February, 2026 | Volume 04

Integrity's managed IT and communications services are built on partnership. We take the time to understand your business and future plans before we recommend solutions to suit your requirements.

Top IT Priorities for 2026

As organisations plan the next phase of their IT, a few clear priorities continue to stand out based on what's delivering the most value. Modern PCs and notebooks remain a key focus, refreshing workstations improves performance, reduces support issues and ensures devices meet current security standards, particularly as unsupported operating systems are phased out. Network infrastructure is another major priority as upgrading switches, firewalls and Wi-Fi improves reliability, security and cloud performance, creating a stronger foundation for everything else that relies on connectivity. Your Account Manager can help you plan your IT strategy in a way that supports both current needs and future growth.

AI in Business: Turning Curiosity into an Advantage

AI tools are rapidly becoming part of everyday business workflows, from email drafting and meeting summaries to customer support and data analysis.

The key is implementing AI in a controlled, secure way that aligns with your business goals. We're helping clients assess AI tools, integrate them safely with Microsoft and cloud platforms, and ensure data remains protected. If you're interested in exploring AI, we can help you pilot solutions that enhance productivity without increasing risk.

Did You Know?

At EIS by Eco, a sister company to Integrity, we specialise in keeping workplaces safe, comfortable, and efficient through tailored heating, cooling, air quality control and ventilation solutions.

From ensuring compliance with workplace regulations to providing both temporary and permanent climate systems, we help businesses stay operational no matter the season.

Whatever your climate control requirements, we're here to provide practical, reliable solutions that keep your operations running smoothly.

Final Reminder - Windows 10 Devices

If you still have Windows 10 devices in use, these systems are now operating without security updates or vendor support, which increases exposure to cyber risk and can undermine the overall resilience of your IT environment.

We recommend planning the replacement or upgrade of any remaining Windows 10 devices as a priority, in a controlled and scheduled way rather than reacting to a failure or security event. Our team can identify affected devices, agree a sensible remediation plan, and carry out the work with minimal disruption.

QUICK TIP OF THE MONTH

Stepping away from your desk for a minute? Lock your screen.
(Windows: Win+L, Mac: Control+Command+Q).

It only takes a second but protects sensitive information from unwanted access.
