

OLD VALUES BECAME MODERN PROPRIETY, LOYALTY, AND LOCAL SUPPORT

Lykkegaard Pumps is a family-owned and operated company that has proudly produced propeller pumps in Denmark since **1883**.

Four generations of the family have led the business, and in the coming years, the fifth generation will step in.

The company designs and produces high-quality customized pumps for, among other things, drainage, sewage, aquaculture, and other industrial needs.

Lykkegaard's values are built on integrity and quality. Those values guide everything we do, from production to our working environment, customer service, and our approach to climate change.

This is how we have made pumps for the past 140 years and how we will continue to make them.

Karsten Lykkegaard is 4th generation of the Lykkegaard-family in charge of the factory. His son Jeppe Lykkegaard will take over the responsibility within the coming years

The new propellers are machined at the factory in Denmark

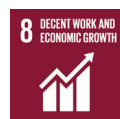

While our values in many ways are old-fashioned, our ambitions are not. We strive to produce the **world's best pumps** in terms of:

- **Operational reliability**
- **Durability**
- **Energy efficiency**
- **Reusability**

We constantly strive to adapt, optimise, and develop our pump designs.

The latest development is a new type of propellers, designed and milled for each individual pump in order to optimise the energy efficiency of every pump we produce. This alone has improved the energy efficiency of the LM Pumps by up to 10 percent.

DESIGNED TO LAST QUALITY, CUSTOM MADE, EFFICIENT

Lykkegaard pumps are designed to last for decades with a minimum of maintenance required. Every year we have 50 to 70-year-old pumps repaired and maintained at the factory.

We don't just make high-quality pumps; we also service and repair them. Either at the factory or by supplying the spare parts along with our online assistance. For customers not that far from Denmark, we also provide on-site service and maintenance.

A local supply chain

We choose high-quality local suppliers as much as possible. Our strategy is to source our materials by primarily buying locally in Denmark, then we turn to sources within the Nordics, and thirdly we have a few suppliers from Germany or other EU countries.

While Lykkegaard is proud to be a Danish company with a mainly local supply chain, we export our pumps globally.

Lykkegaard is not subject to the regulations regarding ESG reporting but has chosen to do the voluntary reporting according to the basic module.

We do this partly because it sharpens our own attention to the issues within the ESG areas - and partly because a large part of our customers are subject to the regulations and therefore need value chain data from us.

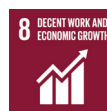

New pump parts produced and assembled at our Factory in Denmark

30-50 years lifetime

99 % of the pump can be recycled or re-used
