring Systems support compliance?

Prolux in partnership with Schneider Electric implement Energy Monitoring Systems (EMS) that provide real-time visibility of your building's energy consumption and emissions. This data is essential for accurate reporting and future-proofing assets under the new compliance framework. EMS also supports energy efficiency improvements, helping reduce operating costs while meeting ESG commitments.

Now is the time to assess whether your buildings are data-ready and capable of supporting ongoing climate reporting obligations.

Contact your Prolux representative to discuss EMS solutions tailored to providing the best possible outcome for your property portfolio.
