

# Protect Lone Workers. Support Psychosocial Safety. Prove Duty of Care.

Nurse-monitored personal safety solutions for employers managing mobile, remote, isolated, after-hours, in-office, and high-risk workers.

INS LifeGuard helps employers strengthen worker protection with monitored personal alarms, safety check-ins, GPS support, fall and crash detection, workplace emergency devices, and 24/7 nurse response.

## 3 WHS RISKS INS LIFEGUARD HELPS ADDRESS

### PHYSICAL INCIDENTS

Falls, vehicle incidents, sudden illness, injury, aggression, or incapacitation can leave a worker unable to call for help.

**INS support:** Emergency button, fall/crash detection, GPS support, two-way communication, and nurse response and escalation.

### PSYCHOSOCIAL HAZARDS

Workers exposed to aggression, stress, isolation, trauma, unsafe situations, or post-incident distress may need early support.

**INS support:** 24/7 nurse chat line, clinical de-escalation, and support from qualified nurses when workers feel unsafe, unwell, or distressed.

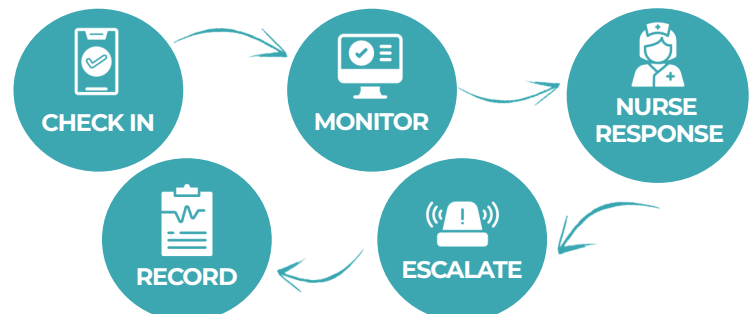

### EVIDENCE GAPS

A written policy may not show that daily safety processes were active.

**INS support:** Manager's Portal records check-ins, alerts, activations, and response activity, helping employers maintain visibility and evidence of active safety processes.

## From policy to active protection

INS LifeGuard helps employers turn lone worker safety from a written policy into an active, monitored, evidence-backed system.

**Real Nurses. Real Care.  
Always There.**

**24/7 Nurse Response**

**100% Australian-Based Monitoring**

**ISO 9001:2015 Certified**

**Manager's Portal**

**GPS Location Support**

## A Practical Safety Layer for Real Workplace Risk

Whether workers are alone, mobile, attending homes, managing aggression, travelling between sites, or working after hours, INS LifeGuard gives them a direct connection to qualified nurses and emergency escalation when needed.

## More than an alarm. Real nurses answer the call.

When a worker triggers an alert, misses a check-in, or needs support, they are connected to INS LifeGuard's 24/7 Emergency Response Centre.

Unlike standard alarm monitoring, INS LifeGuard emergency calls are answered by qualified nurses. This means workers can receive calm triage, de-escalation, practical advice, and appropriate escalation when needed.

# WHS SAFETY SOLUTIONS FOR EVERY WORK ENVIRONMENT

Choose the right safety layer for your workers, workplace, and risk profile.

## Could your current safety system prove this?

- Can workers get help if they are injured, threatened, unwell, or unable to call?
- Do missed check-ins automatically escalate?
- Can workers access support in times of distress, aggression, or isolation?
- Can your workplace provide fixed-location emergency support for staff, visitors, clients, or contractors?
- Can you show digital records of safety activity, alerts, and response events?
- Can your system support mobile, remote, in-home, after-hours, office-based, and lone work environments?
