Integrity's managed IT and communications services are built on partnership. We take the time to understand your business and future plans before we recommend solutions to suit your requirements.

New Service: Microsoft 365 Monitoring & Compliance

Microsoft 365 has become one of the most important systems most organisations rely on, but issues such as compromised accounts, unusual sign-ins and unexpected changes can often go unnoticed until they've already caused disruption.

We're pleased to now offer Microsoft 365 Monitoring & Compliance, a managed service that continuously monitors your Microsoft 365 environment. If unusual activity is detected, such as a user signing in from an unfamiliar location, security settings being changed or suspicious mailbox activity, our engineers are alerted so they can investigate quickly and, where appropriate, take action before the issue develops further. It's another way we're strengthening the proactive support we provide to our clients.

Microsoft 365 Licensing Update

Microsoft has announced pricing changes for some Microsoft 365 licences, including Business Basic, Business Standard and F1.

If we supply your licences, no action is needed. Any changes will only apply at renewal and will be outlined in advance.

If your licences are with another provider, we'd be happy to discuss moving them to us. Managing your licences and IT support together gives you a single point of contact and a more streamlined service.

Behind the Scenes at Integrity

Every month, our engineers deliver projects and support organisations across Cumbria, South West Scotland and beyond.

In June, we completed Windows Server upgrades, replaced critical server hardware, rolled out business phone systems, delivered Microsoft 365 migrations, upgraded firewalls and helped schools prepare laptops for the summer holidays.

Making Better Use of Existing Technology

Many improvements don't require major investment. Existing Microsoft 365 features, wireless network improvements and small hardware upgrades can often make a noticeable difference.

Making better use of the technology you already own can be just as valuable as investing in something new.

If there are areas of your business you'd like technology to support more effectively, please let your Account Manager know before your next meeting.

QUICK TIP OF THE MONTH

Restart your computer at least once a week.
Regular restarts help complete software updates and keep your device running efficiently.
