

# No Glyphosate & Genetic Modification of Produce for Extended Pesticide Resistance - NZ

[www.Change.org/NoHarmToFood](http://www.Change.org/NoHarmToFood)

Please tell the government NOT to mess with our food

The harder these modified food items, the more they withstand frequent and more potent pesticide applications. This results in higher levels of pesticides in our environment and our meals

A prime example of a harmful herbicide prevalent today is Glyphosate (Roundup). Research shows exposure to glyphosate increases the risk of non-Hodgkin lymphoma by 41%.

Prevention  
is Better than cure  
Health comes first
