

Power Quality Insight Program

Discounted Power Logging for Contracted Clients

Prolux has strengthened its diagnostic capability with the addition of the Fluke 1738 Power Logger, an advanced tester that captures comprehensive, high-resolution data across a buildings electrical system. The logger records a full suite of performance metrics, including:

- Voltage levels, dips, swells, transients, and imbalance.
- Current loading, phase balance, and demand cycles.
- Peak load profiling and consumption trends.
- Power factor, reactive power, and efficiency indicators.
- Total harmonic distortion and individual harmonics.
- Irregular supply events and equipment-impacting anomalies.

This intelligence enables our engineering team to pinpoint performance bottlenecks, validate capacity and optimise building reliability through targeted, data-driven recommendations. With accurate analytics, we can strengthen asset performance, reduce operational risk, enhance lifecycle planning and support informed investment decisions.

Exclusive December Offer

Prolux is offering a heavily discounted power logging service for all existing contracted commercial clients who book in December. This is part of our ongoing commitment to help you benchmark electrical performance and ensure your assets are operating at optimal efficiency heading into 2026.

To secure your December booking, please contact your Prolux representative.

NOVEMBER 25
