April, 2026 | Volume 06

Integrity's managed IT and communications services are built on partnership. We take the time to understand your business and future plans before we recommend solutions to suit your requirements.

Meet our new IT Apprentice

We're delighted to welcome our new IT Apprentice, Evan Devlin, to the Integrity team.

Evan joins us at the start of his IT career and will be working alongside our engineers, gaining hands on experience across helpdesk support, systems, and customer environments while developing his technical skills and industry knowledge.

It's great to have you on the team, Evan. We're looking forward to supporting your development and seeing your career in IT grow with us.

Mobile Services: Managed Under Your IT Support

We already manage your IT systems, security and infrastructure, but many clients don't realise we can also handle mobile tariffs and handset supply. Working with all major UK networks, we provide fully managed mobile services—clearer billing, controlled upgrades, fast device replacement and security alignment.

When mobiles sit outside IT, risks increase through unmanaged devices, inconsistent settings or roaming costs. Consolidating mobile and IT support gives you one point of accountability and consistent protection across all devices. If your mobiles are managed separately, we can review whether bringing them together would improve security and control.

Put the date in the diary!

Join our team of experts at Carlisle Race Course on April 23rd, from 10am till 2pm, to discover a straightforward way to simplify and strengthen your business security.

Hear from industry experts including Sophos, Gamma, Zest4, Resilience, and Westcoast, alongside the Integrity team, as they share practical insights on modern cyber security, connectivity, and business technology.

Getting More from Your Microsoft Environment

Microsoft continues to expand functionality across Microsoft 365, security and cloud services.

Many organisations already have access to advanced security, compliance and productivity features but aren't yet using them to their full potential.

A focused review of your Microsoft set up often highlights opportunities to unlock more value from your existing setup, strengthen identity protection and improve collaboration.

We can help optimise and enhance your Microsoft environment so it works harder for the business, please contact your Account Manager to arrange a discussion.

QUICK TIP OF THE MONTH

Don't ignore an update.

Restart your computer at the end of a day or at least once a week. This helps install updates, improves performance, and fixes many small issues before they become bigger problems.
